Before describing other methods by which our coarse fish may be propagated in immense quantities, I will, with your permission, read you some extracts from the Official German Report, on fish-culture, at the Berlin Exhibition, in order to show you what one of the first fish-culturists of the day thinks of Lund's method. This report is written by Dr. Haack, director of the great fish-breeding establishment, at Hningen. In dealing with the Swedish exhibit, he says:—

"In the Swedish exhibit there were two small insignificant-looking models which were quite overlooked by the majority of the visitors, but which were of the very greatest interest to every thinking pisciculturist. These models, in spite of their simplicity and insignificance, show us the way we, in future, most simply, easily, and inexpensively may carry on the propagation of our summer-spawning fish to any extent."

Dr. Haack then describes Lund's box, and refers to its advantages as follows:—

"After the box, which of course may be of any size, has been furnished with fir, pine, or juniper branches, it is placed in any lake, pond, or gently flowing stream. Shortly before their spawning time, a few pairs of male and female fish are caught and placed in the box; they deposit their spawn on the branches, and are then taken out, and can be returned to the water they were taken from, if so desired.

As will be evident to everyone, the eggs which have been deposited and impregnated in the box develop in a perfectly natural manner, for the circulation of the water is fully provided for by the holes in the sides of the box, and the winds and waves promote the development by the gentle movement they cause. This most simple apparatus, in fact, presents us with a most easy and perfect method of cultivating every kind of summer-spawning fish, which does not require a strong stream for the deposit and development of its ova. Air, light, and sun are able to exert their influences on the eggs in the box in exactly the same way as if the eggs had been deposited in plants in the open water in the ordinary way. Wind and waves can in like manner exert their beneficial influence on the eggs, which at the same time are protected from the violence of the storm and the prejudicial force of the waves, from which causes alone millions of eggs are frequently destroyed in the open water. The sides of the box and the thickly placed branches effectually prevent this destruction. But this method of cultivating the eggs and fry presents yet further advantages, inasmuch as nearly all the numberless enemies of the defenceless egg and fry are shut out. (By placing a bit of netting over the top, swans, ducks, and other aquatic birds are kept away very easily.) It is unquestionable, he says, that in this way a much larger proportion of fish life is secured than can be the case in the open water, where the eggs and fry are at the mercy of countless insects, rapacious birds, the parent fish themselves, and other disturbing elements besides the winds and waves. As soon as the young fish can swim about and take care of themselves, one or two of the sides of the box are let down and the fish escape into the open water. Now commences their fight for life, and of course many thousands of them will doubtless perish. (If placed in a pond from which all other animal life has been excluded as much as possible, of course this loss would be reduced very much, and then the fry could be sent in fish-carriers to any part of the country by the million.) So highly does Dr. Haack think of this extraordinarily simple method of cultivating fish, that he says in one place, if it were generally adopted, the necessity for fence months would be quite done away with. He expresses his astonishment that this valuable method is practically unknown in Germany, and attributes this fact to the isolation of Sweden, which also accounts for the backward state of the higher branches of fish-culture in that country. He says:—"In very many of our German waters this apparatus can most certainly be used with the greatest success, and without in any appreciable degree interfering with the professional fishermen," eventually, of course, vastly to their benefit.

And now I come to a most important statement in Dr. Haack's report. "I must again," he says, "impress on the reader that we have here in no sort of way to do with any 'artificial' hatching. Artificial spawning and hatching, as practised with the salmonidæ, has up to the present time been a complete failure as regards satisfactory results when tried with the coarse fish." He states that although for twenty years past he has made numberless experiments in the artificial breeding of these fish, and has now and then succeeded in rearing a few thousand of them, he is nevertheless most completely convinced that all endeavours in this direction are a mistake, for invariably the results obtained from the simple natural breeding in small breeding ponds gave a hundred times better results than the most careful, painstaking, persevering artificial culture. He is not acquainted with a single instance where any one has succeeded in breeding the summer-spawning fish artificially, and the statements that have from time to time, been inserted in scientific journals, to the effect that artificially bred carp eggs have been sold in large quantities, have never to his knowledge been substantiated, though he is well acquainted with French piscicultural experiments.

It may be well here to give you a chief reason why these experiments have failed; it is that whereas the eggs of the salmonidæ are non-adhesive, and each egg can be separately attended to, the eggs the summer-spawning fish are adhesive, and stick together in masses so that it is impossible to manipulate them properly and separate the fertilised from the unfertilised, the dead from the living. But in Lund's box they develop in a perfectly natural manner, and at the same time it protects them from their enemies. But I think many of you will agree with me, that, as far as some of our streams are concerned, this box will do more than this. It will enable fish to spawn which would otherwise never find suitable and undisturbed places. You all know how completely many of our streams are becoming canalised in consequence of the improvements in the navigation, and will remember how strongly "A Thames Fisherman" dwelt on this point in those capital letters which appeared last year. Every bit of land that can be reclaimed from the water is reclaimed, the stream is confined as much as possible to its proper channel, and those shallow spawning places so necessary for the fish are rapidly disappearing, and even where they still exist they are so constantly disturbed by the river traffic that the fish have little chance to spawn. In my opinion this fact, perhaps more than any other, accounts for the decrease of fish. But with the very simple apparatus I have endeavoured to describe to you, we can in a great measure get over this difficulty. We must establish these hatching boxes, obtain our parent fish, then protect the eggs and fry until the latter can take their chance with some control over their own destiny; and it is simply marvellous how soon our coarse fish learn to swim. They do not take three months in the egg shape, and then carry their food about with them in a big bag which clogs their movements for another twenty or thirty days—like the salmonidæ; on the contrary, the coarse fish comes out of the egg in about a week's time—according to the temperature—and then when he does come out he is perfect, and can swim as well as his mother; he has not got to suck the egg, or umbilical sack, as it is called, for twenty days, like his aristocratic cousins.

It only remains for me to describe to you two other methods by which our coarse-fish may be most easily propagated in immense numbers and having gone so fully into Lund's box, which I think we should experiment with first, I shall not detain you much longer. The first of these methods is what I have called a breeding hurdle, we have breeding boxes and breeding ponds, and I do not see why we should not call it a breeding hurdle, for that is what it really is. Mr. Hobden has kindly made us a diagram of it, and I think, gentlemen, we are much indebted to Mr. Hobden for the trouble he has taken, entirely without charge, to illustrate these things for us, he is an angler and says he feels that all anglers should help any scheme which promises to give us larger baskets of fish. I was not a little amused to find also that our friend the carpenter who made the stretchers, is also an angler, and also does it *con amore*. These little straws show the way the wind blows.

Well, gentlemen, this breeding hurdle is not in use in this country, as far as I know, though it is extensively used on the Continent, especially in France. It consists simply of a common hurdle with branches intertwined, and it is sunk in any shallow place, where it is desired that the fish may spawn. You will see it is merely Lund's idea without most of its advantages, but it is undoubtedly very useful where there are no good natural spawning places, or where you want simply to get spawn to send to some other water. I may mention that, though I cannot find from his writings that our good friend the late Mr. Frank Buckland, knew of Lund's box, he mentions the advantages of this hurdle, and recommends it, and, as I said before, merely for securing spawn for transport, it answers well enough.

You will remember a most interesting experiment carried out recently by Mr. Carrington, of the Westminster Aquarium. Mr. W. H. Brougham, the secretary of the Thames Angling Preservation Society, and some other gentlemen, sent one of the river-keepers to a stream near Walton, to procure some perch-spawn, with some trouble he got a supply and carried it in an ordinary bait-can to London to Mr. Carrington, That gentleman placed the spawn in his trout-hatching troughs and when I called at the Aquarium, some fourteen days afterwards, I was delighted to find that a good deal of the ova had hatched out and the young fish were swimming about, so small as to look like very small pins, perhaps ¼ of an inch in length. I have not heard how the young fry got on since, but I fear Mr. Carrington would not be able to keep them long; they would require sun and air in an open water to thrive well. I suggested it would be a good plan to put them in the Serpentine, but what their fate was, I do not know;* but at any rate this experiment proves conclusively that, as I stated three years ago in the Gazette, the simplest way to stock a water with perch, would be to remove the boughs with the spawn on them as placed there by the fish, to another water that you wished to stock. Lund's apparatus, of course, would give much better results, but this plan would answer when you have plenty of perch-spawn to spare. I forgot to mention that the reason why fir branches are recommended, is that they last much longer without falling to pieces and rotting, and also their shape is more suitable.

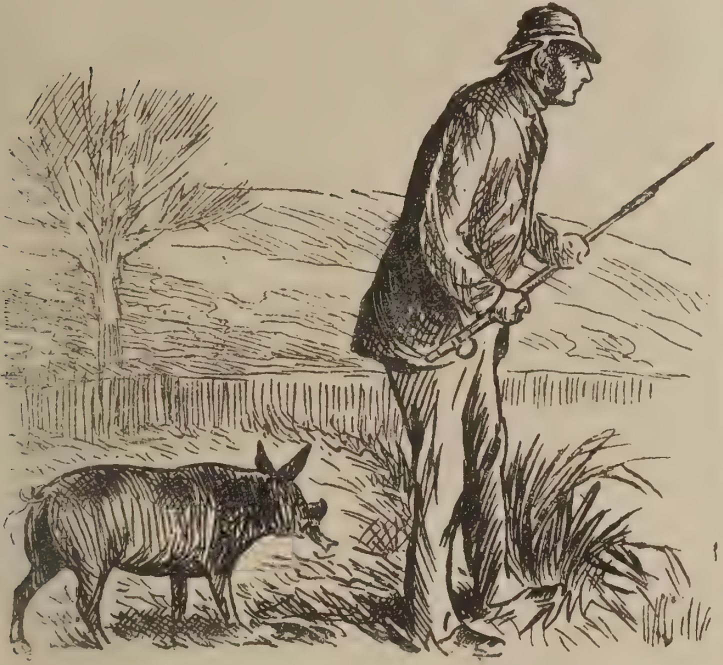
I now come to the last part of my paper and feel I have tried your patience pretty severely, so I will be as brief as possible.

We have here a diagram of a breeding pond for summer spawning fish, in which they may be propagated on the most extensive scale. Naturally, such a pond entails considerable expense to make, but once well made, it will last for centuries. But any ordinary pond with a little expenditure may be made to answer probably. You will see that in one portion of the diagram the water is coloured dark, and elsewhere light. The dark part is made to represent deeper water—say from four to six feet, and the rest is shallower water running up to a few inches in depth. The pond should be fed by a stream of water, and there are sluices for regulating the supply. In Germany, where the carp is in great esteem as an article of food, and where carp-culture is carried on to an enormous extent, the fish-farmer usually has three ponds. The first is the spawning pond, the second the feeding and growing pond, and the third is the stock and wintering pond. To stock such a pond as shown in the diagram, say of an acre or so in extent, requires only that a few pairs of parent fish be placed in before the spawning time; they deposit their spawn on the shallow sides of the pool, and the deep water affords the shelter from danger and heat. They are taken out after they have spawned, as they would destroy their own offspring, which will soon be swarming by hundreds of thousands in the water.

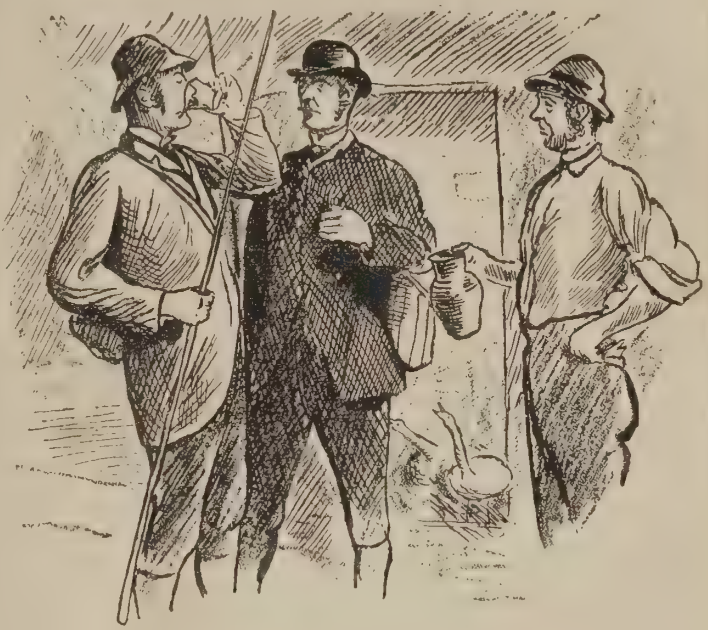
This, ladies and gentlemen, brings me to the end of my descriptions of these simple methods of propagating coarse fish. We have near London miles upon miles of water which ought to furnish us with sport, but which at present it is almost if not quite waste of time to fish. Our Sheffield friends rent, I believe, no less than 200 miles of water for the 20,000 members of their clubs, their great complaint is the scarcity of fish. Personally, I know from the inquiries I so frequently get from all parts of the country that fish are wanted both by angling clubs and private individuals. I do not know where they are to get them, though I could name a dozen places where they can get salmon and trout. The fact is, coarse fish are not to be got in nine cases out of ten, at least in a *fair* way. At present, the stocking of one water means (if I may use the expression) the unstocking of some other water. A. wants coarse fish and orders them of B, who employs

---

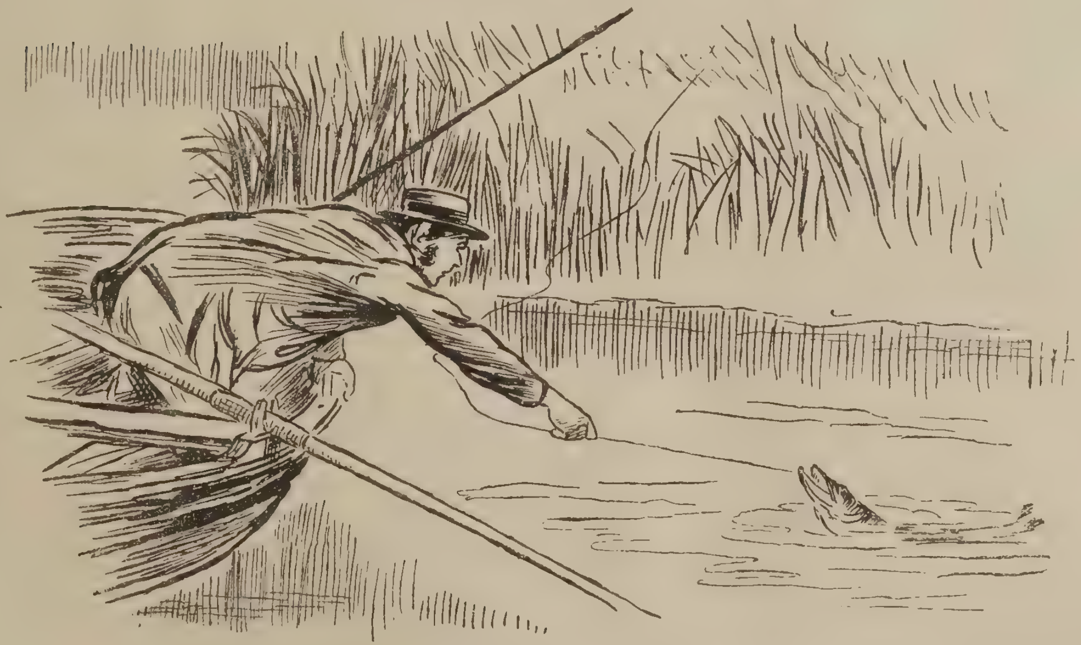
* The majority died, but a portion was placed in the water in St. James's Park.



BEATS ALL THE BAGS AND FISHING BASKETS!



"LOOK SHARP, OLD MAN, I'VE GOT A THIRST I WOULD'NT TAKE A DOLLAR FOR!"



DESERVES TO LOSE HIM!

men to net and poach a water, and so A gets his fish! I am sure, therefore, that any society which takes up coarse fish culture earnestly will not only immensely benefit its own waters, but will have plenty of fish to sell and find plenty of purchasers, and at remunerative prices. One thing should be invariably insisted on, and that is, that whatever kind of fish you cultivate, let it be from the very best and strongest stock you can obtain, and infuse as much fresh blood into your waters as possible. I do not believe in hybrids as far as our coarse fish are concerned. There will never be any real difficulty in getting good stock fish. Thousands of splendid roach, perch, pike, chub, dace, &c., &c., are annually destroyed by owners of trout streams; these gentlemen would be only too glad to get rid of their coarse fish at no expense to themselves. I need not tell you how wonderfully prolific the coarse fish are. Mr. Buckland tells us that he himself weighed and measured the roe in a 16 lb carp and estimated the eggs at considerably over a million; it is not probable such a fish would ever spawn, but you may guess from this what a numerous family even a five-pound fish could produce, if they are properly nursed.

In conclusion, gentleman, although trout-fishing is my favourite sport, as an enthusiastic angler for all kinds of fish, I can only hope that before long something may be done in the directions I have indicated. I may be asked "Where do you propose to begin?" and can only say if I had a stream of my own I should begin there, and that is where I advise you to begin, on your own waters wherever you may want fish. There are certain societies established avowedly for the purpose of stocking our waters, let them begin. The matter does not rest with any single individual, it concerns us all; and from what I have seen at many meetings of anglers which I have attended during the last year, all are agreed that a start shall be made. If what I have been able to lay before you this evening leads up to any such movement, I shall be delighted at such a result of my efforts, and have no fear of the result. I thank you all for the way you have so patiently listened to me, and trust you will overlook the manner in which I have landed my first fish, in the shape of a paper of this kind. I must personally thank our respected chairman for so kindly honouring us with his presence. I always feel that in Mr. Birkbeck we anglers have a powerful friend, who will help us in the future as he has done in the past. We all know what a deep interest he takes in fishing matters, especially as regards our important sea-fisheries. It is, perhaps, chiefly owing to his exertions that the deep sea fishery disputes between this country and the Continent seem in a fair way to be satisfactorily settled. The recent Norwich Exhibition, and that great International Exhibition which is to open at South Kensington next year, owe their success chiefly to him; and when I tell you that he has a beautiful river full of fish flowing through his lands, in Norfolk, which he, on principle, has thrown open to all fair anglers, you will see his interest extends also to what is most dear to us. I must not forget to thank Messrs. Geen and Hoole and other gentlemen who have so warmly assisted me; in fact, it was a happy idea to combine the testimonial presentation to our worthy friend Mr. Bonvoisin, with what to some, might possibly not alone have been a sufficiently attractive subject.

R. B. Marston.

[As will be seen from the press reports of the meeting, the above paper was most warmly and enthusiastically received, and the meeting decided unanimously that coarse fish culture should be attempted by the new United Associations Fishery Society, who will devote at least fifty pounds a year for the next five years to this object—R.B.M.]

CRUCHLEY'S REDUCED ORDNANCE MAPS OF ENGLAND AND WALES.

Just now, when anglers are starting on fishing excursions to all parts of the country, it will be appropriate to draw their attention to the above maps, which are published by Messrs. Gall and Inglis, of Edinburgh, and 25, Paternoster Square, London. These maps are planned on a scale of two miles to the inch, so that the smallest hamlets and most out-of-the-way rivers and roads are indicated. For many years past we have made a point, whenever starting for any new fishing grounds, of getting the map or maps which include that section of the country. A small index or key map is to be had gratis by applying to Messrs. Gall and Inglis, and the angler can then in a moment select the sections he will require, they are sold separately at 1s. plain and 1s. 6d. coloured. We can most strongly recommend them as trustworthy, clear, and inexpensive guides. It is simply wonderful how limited is the information one can obtain in rural parts, as to the rivers and brooks and lakes; but with one of these maps the angler is independent, and can arrange his own excursions without reference to the oldest inhabitant.

DOGS.—Naldire's Prize Medal Dog Soap destroys Fleas, cleanses the skin, and improves the coat and health of the dog. "Naldire's Soap is harmless to Dogs, but fatal to Fleas."—Frank Buckland. Price 1s., of all Chemists, Perfumers, and Grocers. N.B.—See that you get Naldire's Soap.

THREE DAYS' FISHING NEAR HULL.

About a month since I made an inquiry through the medium of the Fishing Gazette, as to the fishing to be had in the neighbourhood of Hull. As I obtained no answer to this inquiry, I presume that locality is unknown to the majority of your readers. In the meantime my friend L. and I, have paid a visit to the above town; and, for the information of any of your readers who may chance to wander there, I give you an account of our doings, trusting it may not be altogether void of interest. In the first place, I will confess that, although ardent lovers of the "gentle craft," both L. and I are duffers at anything but float-fishing.

Having resolved to make the trip by water, behold us with our full equipment of luggage, (including, of course, our well-beloved fishing-tackle) embarking on board the General Steam Navigation Company's s.s. *Bittern*, quite prepared and expecting to have a thoroughly good time. When, however, we arrived off Yarmouth L became pensive and unsociable, standing for a considerable time leaning over the side of the vessel, gazing with an earnest and steadfast stare into the depths below, till at length his love for piscatorial matters completely overcame him, but I draw the curtain. We arrived at Hull on Sunday morning. Monday we devoted to making inquiries as to where we should find sport and learned the following:—

At Gox Hill Gravel Pit good roach, bream, and eel-fishing is to be had, the fish are of fair size and last year two gentlemen fishing there, took in one day over 1 cwt. of roach and bream; this promised well. At Aram, first-class all-round fishing is to be had and also in the canal, near Driffield. Good bream-fishing may be had at Ferryby Sluice (near Barton-on-Humber) the fish running to very large sizes, five and even seven pounders being by no means uncommon. All the above places are within easy reach of Hull and the fishing is free.

Tuesday we determined to try our luck at Gox Hill Gravel Pit. Gox Hill lies on the other side of the Humber, in Lincolnshire, about half an hour's run from Hull. To get there, the intending visitor should take his ticket at the pier (not on the boat) cross the water to New Holland, enter the train there and Gox Hill is the next station. The Gravel Pit is then twenty minutes' walk. It is rather a pretty piece of water, lying by the side of the road. Here the bank is only about three or four feet high, but opposite, it is quite twenty feet and down this one has to clamber (with considerable risk to the neck). At the bottom tolerably secure seats are to be found. At one end of the Pit there is a sort of small peninsula, quite flat and only about six inches above the water; to get on this, a dive must be made down the almost precipitous bank, which, however, being well covered with trees, offers certain branches to clutch at and so lends very material assistance in the descent. Off here, and almost close to the side, between six and seven feet of water will be found, so that one can fish, sitting well back out of sight, an advantage not by any means to be despised. The day was warm but showery, and (alas, that I should have to chronicle it) the fish were anything but on the feed. At the end of a couple of hours we had taken two bream, both rather under the pound and four roach of about half-a-pound each. Then they left off biting altogether. After waiting for a considerable time without getting a touch, my rod was laid in the ruts, and (I am ashamed to own it) as I sat watching my float, the heat and silence (broken only by the twitter of the swallows as they skimmed over the pool) had their effect on me, and at length my eyes closed and I was in the land of Nod. Waking with a start on feeling a few drops of rain on my face, I saw my float executing a dance; but, by the time I had it in my hand, all was quiet again, and on pulling it up to examine the state of my bait (gentles) I found it bitten clean off my hook. We continued fishing till dark, without getting so much as another knock and the result of our days fishing was six fish, weighing under four pounds. Still I am convinced that there are fish there for those who know how to catch them.

Wednesday we were fortunate enough to fall in with an old acquaintance, himself an enthusiastic angler, who at once agreed to join us in a day's fishing. Acting on his suggestion, we took the train from the Paragon Station to Beverley; walked to the river Hull, took a boat, and pulled gently up to Aram, one of us pulling while two tried spinning from the back of the boat. At certain places pleasant recollections were awakened in our friend's breast as he informed us, "Just under that tree I landed a 12-lb. jack last year. Just here I caught a 3 lb. perch, &c., &c." On our way we passed through spots the very beau ideal of jack water, but again to-day we had "na loock;" the fish would not bite, and when we returned all we could show were two roach of about $\frac{3}{4}$ lb. each. In the train we met some brother piscators who had all fared even worse than we. They had seen, so they told us, "millions" of large roach just above the lock at Aram, but empty creels were the order of the day.

On Thursday we had some very novel experiences. We were offered a day's trout fishing in one of the best trout streams near

Driffield. Now, as I owned at the commencement of this, at anything but-float fishing, we are mere tyros. Still we accepted the kind offer (or rather I did, L. having decided, on this occasion, to play the part of an onlooker only). On one occasion I had tried fishing with a blow line; and as I had read that this is often a very killing method of fishing for trout, I determined to try it. In the morning the weather was overcast, and a fresh breeze blowing, just the thing for a blow line. As we took our seats in the train, I entertained strong hopes of registering before the day was out the capture of "my first trout." Arrived at Driffield we found that we had a four miles' walk before us, and it being market day no conveyance was to be had. Still the weather was fine and the country very pretty. For some distance we followed the canal, and to all appearances it was full of fish. We noticed particularly some "whacking" roach swimming about near the top of the water, now and then lazily sucking in some unfortunate, half-drowned fly as it floated by them.

Just before we arrived at our destination, much to our disgust the rain came down in torrents, compelling us to seek shelter in the farm-house close by the water we had permission to fish. As soon as it cleared up a little we sallied down to the stream. Whilst putting the rod together (which, be it said, was an eighteen feet cane roach rod, very springy) we saw several trout of about two pounds' weight, darting about and feeding. No sooner was our line out than down came another heavy shower, effectually wetting our floss silk line, and beating down all that was left of the breeze. What was now to be done? Well, I determined to whip, as my rod was springy; so, attaching a couple of artificial flies I had brought at Driffield, I let out about ten yards of line and giving a few preliminary switches with the rod, attempted to throw out in the direction of a fish I had just seen rise. For a first attempt I didn't do so badly, certainly my line did fall all of a lump, but still at quite three yards' distance from me and in the water too. Well, let's try again, better luck next time! The result of my second trial was peculiar in the extreme, for no sooner had I attempted to make the throw than I heard a strange row behind me, and on turning round beheld L. executing a kind of war dance, and using language the very reverse of complimentary towards me. On ascertaining the cause of all this fuss, I found him with one of my hooks through his ear; and such, sir, was his unreasonableness that after spoiling my cast in this careless way, he actually talked to me as though he and not I was the injured party. When he was released I made another trial, and if the length of throw were the only point aimed at, I should have been well on the way to perfection. I felt my line going out as though it had something heavy attached to it, and on glancing up I perceived my two top joints, which had worked loose, making a rapid journey through the air, and a moment afterwards falling in the stream with a most inviting splash, which would most certainly attract the attention of all the trout in the neighbourhood. Fortunately the line had twisted round one of the rings, and I was thus enabled to land the wandering portions of my rod.

A brilliant idea here occurred to me: I remembered having an artificial minnow in my tackle case, why not attempt some spinning? It's true the minnow was mounted on gimp, and rather large, yet the gimp was fine, and a trout might not object to it on that score, and if I did only have my roach-rod with me that, less the three top joints, might be made to answer every purpose. Hastily taking off my flies I put on a silk-running line and attached the minnow. Here again the question arose, how to throw out? I had seen a jack fisherman lay his line in coils at his feet, and seen it run out beautifully. I tried that way, but my line tried to get through the rings altogether, and couldn't, while the minnow, after jerking violently backwards and forwards a few times, at length decided to stop itself by winding the spare line round my neck, which it did with astonishing neatness. For the next throw L.'s services were called into requisition to hold the line out clear of the ground. This time we got on better; we managed it thus, the minnow was swung to and fro to get sufficient momentum, when it had obtained this I counted one—two—three, let go. "What an awful muff you are to be sure" (this last from L.), as the bait went flying off with some force in the wrong direction, catching him nicely in the face. It was with difficulty that he could be persuaded to help again; at last his good nature overcame him, and now this contrary minnow took an upward flight, falling just at my feet. After singing that beautiful little hymn—

"If at first you don't succeed, try again"—

We did so, and actually succeeded in throwing right into the rushes on the other bank, here for some time that wretched minnow sulked, holding to the rushes and resolutely refusing to be coaxed out. When, at last, it was again in our possession, we improved rapidly. It fell in the water almost every time, and then L. was summoned to haul in the line, thus drawing it through the water. Once, on its return trip, we perceived a trout following the bait and appearing to meditate a rush. Sir, the excitement of that moment was intense; so intense, indeed, was it, that L. forgot to continue the hauling process, and, as a natural result the minnow first stopped, and then sunk to the bottom, whilst the trout with a disgusted wag of his tail, turned away to seek some more worthy object for his affections.

We did not easily get over this disappointment, and soon after I packed and shouldered my creel, and we returned to the farm-house, where we made a hearty tea, for, if we had caught nothing else, we had caught wonderful appetites. After tea we took a couple of guns and tried to bag a rabbit or two, but, the rain coming on heavily again, these gentry would not show themselves at all, and after knocking over a few crows, we found it was time to make our way back to the station.

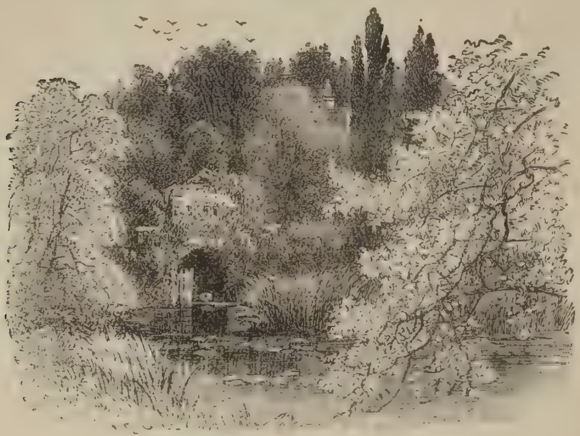
And thus ended our third and last day's fishing in that neighbourhood; and although we might certainly have had a more successful time, a more enjoyable one it could scarcely be possible to have.

That there are loads of fish in the place I have mentioned, there can be no doubt, and large bags are, I believe, the rule. I hope, one day, one will be made there by your humble servant

Utja.

"THE FRIENDLY ANGLERS" AT WINDSOR.

The "Friendly Anglers" mustered in good force on Saturday afternoon last to do suit and service at their annual summer dinner at the New Inn, Eaton Square, Windsor. The day was oppressively hot, and the members and friends preferred remaining outside in the garden at the front of the hostelry previous to the hour fixed for the dinner, where there is a young oak tree, planted fourteen months ago by Mr. W. Paine, the respected treasurer of the club, which he brought from Burnham Beeches, and is now known as "Paine's Oak." It is but a small plant, and at present does not give great promise of further growth. At half-past five o'clock there was a forward movement of the body of guests to the spacious dining-room upstairs, where the "Friendly Anglers" for very many years have thoroughly enjoyed their summer spread, and without the slightest difficulty or confusion all were soon comfortably seated. The dinner, consisting of "fish, flesh, and fowl," fully sustained the high reputation of the house. Mr. Dawson ably discharged the duties of chairman, and Mr. Robert L. Pugh, the great champion perch fisher of the society, and the recent captor of a Thames trout of 9½ lbs., most effectively filled the position of vice-chairman. There were amongst others present Messrs. T. Cliff, C. M. Le Good, W. Paine, Hazelden, King, W. H. Brougham, J. P. Wheeldon, F. S. Hoblyn, Blockley, Newson, Barwell, Grant, J. Gillatt, Palmer, Bayfield, Nickenson, Goodall, Taylor, Woodhall, Berry, Macrae, Mitchell, Page, &c., altogether numbering forty-two. After the enthusiastic disposal of the loyal toast, and "three cheers for the royal navy," the chairman gave the toast of the evening, "The Friendly Anglers," which he remarked was simply giving "our noble selves." He had been for many years a member of that society, and he would truly say in that time there had never been any dissension amongst them; all vacancies had been filled up with good anglers, and already 1,500 lb. weight of fish had been weighed in, and the best part of the season had yet to come. There had been some fine specimens of salmon, trout, perch, and tench exhibited. Of the latter, a case of three of 3 lb. each would soon form a portion of their splendid museum. All he need say of the society was, that it was never in a better or more prosperous position. The toast was warmly responded to, and Mr. F. S. Hoblyn replied. He said that it was a great honour to return thanks for such a club as their own, and he was extremely proud of being a member. There was nothing but unity and good fellowship amongst them, and if ever the society cease to exist, it should be when his existence was no more, but he hoped to enjoy a long life with them. Mr. Pugh then gave "The Press," and coupling the names of their good friends Mr. W. H. Brougham and Mr. J. P. Wheeldon, he referred in very grateful terms to the effective services of those gentlemen in the angling world. Mr. W. H. Brougham, in replying for "The Press," said he had been connected with it all his life, and he would be always ready to help the "Friendly Anglers" in every way in his power. He referred to the recent netting of reservoirs, and to those places being eminently adapted for propagating coarse fish. He concluded by expressing a regret which they would all feel, in the absence of those interesting articles of Mr. Wheeldon in *Bell's Life*, but he sincerely hoped in his new venture they would all rally round him and accord to him the support he so richly deserved. Mr. J. P. Wheeldon very briefly replied. Mr. Pugh then gave "The Visitors," which was replied to by Mr. Hazelden. The chairman proposed "The Officers," coupling with the toast the names of Mr. Le Good, Mr. W. Paine, and Mr. King. This was followed with "The Stewards," and acknowledged by Mr. Taylor. One of the most demonstrative toasts was "Mrs. Goddard, their excellent hostess," which was proposed in felicitous terms by Mr. Hoblyn, and nothing less would satisfy those present than the appearance of Mrs. Goddard, when they gave her a very hearty reception. There was some excellent harmony, contributed by Messrs. Le Good, J. P. Wheeldon, Thomas Cliff, Bloxam, and others, and when the end came at ten o'clock, all expressed themselves as having spent a very pleasant and most enjoyable evening.—B.



AT AMBERLEIGH HOUSE, ON LODDON.

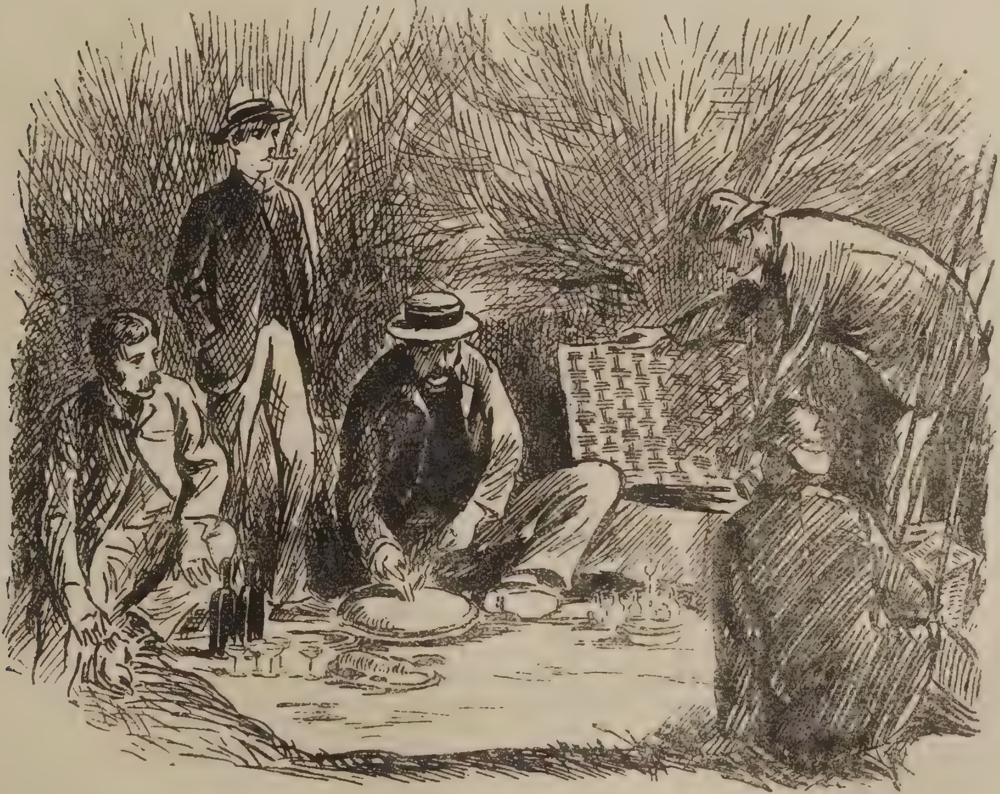
FLY-FISHING FOR TROUT AND GRAYLING IN AUGUST.



ON THE FEED—EEL-PIE ISLAND.

A GOSSIP ON SALMON AND HINTS AS TO TACKLE.

By J. P. Wheeldon.

Very diffidently indeed do I proceed to gossip upon salmon; but, inasmuch as it is done in the columns of the Fishing Gazette, a journal devoted to students of the angling craft of every degree, I simply jot down a few feeble ideas, in the hope that someone else may improve upon them. Salmon-fishing is a princely sport, exciting beyond all description. It only needs to watch the face of an old salmon-angler when describing some sensational episode of past days, to be convinced of this. Most assuredly, he thinks a deal more about killing a clean fish than ever Indian shekarrie would of successfully potting the biggest old man-eater that ever struck down with his murderous paw tough, sinewy palkee bearers, or lay in wait for tender little maidens at the village fountain. Very deservedly too, for possibly there is nothing in the world to compare with the first brilliant burst of a hard-hooked salmon, fresh from the sea, clean as a smelt, and with sea lice clinging to his deep silvery sides. Small wonder is it, then, that scores of hard-worked men, toilers with hand and brain, should eagerly seek for the enjoyment of such glorious health-giving excitement, when it is to be had absolutely at one's very back door. I say at one's back door, advisedly, because travelling nowadays and the same thing thirty years ago, are vastly different things. As a matter of course, there are far more salmon fishers now than there were at such a period. Why? The answer is very simple, and lies in the fact that, whereas when I was a lad the journey from London to Scotland or Ireland was a tremendous accomplishment, it is now, thanks to Flying Scotchmen and Dutchmen, allied to Pullman cars, about equivalent to a run between an early breakfast and a late dinner. It naturally follows that where thirty years ago a man who had actually killed a salmon, a veritable, indisputable salmon, was looked upon as a kind of piscatory god, men of the same ilk are now as plentiful as blackberries.

Possibly it is a pity that it should be so, because it follows that salmon rivers are flogged continuously by a class of men, moneyed, it is true, but bearing the stamp of money alone, whose absence would be conspicuously to the advantage of true sportsmen, and particularly those with moderately filled pockets.

I frankly admit at the outset that I do not intend to set myself up as an authority upon salmon fishing, neither do I intend to go in for a wholesale system of poaching upon the ideas of other men, whose practical experience has far exceeded my own upon this particular branch of the art. It may be that in certain styles of modern angling I can hold my own with a good many. On the other hand, it may be that I cannot, but I certainly fancy I can, and I may possibly be in a position to assert some day that the fancy applies particularly to salmon. Just now, however, I am somewhat modest on the point, so that I shall confine myself in my remarks to a very limited area.

First, as to choosing a rod. Here the leading principle would appear to be that a man should never choose a weapon unsuited to his bodily strength and height of person. Handling a rod or a gun in the maker's shop, and manipulating the same tool out in the field or through a long day by the river side, are two totally different things. A man picks up a gun a pound or so heavier than he is usually in the habit of carrying, and at first sight the extra pound appears to make very little difference. Spend a quarter of an hour over the matter and the result becomes cast in a different mould. The gun begins to feel a "leetle too heavy, eh, Mr. Baker," and one does not get it up to the shoulder with an equal amount of ease and quickness of action. What, then, must the issue be after an hour or so's hard walking across stubble or turnip? Precisely the same reasoning applies in the choice of a rod, and a fly-rod more particularly, because sundry sets of sympathetic muscles are being brought constantly into play.

It is an entirely different thing in the matter say, of a pike or barbel rod, because in the latter case one frequently has the opportunity afforded of resting the arms and shoulders by either watching the play of one's livebait float from a standpoint upon the bank, or waiting for the vigorous pull of a barbel at the bait on one's ledger, while the rod rests over the till of one's punt.

Very much depends also upon the class of water which it is intended to operate upon. For lake fishing or casting from a boat it is obvious that nothing is gained by using an inordinately long rod. Fourteen to fifteen feet in length is long enough for anyone in reason, and with such a rod I should incline to think that as much water could be covered with either fly or spinning bait as was at all necessary. On the other hand, where the cast has to be fished from the bank (that perhaps being a standpoint made up from the most objectionable material, consisting of broken stones and nice handy lumps of rock, and where, moreover, the best bits of water lie, as they would appear to have the knack of always doing, just beyond reach) a lengthy rod, so long as the operator has the necessary power over it, is invaluable. For such work, from sixteen to eighteen feet should suffice. If the angler can make the work of wielding anything more extensive through a day's hard work a matter of pleasure, so much the better. Eighteen feet would be quite long enough for me, of that I am certain. Mr. Francis, however, tells us in his admirable "Book on Angling" that the master of Lovatt uses a rod something like twenty-four feet in length. I am by no means a weakly man, and in times gone by have had a good deal of experience with a twenty-foot roach rod. Judging by the way even that kind of thing makes one's arms ache I should say that the master of Lovatt, as a specimen of muscular Christianity, is very much to be envied.

It is impossible to lay down a set of given laws in the choice of a fly rod. In the hands of some men a whippy rod is an abomination, and all such swear by a stiff one. One of the very best hands on the Wandle that I ever saw throw a fly—and it is a by no means easy river to fish either, by reason of the delicate quality of the tackle one is bound to use in ensnaring its capricious inhabitants—uses, to my eyes, an immoderately stiff rod. There are other fishermen who delight most in a rod so pliable and whippy that it is capable of being almost tied in a knot. Thus it is very much a matter of fancy allied to general practice, and one cannot lay down a hard and fast law. In buying a new rod, therefore, go first to a really good maker, and pay a fair price for the article purchased. Secondly, choose that which suits best the amount of personal strength possessed as well as its general adaptability to the hand and arm intended to wield it.

A plain, free-running, check winch is the best, with the handle affixed to the plate. It is far better than the old-fashioned samples, and is not so likely to catch or hang up the running line. Never be afraid of having the winch too big or of too great a capacity in the matter of holding line. Always provided, however, that the size does not destroy the balance of the rod. In any kind of fishing, a little pokey winch is, in my eyes, an abominable nuisance. I have known salmon anglers who have affirmed that, armed with a winch capable of holding sixty yards of line, they were indifferent as to the strength and game, of the biggest salmon that ever put his nose up. Good anglers into the bargain, but I beg to differ. I seldom go out pike fishing without at least 100 yards of line on my winch; perhaps a little more than is really necessary, but then I fish very fine. But, surely, if the anticipated fight with a lubberly old pike wants say, sixty yards, double, at least that quantity is wanted for a fish which for daring, dash, and determination, could give the best pike that ever bit gimp a very long start, and beat him.

Never use a harsh, hard winch. The easier a winch goes the better, and I am not at all sure that for everything save, may be, fly work, the wooden "Nottingham" would not be the best of all. As for worm-fishing, or angling with the live or dead shrimp, I am confident it would. I shall say nothing, however, under these latter heads, because worm-fishing, to my mind for salmon, barely reads like the thing. Spinning sounds better; and assuredly, if I ever find myself upon the banks of lake or river again, where salmon may be fished for with the spinning bait, I shall use the new "Bell's Life Spinner," made by Alfred, of Moorgate Street, and nothing else, casting with a heavy lead entirely from the reel.

An eight-plait, tapered and dressed line is as good as can possibly be used. Three or four at least should be taken upon any salmon campaign, and of different thicknesses and strength. Heavy rods and extensive far-off casts want heavy lines. Light, easy casts just the reverse. In purchasing the casting line or gut bottom, never haggle about pence. Buy the best, the roundest, and clearest gut that can be had, free from specks and flaws, and if you cannot get a tackle-maker to make your three-yard casts to your own order, make them yourself. Never have a bit of binding in a cast at all. Binding frequently serves to cover the sin of careless and bad knotting. Tie your own knots, and there will be far less occasion in the future for frightening the game after a mishap by sitting down upon a big stone and giving vent to heavenly language with the soft pedal down.

Flies are so multifarious in their number, and vary so much for different rivers, that it would be impossible to give a list of them in anything short of the space of a three-volumed novel. I shall therefore say very little about them, because I believe that an ounce of local experience is worth a ton of far-off theory. I certainly do not believe that half-a-dozen flies will kill salmon all over the world, so that my advice would be to an intending explorer, take with you a full list of such flies as are known to be good killers upon the particular water you intend to fish. When at head-quarters, if you have not got precisely what you want, it is probable that either a local fly tier may supply your need, or that a day's post may be equal to the deficiency. For a wonderfully comprehensive list of salmon flies for nearly every river in the kingdom, commend me to Francis Francis. It is a very difficult, if not impossible matter to attempt to impart theoretical knowledge upon the best principle of casting, striking, and so on. If a man can throw a trout-fly well, or even approaching it, a very little practice will make him equal to the far less elegant method of casting over a big pool with a double-handed salmon rod. Apart from that, I do not believe that the most accomplished theorist that ever lived taught much, if anything at all, as to a matter of detail which is, after all that can be said or argued, only to be acquired by knack, constant practice, and considerable personal skill. My best advice to a beginner is, never try too much. Keep the length of your casting line well under your own command, and "long throws," the summit of nearly every fisherman's ambition, will come by slow degrees.

One thing, however, I may add, and cannot impress it too strongly upon the attention of a novice or beginner—never thrash time after time over a rising fish. If you notice a salmon popping his "neb" up, with just a curl, or a little boil in the water, that fish looks likely, very likely. Cast over, therefore, or rather somewhat above the spot where you saw him break, and let the fly sweep gently over him. If after three throws, or four at the outside, he makes no sign, come out of the water, rest him for half an hour, and try him then with something totally and entirely different, both in size and colour, to the first mouthful of feathers and tinsel submitted. If that is refused, again come out, smoke a pipe, or say five of 'em, and then try him with something different again. Another refusal—go home.

A fish that comes up with a thundering splash, throwing himself smack out of water, head and tail up, is no good. He does not mean business, so let him alone. In working the fly with the point of the rod, keep the rod down, and as much line in the water as you can, so long as it works straight. My own idea is that a fly kills best well under water.

With these remarks I shall close my gossip on salmon. If the reader has not gained much, it is simply because under this head I have little to teach from personal experience. If I could spin a more useful yarn I would gladly do it; but I hardly care to make up for my own deficiency by re-cooking the opinions of others, and trusting to my readers' interest in the point at issue for not discovering the robbery.

THE TACTICS OF FISH.

I HAVE before dwelt upon the cunning of the salmon as shown in his sulkying habits when hooked and his dogged resistance to almost every effort by an angler to dislodge him from his fastness beneath a boulder and some overhanging rock, and pointed out the ingenious device of the late Mr. H. L, Rolfe, which in the form of a sheet of paper sent down the line, has never failed to prove an effective ejectment to this stubborn lodger in the deep. All salmon fishers are equally aware of the habit of this fish, when hooked, of the endeavour to dash out the fly or break the gut with its tail. The accepted plan upon such occasions is to lower the point of the rod on the instant of the fish's spring, so that the fish comes down on a slack line, recovering the line immediately. I have known a salmon resort to this trick six or eight times, and not cease until it has become apparently tired from its exertions. Trout have the same propensity, and this "dodge" succeeds more often, strange to say, in the smaller salmonidæ than in the larger, as many an angler, to their great disappointment, can testify. Being prepared for this peculiarity should be the fisherman's constant care. I never knew but once in all my pike slaughterings a jack to essay this acrobatic leap for liberty, but I can recall one case in which a pike exhibited extraordinary evidences of instinct, if not of reason. I was fishing one of the lakes which head the Loddon at Old Basing, then the property of Lord Boston, when, in spinning, I hooked a fish of just over 11 lb. This pike, upon feeling the hooks, made a desperate rush to the extreme end of the lake, clearly defining its exact passage in the water by the small fry which leapt above the surface to avoid their fell enemy. I had, however, got my prey so well in hand that all its visits to the air were futile. I contrived to turn him, and had brought him some distance home, when he made a desperate effort, and taking out about twenty yards of line, made for a small bunch of reeds in the centre of the pool. With regard to this vegetation, I had been cautioned by the keeper, as the foundation of it was the stump of an old willow, which had been dragged there, armed with nails to prevent netting. Round this formidable obstacle the pike carried my line, and the keeper gave the fish up for lost. Not so did I, but placed my rod with some loose line drawn from the reel on the side of the pool, lighted my pipe and sat down to bide my time, or rather that of my quarry, with the assurance to the keeper that, as the fish had coiled the line round this impediment, the chances were it would soon free itself. This it did, when another succession of somersaults followed. They proved, however, unavailing; and, as a last resource, the pike plunged into the reeds, and catching firmly hold of a mouthful of stems with its jaws, struggled and shook its head with great energy, as if to tear out the flight of hooks. The water being beautifully clear, and the bottom of silver sand, every movement of the fish was distinctly discernible, and a greater example of the expedients a fish would and could resort to for life, I never before, nor since, have witnessed. How often similar proceedings in other fish may have taken place in water too opaque to watch their movements, it is difficult to say. But I have no doubt that the cunning of the pike may have such resources as I have here spoken of, and others which it only required the pellucidness of their natural element to render manifest.

It has been often urged that it is the nature of fish, when thrown alive on the land, to turn their heads to the water and make for it if possible. This may be done if the grass is wet and the soil slimy; but my experiences do not prove this, excepting with eels, as a rule. The fact is, that the experiments I have seen tried by others, have almost invariably been practised on sloping banks, the tendency, therefore, by the slightest movement of the fish, being to bring them closer to stream or pond.

Those who have seen greyhounds coursing a hare, and the doublings of the latter, will have observed somewhat the tactics of a pike in pursuit of a dace or gudgeon. The only way in which the victim can escape, and that perhaps only for a time, is to leap upwards above the surface of the water, and which permits the pike, incapable of checking its impetus, to pass under it. But a very few leaps of this sort exhausts the unfortunate bait, and let the destroyer once pass its victim, it will then, with that powerful rudder, the tail, describe a semi-circle round it, which causing a strong vortex, brings it within the fatal snap of its relentless jaws. This process may be witnessed on a larger scale in the clear green sea-water of the ocean, when the flying fish are being chased by the voracious bonito. The perch, I believe, from observation, does not select a single fish and pursue it to the death, but after driving a shoal of fry into shallow water, makes a headlong dash amongst the lot, and seizes right and left all that are within his reach. There are, however, instances in which fish intended as a meal for both pike and perch escape, with, it may be, the loss of part of their tail, or a liberal reduction in the size of their bodies, from the teeth of their tormentors.

Now, it is a notable fact that the subtlety of the salmon in seeking an escape from the angler, by a resort to the crevices of rocks, and that of the pike, as related above, are attributed in their quality of the carp. William Pilkerton, in Pennell's "Fishing Gossip," in relation to this fish says: "The well known Horatian motto, *Carpe diem*, might, without any great violence to the original, be rendered, catch your carp to-day, if you can, for the cunning customer may not be inclined to give you a chance on the morrow." Its suspicious carefulness is almost proverbial among fishers, and it even contrives to elude the fatal sweep of the net, as described in the *Prædium Rusticum*, by Vanière, who has not inappropriately been termed the French Virgil, and is thus translated by Duncombe:—

"Of all the fish that swim the watery mead,
Not one in cunning can the carp exceed,
Sometimes, when nets enclose the stream, she flies
To hollow rocks, and there in secret lies;
Sometimes the surface of the waters skims,
And springing o'er the net undaunted swims,
Now motionless she lies beneath the flood,
Holds by a weed, or deep into the mud
Plunges her head, for fear against her will
The nets should drag her and elude her skill;
Nay, not content with this, she oft will dive
Beneath the net, and not alone contrive
Means for her own escape, but pity take
On all the hapless brethren of the lake,
For rising with her back she lifts the snares,
And pets the captive with officious cares;
The little fry in safety swim away,
And disappoint the nets of their expected prey.

A subject of this kind must necessarily take of a discursive character, but I had intended it to have had its methodical sequence; as, for instance: (1) The tactics display by fish in their pursuit of food; (2) When taken and its doubtful character; and (3) When captured, and trying to escape. But one division, as the facts occur to me, I have found running so much one into another that I have preferred the more conversational, rather than the conventional mode of treatment.

It will doubtless occur to the icthyological scholar that the above lines in reference to the carp would almost literally apply to the family of the mugil or mullet. And here I would ask permission to correct a common error, which confounds two distinct fish which differ in almost every characteristic of form, colour, and habits—namely, the grey mullets with the red or surmullets. Oppian, of the mullet, says:—

The mullet, when encircling lines enclose,
The fatal threads and treacherous bosom knows.
Instant he rallies all his vigorous powers,
And faithful aid of every nerve implores;
O'er battlements of cork undaunted flies,
And finds from air th' escape that sea denies.

There is, however, here no friendly mud to help the fish, as the net for the mugil is shot near the shore, where its leaded bottom reached a hard, gravelly, or consistent sandy ground; but the watchful eye of of the fish, as soon as it discovers the barrier of restraint, instead of rushing to the only but yet distant opening, which it might not be able to reach before the tide ebbed, boldly essays to spring, or rather tumble over the headline, and when one succeeds, all the rest will be sure to follow.

CREEL.

[We have frequently seen pike spring from the water when we have been playing them.—ED,]

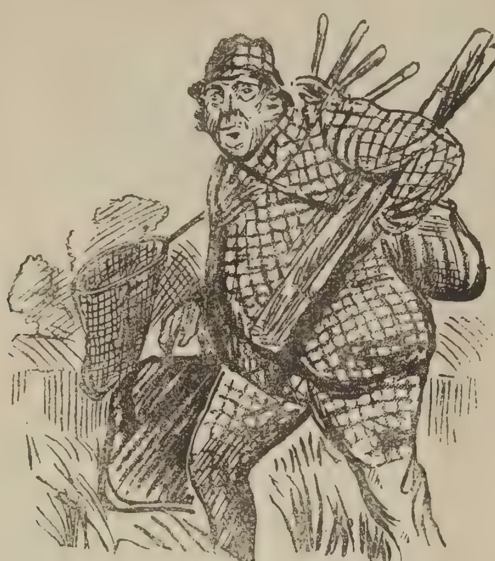
(*To be continued.*)

THE BROADS AND RIVERS OF NORFOLK.

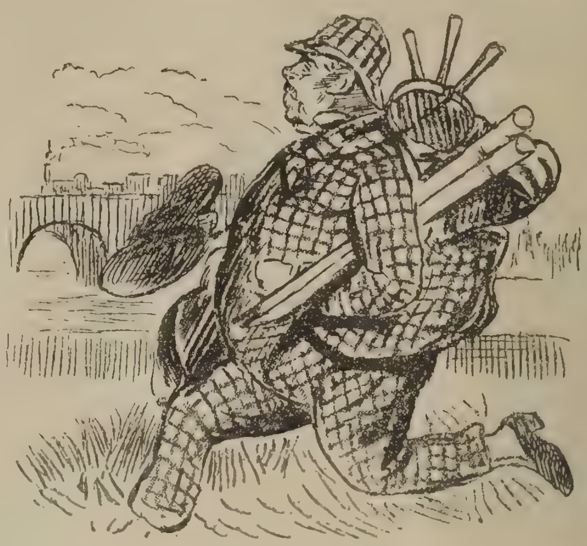
THE "Broads and Rivers of Norfolk," with chart map showing the various points of interest, railway lines and stations, is the title of a most useful little sixpenny guide, which has just been published by that friend of anglers, Mr. P. Soman, *Argus* office, Norwich. We have so often expatiated on the splendid free fishing which the Norfolk rivers and broads afford, that it must be unnecessary to say more in their praise. They afford by a long way the best, most accessible, and cheapest fishing for roach, rudd, bream, pike, perch, &c., in the United Kingdom. Railway travelling on the line of the Great Eastern is extremely cheap, and most liberal reductions are made to club anglers; this line opens up all the best fishing. Living at the river side inns is both good and cheap; the rivers teem with fish, so much so, that the catches are estimated by the stone weight instead of by the pound. The air is splendid, and there is a peculiar charm about the scenery on these broads and rivers which never tires.

The author of the little work before us is a most enthusiastic admirer of the Dutch-like character of the country he describes, with its dykes, windmills, reed-fringed rivers and broads, vast expanse of meadow-like marshes dotted with fine cattle, with here and there a gentle tree-covered elevation. Norfolk is a perfect angling paradise. Next to salmon and trout fishing, we know nothing so delightful as an angling holiday spent at some quiet inn on the Yare or Bure, varied with excursions to the different broads, and trust before long to renew our acquaintance with them. We have sent many a London piscator to Norfolk and have invariably found that when once they have been, anglers always look forward with pleasure to future visits. To those who contemplate going, we would say get Mr. Soman's little guide, which gives abundant information for anglers, and if further particulars are required, call on Mr. C. Greene, the tackle maker, of Norwich, who will fit you out with the proper tackle, and tell you where to begin.

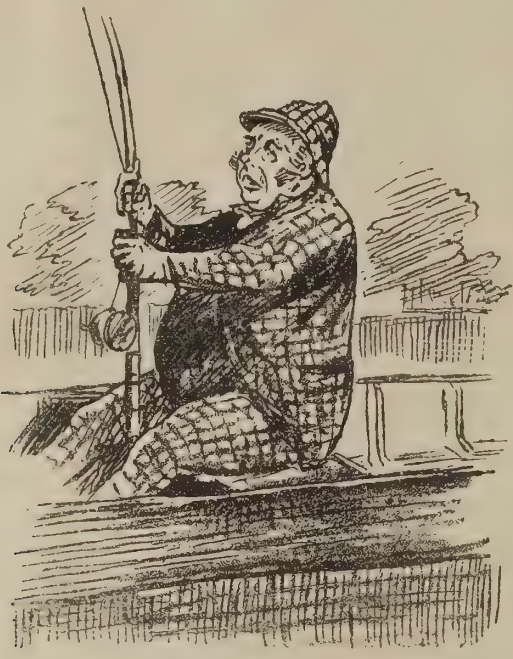
GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]



THE "COMPLETE" ANGLER.



WILL HE CATCH IT?



"GOT HIM ON!"

A FAMILY PARTY.

LODDON WATERS.

NOTES ON THE BLACK BASS.

By R. B. Marston.

The late Mr. Frank Buckland, in his work on "British Fishes," devoted considerable space to the description of such foreign fish as he thought would be desirable additions to our rivers and other waters. With reference to the black bass, he says:—"Among the perches that promise well for acclimatisation the fish which seems to me the most suitable of all is the black bass. In December, 1878, Mr. Begg, a Scotch gentleman who has a residence near Lake Huron, brought to England some living specimens of black bass from the St. Lawrence. Most of these were sent to Mr. Mason, of Eynsham Hall, Oxford, and Mr. Begg himself took a number of them to Dunrobin Castle, the seat of the Duke of Sutherland. It is to the Marquis of Exeter, of Burghley House, Stamford, that English fish-culturists owe the present acclimatisation of black bass in this country. Mr. Silk, the able and successful pisciculturist to the marquis, has been twice to America, at his lordship's expense, to fetch these bass. Mr. Silk kindly gives me the following report of his expeditions. The pains he took to obtain success does him the greatest credit." Mr. Buckland then quotes Mr. Silk's account of his first expedition in 1878, when he left the Delaware River with 250 fish, and got 153 of them safely to Stamford, and of his second expedition, in 1879, when he started with 1,200 and brought 812 alive to Stamford. Most of these fish were placed in a lake belonging to the marquis, called Whitewater.

The next importation was in the spring of this year, when Mr. George Shepard Page brought over some dozens of large fish for the Duke of Sutherland. We published an account of Mr. Page's work recently.

Value of the Black Bass.

Thirty-three years ago, "Frank Forester," the Izaak Walton, of America, wrote thus of the black bass in his work on "Fish and Fishing in America." And it must be remembered that Frank Forester was a thorough sportsman, well acquainted with salmon and trout fishing. He says "The black bass is one of the finest of the American freshwater fishes; it is surpassed by none in boldness of biting, in fierce and violent resistence when hooked, and by very few only in excellence upon the table."

Mr. Charles Hallock, formerly editor of *Forest and Stream*, one of the best sporting journals in the United States, thus refers to the black bass in his most valuable work "The Sportsman's Gazetteer."

Among the various candidates for popular favour for introduction into new waters, the the black bass has always deservedly occupied a very high place. The excellence of its flesh, its rapid growth, its endurance, and its game qualities, all contribute towards this appreciation. Its great merit lies in the fact that it requires no care in the way of culture, since a few pairs transferred bodily, will in time furnish a numerous progency. In consequence of its habit of making a nest and guarding it against intruders, the fish is enabled to readily secure the perpetuation of its race." . . . He then describes the almost endless kinds of flies and baits with which the fish may be captured, and says: "A heavy bass breaking water and leaping three feet into the air at the end of fifty yards of line and a light rod, is a sensation which, once experienced, will not soon be forgotten." In another place he says "no opportunity should be lost for enlightening those who look to his active qualities for superlative sport."

The only objection I have ever heard raised by English anglers against the introduction of the black bass, is that he will clear out all the other fish. But this is quite a mistaken idea. Mr. Hallock says on this point:—

"Many writers have maintained that black bass will in time destroy all other fishes which may be found in the waters into which they are introduced. I have never supported this theory, and careful observation disproves the charge Professor M. G. Ellzey, one of the fish Commissioners of Virginia, says:

"'I have repeatedly fished in the upper waters of the Roanoke for two years past, where bass have been plentiful for many years, and I find the usual varieties of catfish, suckers, sunfish, chubs, minnows, etc., existing in great abundance in the same pools in which I have been in the habit of catching the black bass. I have recently observed the same thing with regard to a large tributary of the Potomac river, in which I have fished ever since I was four years old. Notwithstanding the presence of great quantities of bass, the chub, sunfish, &c., have never been more abundant in the stream than now. Notwithstanding what has been said and supposed, the bass fishing on the Potomac has never been better, nor have the smaller varieties of fish appreciably diminished in that river. In almost all the streams that run into the Ohio river bass exist along with great abundance of other sorts, and here they have existed ever since the discovery of the country. It is, therefore, plain that, as a general thing, fish are incapable of exterminating other sorts in the open waters of running streams.'"

The reason he gives is that the natural food of the black bass consists of the small shell-fish, fresh water shrimps, crayfish, creepers, &c. No one pretends that the black bass if placed in a small confined water, where it cannot get sufficient natural food, will not feed on other fish, because it will; but it must be remembered the black bass is a vastly superior fish to any of the common white fish it may destroy. No one would think of putting them into trout and grayling streams!

Mr. Seth Green, whose name as a pisciculturist is so well known, in his work, "Fish Hatching and Fish Catching," says: "The black bass are courageous and never give up their lives until after they have made a good fight. As soon as they are hooked they throw themselves out of the water with a rush, and endeavour to smash the line, and shake their heads fiercely in their attempts to dislodge the hook. When they jump out of the water it is well to drop the point of the rod, as, if they succeed in flinging their broadsides on the line, they are apt either to snap it or tear out the hook. They are rarely brought to the net till they have leaped a half-dozen times from the water, sometimes as high as three feet from its surface. The thrill of dread which this manœuvre on their part arouses in the mind of of the fisherman is never staled by repetition, and there is no assurance of safety till the bass is fairly landed."

Dr. J. A. Henshall has written quite a large and very valuable volume on the black bass. It was reviewed in this paper some months ago.

The Black Bass as a Poor Man's Fish.

Although it rises well to the fly and affords the fly-fisher superb sport, the poor angler will find he can take the fish with just the same baits that the uses for jack, perch, roach, &c. Mr. Parker Gillmore, the well-known English traveller and sportsman, who is thoroughly well-acquainted with all the best fish and fishing in the world, writes thus of the black bass:—"I fear it will be almost deemed heresy to place this fish on a par with the trout; but I am bold and will go farther. I consider he is the superior of the two, for he is equally as good as an article of food, and much stronger and untiring in his efforts to escape when hooked."

The Colour of the Black Bass.

The following notes is taken from "The Book of the Black Bass," by Dr. Henshall of Cincinnati—a very capital book by the way. "The external appearance of the fish, as exhibited in the colours and markings, differs so greatly and constantly in different parts of America, that it would be useless to describe them minutely in a specimen from any given locality; for, as the vernacular names of fishes are usually bestowed with reference to the outward peculiarities of colouring, this has already given rise to much confusion in naming the species. Thus they are called black, green or yellow bass, respectively in different sections of the country; and not without reason, for black, green and yellow are the predominating primary colours of the two species. The colour, however, is always darkest on the back, with a gradual shading or paling towards the abdomen or belly, which is always white or whitish. There are two species of bass—the small mouthed and the large mouthed, both equally game fish according to Dr. Henshall. The bass spawns in the spring, it builds a nest in the gravel, and the parent fish protect the eggs and fry in a remarkable and most pertinacious manner. They hibernate in the winter."

BARRACUTTA FISHING OFF CAPE OTWAY.

It is many years ago, and I have forgotten what we had been up to, but I distinctly remember that we had to pick a considerable quantity of oakum as a punishment, instead of going below with the rest of the watch at eight bells, and as we sat on the deck on the lee side of the wheel-house—immediately under the watchful eye of "Old Blowhard," the first officer—we arranged the following little scheme, which gave us our revenge upon our old enemy, and also provided us and our hungry messmates with a feed such as we had not known for many a long day.

My chum in disgrace, like myself, was a middy, along with five others, on board a Melborne clipper. Our indulgent friends and parents had provided us with an abundant store of provisions on leaving London; but, as usual, we were robbed on all sides, and the result was that at the end of a month we were daily fighting for our "whack" of the ship's allowance. We were also in much the same predicament with our outfit. Mine cost, at least, fifty pounds; but on the day in question my best suit—in fact, the only suit that I had—consisted of a dungaree jumper and an old pair of canvas pants. I was not a bit worse off than my unfortunate messmates; we had been most unmercifully plundered by all hands, consequently it is not to be wondered at, that when we had lost everything we should in our time follow the example of our elders. When matters had arrived at this state, we held a conference in our cabin, to consider the situation. My particular chum, Deaf Ned, was voted to the chair, and before the meeting was broken up by the officer on watch, who suddenly appeared on the companion ladder, blessing our heavenly bodies, and ordering the watch aft to heave the log, we had taken our solemn oaths, on the bottom of an old tin pannikin, that we would stand by each other in our struggle for something to eat, instead of daily half murdering each other, as had been our practice when the grub was served out. Deaf Ned was a character, and as we sat on the lee side of the wheel-house picking oakum he appeared to me to be working out some problem in his mind, which caused me to ask what he was thinking about; for I felt certain that he was arranging some plan for clearing the steward's pantry, or else he had discovered some loose boards in the store-room bulkhead. He, however, cleared the matter up, by asking me whose watch it was from twelve till four, meaning the first watch next morning. I replied that it was mine. "Well," said he, "I'll tell you what the game is. I heard Old Blowhard tell the steward that we should be off Cape Otway by midnight, and that he was to get the fishing lines out and ready for him when he came on deck at twelve o'clock; he says he always catches plenty of Barracutta just about here." "Now," said Ned, with a twist of his lower jaw which indicated that he meant to eat some of them Barracutta; "how shall we work the oracle, eh?" We considered the matter over, and as I was in Blowhard's watch, I was of course to be one of the principal actors. We arranged our plans, and at twelve o'clock that night I turned out of my bunk in high glee at the prospect of doing Old Blowhard once. He was on deck mustering the watch, I was just in time to answer my name, which he always called out first, to catch me if he could. "Tomkins," he cried out in his peculiar style. "Here, sir," I answered. "Hallo, what's up now?" exclaimed he, as I surprised him with my ready answer, which, I must confess was something unusual, as I generally had to be roused out of my bunk with a sea boot or a wet swab. "Go aft, Tomkins, I want you," said he, after the muster roll was finished. I did so, and found a long fishing line baited with a piece of white rag and ready for putting over the stern, on the weather side of the wheel-house. "I'm going to do a bit of fishing to-night, Tomkins, and I want you to watch the line," said he, as he lowered it over the stern. "Yes, sir," answered I, manifesting great interest in the performance. "You must keep your eye lifting on the line, and as soon as you see anything flacker up at the end of it "you must come and tell me." "Yes, sir—yes sir, I'll come and tell you, replied I, rather too eagerly, which caused Old Blowhard to look out of the corner of his eye at me in a very suspicious manner as if he doubted my word; but as he was certain that I could not pass him with any fish without his seeing it, he took no further notice but left me to watch the line. The night was very dark, but fine, and as soon as Old Blowhard had left me, I heard a very low whistle over the ship's stern; and, looking over, I saw my chum's head out of one of the stern ports, which had been opened during the day to ventilate the state room, which was undergoing a thorough cleaning out, and consequently empty. Deaf Ned was there, ready for action, and as soon as Old Blowhard's back was turned, I lowered the bight of the fishing line to Ned, but held the fag-end in my own hand. We had previously arranged on a system of signals, so that in reality it was Ned that was fishing, and I was watching Old Blowhard. Ned must have been very careful in getting through the saloon into the stateroom without being seen, and I was just thinking what a clever fellow Ned was when I saw a tremendous flackering up in the water about one hundred yards astern, and I could hear Ned hauling the line in, hand over fist, into the state room port. I anxiously watched Old Blowhard, who had just returned on deck from his cabin, where he had been cutting up a pipe of hard tobacco. I kept my eye on him, and every now and then glanced over the stern to see the struggling fish that Ned was hauling in. In about three minutes it was safe into the port, and as quickly as possible the line was thrown out again. A low whistle, and Ned put his head out of the port. "It's a plugger," whispered he in an undertone, and quickly drew his head in again, and I had only just time enough to give him the signal to let go the line when Old Blowhard came aft. "Felt a bite yet Tomkins?" "No, sir," I replied "I haven't." "Well, that's strange; there's plenty of Barracutta off this coast. Give me hold of the line." I did so, and he hauled it in to examine the hook, which appeared to be all right, and he threw it out again and walked away. Our plan was a perfect success, so much so, that before daybreak Ned had four skelping big fish safely stowed away in our cabin. About half-an-hour before the end of the watch we had a smart shower, accompanied by a squall of wind, which increased to a strong southerly buster. Sheets and halyards were let go, and as the watch was nearly up, all hands were called. I rushed below to call the mids. Ned was peacefully slumbering in his bunk. He thought it was Old Blowhard coming; there was a rush for the oilskins, and I put the first one on I got hold of. Ned did the same, and we were soon hurrying up aloft to stow the royals and top gallant sails. Old Blowhard caught sight of us going up aloft with our macintoshes on. "Hey, you young lubbers, come down and take them things off," shouted he, pointing up to us. This just suited him, he knew we should get soaking wet to the skin. There was no help for it, so down we came and took them off. He grinned with delight as he put the macintosh on that he had just taken from Ned, and he walked up and down the deck in it, every now and then looking up at us poor wretches who were hanging on to the yards wet, to the skin. It was full daylight when we came down from aloft, and I was nearly on deck when a sight met my gaze that almost paralysed me. The captain and all the officers were on deck standing round Old Blowhard; they seemed to see something about him that caused them to laugh most immoderately. "You must have had a good night's sport among the Barracutta," remarked the captain quizzingly. "No, sir; never a fish," replied Old Blowhard, looking round to see the cause of the fun. "That's strange," replied the captain, "I thought you had caught so many that you had to carry them away on your back. Come, Mr. Blowhard, where are they. We'll have them for breakfast. This was too much or Old Blowhard. He soon had the macintosh off; and, to his astonishment, saw that the back was covered thick with fish-scales, perfectly fresh. He laid it down on deck, and gazed upon it with an expression on his face that clearly convinced me that he was getting ready for somebody. This caused me to reflect that the sooner I got forward into our den the better it would be for me, but I was too late, he twigged me dodging behind the companion hatch. Ned was surveying the whole scene from aloft, hid behind the mast, in the mizen-top. "Tomkins, my boy," exclaimed Old Blowhard, "come here a moment." "Yes, sir," replied I, very meekly. "Whose macintosh is that?" said he, pointing to that unfortunate garment spread out on the deck. "It's mine, sir." "Is it, now?" replied he, with a leer on his ugly face, that was scarlet with rage at being humbugged in such a fashion in the presence of the officers, who enjoyed it immensely. "And you didn't catch any fish this morning, did you?" "No, sir, I didn't," replied I, growing bold at seeing the officers enjoying it so much.

It would have gone very hard with me if the captain had not been there; but as Old Blowhard could not get anything more out of me, I was sent up to the mizen crosstrees for half a day as a punishment. But I had the satisfaction to know that my hungry messmates would have a rare feed, and that they would save me a tit-bit.

Deaf Ned saw all that had taken place from his hiding place in the mizen top, and as I passed him on my way up to the crosstrees, he promised to look after my interest as far as the feed was concerned, which he did, and when I came down at midday I found a rare feed of cooked fish and half a loaf of soft tack stowed away in the head of my bunk; and what was more surprising to me, I was presented with half a bottle of pickles by my grateful messmates, as a token of their gratitude for the share I had taken in the Barracutta fishing. I never asked where they got 'em from, but guessed that Ned had been round the steward's pantry.

Africander.

THREE WEEKS' HOLIDAY IN NORFOLK AND SUFFOLK.

THE first fortnight of my holiday was spent at Lowestoft, which is a most enjoyable place; and I think a short description of the town and surrounding country will not be out of place before I come to the more weighty matter of angling. The town, in which is comprised the village of Kirkley, claims to be of more antiquity than Yarmouth, which the following amusing anecdote exemplifies: "At the time the learned Potter was vicar of Lowestoft he received a letter from the Archbishop of Canterbury, which was addressed to him at 'Lowestoft, near Yarmouth.' Potter, apparently indignant at the slight thus put upon the town and its more ancient condition, in his reply to the Archbishop added a postscript, in these word: 'My lord, when you direct to me again be pleased to write simply Lowestoft; Lowestoft does not want Yarmouth for a directing post, for Lowestoft was, ere Yarmouth rose out of the azure main.'" Among the attractions of the town are the Bell Vuė Gardens at the north end, which have a most lovely view of the sea and denes. The walk along the denes is most beautiful, their sides are clothed with heather, bracken, gorse, and most lovely moss; also at this end of the town there are two most powerful lighthouses—one a revolving light the other a stationary one; at the south end there is a capital tennis-ground. The principal hotel in the place is the Royal, which, from all accounts, is most comfortable. But the greatest attraction, to the angler at least, is the harbour, which is most extensive—it is formed at the mouth of the river Waveney; a few miles up is Oulton Broad, of which more anon. One of the sides of the harbour forms the pier, which is 1300 feet in length, and form a splendid promenade; half-way down it is a reading-room and a band-stand, where a band performs twice a day during the season. But to return to the harbour. It was constructed by Sir S. M. Peto, in fact Lowestoft owes most of its present prosperity to that gentleman, who purchased Somerleyton Hall, a most magnificent place, a few miles from Lowestoft. Its present owner, Sir Saville Crosley, kindly gives leave to the public once a week to view his grounds and conservatories, which well deserve a visit. I suppose they must be some of the most beautiful in England, they are especially famous for their fuschias. But to revert to our subject—the harbour and the fishing there. The fortnight I was there was most unfavourable to anglers; but every morning I saw numbers of visitors of all ages and sizes trying their luck in the harbour. The tackle they used mostly was a running-line float and gut bottom, two or three hooks, the lower one just touching the bottom. I also saw several paternosters in use. The principal fish caught are smelts (which the natives call cucumbers), dabs, eels, small plaice, whiting and occasionally a small turbot. It was not my luck to catch anything of a reasonable size, a few nice smelts and some small eels and dabs were about all I caught. But though not successful myself, I saw several nice fish caught, among others several eels of 2 and 3 lb., and one nice turbot of 2 lb. The baits principally used are shrimps, with and without their skins, and fresh herring; these can always be obtained from boys, who drive quite a lucrative trade in selling bait. Apart from the angling, the harbour is a very pleasant place to spend a morning in; fishing-boats are continually arriving and delivering their cargoes. There are two very fine fish markets on the quay, one for flat fish and the other for herrings. The amount of fish that comes in is something enormous. It is very interesting to watch the fish brought ashore, especially the coarse fish, as with them there is more variety. One day a most magnificent sturgeon was brought up, weighing 22 stone—it was a monster. I also saw some John Dorey and a variety of curious fish.

I was particularly struck with the immense size of the halibut, and was told by the fishermen that they had seen them weighing—well, I should not like to say what, they may have been humbugging me. While you are staying there, if you want a good, fresh, cheap dish of fish, go down to the market when a boat has just come up, then's your time for a bargain. Now for the herring market: this is much newer and is very spacious, the quantities of herrings brought up is wonderful, but even their numbers pale before the numbers which are brought up at Yarmouth. It may be interesting to some to know how much netting is taken on board a smack. "The boats take from 101 to 161 nets each, each net of an average length of about 50 feet and 12 feet in width."—Wall's "Guide to Yarmouth."

Both at Lowestoft and Yarmouth, there is splendid fishing for the angler from the beach for codlings, the water being very deep close in shore—in maps it is marked as the "five fathom line." The *modus operandi* is as follows:—A line from 50 to 80 yards in length is attached to a weighty piece of lead, which has joined to it a ring; the line must be armed with as many hooks as the owner may fancy and baited with *fresh* herring, but the great art is the throwing out. To accomplish this satisfactorily it is necessary to have a stick—a broomstick, I believe that is what they use. At one end a spike must be inserted, now put the ring which is on the lead upon the spike and hold your stick in both hands, give it a good swing and out goes your line; after a little practice it can be thrown to a great distance. The sport obtained is thus very exciting, two or three codlings being often brought up at once, and their weight varies, I am told, from 1 to 6 lb. You hold this line in your hand, and tell by the jerking when you have a bite. It is no use beginning this fishing much before the 1st of October. Now for the fresh-water fishing in the Broads close to Lowestoft. I write of them as I found them; I dare say I am not competent to form an opinion, as I had not many opportunities of trying their capabilities, and had no friends to show me favourable spots. After fishing in three of them, I formed the opinion that, to obtain much success you want to know them well, or to have a friend with you who knows them. My first visit was to Oulton Broad, which, as I said before, is two or three miles up the river. Starting at Lowestoft at about nine o'clock a.m., you are landed at Mutford Bridge station after about a quarter of an hour's journey; there you alight, and after a five minutes' walk come to an inn, which, if I recollect rightly, was called the "Sportsman's Arms." There you can obtain bait for yourself and the fish, ground-bait, and boats; the charge for the boats per day is 2s. I can't say I think much of their worms, which are most peculiar reptiles with bluish heads. the ground bait is very tolerable, a mixture of bran and meal I fancy. The only thing I objected to in my boat, was that they gave me a pair of sculls each about six inches too long, and at the end of the day I hardly had a piece of skin left on my knuckles. It certainly was my own fault for not looking after them better. One piece of advice I give to all who intend fishing there—be sure and see that you have an anchor at each end of your boat, or an anchor and a pole; it is most disgusting to find that when you have baited a place your boat has swung round. That is how I was taken in; but for all that I had a most enjoyable day, though the sport was not good. I tried several places, the perch absolutely refused to bite at all, they evidently did not like the worms, then I tried for roach with paste, leaving my paternoster to take care of itself. With them I was more successful, but at the end of the day I had only about a score nice ones. About four o'clock I heard the pike begin rolling about in a shallow place, so I caught some bait, and rigged up a rod with snap tackle, and went to try my luck among them, but with no result, except that of losing my temper—well, it was enough to provoke a saint to see those pike striking out all round and not getting a touch. I am sure there are many heavy ones among them; I advise anyone going there to try that place, it is easily found, it lies on the right hand of the entrance to the river which leads to Norwich, at least I think it does; any way, the boatman will show you the place; he told me there were tons of pike there. The Broad is a beautiful piece of water, and very large. There are several nice yachts on it, both steam and sail. Being so close to the sea, it must be the very place to keep a boat on. I was told, but I cannot vouch for the truth of it, that there are some sea trout in Oulton. I should think it very doubtful if there are. My next visit was to Fritton Decoy.

Y. Piscator.

(*To be continued.*)

FLY-CASTING MATCHES AS PRACTISED IN AMERICA.

We asked Mr. Geo. S. Page if he could give us any particulars of the fly-casting tournaments in the States, and he has very kindly obtained the following most interesting information from Mr. Reuben Wood, the present champion fly-caster.—Ed.

"July 13, 1882.

"To Geo. Shepard Page, Esq., London, England.

"Dear Sir,—Your very kind favour of June 28th just at hand, through *Forest and Stream*.

"I herewith enclose printed rules as desired, taken from published report of the State Association. I would add, no person is eligible to enter a contest unless a member of a club in good standing, and the club one of those forming the State Association, for the protection and propagation of fish and game.

"The intention of the originators of these contests, I think, was to encourage and instruct amateurs in fly-casting; but, by some means, of late years the judges have laid but little stress upon any of the points except distance, a ruling that, while I stand unequalled for distance, I deprecate, from the fact that while a man may be able to cast a long distance, he may at the same time do it in a most awkward manner, and in the nice points in handling a fly-rod for fishing, such as "accuracy" (in being able to cast his fly direct to a certain spot), "delicacy" (in being able to drop his fly lightly upon the water), and "style" (being able to handle his rod easily and gracefully, using both hands equally well, in fact, a practical flyfisherman), be entirely deficient.

"The art is, as compared with England, new with us, and I am sorry to say our best fly fishermen do not, as a rule, attend our contests, for the reason that they are held in connection and in a measure as a side show 'to the Grand Pigeon Slaughter,' the grand object of the gathering, rather than the object originally intended when the Association was formed, and as the name of the Association would imply—"For the protection and propagation of fish and game."

"I would advise (1.) Keep your fly-casting entirely separate from any other sport. (2.) Choose your judges from your old men who have a reputation and a thorough knowledge of the art as practised, and required to capture the wily trout.

"As to our records on distances Seth Green has a record, made at Syracuse, in 1869, of 84 feet; from the best sources I am assured that it was guessed at, as it was the first year any report was made of the length of cast. For the next two years no record was kept. In 1871, the best cast was 65 feet with 12 feet 3-inch rod; salmon-casting, rod 17^3, 80 feet; 1872, Seth Green, 65 feet, 1st prize, length of rod not given; 1873, no record given, I took 1st, casting 65 feet with a heavy wind; 1874, R. Wood, 1st, 68^6, 11^6 rod; 1875, R. Wood, 1st, 75 feet, 12-foot rod; 1876, R. Wood, 1st, 69 feet, 12-foot rod; 1877, Iva Wood, 72 feet; 1878, my brother and I let Seth win with a record of 70 feet, 12-foot rod; Rochester, 1879, we did not cast. J. J. Meldram, one of my pupils, 66 feet, 12-foot rod. Salmon casting, Meldram, 1st, 72 feet; 1880, Ira Hood, 1st, 70 feet, 10^6 rod; 1881, R. Wood, 1st, 75 feet, 10-foot rod. Salmon casting, R. Hood, 1st, 110 feet; Ira Hood. 102^{10}, 17-foot rod; H. Prichard, 92 feet, 15-foot rod; 1882, R. Wood, 1st, 75 feet, 10-foot rod. You will observe the rules allow 5 feet to the foot for excess of length in rod. We think it too great, yet have followed the rule for years.

"The State Association owns, and we use for measuring distance, a cord with buoys attached, weighted underneath, so that when the cord is stretched the buoys stand upright, and the numbers easily read for some distance. Buoys placed 5 feet apart. Our first buoy is marked 25; a knot is tied in the rope at zero, that is, drawn to the stake from which we cast, so that the buoys register correctly. The odd feet between the buoys are estimated, if the full distance is not reached, as it would take so many buoys to mark every foot. Thus, I believe, I have given you all the points on fly-casting.

"As to black bass, we find them nearly, if not quite, as gamey fish as the brook trout. They attain a weight of nearly, or quite, 6lb. In a swift, rocky stream a two pounder will give any man all the proof he may require on this head. We are stocking many of our depleted trout streams and inland lakes with them, and prize them very highly, not only as a game fish, but as a table fish. If any one finds their peculiar flavour too strong, skin them, and most of it is lost. You cannot find a fish, other than the trout, within my knowledge, that will give you the sport they will.

"I think I have given you all the points you require; but if not, shall be pleased to reply to any future inquiries you may make. Keep your fly-casting separate from all shooting, and you will find that it will raise your standard, and increase your fly fishermen. And every new fly fisherman I look upon as another fish warden, for he will help you keep the poachers from your streams.

"With best wishes for your success, both in fly casting tournaments and also with your black bass.—I am, &c.,

"Reuben Wood.

"74, South Salina Street, Syracuse,
N.Y., U.S.A."

"George S. Page, Esq.

Rules of N.Y. State Association for Contest in Fly Casting.

No rod shall be allowed over eleven feet six inches, nor less than nine feet six inches in length, and it shall be used with a single hand.

A practicable line and reel shall be attached to the rod.

Three flies, one stretcher and two droppers, must be used, and a casting line or leader of single gut, of not less than eight feet in length.

No attached weight of any kind on the line or fly shall be permitted.

Allowance of distance shall be made according to the length of each rod of five feet for every foot of length, and at that rate for each part of a foot.

Each contestant shall be allowed five minutes for style, delicacy, and accuracy in casting, and five more for length of reach; and, in case of accident, such as parting or fouling of the fly or line, the referee may allow additional time, in his discretion.

No cast shall be valid unless the line be retrieved.

The contest shall be as to distance, accuracy, delicacy, and general style combined; and the distance, if practicable, shall be measured along the water. The casting shall be done with one hand, across, against, and with the wind.

The distance of the casting shall be measured from stretcher fly to the mark that the person casting toes with the advanced foot.

Salmon Fly-Casting.

The foregoing rules shall govern, except that the contest is to be with double-handed rods, which shall not be over twenty feet in length; the shortest length should be stated, as I cast against a grilse rod of fifteen feet with a salmon rod of seventeen feet, having to allow Mr. Prichard ten feet, as difference in length of rod; the casting line or leader shall not be less than ten feet in length. Allowance of distance shall be made for length, but not for weight, and no more than one fly shall be used.

A PLEASANT THING TO "REVIEW."

Messrs. Roper Frères and Cie., of Epernay, have sent us a case of their first quality extra-dry champagne to review! We have reviewed it, and shall keep on doing so as long as it lasts. It is a most pleasant wine, and with a knob of ice in it, makes a most delicious drink this sultry weather. For pic-nics on the river, for banquets, in fact, for all occasions, we can confidently recommend this brand to all who like a dry champagne—infinitely superior to the trashy sweet stuff, in our opinion.

That Yankee who said he "had a thirst on him that he would'nt sell for a dollar," would have appreciated this Roperian draught!

CRITCHFIELD ANGLING SOCIETY.

THE inaugural dinner of the above Society, was held at the Middleton Arms, Queen's Road, Dalston, on Thursday, the 27th ult., when about thirty members and friends sat down to a spread, which, for abundance and elegance, did great credit to the host, Mr. Treasurer Johnson.

The chair was taken by the President, Mr. A. C. Critchfield, who "filled" it in every sense of the term, and was ably seconded by Mr. Charles Hayward as vice.

The Chairman was supported by Mr, Charles Deacon, Mr. John Jones, and other gentlemen well known in the parish of Shoreditch and the Borough of Hackney.

After the viands had been sufficiently well discussed, the time-honoured host of "The Queen and Royal Family" was given, and enthusiastically drunk with musical honours. "The Army, Navy, and Reserve Forces" was also given, coupled with the name of Mr. H. R. Fletcher, late of Her Majesty's Foot Guards, who replied briefly, and, as a soldier should, to the "point."

The Vice-Chairman proposed, "Success to the Critchfield Angling Society," coupled with the name of the President. The toast was received with acclamation, and drank with the usual musical accompaniment. The Vice-Chairman in the course of his remarks, said that this society would acquire a better tone of respectability from the fact of its not meeting on Sundays.

The President then replied in a neat speech, setting forth the advantages of angling to both old and young alike, and expressing an opinion that the society, with the elements it was composed of, and the advantages it possessed, would shortly be second to none, either in number or other qualifications. The toast of "The Visitors" was next given, and duly honoured, to which Mr. John Jones replied, in a sound and practical speech, demurring at the same time, that he was named to reply for "The Visitors," as he had already become a member, and was very proud of this fact.

Mr. T. Glass, in a highly complimentary speech, then proposed "The health of the Secretary, which was very cordially drank.

The Secretary," in acknowledging the compliment, gave the information that twenty-three gentlemen had already been enrolled during this the first month of the society's existence, and that nine more gentlemen were waiting to become members (cheers)

Messrs. Deacon and Merreton entertained the company with duets, &c., during the evening, and Messrs. Ellis, Hayward, Berry, and other gentlemen, enlivened the proceedings with some capital songs, Mr. Lee kindly presiding at the pianoforte. J. F.

P.S.—Some inquiries having been made in a recent number of the FISHING GAZETTE for a society in which Sunday angling was not recognised, the gentlemen enquiring would do well to communicate with the Secretary of the above, who will be pleased to furnish particulars. Address, Mr. John Featherstone, 6, Broke Road, Dalston, E.

FLAMELESS COMBUSTION.

AT the soiree of the Society of Chemical Industry recently held at Owens College, a new theory of combustion was practically illustrated by Mr. Thomas Fletcher, of Warrington, the results being so totally unexpected that many present would, and in fact did, go away with the impression that some deception was being practised. Mr. Jacob Reese, the inventor of the Reese fusing disc, has stated his belief that if it were possible to produce combustion without flame, the temperatures and duty obtained from any fuel would be enormously increased. It has remained for Mr. Fletcher to not only prove the possibility of flameless combustion in more than one form, but also to demonstrate practically the enormously high temperatures which can be obtained by this means. Taking a ball of iron wire about three pounds in weight, Mr. Fletcher placed it on a slab of fire clay, and directing a blowpipe flame on it for a few seconds he suddenly blew the flame out. The temperature increased so rapidly that in a few seconds the wrought iron fused and ran into drops, and this temperature was steadily maintained. The room was darkened, but the closest examination did not show a trace of flame, although the fact that the gas was burning was proved by repeatedly relighting and extinguishing it. The same experiment was repeated in another form by directing the flameless heat into a small fire clay chamber, in which a refractory clay crucible, made especially for nickel melting, was partially fused and worked into a ball like soft putty, the sides of the fire clay chamber being at the same time fused. The heat was so tremendous that the blowpipe laboratory which was given up to Mr. Fletcher for the evening was much too hot to be agreeable, in spite of open windows and ventilators. How far this discovery can be utilised remains to be seen, but it would appear that the presence of flame, usually considered to be a sign of combustion, is really an indication of imperfect results, and the best duty is to be obtained only when flame is totally absent. It is certain that such temperatures as obtained by Mr. Fletcher without flame have never previously been obtained with the fuel used, which was nothing more than a small gas supply for a quarter-inch pipe, assisted by an air blast. As regards the soiree, the society may be considered a promising infant. It is under a year old, and about seventeen hundred were present on Thursday, the building being inconveniently crowded. The meeting next year is to be in London, the president for the year being **Mr. F. A. Abel**, C.B., F.R.S., of the Royal Arsenal, Woolwich.—*Warrington Guardian*, July 12, 1882.

REMEDY FOR TOO-HARD STRIKING.

(Correspondence from the *Field.*)

SIR,—Noticing Mr. Francis Francis's remarks upon too-hard striking in fly-fishing, I thought I would send you a little account of what I consider a perfect remedy for this fault, which nine anglers out of ten are prone to.

I use the very finest-drawn gut I can get in trout fishing, and I used to find that in trying to make a cast when my line was fast, unknown to me, in some bush or snag, I smashed something pretty often, the reason being that I held the line in the grasp with the rod.

But for some time I have adopted the plan of striking from the winch—that is to say, I do not hold the line at all in the hand. Of course, the winch used must be a check winch. I prefer a slight silent check, a check which will prevent a fifteen or twenty-yard cast from pulling off when you draw from the water or make a fresh throw. The advantages of striking in this way are:

1. No matter how hard you strike, you cannot break your line, as it simply runs a foot or so off the winch, and thus gives to the strain after the resistance required to send the hook home has been overcome.

2. If your line catches in an iron fence behind you (about the worst catch you can make), just when you are exerting all your strength for a long cast, and you are holding it tight, you must smash your rod or line; but if you strike from the winch the line runs off, and your rod is saved that heavy "jam" which one always hates to feel. To give a practical instance of the value of this style of striking in grayling fishing, I may mention that last month I was fishing the Yorkshire Derwent in the club waters between Forge valley and Hackness. It was the first time I had fished them, and I got thirty-five brace of trout in four days, the first two days being half spoiled by thick water, I used nothing but fly, the limit is ten brace, and on the last two days I put back five or six brace of good fish. Every fish was struck from the winch, and I rarely missed a fish. In addition to the above trout, I caught and put back at least ten brace of grayling, with which the river abounds. Now I was not fishing for grayling—in fact they were a nuisance, taking up time—and I struck them just as I did the trout, instantly and pretty hard; and yet I do not remember losing a single grayling from too hard striking. Many trout fishers will remember how often they have struck off a grayling's lip.

July 16. R. B. MARSTON.

PANORAMIC RAILWAY GUIDES.

MESSRS. BEMROSE and SON have sent us sixpenny panoramic guides to eleven of the great railways, viz., Great Northern, Midland, Great Eastern, Great Western, London and North Western, London and South Western, South Eastern, North British, Glasgow and South Western, L. B. and S. C. R., and London, Chatham and Dover. These guides are edited by Mr. R. Kemp Philip, and each contains a capital map of the railway it describes. The novel feature in these guides is that, along the centre of each page runs a double line of rails and stations; tunnels, rivers, &c., are marked, and the distances given. On the down and up sides is a description of the scene which presents itself through the carriage windows, and whatever locally pertains to history, biography, science, agriculture, manufactures, or commerce, is pointed out in plain language and readable type.

It will be seen that the tourist who has one of these guides will have a wonderfully entertaining companion, and the angler will find them specially interesting as giving him the names of the many rivers he crosses in his railway journey; indeed, we notice with pleasure that Mr. Kemp has not forgotten to give notes about the angling here and there, and we can assure him that if he will make this feature more general and prominent in future editions, and refer to the fact on the cover, he will find a great increase in the number of his readers. But as every angler possesses, or ought to possess, a copy of the "Anglers' Diary and Guide to Fishing Stations," he can easily supplement the general information of the panoramic guide by reference to his "Diary."*

CAPITAL WADING SOCKS.

MR. J. W. TACON, of 277, High Holborn, sends us another pair of his hand-made fishing socks, which he advertises to send post free for 2s. We have not worn out the last pair he sent yet, and perhaps that is the best testimonial they could have, as all other socks we have tried have been demolished in half the time. Whether for putting on over the waders, or wearing for warmth in the winter, these socks answer admirably and we have pleasure in recommending them.

BLACK BASS FOR GERMANY.

WE learn from Mr. Fred Mather, editor of New York *Forest and Stream*, that he is about to send a number of black bass to Herr Max von dem Borne, Berneuchen, Prussia. We trust that Herr von dem Borne will let us know how his importation succeeds. The black bass is said to be such a fine food fish that, apart from its sporting qualities, it is sure to be appreciated in Germany. We trust British prejudice will not prevent its general introduction into our streams. We mean to do all in our power to introduce it to British anglers, having thorough faith in it.

---

* This invaluable work gives an alphabetical list and particulars of many thousands of fishing places (inland and sea). It can be had by sending 1s. 8d. in stamps to the Manager, the FISHING GAZETTE, 12, Fetter Lane, London.

RIVER REPORTS.

MID-THAMES.

In a morning up we rise,
  'Ere Aurora's peeping;
Drink a cup to wash our eyes;
  Heave the sluggard sleeping.
—J. CHALKHILL.

The best game just now is certainly in the fishing line, to get up early (but hardly before "Aurora's peeping" to my thinking) and before the "madding crowd" is astir, try quiet nooks and corners for perch or chub; but certainly, by all means, "drink a cup" to wash the eyes, if by any means obtainable. To do this comfortably, the keen ones get a little "neat" in the bag over night, and coax the first kindly cow in the morn to dispense the needful vaccine matter. Roach are well on, and the water in the best of trim for this fishing, both for bankmen and puntsters. Chub are being had with fly best, but fine and far off men are having sport with lobworms and cheese paste. Trout are seen everywhere, but gudgeon and barbel, as yet, are not to the fore, At Maidenhead, Captain Haynes, out with Harry Wilder, on Tuesday, took four good trout, best going nearly 5 lb., and second fiddle 4 lb. A piscator resident of Maidenhead, out with L. Wilder, has taken a jack of 5 lb and one bankman is credited with 43 lb.—a miscellaneous bag—of roach, perch, chub and dace. At Marlow, Captain Rawson, out with "Tipney," this week, captured two fine trout, the best a beauty of 5 lb., requiring not only the Captain but two Sergeant piscators to take it prisoner and land it in durance vile. At Hurley, Messrs. Birch, Brookbank, and Bunning have been paying their attention to "all round work" and have got "on the square" with some dozens of beauties. At Medmenham, Mr. Troupe, same few days since, between 4 a m. and 8 a.m. got 10 lb, of chub and 3 trout, all with fly. By the way, I forgot to mention that the Marlow Angling Association have lately turned in 300 trout into their waters below the weir. The Henley Association's first conviction was obtained on Tuesday; G. Arlett, a well-known man in the district being fined £1, and his large cast net being ordered to be destroyed. At Hambledon, on Friday, a pretty lot of trout, 72 in number, were obtained from the brook and distributed in the Hurley, Hambledon, and Henley waters; the fish scaled from ½ to 5 lb. each. Mr. Fowler, with Parrot, in the Henley district, on the 28th ult, got 34 lb. of perch and chub, and a brace of nice trout, all taken near Marsh Pool.

THURSDAY EVENING.—Weather superb, and water of the Thames in spanking trim, but if anything a wee bit too bright.—MARLOW BUZZ.

THAMES (Above Locks).

AT KINGSTON.—Some small jack and chub have been taken. The roach have not been feeding.

AT HAMPTON.—One of the anglers in the Deep took 9 jack. The water is low and bright and the fish quite off the feed.

AT WALTON.—Mr. Abbott, in one day, 7 bream, the largest 4 lb. J. Hone, in five days, 9 doz. of roach, 15 bream (largest 5 lb.), 2 doz. of gudgeon, 1 perch and 1 jack, G. Hone, in one day, 10 bream, 1 roach and 1 chub, and another day 3 bream, 1 perch, 1 chub, and lost a large carp.

AT HALLIFORD.—E. Rosevell, a trout of 3½ lb. J. Pardue, 14 chub; several good takes from the other fishermen, and every punt was out on Tuesday.

AT SHEPPERTON.—F. Pardue, in two days, 5 doz. of gudgeon and 4 perch. H. Pardue, in one day, 4 jack and 2 doz. of roach; and another day 9 doz. of gudgeon and 2 perch. W. Rogerson, in three days, 17 doz. of roach. D. Hackett, one day, 13 perch. W. Hone, 24 good roach.

AT CHERTSEY.—James Haslett, in two days, 7 barbel and two perch; and another day 1 barbel, 2 jack, 12 perch, and 5 doz. of gudgeon. Messrs. Wheeldon and Thurston 27 barbel, of which 15 were put back again. J. Poulter, in one day, 5 doz. of roach and one jack. T. Taylor, sen., 2 doz. roach and dace, and 7 small bream.

AT STAINES.—C. Hone, 4 barbel and 2 small trout. T. Collier, 10 doz. of gudgeon and 6 perch. J. Keene, sen., in one and a-half days, 30 doz. of gudgeon. Mr. Banfield, 14 doz. of gudgeon and 5 chub. J. Keene, jun., 5 jack. E. Keene, 3 jack and Mr. Blackman 3 barbel of 3½ lb. each.—H.

Chichester.

The water here is, although low, in good condition, some fair takes being chronicled the past week. The weather now is all an angler can desire. Good sport is looked forward to. Fish may be seen in myriads, yet are not well on the feed. Some good bream, a roach of 1¼ lb., and some good eels have come to hand, all in greatly improved condition.—GEORGE F. SALTER.

Ilfracombe.

Some good fishing can now be had at the reservoir, for which weekly or monthly tickets can be obtained from the clerk to the Local Board. Sea fishing on Friday and Saturday. Some splendid strings of mackerel were brought in by parties out whiffing. A few boats ran down as far as Baggy Leap, and brought up there catches of bass, averaged about 30 lb. each boat. Sunday 20 crabs where taken from the holes between Hillsborough and Rillage. Monday, blowing strong; fishing parties afraid to venture further down than fresh water, when they out anchor and commence fishing for bream and whiting pout; after two or three hours' sport, they return with from 20 to 40 lb. each boat. Tuesday a small seine was put across the harbour—20 lb. of soles, and a few lb. of plaice was taken from it. Wednesday, a thick fog and heavy sea running; a few boats fishing in shore, caught several pollack and whiting. Fishermen report good prospects of fishing and plenty of mackerel long shore; but the wind blowing strong from the north, there is no chance for boats to get out until there is a shift in the wind, which they hope will be soon. A few small Tamlin cod has been caught from the jetty with rod and line. Very few lobsters has been brought in this week from the pots.—E. COMER.

Lea (Ware).

Several good takes of roach have been made here during the week, principally with the little blood worm, plenty of which are obtainable here in the ditches. One gentleman out the other evening got over 30 roach in less than two hours at the little iron bridge swim, with the baits alluded to. Paste or gentles are of no use while the water continues so bright. The weeds have now been cut, and good sport may be expected among the jack. I hope to be able to report you some good captures next week.—LION AND WHEATSHEAF.

Medway (Maidstone).

Water in splendid condition for all kinds of fishing. Chub are well on and take the fly freely. Roach and bream are biting well early in the morning and late in the evening. Pike are not in good condition, and should not be taken yet. The following fish were weighed in last week:—A. H. Emery, carp, 3 lb. 12 oz.; T. Mellis, bream, 2 lb. 12 oz.; R. Ellerington, roach, 7 lb. 10 oz.; and carp and roach, 8 lb. 3 oz.; A. Emery, bream, 2 lb. 5 oz.; R. Ellerington, roach, 7 lb. 4 oz.; D. W. Pine, chub, 6 lb. 12 oz.; and chub, 5 lb. 14 oz.; A. Roberts, bream, 17 lb.

Medway (Tonbridge).

The water in splendid condition, but no fish ravenously on feed. Bream, roach, and chub have been taken during the week, but the ground fish require well and persistent baiting. All that is required is some settled hot weather.—YE MEDWAY WATER RAT.

Taw and Tributaries (N. Devon).

The water has not gone back, although it is very fine, and I was in hopes after the last three days' and nights' fine weather it would remain fine and the rivers would fall, but alas, the rain, the dreadful rain, has come again. I have heard of and seen some some fine dishes lately. The Yeo has given up thirty dozen, and, no doubt, others I have not heard of. The Bratton stream was fished by a man last Saturday, and he got 50; also the Muddiford, and four dozen were caught, and as he always fishes it Saturdays, he never fails to get some trout. Three gentlemen fishing the Bray last Saturday took four dozen; another on Monday had three dozen and six. I saw a dozen peel taken in the nets to-day by one boat. Another fisherman caught an otter in a mill. he had evidently taken up his quarters for some time, but was imprudent enough to go a step farther than usual, and was received by a pick thrust into his head; He weighed 17 lbs. I have just heard of a gentleman taking three peel with the fly in the Taw to-day. The 2 and 2½ inch solid Devons will be the killers for salmon and peel for some days.—RUSTY GAME.

Thames (Eynsham).

Water in good condition for fishing. There have been some fair takes of jack, trolling with gudgeon. The perch have fed well; most of them have been taken with large lob-worms. Roach not well on the feed yet. Several chub have been caught with the ledger, also with artificial bees and wasps.—W. B. HOWE.

Thames (Goring).

Water in good order for all-round fishing. Prospects for the next few days are good. On Thursday last, ten jack, the largest 5 lb., and some good perch. On Friday some good perch, the largest 1½ lb. On Tuesday, fifteen dozen of gudgeon, two dozen of roach and dace. On Wednesday, six dozen of gudgeon and some good roach and dace. Gudgeon are biting well with worms.—J. RUSH.

Thames (Hampton.)

Water in bad condition; too bright. Best take this week 4 dozen roach and dace, bank fishing; barbel and jack not feeding. Rain wanted for all fish. Punt fisherman above and below lock doing no good.—E. SWAN.

Thames (Shepperton).

Water is in very good condition. Very good prospects for all sorts of fishing. F. Purdue, two days, 7 dozen gudgeon and 2 dozen roach; H. Purdue, two days, 4 jack and 9 dozen gudgeon; myself, five days' fishing, 2 bream, one 4 lb. and one 2½ lb., 2 dozen roach, 4 dozen gudgeon, and 3 perch, 13 dozen roach, and 8 jack and 2 perch. Returned great part of the roach and 5 jack to the river again. —W. ROGERSON.

Trent (Alrewas).

The weather has been delightfully fine the past week, and the water in first class order for all-round angling. Roach and dace have been biting pretty freely at gentles, and "Reynolds," as usual, has met with the lion's share of the sport. A 12 lb., 10 lb., and 8 lb. basket have been captured by him in his three journeys to the weirs. The fly fishermen have had a glorious week, but unfortunately my correspondent does not advise me of which fly has proved the most killing, and which is a very essential part of the business. The following are a few of many satisfactory results:—The Rev. Darwin Burton, 4 brace of grayling, averaging ¾ lb. each, and 4½ brace of trout; Mr. Waters, of Coventry, 7 brace of grayling and some nice trout; another angler 2 brace of grayling and a brace of trout, the largest 2 lbs. Perch have been fairly on at both worms and minnows. Mr. John Roberts, jun., of West Bromwich, got fairly amongst them last week, and, besides some smaller fry, took 7 beauties, which scaled 6 lbs. To-night, Thursday, the river is reported in grand order, and although the wind has been a little cold and boisterous for the time of the year, I anticipate a strong contingent will visit the river to-morrow and Bank Holiday, on angling art intent.—James Gregory.

Trent (Newark).

The river is now in capital ply, and anglers generally are having a fine time of it. Some very good baskets of coarse fish have been had during the week. Bream have been had, running up to 5 lb. weight; and chub, roach, dace, &c., have also been had in goodly numbers, while a few barbel have also been brought to grass. Gentles and wasp-grubs have been killing baits, while the worm has also done its share. Anglers should now pay a visit to the Trent, for the scenery is beautiful, the weather delightful, the water in good condition, and the fish waiting to be caught. Gentles, cad-baits, and wasp grubs will be found capital baits to lure roach, dace, and chub to their destruction; while a bit of bread-paste, or creed malt or wheat, will not be refused by the crafty roach, and worm-fishers will find barbel and bream ready to take that bait.—The Trent Otter.

Trent (Nottingham).

The river here is running at a very low ebb, and the barbel swims are fishable, although, as yet, the fish do not appear to have made much show. At Shardlow a few were got on Wednesday, and the same swim yielded seven fish on Thursday. In the Weston length the subscribers have been busy, and Mr. J. Theaker is credited with a splendid take of chub, dace, and roach, the whole being caught with wasp grubs in less than two feet of water. Since then further takes, though on a much smaller scale, have been had with the same bait. Pike are stirring, and a large take is reported from the Thrumpton length, which is very strictly preserved and in most exclusive hands. Roach below Nottingham bite freely at maggots and bread paste, and the artificial fly adepts are said to have caught some nice lots of dace on the shallows at Burton, Joyce, Honeringham, and Gunthorpe. Worms on Thursday were growing scarce, and were making in price 7d. per hundred.—The Man at the Clubs.

Tweed and Teviot.

The past fortnight has not been one of the best for anglers, although a few fish and trout have been got. The best takes of salmon have been killed on the Sprouston, Hendersyde, and Edenmouth waters, and various baskets of trout, varying from 2½ lbs. to 4½ lbs., have been got by a few of the more successful anglers, who still prosecute this sport during the evenings. On the netting stations some fair takes have been hauled, but on the whole things are not so good as they were at the same period last year, grilse being very scarce this season. The largest salmon that has been killed for a fortnight back was got by Mr. Farrand, on the Lees-water, on Saturday, and turned the scales at 14 lb. The Brothers Kerss, on the water above-named, have been successful in killing about a dozen between them for a fortnight's hard work. The weather is very fine and mild—too bright for angling purposes, and the sooner we have another flood for anglers the better; but, for the sake of the country, it is hoped that the present harvest weather will continue. The wind, as I write is due west, with a light breeze blowing, and bright sunshine.—MaxWheel, Kelso.

Welsh Harp (Hendon).

The excessive heat of the past week has, to a great extent, militated against our fishermen here, as they have not cared to face the exposure of the almost tropical sun; but the takes have, as a rule, been, considering all things, very fair.—Resident.

Wharfe (Yorkshire).

This river, after a long continuation of high waters, has settled down to a nice fly level, and no doubt some good sport will now result. I saw a grand dish of trout on Friday night, which had been taken by a well known Leeds angler in Swinsty reservoir. He also had a golden tench, a fish that I never have seen before taken in this district. I believe that wasp grub was the bait employed. Some nice trout have also been taken in the Wharfe, mainly by spinning the minnow, and, as I heard that one of them had scaled 1½ lb., you may rest assured that there is something left still in the Wharfe larger than "fingerlings" and "5-inch grayling," as stated by a correspondent lately in this paper.—Francis M. Walbran.

Wye and Derwent.

Sport during the past week, both on the Wye and Derwent, has been first class, and baskets averaging fully from 6 to 18 brace per angler have been made. The killing flies have been the small honey dun, bumble, dotteril, little black and red flies. Grayling are now rising free on both rivers. The bottom fishers did remarkably well on the Derwent both yesterday and to-day (Thursday), killing some very heavy baskets of both trout and grayling, chiefly with wasp grubs. Both barbel and coarse fish are nicely on the feed.—George James Eaton.

WALWORTH WALTONIANS.

The 30th brought to a close the July Sunday's bank competition among the members of this society. The result is as follows:—Mr. J. Bedford, with 31 lb. 7¼ oz. of roach and bream from the Medway, won the first prize, a side of bacon, given by Mr. F. Grigg; Mr. Piolaine had 10 lb. 10¼ oz. of roach and dace from the Thames, which entitles him to a box of cigars, given by Mr. Towers; Mr. H. Bayley, with three or four pretty roach from Amberley, that turned the scale at 6 lb. 9½ oz., landed 10s. 6d. given by Mr. W. Brown. The following prizes are given to be competed for on August 6 and 7:—£1 1s. given by Mr. Gilbert, 10s. 6d. given by Mr. Irons, and a pair of hair brushes given by Mr. Delehaye.—Pixie.

Railway Concession to Volunteers in Uniform.—As there are many volunteers amongst the goodly army of anglers, they may be pleased to hear that the London, Tilbury and Southend Railway are granting tickets available to the 11th inst., at 5s. first class and 3s. third class, to and from Southend, to reach the National Artillery Association Encampment at Shoeburyness. The trains thus selected from Fenchurch Street are to day special through at 1.50 and 6 p.m. To-morrow, Sunday, ordinary trains at 2.5 and 7.45 p.m. Return from Southend on the 11th by special train at 1 25 p.m.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

Since my last report we have had some better shows of fish than I before sent you; Mr. Head having won a gold pin with a nice jack, Mr. Townsend taking a silver biscuit plate with a good show of roach at the same competition. Mr. Simpson, of West Drayton, has shown some good perch; Mr. A. Eydman, tench and roach on two occasions; Mr. Howell, roach, dace, and bleak; Mr. Cook, bream and roach. Windsor Joe, since his tumble out of the punt at Twickenham, seems to have lost all his nerve and skill, as he has weighed-in nothing since; several other members have not been in their usual form, and are anxiously waiting for the days to get shorter, when they say that they can catch more fish —Black Bag.

August 3.

ACT ON THE SQUARE ANGLING SOCIETY.

The members of this society have commenced their series of matches for 1882-3. On Saturday, July 22, the consolation prize (a silver cup), given by Mr. H. Chapman, for those members who did not take a prize last season, was competed for, and won by Mr. F. Brien, the match taking place at the quarters of the club, viz., the Ferryboat, Tottenham. On Saturday last we fished a match at Waltham for a prize given by Mr. Brien, victory resting with Mr. Chapman, so that these two members won each others' prizes. Several of the subscribers and also one or two of our members have been having some very fine barbel, viz., Messrs. Chapman, Duke, Willmott, Herbert, and Short; but a good run of water is wanted just now to clear off some of the silk weed.—A. George, hon. sec.

Aug. 1.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 10s. 6d. from C. Busbridge, Hampstead Angling Society (annual subscription), 8s. 2½d. from Izaak Walton, and 8s. 6d. from West Central Angling Societies' donation boxes.—R. Ghurney, general secretary.

ANGLERS' PRIDE ANGLING SOCIETY.

The following members weighed in on Sunday. Mr. H. Mallett had a very excellent show of bream: two 3 lb. 3½ oz., two fish over 2 lbs., and several over 1 lb. each. Mr. Gafney, 5 lb.; Mr. Haines, 6 lb.; Messrs. T. Fiddes and Soar also had fish. The next South London visit will take place at the above Club on Wednesday, August 16th.—J. Marshall, Sec.

BATTERSEA FRIENDLY SOCIETY.

Only a few of our members were out on Sunday last, and the majority of those were very little short of a blank. Mr. Mumford had 2 lb. 4 oz. roach and bream, from Amberley, and Mr. H. Martin 3 lb. 2¼ oz. of roach, from the Wey.—H. W. Payne.

BROTHERS WELL MET.

For many years past, it has been the custom to have an annual day's outing among the members of this society, when the silver medal and various other prizes are competed for. Unlike the majority of clubs, who usually award the medal for the greatest gross weight of fish, in this instance it is given for one day's fishing, and the winner may be entitled the champion for the year being. Amberley was again the chosen place, and the swims which were pegged out were satisfactorily selected by Mr. H. Hunt, the secretary, and Mr. W. Sutcliffe. Although the tide was a very bad one, nearly 40 lb. of fish was the result. The contest, as all contests of this kind should fluctuated considerably during the day; and, upon weighing, Mr. Sutcliffe proved the winner of the first prize, the silver medal, with 11 lb. 5½ oz. of roach and bream, all fine fish; Mr. A. Gunston, second; Mr. H. Canton, third; Mr. J. Calcraft, fourth; Mr. M. Harris, fifth; Mr. H. Bodein, sixth; Mr. W. Harris, seventh; Mr. B. Redwood, eighth; Mr. W. Tame, ninth; and Mr. W. Hanson, tenth. Everything passed off satisfactorily, and a very enjoyable day was spent.

CITY OF LONDON ANGLING SOCIETY.

The following weighed-in on July 23: Messrs. Warden, Chambers, Mortimer, and Plumstead, sen., bream and roach from Amberley; Mr. Castell, roach from the Roding; and Mr. Silk, a jack and some dace from the Thames. On July 30, Mr. Mortimer had bream and roach from Pulborough; Mr. Castell, roach and dace from the Wey and Mole; Mr. Lundy, a jack from Tottenham; and Mr Nitz, roach from the same place. Mr. Fowler on several days last week had good sport in the waters near Yarmouth.—Cas.

CROWN PISCATORIAL SOCIETY.

Several members of the above society were out last Sunday, the 30th ult., the trays were well filled with roach, rudd, perch, tench, &c. Mr. Willcockson having rudd, perch, and tench; three of the latter weighed 5 lb. Mr. Neagus having a nice show of roach. The members are requested not to forget next Sunday at Waltham.

DUKE OF CORNWALL ANGLING CLUB.

The members of the above club were pretty well on the job on Sunday, Mr. Aldridge being to the fore with a brace of nice jack; Mr. Kettle, with a good show of roach; several others, with smaller baskets, contributing to the trays,—J. Heckford, sec.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members showed some very fair takes of bream from Amberley:—Mr. Young, 16 lb. 8 oz.; Mr. Burness, 10 lb. 2 oz.; Mr. Theobald, 7 lb. 2 oz.; Mr. Parkin, 11 lb. 12 oz.; Mr. Page, 3 lb. 10 oz.: Mr. Parett, 1 lb. 12 oz. From the Welsh Harp, Mr. Watley, 6 lb. 12 oz.; Mr. Stammer, 3 lb. 1 oz.; Mr. Mayes, 3 lb. 6 oz.; Messrs. Walker, Scott, and Parrett had roach. A considerable number of the members attended the funeral of the late Mr. W. Phillips, who was interred at Finchley on Sunday last.—J. Fitch, jun., sec.

P.S.—I have in my possession the second joint of a roach rod found at Amberley three weeks ago. The owner can have the same by applying at the club-house.

GRESHAM ANGLING SOCIETY.

The Thursday meetings of this society still keep up their interest, although at this season of the year many members are necessarily absent. The chair this week was occupied by J. F. Clarke, Esq. The secretary having read the minutes, announced that several members, including Mr. A. W. Parker, Mr.

Meadmore, Mr. Bryant, and others had taken fish since last meeting, and it was hoped to hear of some good takes during the approaching holidays. Mr. Edward Bennett, of Great Yarmouth, had also taken about $3\frac{1}{2}$ stone of pike, perch, and roach at Ormsby Broad. Among the numerous additions to the library was a valuable copy of Bagster's edition of Walton (1810) presented by Mr, Graham Bennett. The committee have had frequent meetings to consider and revise the society's rules, and will shortly submit them to the members, and it is thought they will meet with unanimous approval. Their high standard has been fully maintained, and the weight of fish allowed to be shown are in several instances increased. The prize distribution for the past year will shortly be announced. Among the successful competitors are Messrs. F. S. Barnard, T. P. Cooper, T. Crumplen, J. McDowell, Mr. King, E. Frost, G. Chambers, Dr. A. C. Tucker, W. T. White, Dr. Defreiz, Graham Bennett, G. Chambers, H. H. Barrett, R. Bryant, and A. W. Parker. The society's prizes, not being given in money, the prize winners are requested to state their wishes, which will at once receive attention. The usual river reports from Bartholomew, of Goring, and others were read, from which it appeared that the water was now very bright, and not much had yet been done. Captain Alfred mentioned that some large takes of barbel had been had at Chertsey. The meeting closed with very cordial thanks to Mr. Clarke, who very ably presided.

HEARTS OF OAK ANGLING SOCIETY.

Good trays of fish this evening, Mr. R. Ford showing in bream and roach, two bream weighing 6 lb, ; Messrs. J. Whitmore, B. Cox, H. Cook, and A. Fish, roach; Mr. C. Cuthbert, sen., perch. This club is progressing very favourably at their new quarters, The Dolphin, Church Street, Shoreditch.—C. MILLIE, sec.

July 30.

MAIDSTONE ANGLING AND MEDWAY PRESERVATION SOCIETY.

President: The Mayor of Maidstone. Vice-Presidents: H. A. Brassey, Esq., M.P.; J. J. Ellis, Esq., J.P.; L. J. W. Fletcher, Esq., J.P.; J. Hollingworth, Esq ; Roger Leigh, Esq., M.P.; Major Roberts, J.P.; Captain Prentis, J.P.; A. F. Style, Esq.; A. Warde, Esq.; and C. Whitehead, Esq., J.P. Chairman, Mr. D. W. Pine; Vice-Chairman, Mr. T. Oakley. Committee: Messrs. W. H. Bensted, J. C. Brewer, C. A. Case, W. S. Mellis, R. Ellerington, G. Friend, C. Gibbs, W. Hook, J. Keeley, W. Keeley, F. Pine, jun., T. R. Price, W. Shrubsole, J. Smythe, and C. E. Wright. Mr. David W. Pine, hon. sec., *pro. tem.*; Mr. T. Oakley, assistant hon. sec. An association has been formed under the above title, and has for its object the preservation of the river and the culture of all kinds of fish. Competent authorities have been consulted, and their report is most favourable as to the grand capabilities of the Medway as a fish producing river. It is not contemplated to put a stop to any person whatever, fishing fairly, but in order to improve the public angling, fishing during the fence months, and all poaching will be rigidly opposed. The co-operation of the riparian proprietors has to a great extent been obtained, and the work is still going on. Trout are being reared, and in due course will be turned into favourable places, and a keeper has been appointed. In order to perfectly carry out the scheme, funds are required, and the society makes an appeal to the public, especially those interested in all kinds of sport, rowing men, &c., &c. Persons may become honorary members upon subscribing a sum of not less than five shillings annually, although larger amounts will be most useful. Persons wishing to become members will kindly send their names and subscriptions to the hon. sec.

ORIGINAL ALEXANDRA ANGLERS.

Mr. Atkinson had a fine show of roach from the Forty Guinea Water, Broxbourne, some scaling 1 lb. each. Mr. High had bream from Daynham; Mr. Blackledge, roach; Mr. E. Brockett, bream; Mr. Thorn, bream; Mr. Stanton had some fine roach from the Thames.—E. DYMOND, sec.

PECKHAM BROTHERS ANGLING SOCIETY.

The members of this society were out on Sunday, when Mr. W. Brancher won the prize given by Mr. Gendle, and Mr. Gendle that given by Mr. Winard; Messrs. Ojan, Williams, Stidolph also had fish. Mr. Brancher had a bream 3 lb. 1 oz, and a roach 1 lb. 7 oz. The fish have been sent for preservation. The president, Mr. Brodie, had a fine take last week, the three largest fish, tench, weighing 12 lb. 7 oz. These have also been sent to Needham. The next match for the President's Cup will be fished on Sunday the 13th. Full particulars at the club house.—W. H. Page, hon. sec.

August 2nd.

STANLEY ANGLERS' SOCIETY.

Appended I hand you the list of fish taken by some of our members during the week. Mr. Baldry, perch; Mr. W. R. Humby, trout, roach and bream; Mr. Wheatstone, perch, roach, dace, chub and barbel, one fish weighing 6 lb. 13 oz.; total, 30 lb. 12 oz. Mr. Pittrucce, roach and dace. Mr. Screll, roach and bream. I regret to say that those who have been out during the week have not met with the sport their perseverance deserves, and, owing to the absence of any exceptional takes of fish or exciting topics for discussion, our meetings have been poorly attended, especially as many members are out of town.

August 3.

SURREY PISCATORIALS.

On the 26th ult. several of the honorary members competed in the Thames for prizes. The sport was rather slow, one nine fish that would weigh were taken by five members. On August 9 the grand competition of the season will take place. The following are the prizes given for that occasion:—First, silver cup, valued £11 11s.; second, silver lever watch, given by Mr. Beckett; third, pair of £2 2s. boots, given by Mr. Boalch; and, fourth, £1 1s, given by Mr. C. Meadway.—PIXIE.

THE PISCATORIAL SOCIETY.

In the barbel competition on Monday last, Mr. G. H. Thurston, of the Chertsey Bridge Hotel, took the first prize of three guineas with $22\frac{1}{2}$ lb. weight of barbel, and Mr. G. Robinson the second prize of two guineas with 22 lb. weight of barbel, and one guinea for the heaviest fish 6 lb. 1 oz. Mr. Shipway weighed in 6 lb. 11 oz., and Mr. Forman 6 lb. 9 oz. Mr. Thomas Huggett had a pike of 10 lb. and a splendid show of roach.

THE STOKE NEWINGTON.

Very little being done by our members at present, although several have been trying different fishing waters. On the 30th inst. Mr. W. Robinson had a few roach from Broxbourne, and Messrs. Gretton and Read a few bream from Dagenham. Mr. W. Robinson wins Mr. C. Martin's prize for the heaviest roach taken during the month with one weighing 1 lb. $\frac{1}{4}$ oz.—T. GRETTON, sec.

July 31.

WALTONIANS.

On July 30, Mr. Malcom weighed-in roach and bream, 6 lb $3\frac{1}{2}$ oz.; Mr. Luxton, one roach, 1 lb. $8\frac{1}{4}$ oz., and bream, 1 lb. $11\frac{1}{4}$ oz.; Mr. Grace, roach, 4 lb. 13 oz.; Mr. Good, jun., roach and bream, 4 lb. $1\frac{3}{4}$ oz.; Mr. Starr also weighed-in roach.—A. J. MARRIOTT.

WEST CENTRAL ANGLING SOCIETY.

We had another good show of fish on Sunday, Mr. Taylor having roach and bream from Amberley, two roach weighing 2 lb. $10\frac{1}{4}$ oz., and 12 lb. of bream; Mr. F. Beard, roach and bream from Pulborough, and an eel, which weighed 2 lb. $1\frac{1}{2}$ oz.; Mr. Webster, roach and bream from Amberley; Mr. Payne, roach, one scaling 2 lb. 2 oz, from Amberley; Mr. White and Mr. Oliphant, roach, dace, bream, and perch from Woking.—R. I. BEARD, jun., sec.

August 1.

WOOLWICH INVICTA ANGLING SOCIETY.

The members of the above society were out during the week, and the result was a very fine show of fish, Mr. Maddick scaling over 40 lb. of very fine barbel from the Thames. Also Messrs. Foster, Pycroft and Friend a fine tray of roach from the Medway.—C. FOSTER.

ANSWERS TO CORRESPONDENTS.

A. G. TILLEY, Kidderminster Angling Society.—There is nothing very uncommon in a fish swallowing the plummet. Trout will rush at anything moving, at times. We have once or twice caught fish in this way when using a roll plummet, and have often noticed perch follow it as it was drawn up. At the same time, we could not advise you to angle with plummets; nor do we agree with you that your adventure "may lead to a new bait for trout-fishing."

W. G., Tottenham.—We think the black bass are still alive at the Aquarium; but they have lost their beauty, in consequence of catching fungoid disease from the carp in the tank with them, and will not live long, we fear.

CORRESPONDENCE.

[Much of the Correspondence on "The Wharfe," "Who is the Father?" &c., is crowded out this week.—ED]

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

HOW TO DISTINGUISH YOUNG CHUB FROM DACE.

SIR,—Some time ago you stated, in answer to a correspondent, that by examining the anal fin it was easy to distinguish the above, the fin of the one being concave and of the other convex, but you did not say *which* was concave and which convex.—I am, &c., F. de M.

Rheims.

[In the case of roach and dace the anal fin is slightly concave, in the chub it is slightly convex.—ED.]

THE CRITCHFIELD ANGLING SOCIETY.

SIR,—I think this club, which does not go in for Sunday fishing or meetings, may suit your correspondents who are enquiring about such a club. For particulars see Club Reports.—I am, &c. WALTONITE.

FISHING AT FOWEY, CORNWALL.

SIR,—Can you or any of your readers inform me what freshwater fishing is to be had in the neighbourhood of Fowey, Cornwall, and, if any, I should also be glad to know the names of a few flies useful in the district in September.—I am, &c., SAMUEL HARRIS.

[There are two or three small trout streams, the *Anglers' Diary* says, near Fowey, and first-rate sea fishing. You may get sea trout and salmon in September. You cannot use better flies than these, we think:—Sand fly, alder, soldier fly, coch-y-bondhn, blue upright, and the various duns—light, blue, yellow, olive, and whirling. The Devon minnow is also useful in these streams. —ED.]

A NON-SUNDAY ANGLING CLUB.

SIR,—I quite agree with your correspondent "T. A." in his suggestion as to the formation of a fishing club who do not fish on Sundays, I believe there are many young men who would belong to such an one, whose views of religion and, in some cases, the scruples of friends would not permit them to indulge in their favourite sport on that day. I shall be glad to hear more of this.—I am, &c. JOHN J. HARRIS.

52, Andover Road, Hornsey Road, N.

POACHING NEAR MAIDSTONE.

SIR,—In your valuable paper issued on July 22, there appeared a letter signed "Medway Angler," which may lead to misconception and a wrong impression on the part of some of your readers.

"Medway Angler" says: "The Maidstone Association allows fish to be taken of any size." This, Mr. Editor, is quite false. In our book of rules (which I beg to enclose), rule 7 gives the proper scale of sizes for all fish; and any member weighing-in fish of less size than stated is fined 1d. for each fish. So much for that. Again, "Medway Angler" says that "we do not preserve nearly so far as Hartlake Bridge." This is an error, as we have fixed our boundary at that place, where we meet the Tonbridge Society, which is working with us in a very satisfactory manner.

Of course, we are quite in our infancy as an association, and we cannot undertake that every member of our fishing club will behave himself in a sportsmanlike manner; but we are immensely surprised that any one connected with our society should have so wilfully made such gross misstatements to "Medway Angler."

Hoping you will spare me space for this letter—I am, &c, DAVID W. PINE, Chairman of the Maidstone Angling and Medway Preservation Society.

NETTING NEAR TONBRIDGE.

Sir,—I should like to say a few words as to the inaccurate reading by Mr. Hollomby of my letter on this subject.

As to large takes of roach, Mr. Hollomby contradicts a statement which was never made. I did not state there were "no" large takes, but that there were "very few," and, as Mr. Hollomby says there were "some," I think we agree. He also says that the Tonbridge Society preserve the river to Hartlake Bridge and no further. I am quite aware of that, and stated so in my last letter.

As to poaching, Mr. Hollomby admits that, within his knowledge, the poachers had a few fish from one of their streams. Is it not very probable that they had a great many without his knowledge? Are there no streams that could be netted besides those about Hartlake Bridge? If Mr. Hollomby will refer to my letter, he will see that I did not refer particularly to streams "about," but "above."

The difficulty Mr. Hollomby makes about the undersized fish, is quite amusing. Do the Tonbridge Society require an Act of Parliament to compel their own members to return small fish? I am aware that they cannot compel outsiders to do so; but how can they expect them to, when the society men themselves do not? Let the Tonbridge Society raise their sizes to something above the fry size they are at present, and so set the example.

I am glad to hear that, "when the Maidstone Society get into working order, they intend to preserve to Hartlake Bridge." When will that be? At present their efforts, according to their own reports, seem to be confined to fishing for prizes and breeding trout for one of the most sluggish rivers in England, when, higher up, the river is being netted out.

Mr. Hollomby makes a great deal of the words "near Tonbridge," but allow me to inform him that I had nothing to do with this heading.

Owing to my letter being too late for insertion in the Gazette for which it was intended, the Friday mentioned as the day on which the man who bought the roach was down the Medway reads a week late; it should be Friday, 7th July.—I am, &c., A Medway Angler.

[If correspondents would supply their own headings to letters, it would materially help us; as a rule we have to put the best we can.—Ed.]

CLUB AND OTHER JOTTINGS.

By L. B.

The new proposed Thames Conservancy bye-laws continue to be the great topic of absorbing interest among anglers of all classes, coth in and out of the Metropolis. They are so utterly at variance with justice, nay, with common sense, that if the opposition to them is only conducted and supported in the right manner, it is bound to be successful.

Sport continues to be very indifferent, the water being very low and bright in nearly all the rivers, and the piscatorial scribe, whose duty it is to make up a *bonâ fide* report of takes in one or several districts, just now has all his work cut out, like the starved apothecary in "Romeo and Juliet," who by thinly scattering his poor and slender store, succeeded in "making up a show." Of all rivers to get authentic reports from, perhaps the Lea is the worst. I have not the slightest hesitation in endorsing Mr. Wheeldon's recently publicly-expressed opinion, that the Lea fishermen are undeniably the best roach anglers in the world, and one might add, the most secretive. Oh, the numberless little dodges I have seen resorted to to keep a good swim quiet! The number of naughty fibs told with the same purpose in view. In the Thames, when the fish feed, whether owing to professionals who are interested in publicity, or innkeepers, to whom an influx of anglers means trade, we hear of it, and fair reports appear in print. Not so on the Lea. As a rule, the fish find their way from the landing-net into the piscator's basket, and see light no more until shown for a brief season to be weighed in at the club, and even then, methinks, I have heard the most delightfully evasive answer given to some brother member who had the unwarrantable curiosity to ask—"Where the scaly ones were caught?" The post has just brought me a few lines from my good friend Mr. Vincent, hon. sec. of the Watford Piscatorial Society, in which the following occurs:

"I herewith forward you spawn from a roach taken in our water this morning. The fish weighed 11 oz. Should it have so much, if any, at this time of the year? Is it possible that the fish has spawned this year."

The spawn, which came to hand quite safe, and would fill a tablespoon, heaped up, is perfectly healthy in appearance, and does not warrant the conclusion that the fish was egg-bound. It could not, even if it had spawned unusually early, have filled in so considerable a quantity of spawn so soon in the season, and I therefore conclude it must be an exceedingly late fish.

The visit to the Norfolk Angling Society on Monday last was not the success it should have been. No doubt the intensely close evenings we are having make people prefer a stroll in the open to the unavoidably hot atmosphere of brilliantly gas-lighted rooms.

Good takes continue to be the order of the day at the Welsh Harp, and the other evening I had the pleasure of seeing a very pretty dish of perch, taken by Mr. J. H. Stead from this water, some of the fish weighing close upon 2 lbs.

This Friday evening will be held a meeting of the "West Central Association" working committee, at which business of the utmost importance will be brought forward for discussion and settlement. It is therefore hoped every committeeman who can possibly do so will attend.

NOTICES OF BOOKS, &c.

The Scientific Angler. Being a General and Instructive Work on Artistic Angling. By the late David Foster, of Ashbourn (compiled by his sons), with Illustration and Steel Engraving of the Author. London: Bemrose and Sons. Ashbourn: D. and W. H. Foster.

[We have received a copy of this work, and have only time this week to acknowledge it, and say we anticipate perusing it with great pleasure and shall notice it fully next week probably.—Ed.]

Art and Letters for August has the third instalment of an article on Modern Landscape, with seven interesting examples; continuation of the sketch of Carle Vernet, with a portrait, and reproductions of several of his works; Illustrated Notes on the Hamilton Palace Sale, and other welcome topics. A copy of Munkacsy's picture of Milton dictating "Paradise Lost" to his daughter, forms the frontispiece.

Cannon's Glue Powder.

Anglers will find this new glue powder extremely useful and convenient when putting ferrules, &c., on rods. The great advantage it offers is that it can be got ready for use in a minute or two, as you only have to pour a little boiling water on the powder and stir it up. Of course, it can be used like ordinary glue for any purpose, and is quite as strong as the best Scotch. We can recommend it.

KNEELING PADS FOR FLY-FISHERS.

Mr. Malcom, of Messrs. Woolgar and Co., 40, Ludgate Hill, has sent us a pair of just the very things we have been in want of for years, viz., kneeling pads. They are waterproof pads, to be fastened to the knee with straps. Anyone who finds it necessary to creep and kneel and walk on the knees a good deal to get at shy trout in a bright water with open banks, will join with us in blessing Mr. Malcom for his capital invention. These pads will save the fishing stockings, and, more important still, the angler's knees, both from damp and hard ground and stones.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, 1883.

We are requested to state that the Executive Committee of the Great International Fisheries Exhibition took possession of the Horticultural Gardens at South Kensington, a site covering 22 acres, together with all the buildings and offices, on Saturday, the 29th ult., and that steps are about to be taken for the erection of large additional buildings.

Announcements have been issued by the committee to the effect that applications for space, and entries for Great Britain and Ireland, should be sent in by the 1st of September. In favour of distant colonies and countries, the date has been extended to the 1st of November.

THE PROPOSED NEW BYE-LAWS.

We are informed that "a meeting of anglers will take place on Tuesday evening next, at the Cannon Street Hotel, at 7 o'clock. Two delegates from each angling club, and representatives from the preservation societies will be present. Admission by card only." We regret to say we can give our readers no further particulars; in fact, we only get these quite unofficially at the last moment, and have no idea who is calling the meeting.

AN EASY SHAVE is obtained by using the Genuine LLOYD'S EUXESIS. Its cleanliness and portability will be appreciated by all who shave, as soap, water, and brushes are entirely dispensed with. EUXESIS soothes the most irritable skin, leaving it cool and refreshed. Sold in 1s. 6d. tubes, by Chemists, Perfumers, and the Sole Manufacturer, Aimée Lloyd, 3, Spur Street, Leicester Square, London. N.B.—Ask for LLOYD'S EUXESIS, prepared by the Widow, and observe her name, "Aimée Lloyd," on cap of tube.

A Correction.—In the report of the monthly meeting of the West Central Association it is stated that Messrs. Crumplen and Sachs have been elected on the sub-committee of the 1883 Exhibition. As there are eighteen sub-committees, it should have been stated that the above gentlemen have been elected on the sub-committee for obtaining loan collections of freshwater fish, stuffed or preserved. We have been requested to make this correction, as the applications to serve on committees are so numerous.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

SATURDAY, AUGUST 12, 1882.

PROPOSED NEW BYE-LAWS FOR THE THAMES.

IMPORTANT NOTICE.

THERE will be a conference of representatives from the various Preservation Societies. The three Central Associations and the London and Suburban Angling Clubs at the Cannon Street Hotel, on Tuesday evening next, at seven o'clock (punctually) to take into consideration the above bye-laws. The meeting is convened under the auspices of the Thames Angling Preservation Society, and the chair will be occupied by Mr. Thomas Spreckley, president. The admission is by ticket, in order to make the conference of a full representative character; if there are any angling clubs who have not received two tickets, they will be sent on application to Mr. W. H. Brougham, Swayfield Villa, Hounslow. Although the list of angling clubs has been compiled from the three Central Associations, there are such constant alterations in the addresses of clubs, that some of them may be unavoidably omitted. B.

THE PROPOSED THAMES BYE-LAWS.

AN important conference of delegates from the Thames Angling Preservation Societies, was held at Maidenhead, on Wednesday, August 9th. The following gentlemen amongst others being present:—Messrs. T. B. Sharpe, R. Nicholson, J. H. Clark, W. G. Day, A. A. Wood, and Captain Haynes of the Maidenhead and Bray; Messrs. A. Butler, F. Brown, and Dr. Short, of the Reading and district; Messrs. H. Askew, and M. Clare Sturgis, from the Henley; Mr. R. Plummer, senior, from the Windsor and Eton; Mr. T. H. Wright from the Marlow; and Mr. C. P. Wheatstone from the T.A.P.S.; Mr. P. Green, president of the West Central Association was present by special invitation. The local and piscatorial press was also represented.

Mr. T. B. Sharpe, having been duly elected to the chair delivered a few practical remarks, after which the bye-laws were dealt with *seriatim*.

Many important amendments were moved, discussed, and carried, in such a business-like manner, as left no doubt that each and every delegate present had studied and made himself thoroughly acquainted, not only with those portions which are generally admitted to be objectionable, badly drafted, or made to enact the opposite of that which must be intended, but also with those portions which will undoubtedly tend to promote and protect the interest of the fishery.

While it may be considered unadvisable to make known the instructions given to those gentlemen who are elected to represent the Upper Thames Preservation Societies at the conference to be held at the Cannon Street Hotel, it would be idle to attempt to disguise that there was at this meeting, as at most meetings held on this subject, an unanimous expression of opinion that the Conservators should be informed that unless certain alterations are made the bye-laws must not be allowed to pass.

The opinion of this meeting went so far as to say that an influential and representative deputation should be formed at the conference about to be held, and that the head of such deputation should not only be expected to give a verbal statement of the opinions of the said conference, but also leave with the Conservators a written statement duly signed by at least a majority of the members of the said deputation, so as to prevent the possibility of discovering, when too late, that one member meant this, another that, and the head something totally different, which would result in the Conservators saying to themselves, those bye-laws have cost upwards of £400 in advertising, and we had better pass them as they are.

An interesting feature of the meeting was a formidable display of night lines, and an extraordinary sized cast net which had been captured, together with a notorious poacher, a travelling tinker by trade, Unfortunately the tinker subsequently made his escape, thereby proving himself too artful for Wilder, who, nevertheless, had shown considerable skill in the detection and capture. It is intended to introduce these night lines with the deputation, so as to demonstrate to the Conservators how unwise it would be to allow their use in the upper river.

The conference was brought to a close by Mr. P. Geen proposing a hearty vote of thanks to the chair for conducting the business, so as to enable them not only to get through the bye-laws but also to give practical instructions to their delegates,

FLY-FISHING IN JULY ON A WILTSHIRE BOURNE.

AS a general rule July is not a favourable month for the fly-fisher, the water in the small streams being low, and the trout by that time shy and difficult to catch; but this season, owing to the abundance of rain which has fallen, the little bournes which have their rise beneath the chalk hills of Wiltshire have been well supplied with water, and have been in an unusually favourable condition for fishing. They flow over a clean gravelly bottom, and many of them, although shallow, are well stocked with both trout and grayling. On the 27th July last, I started to fish in one of these bournes which loses itself in the river Wiley, about seven miles above the ancient city of Sarum. At 10 a.m. I commenced wielding the timber; the sky was cloudy, with a south-westerly wind blowing up stream, enabling me to cast a long, fine line. As I neared the bank I could see lots of small fish busy at their morning repast, whilst here and there a ring of larger dimensions denoted that the good ones were also on the feed. A few trial casts, and then I was well over a fish, which came, and with a bounce out of the water, was gone with my Wickham fixed in his jaw. It served me right, for using an old worn fly. Substituting a new one of the same pattern, I was again at them; a few casts more, and I landed my first, a small trout of a quarter of a pound. "Basket him" said the proprietor of the stream (who was carrying my landing net), "always kill the first; it ensures luck." I then tried two or three rising fish, but it was no go, there was nothing to hide behind; and although I was fishing fine, and far off I could not get over them without being first seen, After a while I caught sight of a brace of beauties lying under the opposite bank, an old willow here favoured my approach, I dropped my fly just above them, and as it came floating down, the foremost one yielded to the temptation, when he felt the barbed hook he dashed away up stream, taking out the line merrily; he then rushed into a bed of weeds, I tried to move him every way, but it was of no avail, so I summoned a haymaker to my assistance, who, after poking with his pitchfork for some time, managed (as is usually the case under such circumstances) to assist me to lose the fish. Hard lines, but there was no help for it. Another good one was rising about twenty yards above, creeping on my hands and knees I got within reach, one or two casts, not quite far enough, and then, ah, that's got him! as the splashing at the other end of my line told me he had accepted the proffered lure; a sharp fight of a minute or two, when I succeeded in steering him past a dangerous bed of weed, and he came walloping over and over down the stream towards me, his deep spotted side looking like a bar of gold, studded with rubies. My friend was waiting all ready with the landing net, when almost within reach he made another roll and broke away. Cruel luck, it was enough to try the temper of a saint, and I am afraid I used language not quite fit for ears polite. I still flogged on, but I was getting disheartened with my ill luck, when I felt a tug on the line; after a pretty bit of play, I landed a grayling of 1lb., almost directly after a trout of equal weight was basketed; this put me in good heart again. I then approached a weir thrown across the stream for the purpose of irrigating the adjoining meadows; below the fall there was a nice piece of deep water, overshadowed by alder bushes, through an opening I could see several fine fish, evidently on the feed. My first cast I had a rise, but missed, and got hung up in the bushes. I dared not show myself, so I detached my collar from the line without being seen and replaced it with another—the flies, a red spinner and a quilled gnat—and again made them an offer. Immediately there was a boil in the water, the music of the reel assuring me I was well fixed in a good one; as my hooks and tackle were of the finest, I had to work very patiently, and eventually was rewarded with the capture of a 2 lb. grayling. I took five fish from this pool, three grayling and two trout, all good ones. By lunch time eleven fish were brought to grass, and afterwards I kept on killing until about four o'clock, when they, unaccountably ceased rising; although a gentle rain was falling, and everything looked promising for sport, nothing more was done, so I gave up for the day, my total being twenty-one fish.

The next morning I was again on the banks of the stream, and was rewarded with sport equal to that of the preceding day. At one o'clock I put up the rod and weighed the catch, consisting of 21 trout and 13 grayling, which scaled something over 20½ lb. It would have been much heavier but for my bad luck with trout, as I lost five of the best that I hooked, which broke away, owing to the smallness of the hooks which I was compelled to use; but I was well satisfied, it being one of the best of the many good days I have had fishing on this stream. It is such days as these that never fade from the memory of the angler, but stand out in vivid distinctness when the unsuccessful ones of hard toil and many disappointments are forgotten.

Red Ant.

ANGLERS ON BANK HOLIDAY.

THE patrons of the sport of angling were in strong force everywhere on Bank Holiday. The various railway stations presented representatives of the rod, line, bait-kettle and seat, and real earnest hard working bank anglers. Not only was the Thames made the scene of their operations, but all available pieces of water were stocked with brethren of the rod. Here and there it could easily be detected were new aspirants to the angling art. Not of the kind I heard the other day, when an angler had been fishing hard for a long time, and on being asked what bait he was using, replied he had not been using any at all, as he thought the fish would hook themselves. Whilst I am on this theme, I may refer to a smart story I heard a few days since, of an aspirant to the fly-fishing art who, regardless of expense, had set himself up with new rod and line and a valuable book of selected flies. He went on whipping for some time and trying two or three kinds of flies without any result. His temper then got the better of his judgment and he threw the book of flies into the water, and in an angry manner told the fish to take their own choice. As a rule, they say an angler is remarkable for patience, but there is not a rule without an exception. Well, Bank Holiday on the Thames was enjoyed by a host of anglers, the weather contributing to their pleasure, but the fish did not do their part; as the saying is "They hooked it," and the angler did not get his hook, even with a tempting bait, at all well patronised. Still he went on and very few grumbled. The river-keeper is occasionally seen and here and there the angler is told he has been taking unsizeable fish, he pleads ignorance, of course—it is a common plea—the river-keeper says "Don't do it again." A few days previous, one of these professedly ignorant anglers was found at Penton Hook, he gives his name and address and the title of his club. Inquiries are made, the answer returns "the house is an empty one, and has been for some time;" but what about the club? The name given was "Hope," but a reference to the list of angling clubs distinctly negatives the existence of such a club. So much for the Thames. Then the "Black Dog water" at Feltham, the various portions of the Colne, the Lea, the Stort, and other rivers near the metropolis, were not wanting in rodsters. Some private waters, where permission had been obtained, were amongst the choice events of the day. In one of these—I never mention where—my friend Mr. Jardine once got some splendid perch, from a permission of mine—and I saw them caught. B.

[The fly-fishing story appeared in *Punch* last year.—Ed.]

NOTICES OF BOOKS, &c.

The Scientific Angler.—Being a general and instructive work on Artistic Angling. By the late David Foster, of Ashbourne, (compiled by his sons.) With illustrations and steel engraving of the Author. London: Bemrose and Sons. Asbhourne: D. and W. H. Foster.

"David Foster was born at Burton-on-Trent, September, 22, 1815. At an early age he was apprenticed to a jeweller, but young David preferred to roam the fields and woods, prying into the secrets of insect life. His delight was to talk with the old fishermen on the banks of the Trent, and to learn from them something of the habits and haunts of fish.

The art of angling so fired his soul that he arranged to enter the famous fish-hook manufactory of Messrs. Allcock and Co., of Redditch. The work absorbed all his powers; he originated many improvements in fishing tackle, and was justly valued for his cleverness and ingenuity. Foster was a born student of nature—angler and naturalist—his whole life being spent in the pursuit of knowledge appertaining to his favourite pursuits. He frequently visited the noted fishing streams in the three kingdoms, often making long tours in Scotland and Ireland with men of great celebrity.

From the time of Izaak Walton and his friend Charles Cotton, the limpid Dove has been the chosen resort of fishermen. The scenery is of the most romantic and beautiful description. Its beauteous swims, eddies, and streams filled the soul of David with delight.

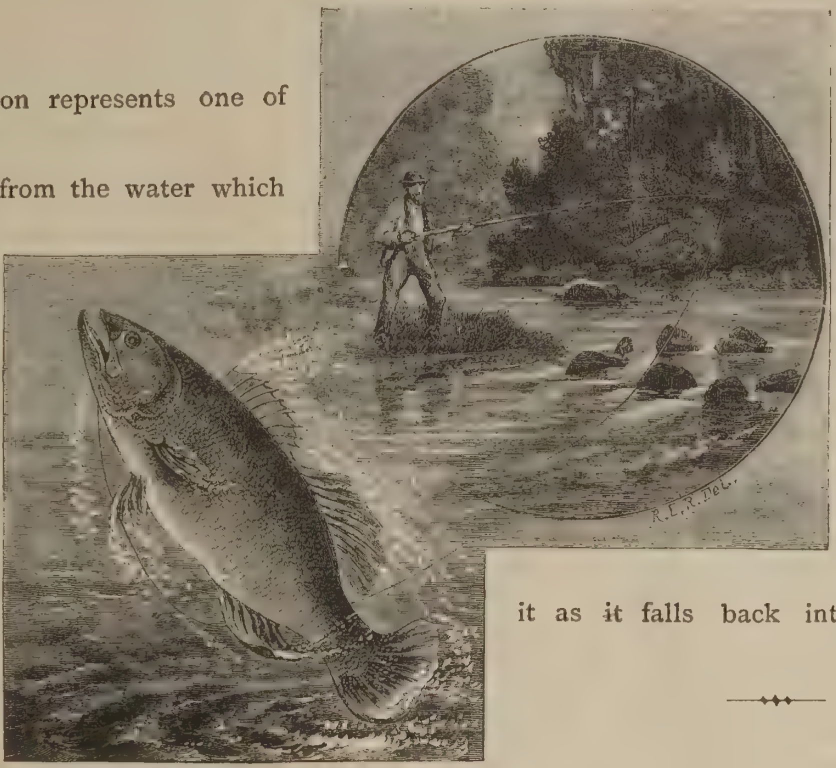
In the year 1841 he removed to Ashbourne to be near the Dove. Here he rapidly grew into notoriety as a "naturalist," and was significantly described "The amiable angler of the Dale." He applied himself with great energy and ingenuity to the improvement of fishing with the artificial fly; the study of aquatic insects; the forms and colours of flies found on certain waters; the times of their appearance and departure; and the methods of imitation. An entomological student, a man of keen observation and quick discernment, witty, courteous, patient, kind, and hopeful. He was a great favourite with gentlemen who made angling their recreation. Gifted with a natural fluency of speech, he was a ready and an amusing companion. For forty years he had been the "mentor" to whom the fly-fishers of the Midlands had been accustomed to apply for aid and instruction. "Born a naturalist," he sought to make nature in her insect creation a thing of practical wisdom. Men speak of him as a clever, original, well-informed man, "just and true in all his dealings."

In *Land and Water*, last August Mr. Foster was referred to in very flattering terms as the originator of several valuable improvements in the art of fly-fishing, &c., the most important being Foster's eight-plait waterproof line, and the new patent acme line. These lines are now in use throughout the civilized world, as well as his machine for refining gut, improvements in reels, rods, flies, &c. The last few years of his life were devoted to the pleasure of angling, and to the exercise of his inventive genius. A splendid rod, constructed upon an entirely new and original principle, was just completed when he died.

For many years Mr. Foster contributed to various newspapers "Notes on Angling." These, with a mass of manuscript on the art of fly-fishing, would make volumes of intense interest and usefulness, and be a fitting memorial of a man, who, for nearly half a century, stood among the leaders of his profession. I recommended the compilation of this volume, giving a digest of Mr. Foster's long experience.

Before closing these hurried sentences, I must not forget to state that

THE BLACK BASS.



THIS illustration represents one of the many leaps from the water which a big Black Bass will make in its attempts to get rid of the hook. American anglers aver that the fish tries to cut the line by falling on it as it falls back into the water.

◆

the sons of Mr. Foster have been for many years associated with him in the business, and have by their attention and cleverness added much to their father's comfort and success. They seem to have inherited the genius and virtues of their father. It will greatly interest the reader to know that the business is carried on under their able management. They purpose to bring out, as soon as possible, what is thought to be the most wonderful of all the inventions of David Foster—the 'new rod' alluded to above."

The abode kindly, sincere, and well-merited lines on David Foster, are from the "Brief Biographical Sketch," by Mr. James Wonnacott, of Ashbourne, prefixed to the work before us. So many of our readers are enthusiastic fly-fishers, that the mere announcement of the publication of a work on angling by the late David Foster, was, we are sure, sufficient to cause them to eagerly look for the book, and we are not at all surprised to hear that nearly the whole of the large first edition has been subscribed for already. For our own part, we can say that never have we anticipated more pleasure from the perusal of a new work on angling, than when we heard that the one under notice was to appear. Foster had such a sterling reputation amongst all our Midland fly-fishing friends, our own experience of his flies and tackle, our personal acquaintance with his sons, all impressed us with such genuine enthusiasm, that on receiving a copy of the work from Messrs. Foster, and before opening it we were disappointed to find the work was not double the size. After reading it through we have only one feeling of disappointment to mention, and that is that there is not more of it. Not for a moment would we infer that its information is meagre, but simply that it is so good and practical that we should have liked much more of it. Its three hundred pages are thoroughly well worth the moderate price charged for it; it is one of the most valuable and important contributions to angling literature which has ever been published, nor could it well be otherwise, seeing that it gives the life-long experiences of one of the best and most practical anglers who ever cast a fly for trout or grayling.

The fact that the first edition is already, before the book is fairly published, nearly disposed of, proves the estimation in which its author is held by fly-fishers; but the work appeals to anglers of all kinds. The author was a genuine all-round angler, and the first hundred pages are devoted to bottom fishing and the habits and haunts of our freshwater fish generally. The illustrations, over sixty in number, are very clear and good.

Some of the statements we do not agree with entirely, but these, for the most part, refer to questions which everyone is entitled to have his own opinion about, and do not in the least affect the value of the work as a whole. For instance, we are inclined to credit fish generally with a much higher development of the sense of taste than is accorded them by our author, in his chapter on "Habits and Haunts of Fish"; and again, in the same chapter, with regard to the statement that both grayling and young trout are devoured by salmon, is one we have never been able to verify, though we have for years tried, both in this country and in America and Germany, to find any one who has ever caught a salmon in freshwater with traces of freshwater food in its stomach. One gentleman who strongly affirmed that salmon killed trout, had the fish he caught in a trout stream close to his house carefully examined, but could never find anything in the shape of food, and yet there were thousands of trout in the water with the salmon, and many of the salmon had been in his pools for weeks. Salmon-fry in a trout river, of course, consume much food which the trout would otherwise get, but, on the other hand. the trout feed on the salmon spawn to an enormous extent. Nature generally strikes a fair balance in these matters. If this were not so, we ask, how is it there are any trout or grayling left? Seeing that before civilisation erected dams on our rivers. salmon could and did ascend to the head waters of most of our streams. In Iceland, at the present day, you find enormous quantities of trout and salmon in some of the streams. They have been there for ages, long before man appeared on the scene; surely the weaker fish would have disappeared, if it is true that the stronger prey upon them!

Again, our author states, in the same chapter, that "There has been a considerable falling off in the takes of salmon during the last twenty years or so." As a general statement this is not correct, though it may be true of certain rivers. In 1861, the total produce of the salmon fisheries of the English and Welsh fisheries was placed at £18,000. Of late years the produce has been reckoned at £100,000, the improvement being undoubtedly due to the action of the "Salmon Acts."

Again, the statement that "salmon frequent only the northern and temperate parts of the earth," would seem to ignore the existence of that superb salmon, the *Salmo quinnat* of California, which has become an esteemed article of food in every part of the world. In this most interesting portion on the "Habits and Haunts of Fish," the reader will find many valuable hints, and we sincerely hope in some future edition the compilers will be able to give us much more of the authors views and opinions, which the size of the present work has compelled them to omit. Chapter III. treats on bottom fishing generally, pond-fishing for perch, &c., gudgeon, dace, roach and barbel fishing.

Here is a Novel Method of Perch Fishing.

They will run eagerly at the minnow, especially in the summer months; but the method by which most sport may be derived from them is to cast for them with a trio of artificial red palmers or caterpillars (double-hooked) attached to a moderately strong fly-cast, one at the point, and the others mounted on gut lengths, and attached to droppers. These are used as small flies, just as when working (sinking) them for trout, with this exception—when a fish is hooked no action is taken whatever. The hooked fish will quickly be shown, and will work the remaining palmers infinitely better than the rodster can; and, incredible as it may seem, by this means each lure will have secured its capture in a very short time after the first was hooked, and the difficulty of landing these contributions adds in no small degree to the diversion. The best way to land a string of perch is to secure the endmost one in the net first, and when this is done the rest seldom get into mischief.

Whipping for Perch.

Doubtless many of our readers never think of fishing for perch with anything but float-tackle, paternoster, or ledger, but we can assure them there is infinite truth in Mr. Foster's advice, "that where perch are wary fine sport may often be had by 'whipping' (in fly-fishing manner, that is) for them with the cad-bait, fresh-water shrimp, and other aquatic insects in nymphæ, and even in clear water, under the overhanging banks, trees, on bushes." We would add that a marsh worm on Stewart tackle on a fine gut collar is a deadly instrument for taking perch with. The angler uses a fourteen foot, fairly stiff trout rod and throws the worm over hand, just as in up-stream worm fishing, and lets it sink a little then renews the cast. A big perch on a fly rod affords fine sport.

Gut versus Hair.

Our readers will remember the controversy on this question which at various times has cropped up in our paper. Some anglers appear to consider our advocacy of gut as an unpardonable offence. We have never pretended to give more than our own opinion, and hold that every angler is entitled to do that; and we have never refused to insert the views of those who do not agree with us. In confirmation of our view of the matter, we quote what Mr. Foster has to say on the subject, and it must be remembered his experience was gained on perhaps the most persistently fished rivers in the world—those of Derbyshire. He says:

Another consideration is the substance to mount the hooks upon—whether hair or gut—some anglers preferring one, and some the other. There are equally good anglers upon both sides, but the ancient hair, it cannot be denied, is rapidly losing ground before *refined* gut, which is now imported in such immense quantities from Spain, Sicily, China, and elsewhere, and may be said to be thrice the strength and half the substance of the traditional hair. It is, or should be, the object of the fisherman to reduce his lines and general tackle so as to be as nearly invisible as possible, to which end it is essential that the bulk and surface presentable should be reduced as far as is compatible with strength. It is therefore an advance in the right direction (and one that should have been taken before) to have the gut drawn while in its gummy state to as fine proportions as are requisite to meet special cases; for, although we were the originators of the gut-drawing system, we have no hesitation in claiming the superiority of the gut drawn accurately, prior to its being set and hard, as then it retains its enamelled surface entire. Had this been done a quarter of a century or so ago, the necessity for our oft-repeated researches would not have existed. To assert that hair of any description is equal to even gut of equal thickness is absurd. The former is not only *weak*, being hollow, but is given to stretch when strained, and is very susceptible to breaking at knots. It magnifies greatly in the water, and, lastly, absorbs the wet and swells. On the other hand, very little can be urged in regard to the use of gut that is detrimental. It can now be obtained one-third the thickness of hair, each strand being far superior in point of strength, and, when slightly stained the colour of the water where it is intended to be used, it is as near being invisible as anything ever discovered. Hair effectually superseded the Indian weed, and silkworm gut will eventually supersede hair quite as effectually.

We find so much matter of interest in the work before us, that we must reserve our notice of the rest, and greater portion of the contents for our next issue.

(*To be continued.*)

Angling Resorts near London: The Thames and the Lea.—By J. P. Wheeldon. New and cheaper edition. This is, we believe, the third or fourth edition of Mr. Wheeldon's capital little work. We spoke highly of it some years ago and can only confirm our then expressed opinion of it. Any Thames or Lea angler who possesses this little volume—and it can be had now for 1s. 6d.—will often find himself pulling it out from among its kindred in the book-case, to hear half an hour's pleasant chat from Mr. Wheeldon.

GERMANY AND THE 1883 LONDON INTERNATIONAL FISHERIES EXHIBITION.

We very much regret to see a statement in a German paper to the effect that the Imperial Goverment have decided not to send any national collection to the London Exhibition, and gives as a reason the fact that our Government declined in any way to support the Berlin International Fisheries Exhibition. As the paper in question is the German *Fishing Gazette*, we fear the report is only too correct. Germany could show us so much in practical pisciculture and fish farming, that we hope no stone will be left unturned to get the decision reversed.

CLUB REPORTS.

ANCHOR AND HOPE.

Monday the 7th inst. our trays were very well filled, the following members weighing in: Mr. B. Powell, jack and bream; Mr. H. Scott, bream 8 lb. $7\frac{3}{4}$ oz.; Mr. A. Shakel, bream and roach 4 lb. $4\frac{3}{4}$ oz. (one roach scaling 2 lbs.); Mr. R. Smith, bream, 14 lb. $3\frac{1}{4}$ oz.; Mr. F. Bowling, 6 lb. $4\frac{1}{2}$ oz. (one bream scaling 3 lb. 7 oz.); Mr. Summers, bream, 3 lb. 13 oz.; Mr. D. Davis, perch and roach, 1 lb. $1\frac{1}{4}$ oz.; Mr. T. Bowling, bream and roach, 1 lb. $11\frac{1}{2}$ oz. The bream and roach have been sent to Mr. Miller, East Street, Walworth, to be preserved.—D. Davis.

8th August, 1882,

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge, with thanks the receipt of 10s. 6d. donation from the Izaak Walton Angling Society, and 10s. worth of fishing tickets for the Welsh Harp from Mr. Powell, Richmond Piscatorials.—R. Ghurney, sec. August 3.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

A contest by the members of the above association was held at the Limpley Stoke Canal, Limpley Stoke, sixty-eight members contested for £15 in prizes, given from the fund of the association. The catches were very fair, considering the lowness of the water, and the canal full of weeds. Forty-three succeeded in getting fish, one member capturing eighteen perch. Over thirty returned to the Club House, the White Hart Hotel, Old Market Street, to weigh-in; several of the catches were over 1 lb. After business, an enjoyable evening was spent, the vice-president, and secretary's healths being drank with musical honours. The club is in a very flourishing condition, having a good balance at their bankers, and intend to have another contest during the season.—J. Hadden, vice-president.

CAVENDISH.

The most successful of our members last week were Messrs. Granfield and Soillieux, who weighed in about 15 lb. very fine tench; Mr. G. also having a Prussian carp scaling 1 lb. 6 oz.; Mr. Penton, as per usual, weighed in chub; other members weighed in, but their takes were unfortunately small.—E. Chambers.

9th August, 1882.

GREAT NORTHERN BROTHERS.

Sunday, Aug. 6, the following members weighed fish from Amberley:—Mr. Baker, one bream, 3 lb. 15 oz.; Mr. F. Watling, 3 lb. 14 oz.; Mr. Stammers, 3 lb. 15 oz.; Mr. Watley, 1 lb. 10 oz., from Welsh Harp; Mr. Burness, chub, from Watford, Monday, Aug. 7, Mr. Theobald, roach, 8 lb.; J. Fitch, roach, 9 lb. 4 oz., two roach weighing respectively 1 lb. and 1 lb. 5 oz.; J. K. Fitch, roach, 6 lb. 4 oz.; Mr. Hutchings, 6 lb. 8 oz.; Mr. Porter, 1 lb. 2 oz.; Butler, 1 lb. 10 oz.; Young, 3 lb. 6 oz.; W. Parkin, 2 lb. 2 oz.—J. Fitch, jun., sec.

P.S.—Found on the Metropolitan Railway, on Monday last, a bait can; the owner can have the same by applying at the club house, Robin Hood, Southampton Street, Pentonville.

Aug. 10.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This society held its weekly meeting on Monday last under the presidency of A. Matchen, Esq.; P. Courtnay, vice; J. Hewettson, chairman. The president presented the first prize of the society, viz., a cup to Mr. Hannant, and in so doing remarked on the progress made in so short a time, showing that the society was well appreciated by the attendance of London anglers—Mr. Crumplen, Mr. Bennett, Mr. Pond, and others. Mr. Bennett, of the Gresham, is also a member of the Yarmouth, and showed a good quantity, about 30 lb. of large bream. F. Hurt, Esq., of Acton, together with J. Hewettson, of Putney, also sent in on Friday about 28 lb. of roach, rudd, and bream in splendid condition from Potter Heigham. The broads and rivers were visited by nearly 200 anglers during the Bank Holiday, and had good sport. Mr. Green, of the Yare Preservation Society, was also present, and mentioned a case when nearly two tons of freshwater fish were found netted, which clearly proves that the rivers wanted such societies as, thanks to those contributing, have been formed on each river, and thus stopped the wholesale destruction of fish that was going; there is still more to be done in the way of watchers when funds will admit.—J. Lark.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held as usual on Thursday, the 10th inst., D. Cartwright, Esq., in the chair. After confirmation of the minutes, the secretary read the correspondence, including the usual river reports from Goring and elsewhere. The water was stated to be particularly bright, and not many takes were reported. An important communication from the Thames Angling Preservation Society was also brought forward, and Messrs. T. Crumplen and G. Austin were deputed to represent the society at the meeting in reference to the new Thames bye-laws, to be held at Cannon Street Hotel on Tuesday evening next. The takes of fish during the week included Mr. Edward Bennett (who took the first roach prize), one perch $1\frac{1}{2}$ lb., and bream 33 lb., two of these weighing 3 lb. each; Mr. Crumplen, bream $13\frac{1}{2}$ lb. (one 3 lb.); Mr. Bryant, one perch $11\frac{1}{2}$ oz.; Mr. G. Austin, one bream 2 lb. 14 oz. The librarian announced that Mr. Crumplen had presented Knight's "Life of Gresham" to the library, and Dr. Lloyd and Mr. Paterson promised a further addition. Mr. Jardine brought up several large specimens of pike lately taken. Mr. Wheeldon, who is always welcomed, was present at the meeting. Messrs. J. Beck, F. G. Tomlinson, and H. J. Vyle were ballotted for and elected.

The proceedings closed with a cordial vote of thanks to Mr. Cartwright for presiding.

GOOD INTENT SOCIETY.

On Saturday last the members of this club brought in some fine takes of bream, Mr. G. Hughes having 70 lb., Mr. Bell some good fish, Mr. Phillpot jack, Mr. Tavener dace, Mr. Gadbury bream and perch. Our annual dinner takes place at the Rye House Hotel on Monday the 21st inst., when we hope to have a large gathering; Mr. H. J. Tibbath, chairman; Mr. J. Smart, vice-chairman; dinner on the table at 2.30 sharp. Having spent a couple of days at Pulborough, I put up at the Arun Hotel—it is about ten minutes' walk from the station, and any brother angler that may be going to Pulborough cannot do better than put up there, the charges are very moderate, and the proprietor, Mr. Pearce, is most obliging, and studies the comfort and convenience of anglers, and I think, where anglers are well treated, we ought to make it known, then moderate charges would become more general.—R. MURPHY.

August 9th, 1882.

HIGHBURY ANGLING SOCIETY.

A strong muster of the members of the above society went forth on Sunday last to their favourite swims, the result being eminently satisfactory. Messrs. Anthony, Thomas and Sampson contributed a fine show of bream and roach from the Welsh Harp, the latter gentleman having some very nice fish. We also had a goodly take of roach from King's Langley by Mr. S. Howell, who took the prize of the day. On the 7th inst. (Bank Holiday), we were likewise favoured with some splendid tench (between 9 and 10 lb. by Mr. Devonshire, as also Mr. Higley with tench, roach, and perch, a brace of the former scaling nearly 6 lbs.; in addition, some good bream from the Ouse by other members. The annual dinner will take place at Mr. Lyndsell's, "The Pied Bull," St. Margaret's, on Saturday, September 2nd next, and members are particularly requested to attend a meeting of the society on Wednesday evening the 16th inst., in order to make final arrangements as to the number to be catered for, and other important business.—JAMES EDWARD WHEATLEY, secretary.

IZAAK WALTON ANGLING SOCIETY.

Mr. G. P. Rolt had some good barbel on Saturday last, the 5th inst., from the Ferry Boat Fishery, at Tottenham. The heaviest one scaled 5 lb. Mr. G. Rolt had some good fish on the same day from the same water, amongst them was a beautiful perch, which weighed 2 lb. 9 oz. There were several members out on Sunday last, but only two showed and weighed in. They were Mr. T. Ward, who had roach, and Mr. G. Manning, who had roach and dace. Two special prizes were fished for on Wednesday, the 9th inst. Mr. W. H. Mecham secured first honours, Mr. W. Wilkinson second ditto. There was a fair competition for these prizes. Messrs. C. Green, T. Dennison, sen., and T. Dennison, jun., had good shows, and ran very close.

LITTLE INDEPENDENT ANGLING SOCIETY.

A great number of members worked very hard to bring home a good show of fish this week, having the privilege of an extra day's fishing, but was a little disappointed, the most successful being Mr. Letch, with a show of bream and jack; Mr. Hopton, bream, perch and jack; H. Moore bream, chub, and roach; F. Hurwood roach; S. Evans jack and roach; and W. H. Evans, perch and roach. There were also several other members who weighed in. We hope to be more successful next week.—H. MOORE, Sec.

LIVERPOOL ANGLING ASSOCIATION.

Nineteen of our members had a day on the Vyrnwy on Monday last (Bank Holiday), but had only indifferent success. A fern case and stand, presented by Mr. Chandler, for the heaviest basket of fish, was won by Mr. Boulding: Trout and grayling, 1st prize, Mr. R. Woolfall (2nd and third not taken). Coarse fish, 1st, Mr. H. Davies, 2nd, Mr. Pearson, 3rd, Mr. Travis. The day was very bright, and the water low and clear, and but poor creels resulted. Messrs. Woolfall and Leaman had a good day amongst the roach on a mere near Northwich, killing some 20 lb. of 6 to 8 oz. roach in a very short time. A peculiar feature was noticeable in respect to this catch. A party had been fishing the same swim for several hours the same morning and never had a bite.

9th August, 1882. R. WOODFALL, hon. sec.

NORTH-EASTERN ANGLING SOCIETY.

On July 28th two members of the above society, namely, Messrs. Haylock and Melbourne, had a splendid day's sport on the Ouse at Huntingdon, resulting in 58 lb. of roach and bream, and an eel weighing over 2 lb. The fish were on view at the Society House, the Shepherd and Flock, Swan Alley, during the evening.—J. HUMPHREYS.

NORTH WESTERN ANGLING CLUB.

The only takes of any note by the members of the above during the past week was one by Mr. North, 13 bream, 38½ lb. from the Welsh Harp, and Mr. Bonvoisin, who is spending his holidays in the neighbourhood of Yarmouth, sent up a small hamper containing 32 lb. bream. The return visit West Central Association was paid to this club on Wednesday evening last; there was not a great number of clubs represented, but the good singing contributed to by Messrs. Welsh, Lownian, Gooch, Aldis, Heckford, Jennings, Constable, Hyde, Packman, Hillier and Rowland made up for any deficiency in the number present. Mr. R. Marshall, chairman, and Mr. Lancaster, sen., vice ditto.—H.

Aug. 10.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The next return visit of angling clubs enrolled on the Central Committee will take place on Tuesday next, August 15th, instead of Monday, August 14th, as previously announced in the numerous sporting papers.—THOMAS WM. LUCY, sec.

STANLEY ANGLERS.

The takes of fish this week by our members have considerably improved over those reported lately, and we have had some very good shows indeed. Mr. W. Ellis, roach and dace; Mr. C. P. Wheatstone, jack, perch, dace, chub, and trout, 21lb. 3½oz. total weight. Mr. Scull has been very busy with the roach, having scaled 50, weighing 17lb. 11oz., and 66, weighing 24lb. 1oz. Mr. Pistrucci made a fine show with 12 roach, scaling 9lb. 0½oz., 3 of which were over 1lb. each. Mr. D. M. Humby had a couple of nice tench; Mr. R. H. Humby, a bream of 3lb. 1oz. and 1 tench, 2lb. 9½oz.; Mr. W. H. Rose, 15lb 1½oz. of bream.—GEO. E. WALKER, sec.

August 10, 1882.

SURREY PISCATORIAL.

The following is the result of the competition that took place among the members of this society on the 9th:—Mr. Beckett, with 19 lb. 6½ oz. of roach, dace, and two nice grayling, won the 1st prize, a £11 11s. silver cup; Mr. Linstead had 13½ lb. of roach, dace, and jack, the 2nd, a silver lever watch; Mr. Bansback, out with C Brown, of Richmond, roach and dace, managed to get the 3rd, a £2 2s. pair of boots; Mr. Watson, out with J. Johnson, of Kingston, got among the roach that entitled him to the 4th, a £1 1s. prize. Several members visited Huntingdon, but returned too late to weigh their fish for this competition. The next contest will take place on the 23rd for three prizes, given for honorary members only. Messrs. Boalch and Watson are appointed to represent this society at the meeting to be held at Cannon Street Hotel on Tuesday next.—"PIXIE."

August 10.

THE HOXTON BROTHERS ANGLING SOCIETY.

The annual dinner will take place at the Rye House, on Sunday, August 27th, 1882, at three o'clock. You will oblige by informing me on or before Thursday, August 24th, if we shall have the pleasure of your company on that occasion, so as to enable me to arrange accordingly.—R. GHURNEY, sec.

N.B.—The distribution of prizes will take place on Monday evening, September 18th, 1882, at nine o'clock, in the club room. Members will oblige by sending in their prizes not later than Thursday, September 14th.

UNITED LONDON ANGLERS.

A special general meeting will take place on Monday, August 11th, 1882, at 8.30. p.m. sharp; to consider business of importance:—The proposed new Thames Fishery bye-laws; the better representation of delegates; to hear the report of the test case in the River Lea, from Carthagena Lock to Calais Point, and other business. Chairman, Mr. S. Morgan.—R. GHURNEY, Sec.

At Worship Street Police Court to-day, before Mr. Bushby on an adjourned summons, George Hubbard and Arthur Alsworth were charged with using a prohibited net and taking other than bait to be used for angling purposes, to wit, pike, barbel, roach and dace of less size than allowed by the Lea Conservancy Bye Laws, and were fined £5 and 2s. costs each or one month's imprisonment in default. The case was proved by Thomas Verdun, local bailiff of Clapton, in the service of the United London Anglers' Central Committee, and a police constable. Mr. G. Cerbe, clerk to the Lea Conservancy Board, attended to prosecute.—R. GHURNEY, sec.

10th August, 1882.

WALWORTH WALTONIANS.

On the 9th Messrs. Gilbert and Delahaye, jun., had a very nice show of tench and carp from a place near Pitsea. On the 21st an open contest will take place for a dressing-case given by Mr. Rayner, and 10s. 6d. given by a member. "The Diamond Ring Day," is the 10th of September. Members are requested to bear that in mind.—PIXIE.

Aug. 10.

THE RICHMOND PISCATORIAL SOCIETY AND THE PROPOSED THAMES BYE-LAWS.

THE members of this society have met at the last two meetings, under the presidency of the chairman (Mr. F. C. Clench), in exceedingly large numbers, the principal business being to consider the proposed new bye-laws of the Thames Conservancy, when, after a lengthy discussion in the first instance, it was unanimously decided to postpone the same until the following meeting night; and as a preliminary step the T.A.P.S. be asked to take into consideration such revision of the proposed bye-laws as they may deem it necessary for the welfare of anglers. And further, the following resolution be sent to the committee of the Thames Angling Preservation Society: That this society venture to suggest to the committee of the T.A.P.S. the advisability of convening a conference of the various angling societies, with a view of taking such steps as may be necessary to obtain any amendments the conference may think advisable in the proposed bye-laws of the Conservancy. At the adjourned meeting a letter was read from the secretary of the T.A.P.S., acknowledging the receipt of the letter in reference to the proposed bye-laws, which should, agreeably to the wishes of the members of the R.P.S. be placed before the committee; also a second letter of subsequent date to the effect, the committee of the T.A.P.S. had acceded to the request of the Richmond Piscatorial Society to hold a conference of the angling clubs, such conference to be held at the Cannon Street Hotel, on the 15th inst. The proposed bye-laws and amendments were again fully investigated and framed for presentation at the conference. Messrs. Taman and Terrill, at the unanimous wish of the members, kindly consented to act as representatives, with an intimation to bring before the conference the advisability of urging on the Thames Conservancy the necessity of abolishing netting between Richmond and Kew bridges, on the owners of that privilege being compensated to such an extent as the Thames Conservancy may consider reasonable; the members present being Mr. F. C. Clench (chairman), Mr. H. Dickinson (vice-chairman), Mr. Houghton (treasurer), Mr. Rowe (librarian), Mr. Gaynor (curator), Messrs. J. D. Johnson, Plant, Griffiths, Smith, Downs, East, Hayward, Field, Eydmann, Nattress, A. J. Little, Dwelly, Powell, Crew, Harwood, Taman, Terrill, Wilson, Trinder, Pentrey, Heasler, Hester, W. Abbott, and Davis; Mr. P. Geen, honorary member; visitors, Mr. Sachs, of the Piscatorial Society, Mr. J. Pawsley, Gresham Society, Messrs. Wheeldon, Neville, &c. Takes of fish from the Thames: Mr. Little, 1 jack, 6 lb. 3 oz.; Mr. Hayward, 1 bream, 3 lb. 5 oz.; Mr. Smith, 19 lb. 4 oz. dace, 5 lb. 7 oz. roach; Mr. Rowe, 1 barbel, 3 lb. 7½ oz.; Mr. Nattress, 1 tench, 1 lb. 3½ oz.—J. H. GAUNT, hon. sec.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"Hope deferr'd maketh the heart grow sick."

In my last note I stated that the Thames was in prime order for angling; but its very goodness seems to have been its badness, for, in consequence of getting rapidly over the "hay fever and green grass sickness," it has become as clear as gin, and all kinds of fish seem to have sought the shelter of umbrageous weeds, from whence not any amount of gentle enticement or minced lobworm luxuries will inveigle them. Gudgeon are the coming fish, and are being had in quantities; but this year seems given to small ones, and cooks will bless the apparition of such infinitesimal morsels to brown, crisp, and dry with egg and bread crumbs. At Maidenhead some fair trout and barbel have been taken, and also trout at Marlow, Hambleden, and Goring. At Hurley, Messrs. Birch, Davis and Co. yesterday got some 3 dozen miscellaneous fish, but only by baited breath as well as swim, as the bed of the river could easily be discerned in 8 feet of water. Thursday evening.—Weather gloriously fine, with wind N.E. Water perfectly clear. Piscators going in for anything but gudgeon, but choose and exercise the "fine and far-off style" to command the least success.—Marlow Buzz.

THAMES (Above Locks).

At Kingston, John Johnson, sen., has been amongst the perch and jack, his best day being ten brace of perch, and one brace of jack. John Johnson, jun., has taken in one day five barbel, weighing altogether about 17 lb. A carp of $7\frac{1}{2}$ lb. has been caught from the banks, and a splendid lot of roach. At Walton, John Hone, in four days, 41 bream; George Hone, in three days, four dozen of roach and dace, and 17 bream; George Rogerson, in three days, 40 bream; and R. Walford, in one day, six dozen of gudgeon. At Halliford, J. Smedwick, in two days, 11 dozen of roach; H. Rosewell, in the same time, 8 dozen; Edward Rosewell, in one day, 5 jack; and George Rosewell has landed a trout of 4 lb. At Shepperton, F. Purdue, in three days, 15 dozen of gudgeon, and 15 perch; H. Purdue, in two days, 12 dozen of gudgeon. At Staines, Mr. C. Banfield, in two days, with John Keene, sen., 35 dozen of gudgeon, and 8 chub; Mr. and Mrs. Shaw, with J. Bent, in three hours, 9 dozen of gudgeon, and one perch.—H.

Ancholme District.

I and my boys had a turn out on Saturday last, and speedily caught 50 roach and dace with the fly. Msnday being Bank Holiday there was a large influx of anglers, who had somewhat varying sport; but, owing to the delightful weather, all had a most enjoyable holiday. The waters, owing to continuance of fine dry weather, remain very clear. The fishing would be improved by a fresh, but for the sake of the farmers we must not desire this. I had an hour's trout fishing last evening, and caught one brace of fine fish. In the Ancholme, the bream, roach, perch, &c., have been well on the feed. Mr. J. Atkinson and friends went to Harlem Hill on Monday, and had a fair catch. Mr. A. saw 16 trout the other day at the entrance of the Scawby Beck. A man caught 4, and did not know what they were. As they were only yearlings as yet he ought to have returned them.—Thomas Ford.

Ballynahinch.

Since last report the weather has been greatly against angling—strong sunshine and very calm. The following are the takes for the week:—On the 2nd inst., Mr. Dudgeon, 21 trout; Mr. Deverell, in a few hours in the evening, 5 trout; Mr. Bury, 20 trout; Captain Nicholson and brother, 20 trout; Colonel Johnstone and brother, 30 trout. On the 3rd, Mr. Dudgeon, 14 trout; same date, Mr. Deverell. 11 trout; Mr. Bury, 22 trout; Captain Nicholson and brother, 19 trout; Colonel Johnstone and brother, 16 trout. On the 4th, Mr. Dudgeon, 4 salmon, weighing 12lbs, $10\frac{1}{2}$lbs., $7\frac{1}{2}$lbs., and $5\frac{3}{4}$lbs., also 3 trout; same date, Mr. Deverell, 23 trout; Mr. Bury, 10 trout; Captain Nicholson and brother, 20 trout; Colonel Nicholson and brother, 33 trout, on the 5th; Mr. Dudgeon, 7 trout, same date; Mr. Deverell, 21 trout; Mr. Bury, 4 trout; Captain Nicholson and brother, 4 trout. The largest take by any one of the other rods for these last three days has not exceeded a dozen of trout. Weather so calm.—Walter Blackadder.

Chichester.

Owing to a leak in the Budham Lock, the water is considerably lower than usual, but in capital condition. Fish are well on feed, in the small hours of the morning some satisfactory sport having been obtained; I daily hear of big fish breaking away; the fine tackle of the past few seasons is this year useless; pound-fish seem much stronger, and the heavy weights have as yet all escaped. For bream paste seems most killing; all fish are now in good condition.—George F. Salter,

Dove.

This stream all the week has been running very low and fine, and bottom-fishers complain that the water has been far too bright for them. However, fair sport amongst roach, chub, and dace has been had with the wasp-grub, which is just now the very best bait that can be used for these fish. Every day the river banks are now thronged with rodsters, and I really think the number of anglers increases every season. Trout and grayling have been rising best in the evening, but there has been a fair rise on all day long, and on the preserved lengths sport has been excellent with the fly, though the spinning baits have proved next to useless. The golden dun, the doteril, and the July olive, have been most destructive. The average of baskets has run up to about 7 brace per rod, that is, to the experts. Barbel are now feeding freely, and I expect when a fresh comes on the river they will be found well on at the lob worms.—The Splodger.

Ilfracombe.

There has been a few days good fishing this week, parties whiffing getting some good baskets of mackerel and a few bass. Although they can see the bass playing thickly round the boats, yet they refuse to take the spinning bait, and the water being so clear they can almost see the bottom. Some good strings of gurnet, tubs, conger eel, and bream have been caught. To-day a boat drifting with her nets caught a quantity of mackerel off Clovelly; they were brought here and sold for 2s. a dozen. The fishing from the pier and jetty has been very good for pollack, whiting, conger eel, and dabs, and some fine lobsters have been brought in from the pots. Wind to-day blowing strong from the East.—E. Comer.

Lea (Ware).

A goodly number of anglers of various London clubs visited here on Sunday and Bank Holiday, prominent among them being members of the "Good Intent" and "Bloomsbury Brothers" who mustered rather strongly. The sport, as a rule, was far better than had been obtained here latterly, takes of roach from 10 lb. to 14 lb. were the rule rather than the exception, while in many cases really good fish were killed, several weighing over 1 lb., although I saw one a really fine fellow of $1\frac{3}{4}$ lb. taken at the boom, a handsome roach this was. Sport among the jack has not been really first-rate, the fish killed being as a rule small; the heaviest I saw killed on Sunday was one of about $4\frac{1}{2}$ lb., but some really fine jack are to be seen here and must fall to some lucky angler's skill, although I am afraid not before we get some rain, the water owing to this want is getting very low and as bright as it possibly can be. On Wednesday, in two hours, Mr. C. Clark, of the "Hoxton Brothers," was really fortunate, considering the mentioned state of the water, in taking over 10 lb. of roach and dace, and really good fish too, some weighing over a pound. Thursday I was out trolling and got two fair jack, these I took in the dead water between the town and Stanstead Lock, a reach of water I would advise those anglers in quest of jack to try their luck in. Live baits are somewhat difficult to obtain here, but as I generally keep myself well stocked, I shall only be too pleased to accommodate any brother anglers with them.—"Lion and Wheatsheaf."

Leicester.

The fine summer-like weather that we have been favoured with since last Friday week has induced a large number of anglers to visit the societies and neighbouring water, and, taken upon the whole, with fair results. Monday, being Bank Holiday, saw a large number of anglers fishing the Soar and canal, and, with roach biting more freely, a number of them had some good bags, ranging from four to ten and twelve pounds per rod. Good perch have also been taken with the worm, but takes of pike have been small. At Aylestone they have had more than their usual share of patronage, and these favourite waters have been yielding good sport. Last Sunday, a large number of anglers visited the Barrow waters for bream fishing, and as early as four o'clock on Monday many rods were at work, but the bream were not on the feed. Consequently, the bags were small. I could not hear of many takes over 10 lb. The Wreake and Narborough waters both received a share of patronage, and in the majority of instances, anglers have been well rewarded for their endeavours. The annual fishing contest of the local society will take place on Saturday, the 19th inst., when, in addition to the valuable money prizes given by the society a number of tradesmen are supporting the movement by giving some valuable prizes to be competed for. The waters at Leicester and the neighbourhood are fine and in good condition for angling.—Alert.

Medway (Tonbridge).

The water is in capital condition for all kinds of angling, and during the week some very large bags have been made. Mr. T. Elliott has had very good luck with the fly-fishing for chub. On Monday the river was regularly beseiged with anglers, a large number of whom had very good bags. Mr. E. B. Grave, below the town, had 20 creditable roach, and, trying for pike, hooked a veritable "hummer," but he broke him away. Mr. R. A. Wallas Beeching has been having some good sport with roach and bream, as also have the Messrs. Bartram, opposite Tonbridge Castle. Messrs. T. Hewitt and Jempson, fishing above the town on Saturday, caught 10 bream, weighing 28 lb., and on Monday they secured 31 lb. 10 oz. of bream and roach, the largest roach weighing $20\frac{1}{2}$ oz. With a little judicious baiting, fish seem to be right on.—Ye Medway. Water Rat.

Ouse (Littleport).

Water still very bright and weedy. Roach and perch are coming on, I hope, though but very slowly. All anglers are taking a few, though I am sorry to say there has been nothing worth reporting the last fortnight, the best catches being $2\frac{1}{2}$ dozen roach one day last week by Mr. George, Bassingbourne, and a nice little dish of roach and perch on Wednesday morning by the Rev. W. Tillbrook, Comberton Vicarage, Cambridge. I also hear of several decent pike having been taken by Mr. E. Hills, of Ely, a little higher up the river.—C. South.

Thames (Eynsham).

We have had a great many anglers this week, Monday being Bank Holiday they were very numerous. The water is in capital condition and sport has been good. Roach and perch have been caught in large quantities, the former with malt, the latter with minnows and worms. Mr. Clench, chairman of the Richmond Piscatorials, had a splendid take of barbel on Monday; altogether the fishing bids fair to be very good for some time.—W. B. Howe.

Thames (Halliford).

Owing to the water being so low and bright the fishing is very bad. Different gentlemen fishing with me since my last, report their takes have been as follows—viz., 1st day, Messrs. Plimpton and Bennett, 4 dozen roach and dace; 2nd day, Mr. Halford and friend, $4\frac{1}{2}$ dozen roach and dace; 3rd day, Mr. M. and G. Palmer, $7\frac{1}{2}$ dozen roach and dace; 4th day, Mr. Wheeler, trout fishing, took one between 3 and 4 lb.; 5th day, Mr. Geo. Palmer, one trout, which turned the scale of 4 lb, weighed at Mr. Stone's, Ship Hotel, Halliford, being the sixth trout Mr. Palmer has taken with me this season, and being the thirteenth I have had the pleasure of landing this season.—George Rosewell.

Thames (Windsor).

Many anglers are under the impression that fishing for barbel under a broiling sun in a bright water is useless, and this week I am able to upset this theory; providing fine tackle is used and swim properly baited beforehand, as between 3·15 and 3·50 this afternoon I piloted a gentleman, Davies, Esq., of Elmley Castle, Pershore, Worcester, to a swim, where, in the thirty-five minutes he caught six barbel going about 15 lb. Having missed his train, and there not being another for some time, he tried to get a fisherman for an hour or so, but without success, so I took him to a swim I had baited with the above result. Had he not been obliged to leave, our take would doubtless have been considerable, he took away the two best, and the rest were returned. On the 4th inst., I had my first day's "outing" this season, and took out Francis Francis, Esq., of the *Field*, and his friend Ledger, Esq., they had about 50 lb. of barbel, the bulk of which were taken in the evening, opposite Windsor Bridge; all were returned by Francis Francis, Esq.'s request, with the exception of four which were injured. Before breakfast on 7th inst., Mr. John Godard, of Eton, fishing with me, took 6 barbel and 1 chub in about 1¾ hours, and the next morning, before breakfast, in two hours and a few minutes, Pierrepont Brooke, Esq., of the 93rd Sutherland Highlanders fishing with me, had 13 barbel going 32 lb., when weighed at the Victoria Barracks. They were afterwards distributed to the men of his company. On the 7th inst., George Lumsden, fisherman, of Eton, took a fine specimen of a Thames barbel, weighing 10 lb., which is now in the hands of Cooper for preservation, and will be another addition to my local trophies in angling. On the 4th inst., Master F. E. Layton, of Windsor, took a very handsome carp of 6 lb. 7 oz., whilst fishing for roach in the mill stream; this, also, is in the hands of Cooper, and will be added to my collection. On the 6th inst , Mr. Lock, of Eton, had a very pretty trout of 4½ lb., which he took spinning at Boveney Weir. Some good bags of roach, perch, and gudgeon have been had, and several have been topped with stray barbel. Mr. Sowerbutts, of Eton, with a friend, had forty-three roach and dace, and numerous others have had jack, chub, perch, and barbel, but of no size or quantity worthy of mention. At Datchet, a well-known local angler had a nice bag of barbel one day, going 36 lb.; though this is an excellent piece of water for barbel, but few seem to make bags, there must be something wrong with the baiting or bait. Water at time of writing is good for time of year, and barbel will come freely to greaves, if properly baited beforehand, and properly fished for with fine tackle. Jack are numerous, and I have lately noticed some rare big fish feeding, and, in a month or two, expect some heavy ones will be had.—B. R. Bambridge.

Trent (Newark).

The water is as clear as unadulterated "Old Tom," and so low that nearly any swim can be reached from the bank. Fair quantities of all kinds of fish have been taken during the past week. Chub and bream have been taken with the wasp grub; roach and dace have been biting very fairly at gentles and paste, while the worm has also succeeded in deluding eels, flounders, bream, barbel, &c. Scratchings have also been successful in one or two instances in taking barbel, although catches of the latter fish have been the exception and not the rule. I have been out a couple of days this week, and, by a bit of judicious ground baiting, I succeeded in capturing 6 dozen roach and dace, principally roach. Half my fish averaged ¾ lb. each. Plain bread paste was my most successful lure. Any sort of summer fishing can now be practised with some chance of success.—The Trent Otter.

P.S.—A few inches more of water in the river would be an improvement.

Trent (Nottingham).

This river is still very low, and during the week thousands of anglers have been out, especially in lower waters. On Bank Holiday the rodsters were, in fact, a sight to see. At Honeringham upwards of 40 lb. of chub fell to the skill of two of our principal fishermen; and in the fishery below a take of 23 lb. of the same species was also recorded. In the upper lengths, six splendid barbel were killed on Monday, with the worm. the largest being 6½ lb., and below, at Shardlow, Mr. J. Theaker, accompanying a resident gentleman, succeeded, amongst other fish, in taking close on 50 lb. of chub. All these latter fell to the worm, ignoring, singularly enough, the wasp grub. Some very good roach and dace have been caught at Sawley and in the Willington district. Mr. Brown, of Derby, is credited with having killed another very fine salmon.—The Man at the Clubs,

Tweed, Teviot, and other Scottish Rivers.

During the past week the weather has been very warm, and, consequently, with a rising temperature. We have had a decided fall in the size of all our rivers, and a falling off of the take, as against those of last week. Notwithstanding these incumbrances, the disciples of Old Izaak have had exceedingly good sport, taking the thing all round, although on one or two of the waters the returns are reported almost *nil*. On the Tweed, Mr. P. Elliot has killed one very good trout of fully 3 lb. weight, and on the Makerstown water, Mr. Roughhead has killed 1 grilse, and 1 bull trout, the former of which weighed 6 lb and the latter 8 lb. On the Bemersyde waters, Colonel Haig has killed a good few salmon during the past three weeks, and on the salmon casts at the Pavilion, Melrose, Major-General Henry has also been successful in killing a number of salmon and trout. Mr. Roughhead, on the Makerstown water, on Wednesday, killed a couple dozen trout with worm, but the rivers have run too long small for such lures to be effective now. On the Teviot, Mr. T. Murray, Kelso, hooked a very nice fish at Maisondieu streams, but lost it after having run it for some time. Angling at Coldstream Bridge, John Collingwood, Esq., of Collingwood House, killed a 10 lb fish, and was broken with another, while another gentleman had one of 14 lb. The netting stations on the Tweed at Coldstream are doing fairly well, considering the state of the weather and water. Bandibus station has had 20 salmon, and the English water 10 grilse and one trout. At Berwick, the produce at the netting station does not improve as the season advances, and as the time draws on for the closing of the net season lessees are not extremely jubilant over a good season till the close, seeing that grilse, which ought now to be very numerous, are exactly the reverse. Last year, at the same period, the opposite was the case. At the Wilford fishery a beautiful salmon of 40 lb. was got, and some of a lesser weight. Prices just now at Berwick are—salmon and pike 1s. 2d., and trout 1s. per lb. In the same period last year prices were—salmon and pike 11d., and trout 8d. per lb. The trout angling in Lochleven continues unsatisfactory, but on the river Annan the reports are good, several baskets of yellow trout having been got, as well as many sea trout. In the Esk, Dumfriesshire, good takes of sea trout have been got, and still continue. In the Langhoem district Mr. W. Urquhart killed two salmon 13 lbs., and the smallest 12 lbs. The weather is very warm and bright, the glass registering 77 deg., with the wind south-west.—Max Wheel, Kelso, Aug. 10.

Wharfe (Yorkshire).

The river has now run down to summer level, and the fish have become exceedingly wary, very few trout have been taken during the past week, but dace have been rising pretty freely to such flies as the soldier palmer and red ant. I have seen a stray August brown or two on the water, and in another week or ten days the imitation should prove a killing fly. Weather at present excessively hot. I have spent most of my spare time during the week in perusing D. Foster's work on "Scientific Angling." It is, indeed, *sui generis*, and will do much towards adding to the fame which the late author had acquired during his well spent lifetime. As the Editor promised to review it in this week's issue, it would be a work of supererogation on my part to say more than that it is eminently practical, as might be expected, and that every angler ought to possess himself of a copy.—Francis M. Walbran.

Wye and Derwent.

Both rivers have been in first class condition for fly-fishing the whole of the past week, and I am pleased to say that a fair quantity of fish have been killed by experienced fishermen both off the Wye and Derwent. The best feeding times are early in the morning and the last thing at night, and baskets averaging from 3 to 5 brace per angler have been made of an evening. The killing flies have been the small honey dun bumble, little red, ribbed with gold twist, and black gnat flies. Last Friday 12 brace of good fish were killed off the Wye, between Tilleford Bridge and Bakewell with bumble and red flies. Last Monday, being Bank Holiday, very many anglers visited these rivers; dipping under the bushes and trees in the middle of the day, has been followed with good success, the small house flies being well taken, and several trout over a pound a piece have been landed. The bottom fishers only fish early and late, and their takes have been but very middling. Several small pike have been killed during the week between Cromford and Ambergate. Weather very bright and hot, scarcely any fish rising in the middle of the day, only what are feeding under the bushes and trees.—George James Eaton.

THAMES CONSERVANCY AND "PRIVATE RIGHTS" ON THE RIVER.

The Thames Conservancy are meditating an audacious obstruction of the public rights on the Upper Thames, and as to be forewarned is to be forearmed, we trust the public outcry will compel the Government to withhold its sanction from an impudent attempt to convert the Thames into a private stream. This attempt is to be made in the proposed new bye-laws for the regulation of the "public fishery"—bye-laws which the Queen in Council will have to sanction before they have the force of law; but once sanctioned, they will rule the river.

By one of these bye-laws, in an artfully constructed clause, the Conservancy takes power to itself to recognise "private rights" on the river by licensing persons as the owners of private rights in the Thames. This means that the persons who, on the Upper Thames, have been laying claim to the waters of the Thames, and who are, in several cases, at once conservators and "justices," are to license each other as owners. Some of these proprietors of lands adjacent to the river have supported their claims "in law" by giving as justices decisions in each other's favour; giving trespassers half-a-crown and ten shillings costs for fishing in so-called "private" parts of the river. "A Thames Rights Defence Association" was formed, and the *tria juncta in uno* (conservator, magistrate, riparian) was stopped. Last year, however, Sir Roger Palmer, who lives at Maidenhead, and held the office of president or vice-president of the local angling society, and is, moreover, as he was then, the nominee of the Board of Trade on the Thames Conservancy, summoned one of the bailiffs of the angling society for fishing in a part of the Thames which Sir Roger declared to be his own property. Sir Roger had for his advocate before the magistrates the clerk to the bench, whose clerk was his *locum tenens* in the discharge of his master's public duties. The Thames Rights Defence Association defended the bailiff, and the bench, after investigating Sir Roger's title deeds, decided that he had no claim to the waters, and he had to pay eight guineas costs. Now, under the bye-laws which the Conservancy propose to make law, his brother Conservators can license Sir Roger as the owner of the Maidenhead waters, and Sir Roger can license his neighbours and fellow-Conservators. When we state that the people who are making these claims to private ownership in the Thames declare that the sole right of fishing lies in them, and that no one has a right to linger on the river in a vessel, but to navigate as quickly as possible from point to point, it will be seen that the Government must be pressed to allow no such audacious proposals for the abstraction of public rights on a "common river" to be in the bye-laws.—*Gravesend Argus*.

Under-sized Fish.—At the Reading County Magistrates Office on Saturday last, W. Andrews, of Chelsea, pleaded guilty to taking seven perch, which were less than six inches in length, measured from the eye to the end of the tail, in the Thames at Pangbourne, on the 30th July. Mr. Henry Creed prosecuted on behalf of the Reading and District Angling Association, and stated the case against the defendant. Defendant was fined 2s. 6d. and 19s. 6d. costs.

Flies.—The annoyance from these pests will, for some time, be very great. The method given below and which is furnished by an Iowa lady is simple, cheap and worth trying, both for house and store:—"For three years I have lived in town, and during that time my sitting room has been free from flies, three only walking about my breakfast table, while all my neighbour's rooms are crowded. I often congratulate myself on my escape, but never knew the reason of it until a few days ago. I then had occasion to remove my goods to another house while I remained on for a few days longer. Among other things removed were two boxes of geraniums and calceolarias which stood in my window, being open to its full extent, top and bottom. The boxes were not gone half an hour when my room was as full of flies as those of my neighbours around me. This, to me, is a new discovery, and perhaps it may encourage others in that which is always a source of pleasure—namely, window gardening. Mignonette, planted in long shallow boxes, placed on the window sill, will be found excellent for this purpose."—*American Sea World*.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

"WHO IS THE FATHER?"

Sir,—There are obvious reasons which tempt me to answer the letter of onr friend, Mr. Manning, which appeared in your last week's issue, under the above heading. Before giving you those reasons, permit me to say that the mere question of "Who is the Father of the Anglers' Benevolent Society?" is, in my opinion, of such little importance that I should not have presumed to have made a demand on your space for the mere purpose of answering it. My reasons for asking you to favour me are, that Mr. Manning's letter, while it very fairly leaves the question an open one, none the less implies that there are anglers who think that I, in claiming to be the Father, have done my friend, Mr. Ghurney, an injustice. Although, Sir, this appears to be an age in which such injustices are of far too common occurrence, I hope none the less that men will have the courage to step forward and claim, as Mr. Manning has done in this instance, that "honour shall be given where honour is due."

I have known Mr. Manning, now, for a number of years, and I have my estimate of him. I once heard him say something which I would wish all those who profess to take an interest in angling to read: "I have been a member of this committee (the United London Anglers Central Committee) for seven years, and I am proud to say that I never yet missed a meeting." No wonder, Mr. Editor, that he should come forward and ask for the facts. He believes that his committee and his secretary are the persons entitled to the credit of having originated the Anglers Benevolent, and he has an undoubted right to say, stand forward and shew your title, or cease to claim that which is ours.

I have such an array of facts that my greatest difficulty is to choose a few which will best and most conclusively prove my case. The letters—many large bundles—especially those signed R. B. Marston and L. Bonvoisin, are sufficient, the Fishing Gazette for 1879 is equally sufficient, and the minute book of the West Central Association is conclusive.

On December 3rd, 1878, after many months of private talk with the members of my club, I was encouraged to say at a committee meeting, Mr. Ghurney being present, that "I thought the time had arrived when something like united action should be taken to put a stop to the unceasing and ever-increasing volume of appeals, which was proving itself a great enemy to our best interests, and a cruel tax on the regular attendant at his club." I gave a rough draft of my idea, which was much improved upon by the members of the committee, and Mr. Ghurney was asked to bring it before the members of the United London Anglers' Central Committee, and ask their co-operation. When he did so, Mr. Manning, being a never-failing attendant, heard for the first time of the Anglers' Benevolent from Mr. Ghurney, and came to the conclusion that the idea was his or theirs, not mine or ours. This will be proved if you kindly insert the following cutting from your Gazette of January 24th, 1879, which is a portion of my statement made to a general meeting of the association, held on the 17th of the same month, Mr. Ghurney again being present:—

"The Chairman, Mr. Geen, then called the attention of the meeting to the question of the numerous appeals, which are made from time to time, on behalf of distressed members of clubs. The working committee had given the question during the past two months their best consideration, and they are of opinion that the time has arrived when it should be dealt with in a comprehensive manner. The good understanding existing between the East and West End clubs has enabled them to appeal to the "Central Committee of London Anglers," to take united action with them, which they have promised to do. I shall not detain you by entering into the demerits of the present system of appeal, beyond saying that, in my opinion, if it is not the worst possible, it is certainly not the best. I should like to say before giving you the committee's plan, that they are, and I believe you will be, unanimously of opinion that an angler, being a member of a club, who through no fault of his own, but in consequence of a series of misfortunes becomes distressed, has a claim upon us for assistance.

The committee recommend that an independent society, that is, independent of either the Central Committee or this association, should be formed, having for its title The Anglers' Provident and Benevolent Society. Provident, because every angler would be invited to pay a small sum annually, that he might be entitled to appeal to this society in the event of his becoming pecuniarily distressed. Benevolent, because a number of good-hearted anglers would cheerfully give a benevolent subscription to a society, provided they had confidence in that society doing good with it. It is proposed that this association should appoint five members in whom they have confidence for such work, and that the Central Committee should also appoint another five. Having these ten representatives of the whole of the London clubs, and, further, with a secretary who has a thorough knowledge of anglers, such as Mr. Ghurney, I think we could and should be willing to give such men a fair trial, and the result would be, in the opinion of the committee, a grand success. I am pleased to inform you that Mr. Ghurney has kindly accepted the secretaryship, and that the Central Committee have appointed five capable men, who are well known and respected. With these few remarks, I will now leave the question in your hands."

Is it rational to suppose that I could stand up before the representatives of the London Anglers, our working committee being present, and assert that we had appealed to the central committee of London Anglers? Could such a statement have passed? Could it have appeared in your paper and a notice by yourself in large type calling attention to it, if my statement was the reverse of true?

Now let me ask Mr. Manning, or anyone who takes an interest in this question, if it would be possible for me to receive letters at this time, January 20, 1879, from yourself, one of which says, "I have received your letter about the proposed 'Anglers' Provident and Benevolent Society' and I think *your* idea is splendid. I send you five guineas as a contribution towards the fund, and please put my name down as an annual subscriber for one guinea."

Three days afterwards you had occasion to write to me again, and you say, "I have written a notice of *your* scheme which will appear to-morrow" (the 24th January, 1879).

Is it likely, Sir, that you were blind as to who was the originator of the scheme, and that I and the thousand and one other persons permitted you to remain blind?"

I will only give one other quotation, and that is from a letter of Mr. Bonvoison, who was sure to know the facts. He wrote, "Once let this pet scheme of yours be started on its mission of good, and I shall expect you to actively co-operate with me in my pet scheme, the protection of the Grand Junction Canal."

Can it be necessary to write another word in proof of "who is responsible for the starting of the Anglers' Benevolent?"

I must admit, Sir, that my conscience pricks me that I have done so little for my "pet scheme." I know full well that it was such men as Messrs. Bonvoison, Morgan, Beckett, Murphy, Aldridge, Field, Manning, and, last yet first, my friend Mr. Ghurney, who matured that scheme, and who has had to bear the burdon of its working. Mine has been the pleasure to stand by and see the scheme perfected, and its grand work being carried on by good and true-hearted men.

When I said at the tournament dinner that I was the father, it was intended to show that instead of thanks being due to me, the society had an indisputable claim on my services at any and all times.—I am, &c., P. Geen.

"WHO IS THE FATHER?"

Sir,—It is with considerable surprise I read Mr. Manning's letter in the Gazette on this matter. I am inclined to think that the honour of having originated the Anglers' Benevolent Society can be claimed by a great number of people, if it is due to each one who may have had some sort of an idea that such a society would be desirable. I might almost claim that honour myself, for I can distinctly recollect that when my friend, Mr. Geen, first mentioned the matter to me (which was months previous to his publicly naming the idea, and a considerable time previous to January 17, 1879, when he introduced the matter to the W. C. Association—see Gazette January 24, 1879), I was reminded that some such idea had once passed in a hazy and indistinct manner through my mind. Doubtless, the Father of the Society is the man who has successfully advanced the idea; who has, as it were, rocked the infant in its cradle, helped it in its first steps, provided it with excellent nurses and sponsors, and carefully tended it until it has become the sturdy child we now see; such a man is not only the father, but the mother also. All honour is due to those who assisted him, and who now carry on this grand work; every one of them is entitled to his full share, and no one is more ready in according that honour on every occasion, both private and public, than the gentleman to whose successful energy the anglers of London are indebted for the foundation of the Anglers' Benevolent Society.—I am, &c., R. W. Hobden.

THE ANGLERS' BENEVOLENT SOCIETY AND ITS ORIGINATOR.

Sir,—Will you please allow me space to say, in reference to the above and Mr. Manning's letter in your issue of last week, that Mr. Geen's statement was quite correct, viz., "that he was the Father of the above named society."

It is just like my friend Mr. Manning, when he thinks a man entitled to certain honours, he is always to the front to see that man receive his full share of what is due to him, and I admire him for it; but this time he has been misinformed, and I am sure he will not mind my setting him right in the matter.

Some long time before the Anglers' Benevolent Society was started, Mr. Geen brought the question before his club of how to put a stop to the continual appeals which were always being made to the Hammersmith Limited and other angling clubs for distressed anglers. He was deputed to bring the matter before the West Central Association, which he did, and the scheme he laid before that body was so well received that a committee was appointed to draw up a code of rules, &c.

The first thing the committee did was to invite the Co-operation of the East Central committee, which was, as usual, most readily accorded, and together the two committees drew up a Code of Rules, and started the society.

Of course, it is impossible to give you a copy of minutes, &c., for publication, in reference to the preliminary meetings, but I shall most willingly allow Mr. Manning, or anyone else who desires to do so, to examine the whole of the books, if they will call at my private address at any time when I am at home.

Mr. Geen would be the last man in the world to rob Mr. Ghurney, or any man out of any credit that was their due, and that must be the opinion of everyone, who knows anything at all about him.

It does not matter one iota who was the Father of the society, so long as it is the success it is; but it does matter to me, when my oldest friend is accused of taking credit to himself that is not his due, when I know so well how hard he worked for the formation of the society, and has worked for the London Anglers for years, several men getting the credit for what has really been his doing and he has never complained, and would not let others complain for him.

Mr. Geen has, times out of number, remarked to me that Mr. Ghurney was working as hard as any man could work for the society, and he would upon all occasions thank him for his labours to make his (Mr. Geen's) pet scheme a success.

I am sure Mr. Manning will thank me for setting him right, because I know how very fond he is of fair play. We are all willing to allow that Mr. Ghurney has worked, and does work, most laboriously for the Anglers, and is deserving of thanks from all. He is not the man to wish Mr. Geen to be robbed of his child. Thanking you in anticipation, I am, &c.,—T. Hoole.

EXTRAORDINARY CAPTURE OF A PIKE.

Sir,—Some of my brother anglers may be interested to read the following account of a capture of a pike made by me yesterday.

Whilst perch fishing from a wall in about fifteen feet of water, in a pool of, say sixty acres, I baited with worm, and, putting on a sinker, threw in and went to lunch, leaving the line clear for a run.

On returning in about half an hour, and winding up, I found a dead weight at the end of the line, and although I conjectured I had a fish, I could not for some time determine what kind it was, as it merely offered a passive resistance, and moved slowly about.

I could feel it was a good one, and as I had nothing but gut and a fine silk line, I played very carefully, and after about ten minutes' a friend got into the net a pike which scaled 4½ lbs.

Immediately on being landed the pike disgorged a perch of half a pound, and at the same time the line parted in two, and, to my astonishment, I found my perch hook imbedded in the jaws of the smaller fish; so that the greedy pike had evidently taken him whilst on my line, had swallowed him, and had held on so tenaciously that he allowed himself to be played and landed.

The circumstances are unique in my experience. I have before had smaller fish seized by a pike, but have never brought it to a successful issue until yesterday.—I am, &c., W. S. P.

Eagle Cottage, King's Norton, Aug. 5, 1882.

THE WHARFE.

SIR,—I read "Yorkshireman's" letter with pleasure, as it is a true and fair statement of the present condition of the River Wharfe. His remarks with reference to the gentleman whom "F. P. H." thinks proper to style a "pompous individual" are also very appropriate and perfectly correct.

I believe were trout a penny a pound instead of a penny an *ounce*, as I heard last week was the price in this neighbourhood, the river would swarm with them from Arthington to Buckton, some forty miles; but when so high a price can be had it is a greattemptation to poachers.—WATCHET.

THE RIVER WHARFE.

SIR,—I was exceedingly astonished to read the account which "Creel" inserted in your issue of July 1st, concerning the woeful condition into which this famous Yorkshire stream had lapsed. Had he maligned the Yore in similar manner I should have taken up the gauntlet at once; but not being an habitual fly fisher on the Wharfe (although I have had my share of good sport from it and am at present a resident on its banks) I left its defence to others who were, and who I felt certain would not allow such an extraordinary statement to pass unchallenged. As several competent judges have now "had their say," I will throw in my mite. In the issue of this paper for June 4th, 1881, I wrote an article giving a full description of this river, and as no one at the time controverted any of my statements, we will assume that they were correct; if any of your readers will take the trouble to scan over that article they will doubtless come to the concusion that one of us ("Creel," "Veteran Angler," or myself) is not remarkable for veracity, but which of us it is I leave to the judgment of those in the habit of fishing in the Wharfe almost daily—not of those who come to fish the Yorkshire streams with gut like cartrope and flies which bear a closer resemblance to bumble bees than anything else in entomology, and who after thrashing the water for a week with no perceptible result, return homewards sadder but wiser men, deluding themselves and acquaintances by the assertion that "there are no fish in the river." I am delighted with "Yorkshireman's" letter on the subject in to-day's issue of your valuable paper, and if I were to write for a week I could not give a more honest and truthful account of the present state of the Wharfe, and also of the real facts of the whole case. I could not help smiling when I read "Creel's" allusion to "fingerlings" and "5-inch grayling," as by writing this he certainly evinces a most lamentable ignorance on the subject of the size of trout and grayling in the Wharfe, or else he has been strangely misinformed. I will not adduce in counter-evidence the weight of both trout and grayling that I have in different seasons killed on the Wharfe, although I could easily do so by referring to my angling diary. But Mr. R. M. Pratt, of Otley, secretary to the Otley Angling Club, who is a thorough sportsman, and whose word is most reliable, will bear witness how many fish of ½ lb. to 1½ lb., and even larger than that, are killed in the course of a season; in fact the limit of fish to be returned to the water is something like what "Creel" would have your readers suppose to be the average size of Wharfe trout. The worst "pollution" that I have yet met with on the Wharfe is the growth of aquatic weeds, which in a droughty summer flourish most luxuriantly on some stretches of the river, and which are a great nuisance to the fly-fisher, although providing harbours for the fish.

The reservoirs belonging to the Leeds Corporation at Swinstay and Fewston are well stocked with trout, as will be seen on reference to my report on the Wharfe in last week's issue. I believe that tickets for a day's fishing may be obtained by any Leeds ratepayer on application to a member of the Town Council. As regards the question of obtaining permission to fish, surely landed proprietors can do as they like with their own without being subjected to such unsportsmanlike language as that applied to them by "F. P. H." Speaking from personal experience, I have always found Yorkshire proprietors remarkably liberal in granting permission for a few day's fishing, and in cases where it is withheld from the general public you generally discover that such a state of affairs has been brought about by the misconduct of anglers who were unworthy of the name, and who did not know the value of a privilege when they had obtained it.—I am, &c., FRANCIS M. WALBRAN.

P.S.—I have read with pleasure and interest "Tarns" note on the Yore in to-day's issue. I can fully substantiate his statements, as there is no river that I am so well acquainted with. The poaching that takes place in the Bainbridge district is greatly to be deplored, as, if properly watched and preserved, the Yore would be a magnificent trout stream.

THE WHARFE.

SIR,—Now that "Creel" has closed his correspondence on this subject, you will perhaps allow me space to sum up the whole of his assertions, researches through Parliamentary papers, and salmon fisheries reports. When I first replied to "Creel," it was not merely for the sake of contradicting him; but I concluded that his remarks were very misguiding to any angler who contemplated an angling excursion to this famous stream, and would so deprive many a worthy Waltonian from enjoying the sport and pleasure to be had there.

In the first place, it has been proved to "Creel" that there are plenty of fish in Wharfe, not "fingerlings," as "Creel" calls them, but good sized, takeable fish; so we are quite clear on that point, and can dispense with the assertion, "The river is nearly denuded of all fish, and in the future must be blank."

"Creel" has gone further than this, and has prophesied "that Wharfe ere long will be nothing more than a common-sewer." Well, I am surprised at this remark after the correspondence and information "Creel" has received, and I am quite certain any information I can now bring to bear will not convince him differently; but I trust that you, Mr. Editor, and your numerous readers (some of them who have probably visited the river) know that the water is good, and sufficient in quantity and quality for all angling purposes.

In answer to the question, "Is or is not the Wharfe gradually deteriorating, and becoming of the pestiferous character of the greatly neglected Aire?" I say emphatically, No!

"Creel" asks me to state where he has accused the people of Leeds of drinking the waters of the Wharfe. If he will refer to his correspondence in your issue of July 15, he will find: "Arthing Mill Weir is nearly two miles below Pool Bridge, a short distance above which is the viaduct of the North Eastern Railway, and the pumping station, which lifts the water from the Wharfe into Eccup Reservoir to supply Leeds."

My advice to "Creel" is for him to have a fishing excursion to the Wharfe, and he will then form very different opinions to those he already possesses; and if he will give his account, then no one will read it with greater pleasure than myself. I close with "Creel," and may say in doing so that I fully endorse his description of the river Calder.

"Yorkshireman" says he has read the correspondence on this subject with indignation. I really don't know that I have written anything to cause anyone to be indignant, and I fail to notice any remarks of "Creel's" to cause that feeling. My remarks may have been a little too plain for some gentle readers.

"Yorkshireman" takes me to task on the number of trout fry turned into the Wharfe, also the number caught by an Otley gentleman in two fields' length, and he is further audacious enough to assert that myself and that gentleman are one and the same person. Well, certainly, an anonymous letter writer always enjoys the privilege of trespassing on personalities more than a *bona fide* writer. I forward you the card of that particular individual, and "Yorkshireman" can have it if he pleases. I shall admit my mistake in the number of fish he killed, if "Yorkshireman" saw them. I have for my authority a gentleman (whose name I can give) who saw the fish ten minutes after they were taken.

My report as to the number of trout fry turned into the Wharfe may be slightly incorrect, but it answered and substantiated my argument that there were plenty of fish in the river; and I think "Yorkshireman" might have found something less trifling to write about than the two slight mistakes I made, if such they be.

In "Yorkshireman's" criticism of my correspondence, he states that my remarks in reference to the owner of the sporting right of Lindley reservoir were not written in the spirit of the Complete Angler. I was not aware that correspondence had to be written and conducted after the spirit of any author, and, from what I know of the FISHING GAZETTE, I have always found it open for the free expression of opinion: hence my opinion of the proprietor in question.

I am aware that gentleman grants fishing to the Otley Club under very stringent rules and conditions, and he likewise gives permission to a few personal friends to fish in Lindley reservoir, and nothing further. (Come now, "Yorkshireman," confess that you never knew any one fish in Lindey reservoir but a strict personal friend) The reservoir is not his, but belongs to the Corporation of Leeds. He certainly has the sporting right, and no doubt "Yorkshireman" knows that the agreement between the Corporation of Leeds and that gentleman was a blunder from beginning to end, and the validity of that agreement is much doubted. He is a sportsman, but not an angling sportsman, as "Yorkshireman" would have us believe.

I will give you a grievance that anglers suffer under from the influence of Otley Club, as "Yorkshireman" has given me the opportunity, and seems to have a very high opinion of those connected with it. They have at the present time miles of water on the Wharfe, and they are continually trying to purchase small patches of ground (not that they want it to fish in), but they require it for the sole purpose of stopping anglers who have been accustomed to fish in it for half a century. I know one small piece, a distance of two miles from Otley, and they have tried over and over again to grasp it; but, thanks be to Mr. Yates, he is determined not to let them deprive outside anglers of fishing, although they have offered him an enormous price for it that I could mention.

If it were possible to gain access to this club, I should not find fault with their purchasing and preserving, but when a club is confined to thirty influential gentlemen, and you may pay what sum you like, you cannot gain admission as a member; in fact, there are gentlemen now waiting until some member dies or leaves the club before they can be enrolled as members. I ask, is it right for thirty gentlemen to monopolise a distance of six or seven miles of a river by paying fabulous sums of money for every inch they can lay their hands upon? "Yorkshireman" talks about rights and Waltonian language, let him examine and consider these actions in a conscientious point of view, and tell me, are these Waltonian actions? "Waltonian language" says he! I should like to come across a follower of the gentle craft whose indignation would not be roused when he finds, where he could once fish with pleasure and sport, the ground is snatched from him, and for neither love nor money can he fish it again. I could give you other grievances, and also convince you that I know something of that "aristocrat"; but I wish to keep from personalities as far as possible, and I am the last in the world to attack a man's private right, unless he abuses that right. I close this correspondence, duly apologising to "Yorkshireman" for having unknowingly hurt his feelings by advocating some of the rights of the angling fraternity of Leeds.

Leeds. F. P. HAMMILL.

[We have so often pointed out the absurdity of anglers grumbling at waters being closed to them by clubs, that it is hardly necessary to refer to the matter again. Mr. Hammill himself admits that he would like to get the fishing which the Otley Club has secured; but he would have to pay the same for it, and then would he give away his privileges to every enthusiastic angler who wished to enjoy them?—ED.]

THE WHARFE.

SIR,—I should be wanting in courtesy if I hesitated to thank "Yorkshireman" for the following sentence in his letter, which appeared in your last issue:—

"The worst pollution which comes into the river is above Otley, and proceeds from Burley Wood Head Bleachworks, and some mills, which destroy all the fish in that tributary beck, and certainly causes the water where it enters to be as black as ink."

Now, Sir, an exactly similar statement of mine, with the addition that I had used it as ink to write to the Home Office, became my chief offence in the eyes of F. P. H., who gave my statement the most unqualified contradiction.

I am glad to find "Yorkshireman" doing justice to Mr. Fawkes, who, instead of being the "pompous individual" and aristocratic curmudgeon F. P. H. would depict him, appears to be a liberal friend to anglers and an excellent sportsman.

I have to thank an unknown correspondent for sending me a semi-official manuscript detailed survey of the Wharfe, with all its becks and turns, from its rise to its junction with the Ouse, and thence to the sea, which I may give your readers one day; but at present, I think they must have had enough of this river. CREEL.

POLLUTION OF RIVERS.

SIR,—I have read with great pleasure "Creel's" letter anent the pollution of Yorkshire rivers, which is not only of great moment to anglers, but still greater from a sanitary point of view.

The water-closet system, the tanneries, bleacheries, dyeries, and all the rest of "ies" of pollution and contamination, whose poisonous discharges into what was formerly a clear and sparkling stream, have changed it into a vast sewer, in comparison to which the malaria of an African swamp could only claim second place.

Who is to blame for this? I must say the local sanitary boards.

Surely the engineer or the chemist might give a little of their attention to this most vital subject.

But in these days the great feats of science are in discovering means whereby unscrupulous manufacturers of oleomargerine, bosh cheese or butter, and similar nostrums, can deceive a too easily gulled public, and in offering to textile manufacturers a sizing composition which will add considerably to the weight, and deceive the unsophisticated savage (who, you cannot gainsay, is quite as honest as his bleached brother from this standpoint).

Why, in all reason, cannot these scientists give a little more attention towards rendering the manufacturers' discharges innocuous to the river?

Residents near the banks of rivers in the great manufacturing centres have the whip in their own hands; they elect representatives to their local co-operative boards, and from these they must insist on immediate remedial measures, to do away with this scandalous state of affairs.

The manufacturer, rattling his well-filled pocket, will, on being interviewed, exclaim, I cannot do with restrictions, I must be free to carry on my business; and adds, If I stop my works the operatives will earn no money. To this piece of ratiocination the reply is, You can carry on your trade, but not to the detriment of your neighbours.

What is the use of money, if you have not its most important companion, health?

The electors of these towns must call their representatives to toe the line and stand no evasive promises, giving them plainly to understand that unless they take their desires in this vital question immediately in hand they need not seek their suffrages on the termination of their present stewardship.—I am, &c ,

VIATOR.

[This Wharfe-Aire correspondence is now closed.—ED.]

ANGLING IN THE THAMES NEAR ABINGDON.

SIR,—I lately enjoyed a most pleasant week's fishing in a quiet and pretty corner of Old Father Thames at Clifton-Hampden, near Abingdon, Berks; and, as some of your readers may like such an outing these holidays, I send you the following particulars, and hope they may prove of service.

We (that is the wife and I) booked from Paddington, G.W.R. (single ticket about 5s.), to Culham, about one hour's ride, and then walked to Clifton, a small village about a mile from the station, and obtained capital apartments at Mrs. Balls', who is very reasonable in all her charges, a capital cook, very pleasant and accommodating. So far so good, and now about the fishing. I soon made the acquaintance of Fred Casey (his father keeps the toll-house on the bridge), who, the locals told me, knew where all the big fish lay and every deep hole and swim round about, and such I found to be the fact. Fred has a boat or two and a nice fishing punt to let. I went straight to business with him as to terms (which I think is the best, and saves occasionally a deal of unpleasantness after); he said he would let his punt out at 2s. 6d. per day, or go himself and find all baits, &c., at 6s. per day, which price, as he is a really good fisherman, very civil, and most obliging, starts as early as you like, daybreak if necessary (till dusk), is, I think, very moderate. And what more do you want? only the fish, and that we caught both in quantity, quality, and size. I soon settled with Fred to start next morning; but there, I am afraid I am getting too prosy, and making this too long, and will finish up by saying I had a capital week's sport with Fred amongst the barbel, chub, roach, dace, and eels. The largest barbel just under 7 lb., several 3 and 4 lb.; chub up to 4 lb., plenty 1½ lb. and 2 lb.; and, as to roach and dace, fair sized, we tired of counting them. and returned most of them to their native element. We also caught a nice lot of eels—three or four each day—1½ lb. to 2 lb. each. If this information is of use to any of your numerous readers on the look out for a quiet rustic spot, not difficult of access or expensive, I shall be very glad. I am about to have another week there, and should it be acceptable, shall be pleased to let you have an account of my experience amongst the finny tribe.—I am, &c., A. J C.

P.S.—Will you kindly—or some of your readers—tell me about the fishing at Ilfracombe; or, better still, where good sea fishing can be had off the rocks or shore nearer home.

July 26.

[There is splendid sea fishing at Ilfracombe. In the late autumn you will also get good sea fishing at Lowestoft. Many thanks for your very useful letter.—ED.]

GROUND BAITING.

SIR,—Our friend "Fairfisher" must be one of those singular and extraordinary anglers we sometimes meet about once in a century—men whose ideas respecting the gentle craft, to say the least, are most peculiar; a marvellous individual, for he appears to be one of those fortunate gentlemen who can dispense with the trouble of ground baiting, certainly "a consummation devoutly," etc.

I must say I was positively startled at the suggestions he throws out in reference to this subject in your last issue.

It is perfectly clear "Fairfisher" cannot have the slightest conception of the extreme difficulty there is now-a-days getting certain fish together in certain rivers, or he would never give vent to ideas so palpably ridiculous—

Take the Trent : I know places where the utmost care and caution are requisite in throwing in say 1000 lobs. A few yards too high, too low, too near in, or too far out, and you might just as well pitch them into the Burlington Arcade.

This is well known amongst the old hands.

There are places some of the cleverest Nottingham men would not think of fishing without throwing in two or three thousand lob worms, and when they are 6s., 7s., and even 8s. per thousand (in dry weather), the expense alone is no joke.

If "Fairfisher" has really any idea what three thousand lob worms are, and the space they would occupy, he might imagine they would bait the Thames for two miles; but allow me to inform "Fairfisher" this number is reckoned not one too many.

In these cases there is none of the disgusting compound alluded to. He may rely upon it, they are thrown in without any addition whatever.

To show you the necessity of some ground bait, I was at the Welsh Harp (this is a splendid piece of water, and the small fry literally swarm all along the shallows) last week for a breather, and I noticed two anglers, more especially at the extreme end near the cottage, kept dropping in large pellets of ground bait simply clean bread and brain, (you could have eaten it), and they pulled fish out almost every throw in.

After chatting for a little while I said, "You seem to use a pretty considerable amount of ground bait." and in reply one of them observed, with a merry twinkle in his eye, "Well sir, you might play on the Welsh Harp, or any other harp for a month, but you would get nothing to any tune without it."

Think of that, friend "Fairfisher," and be convinced.—Yours etc., MARK ANTONY.

GROUND BAITING.

SIR,—In your editorial foot-note to my letter of the 29th July respecting the above subject, you certainly quote a reason in favour by stating that our patron Saint, found ground-baiting necessary; but he was no pot fisherman. In his happy days anglers required none of those incentives to the sport—viz., "prizes," which does not redound to the credit of the angler of the nineteenth century.

Izaak Walton sought the riverside, content with moderate sport, and to enjoy the genial companionship of his fellow craftsmen, admire the beauties of nature in its three phases—spring, summer, and autumn, and in the winter to commune with his fellow fishermen on their past sport, not as is the case nowadays, anxiously looking to the termination of the year in the expectancy of having handed to him five, three, or two guineas, tin pots, copper kettles, pounds of cigars, tobacco boxes, and other such sundries, prizes which it seems are now necessary to bring our piscatorials to the waterside.

No, Mr. Editor; I am quite willing to be a lunatic and agree with "Creel" in his very pertinent remarks so long as I have my liberty, and can go a-fishing. Imagine for a moment the results of the following to a clean water. I read in a paper last year of some (not dozens) but hundreds of anglers meeting to fish a competition. Reason to yourself each of these carrying with him only two pounds of ground-bait, some of a most disgusting composition, and casting it into the water. We hear of outcries against decaying vegetation; but what can be worse than animal putrescence? How often in the year would you like a repetition of this competition in a lake of your own?

In the neighbourhood of where I live there is a reservoir; the public, on payment of a small sum, received permission to fish. The place was well frequented. The manager, passing one day, saw an angler throwing in ground bait; the stock-in-trade not being exhausted, he examined the remainder, and found it of a most disgusting nature. In consequence of this, notices were put up tabooing it; but sly Messrs. Pot were seen at their tricks again, after repeated warnings. One day one of the fraternity was practising as usual, in blissful ignorance of the vicinal companionship of one of the labourers, who, having received orders to watch the place, placards and warning not being found sufficient.

The sequel is: the fishing is stopped, the water cleared of its finny inhabitants, and the angling public deprived of their pleasure—the delinquent being "ground bait."

I hope to see some one more able than I am taking up the cudgel in favour of "Creel's" opinion.—I am, &c., FAIRFISHER.

[We are quite as much against pot-fishing as "Fairfisher." If he will refer to our back volumes he will find ample evidence of this; he will also find that "Creel" has many times, in this very paper, recommended the use of ground bait, and we could, if we were at liberty to give his name, point to well-known angling works of his in which all kinds of ground baits are recommended. "Creel" only protested against noxious compounds being thrown into water intended for drinking purposes, and of course every sensible man agrees with him. This is vastly different from decrying the use of ground bait generally. Why "Creel" himself uses bushels of it.—ED.]

GOOD SPORT IN THE OUSE.

SIR,—I fished the Ouse in Huntingdonshire on Bank Holiday. The river was in capital condition. I fished from half-past four in the morning until half-past eleven at noon. I killed fourteen dozen roach and four bream. I took all the roach with boiled wheat. Three of the bream took the worm and one the boiled wheat.—I am, &c , R. CULLEN DEWY.

Kingston-on-Thames, August 9, 1882.

DANGERS FROM EXCURSION STEAMERS ON THE YARE.

SIR,—I enclose you per book post the *Eastern Daily Press*, wherein you will find a letter referring to an accident that occurred on the Yare the other day. I was a passenger on board the *Jumbo*, and assisted in getting the unfortunates on board, and I can verify all that is written.

Being on a fortnight's fishing excursion, I thought I would just do the trip by steamer to see how the fishing boats fared, as I had heard a good deal about their being knocked about, and it is really perilous to be on the water as they are passing; and I should feel glad together with, I am sure, many of your numerous readers by your taking some notice of this in your next issue, so that the public feeling may be thrown forward to compel them to regulate this paddle traffic, and thus be the means of saving many a life and ensuring the safety of many anglers.—I am, &c., T. K. C.

August 10, 1882.

[The letters in the *Eastern Daily Press* describe how the steamboat *Jumbo* swamped a pleasure-boat with three occupants near Reedham Ferry, and how the steamboat *Meteor* swamped a sailing boat with five occupants, leaving them struggling in the deep and dangerous river. It is high time our Norwich and Yarmouth friends took steps to prevent this danger to life. These steamboats go tearing up and down the river like wild beasts, seeking whom they may devour, throwing up enormous waves. A good swimmer has little chance in the Yare, as a perfect network of long tangled weeds extends into deep water along each bank, and the swimmer who attempted to get through them would be a lunatic; his best chance would be to remain swimming in the open water till a wherry or boat came by.—ED.]

ORMESBY BROAD.

SIR,—Those of your readers spending a holiday at Yarmouth may be glad of a little information gleaned recently during a short visit. Ormesby and Filby Broads are within seven miles by road from Yarmouth, but may be readily reached by rail to Ormesby, where an omnibus meets the trains during the season for the conveyance of visitors to the Broads. At Ormesby there are two hostelries, the Eel's Foot, proprietor Mr. Moncey, and the Sportsman's Arms, kept by Mr. Richmond.

When at Ormesby, we halted at the latter. If the accommodation here is not all that could be desired, it is at least "an honest alehouse," of the old Waltonian type, and Sam Richmond, I am sure, will make anglers welcome, and give them every information in his power. There is a landing stage just at the back of the house, where suitable boats can be procured for half a crown per day—and a boat is almost an absolute necessity in fishing these Broads. Bait can also be obtained here, but I would never recommend an angler to trust entire to the local supply. Once on the water, stakes mark the *locale* of the various swims, and to any pair of these stakes the boat may be secured. The boat is simply a large rowing boat, and can be easily managed alone, but in my own case, enjoying the hospitality of a friend, we took with us Mr. White, of

82, George Street, Yarmouth, who for a small sum will readily act as fisherman, and, by his ready attention, add materially to the comfort of the holiday trip.

I do not mention these names to advertise the individuals concerned, but I know that strangers to the place, like myself, are often in want of this kind of information, and if it can be supplemented by similar "tips," so much the better for the angler. It occurs to me, however, that anglers visiting Yarmouth could not do better than call on Mr. Lark, the working secretary of the Yarmouth Piscatorial Society, which holds its meetings at St. George's Wine Vaults, King Street, Yarmouth, and he will gladly give them information as to local streams. That the Broads are teeming with fish I have no doubt, for my friend Mr. E. Bennett, who fishes Ormesby frequently, seldom fails to have a good take, and I hear the same from other quarters. On the solitary occasion when I fished with him there, he took a perch of 1½ lb., and we both took a large quantity of small fry, the whole of which, save half a dozen, retained alive for bait, were returned to the Broad. The conditions then were against us, and few (if any) anglers took large fish. So far as we were concerned, this was made up, for on the following day, when fishing private water near another of the Broads, we had an excellent day's sport; but I think any angler who has a few days to spare, and a little money to spend, would hardly find better fishing than at Ormesby or one of the other Broads. Some of the swims are very deep, and hold big fish, especially bream, perch and pike; roach and rudd are also plentiful.

When fishing on Monday last, I hooked a bream of about 2 lb., and had nearly landed him when the gut broke, and my fish disappeared. Curious to relate, Mr. Bennett took a similar fish three quarters of an hour later, which on examination proved to be the fish I had first taken, the gut still protruding from the mouth.

The practice of "liggering" for pike, which goes on largely in these waters, is much to be deplored, the abolition of which might form useful work for the local anglers to take in hand. Hundreds of these "liggers" are set during the season, and one would think it needs but a proper representation to the persons interested to secure the abolition of so injurious and unsportsmanlike a custom.—I am, &c., T. Crumplen.

SOME QUERIES ABOUT HENS, &c.

Sir,—Some years ago I saw a scale list of the weights of trout, and what were the lengths to the ounce. I adopted to a rod the inches for weight, but having missed my rule, can you or any of your numerous readers give it to me again. I think it was in the *Field* Almanack. Should any of your reader have them bound, I shall feel a great favour is conferred by looking it up, fully ten years ago—I believe twelve. I am convinced that a rigid rule on all waters should be that fish less than 6 inches should be returned. I have seen many dishes this year that it would take four or five to place one after the other to get 12 inches in length. I should be glad also to hear of the breeders of the old blue game fowls. I fear they are dying out, or getting mixed with the Spanish fowls, which make flies so much like down instead of stiff hackles. I could exchange some hens with any breeders who wish to keep up the old strain of hackles, which are only fit for fly-making. In the hopes that the old fashioned flies (none better) may be still, and in the future, known to the art. You have my address, Mr. Editor, and should any one wish to exchange or get any colour fowls, by sending a sample hackle, I shall feel proud to keep up the breed of fowls for fly tyeing. I have heard a great deal of the Alexandra Fly and have tried to get an original perhaps your readers can lend me one. I cannot close without a word of advice to gents who are about to go on a fishing trip. Don't be let in by advertisements. I know a gent who has lately come into Devon for fishing, and he has taken his house with a distance of nineteen miles to go by train, and had he first applied at the right quarters eight would have been the farthest distance without a change of trains. Another has got sea fishing instead of "fresh water" ten miles up one line and twelve another. There are many farm houses by the water any where, but the lodginghouse keepers say "fishing in the neighbourhood," but it may be twenty miles off. When you have settled to come, bring a eight or ten feet rod with you for trout, but wherever you put up, there get your flies; the many streams in any county want their own flies. If you want sea fishing, it can be got should the weather remain fine. A stiff pike or trolling rod with one hundred yards line (hemp will do) and the baby spinners, baited babies, on any sea tackle will take the pollock, bass, mackerel or whiting. Salmon fishing is a difficult thing to get in Devon—in North Devon especially—but the minnow, especially the solid one, is the bait mostly used, ten feet trolling rod and a good line and collar. The fly is not discarded here, and some fish are taken with it, but the minnow is the go.

Any information I shall be glad to give.—N. Devon.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr. HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted), 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract of the right eye." Similar Testimonials from John Lowe, Esq., M.D.; Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's abbey, Hendon; and hundreds of others. Mr. Laurance's amphlet, "Spectacles, their Use and Abuse," post free.

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for " season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, ULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. Richmond, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

ANGLING.

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, Furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, No. 57 and 58, Chancery Lane, E.C.

JOHN STONE, Secretary.

The Fishing Gazette.

:o:

SATURDAY, AUGUST 19, 1882.

PROPOSED NEW BYE-LAWS FOR THE THAMES.

AN important conference of representatives from the whole of the Thames Preservation Societies, Central Associations, and London and Surburban angling clubs, took place at the Cannon Street Hotel, London, on Wednesday evening, August 15, 1882, T. Spreckley, Esq. (President of the Thames Angling Preservation Society) in the chair.

The following alterations and additions were unanimously agreed to:

Bye-law 6, sec. (4).—Instead of "Grig-weels to be used only in the river below Richmond Bridge," read "Grig-weels for eels only to be used anywhere.—"Sec. (12), to be expunged, and the following substituted: "A casting or bait-net, not exceeding 30 feet in circumference, to be used only by assistant river-keepers and licensed fishermen, in obtaining bait only to be employed in angling, the sack or purse thereof not being more than 6 inches in depth, when extended to the utmost."

Bye-law 7.—The prefatory paragraph to read as follows: "No fish of the species hereinafter mentioned shall be taken in or out of the river Thames, or having been thence taken shall be had in possession or exposed for sale on the river Thames, or on the shore thereof, or any city, town, village, or place adjacent thereto, of less than the respective sizes and dimensions following (this section shall not apply to any person who takes such fish accidentally, and forthwith returns the same to the water with the least possible injury)."—The size of trout to be altered from 14 inches to 16 inches.

Bye-law 8.—Where it is said "Eels may be taken all the year, but not with hook and line," insert "Eels may be taken in angling from the 16th of June to the 14th of March, both days inclusive."—The season when fishing is permitted for pike or jack to be altered to "From the 1st of August to the last day in February following, both days inclusive;" and the season when fishing is not permitted for pike or jack, to be "from the 1st of March in each year to the 31st July following, both days inclusive."—Expunge the concluding paragraph and substitute the following: "Nothing in this section shall apply to any person who shall during the period between the 1st day of April to the 10th day of September, both days inclusive, take or attempt to take bleak, gudgeon, or minnows for use as bait for trout."

Bye-law 9.—After the words "rod and line," at the end of the opening paragraph, add "and Grig-weels for eels only, by fishermen only."

Bye-law 10.—The commencement to read "No person shall do, aid, or assist in doing the following things, that is to say,"—Section (*b*) after words "shore thereof" add "or any city, town, village, or place adjacent thereto."—Section (*d*) to be expunged, and the following substituted: "That no person shall fish or attempt to take fish with any sort of net in the night time or before sun rising, or after sun setting, at any time of the year, in the said river of Thames." The following additional section, "(*m*) Not more than two rods to be used by an angler at one time."

Bye-law 12, the word "shall" be substituted for "may" in reference to the burning of nets.

Bye-law 14, to be altogether expunged, and the following substituted: "Nothing in these bye-laws except the provisions relative to the fence season shall take away or abridge any right of the owner or occupier of a private fishery (if any), or any person having authority in writing from any such owner or occupier (if any), to fish for, or to take, or attempt to take, fish and eels by means of nets commonly called cast-nets and cray-fish nets, or by grig or ground-weels for eels, or by means of eel bucks or stages, so far only as such eel bucks or stages can be legally used."

The following additional bye-law to be added:—

Bye-law 15.—Any water-bailiff or officer appointed by the Conservators to carry into execution any bye-laws relating to fisheries, and also any other person specially authorised in this behalf by writing under the common seal of the Conservators, may enter into any fishing boat or other vessel employed, or about to be, or having been employed in fishing, or taking fish, or endeavouring to take fish on the River Thames, and may therein search for fish unlawfully taken, and any unlawful or prohibited net or apparatus for taking or destroying fish, and may seize any such fish, net, or apparatus found therein, and may also seize on the shore of the river Thames any fish unlawfully taken, or any unlawful or prohibited net or apparatus for taking or destroying fish; and any person or persons who shall resist or obstruct the water-bailiffs, or persons specially authorised, in the execution of their duty, shall be liable to the penalties to be enforced by these bye-laws."

The following gentlemen were appointed as a Representative Committeee (with power to add to their number), to carry out the instructions of the Conference, and to select therefrom a deputation to wait upon the Thames Conservators in reference to the alterations and additions that have been made.

PRESERVATION SOCIETIES.

THAMES ANGLING.—Capt. Alfred and Messrs. Alfred Jardine, W. A. Crump, and A. J. Little.

WINDSOR.—Messrs. R, Plummer and W. Lock.

READING AND DISTRICT. Dr. Short, and Messrs. F. Brown and A. C. Butler.

MAIDENHEAD, COOKHAM, AND BRAY. Messrs. T. B. Sharpe and A. A. Wood.

HENLEY.—Messrs. M. Clare Sturgis and W. A. Simmons.

MARLOW.—Major Carson, and Messrs. R. F. Jackson and T. H. Wright.

OXFORD—Mr. W. J. Mayo.

ASSOCIATIONS OF ANGLING CLUBS.

WEST-CENTRAL.—Messrs. P. Geen and T. Hoole; CENTRAL COMMITTEE.—Messrs. S. Morgan and R. Ghurney; CENTRAL.—Messrs. F. C. Hatfield and J. C. Murray.

ANGLING CLUBS.

THE PISCATORIAL.—Messrs. T. R. Sachs and F. H. Lemann; THE GRESHAM.—Messrs. T. Crumplen and J. P. Wheeldon; RICHMOND PISCATORIAL.—Mr. F. C. Clench; THE STANLEY ANGLERS.—Messrs. C. P. Wheatsone; THE PRESS—J. White, W. B. Senior, and R. B. Marston.

Thomas Spreckley, Chairman; W. H. Brougham, Secretary.

Amongst others present at the Conference were: Mr. T. Spreckley, in the chair; Mr. W. H. Brougham, secretary; Messrs. H. J. Alfred, A. Jardine, W. A. Crump, and A. J. Little, of the Thames Angling Preservation Society; Messrs. R. Plummer and Lock, Windsor Association; Dr. Short, Messrs. Brown and Butler, Reading Association; Messrs. T. B. Sharpe and A. A. Wood, Maidenhead Association; Messrs. Clare Sturgis and W. A. Simmons, Henley; Major Carson and Messrs. R. F. Jackson and T. H. Wright, Marlow; Messrs P. Geen and T. Hoole, West Central; Messrs. S. Morgan and R. Ghurney, Central Committee; Messrs. F. C. Hatfield and J. C. Murray, Central; Mr. F. C. Clench, Richmond Piscatorial; Messrs. T. R. Sachs and F. H. Lemann, the Piscatorial; Mr. T. Crumplen, the Gresham; Mr. C. P. Wheatstone, Stanley Anglers; Messrs. W. Senior, J. White, J. P. Wheeldon, R. B. Marston, &c., &c. The following, amongst other clubs, were represented by delegates: Albert, Alliance, Alexandra, Amicable, Waltonians, Angler's Pride, Acton and Ealing, Anchor and Hope, Bostonian, Bermondsey Brothers, Beresford, Burdett, Bridgewater Brothers, Brunswick, Buckland, City of London, Cavendish, Clapham Junction, Cambridge Friendly, Cobden, Clerkenwell Piscatorial, Critchfield de Beauvoir, Dalston, Eustonian, Edmonton and Tottenham Friendly Anglers, Good Intent, Great Northern Brothers, Gresham, Hammersmith Club, Hammersmith United, Highbury, Hoxton Brothers, Izaak Walton, Junior Piscatorials, Kensingtonians, Knights of Knightsbridge, Kings Cross United, Larkhall, Little Independent, Metropolitan, Nelson, Norfolk, North Eastern, North Western, Odds and Evens, Original Clerkenwell Piscatorials, Patriotic, Piscatorials, Phœnix, Prince of Wales, Princess of Wales, Queens, Reform, Richmond Piscatorial, St. John's, Savoy Brothers, Sir Hugh Myddleton, St. Pancras, Stanley Anglers, Star, Stepney, South Belgravia, Surrey Piscatorials, St. John's Wood Piscatorial, Three Pigeons, Trafalgar, True Waltonians, United Society of Anglers, Waltonian, Walton and Cotton, Walworth Waltonians, Westbourne Park Piscatorial, Walthamstowe, West London, &c., &c.

THE CONFERENCE AND THE BYE-LAWS.

ELSEWHERE in our columns, our readers will find particulars of the proposed changes made by the conference in the proposed new Thames Conservancy Bye-Laws. The meeting was a complete success in every respect, and the president and secretary of the Thames Angling Preservation Society are to be congratulated.

The only alteration to which we object, is that which would confer on the jack a fence time extending from the 1st of March to the 1st o August, and at the preliminary committee meeting we supported an amendment to the effect that the fence time for jack should commence on March 15, and in this we were at one with such anglers as Messrs. A. Jardine, Capt. Alfred Wheatstone, and C. Hatfield. In the result it appeared thirteen of the gentlemen present were in favour of March 1, and ten in favour of March 15. If the time is extended to August. 1, according to the statements we heard, and from what we believe ourselves, we should say many thousands of jack will in future be saved each year, which now fall to the trailers; this being so, we fail to see the advantage of still further protecting such a voracious fish as the pike, by also adding a fortnight to the fence time for jack at the commencement as is now proposed. The fact is, the rage for legislation about our fish threatens to be a worse evil than the previous want of protection, and before long it will be necessary for the angler to employ a solicitor to accompany him on his excurcursions, with printed copies of the laws and bye-laws to refer to, to prevent infringements of the same. What all this grandmotherly legislation will lead to, goodness knows, except it be to an increase of poaching. For instance, the proposed amendment, that it shall be an offence in the eye of the law for an angler to use more than two rods, is surely going a little too far. We object to pot fishing as much as anybody, but this amendment is aimed at those poor men who get a meagre living out of rod-fishing, by using two or three rods at once, and who, if stopped, will turn poachers in earnest. It is all very well to talk about the spirit of true angling, but the spirit of true angling won't fill a man's belly; and as sure as you attempt to restrict and oppress that numerous class of needy individuals who do now pick up an honest living by rod and line fishing in open day, so surely will you find them turn to night poachers. That a man can do any great harm by using half-a-dozen or a dozen rods we deny, in fact, if he fishes one properly, he would probably kill more fish, and to make it a criminal offence, to use more than two rods, is a bit of proposed grandmotherly legislation which we are certain will never become law. We shall hear soon that it is contrary to the spirit of true angling to have a ledger out for jack while you are roach fishing.

Towards the close of the conference, the Richmond Club delegates came forward with a most valuable proposal, viz., that the delegates from the conference should be asked to petition the Conservators to endeavour to free the Thames from Richmond to Kew, from the netsmen, who now by charter have the river to themselves. The matter was most ably placed before the meeting by the proposer. Mr. Geen opposed on the ground that the occasion was not a favourable one, and that when the question was opened, it should not be restricted to the water between Richmond and Kew Bridges, but to the whole extent between Richmond and Greenwich. To this the Richmond delegates at once agreed, but insisted the time was not inopportune. However, on the Richmond proposal being put to the meeting, it was negatived by a majority. We should not forget to mention the very valuable suggestion made by the chairman of the Central Association, Mr. Murray, viz., that the purse or tuck of all cast nets used for bait should be limited to six inches. He said he was practically acquainted with the use of the cast-net and pointed out that it did not matter what size the cast net was in diameter, if the purse was kept down to six inches, as then the net could only capture bait; but increase the purse size and the net became a dangerous affair for the capture of larger fish in proportion as you increased it. We trust most sincerely that the Conservators will accept this amendment. We have frequently seen fish up to four pounds taken in a cast net on the Lea and the chairman of the Central's proposal will be a terrific blow to a most specious form of poaching if it is accepted.

THE SCIENTIFIC ANGLER.*

(Second Notice.)

The subject of ground baiting has recently been referred to in our columns, and an interesting letter on the subject will be found in the correspondence column this week, from "Creel." Mr. Foster has some very sensible remarks on this question. "It is," he says, "necessary to bait *moderately* the swim fixed upon the evening previous. We emphasise moderately, because it is the custom to sink so much food for the fish under the appellation of ground bait, that by the time the expectant 'rodster' turns up the whole school will have gorged themselves and dispersed to more secluded nooks to doze off the effects; hence it is the enterprising angler so frequently meets with scant sport. This is often attributed to the influence of passing electricity, whether in the earth or atmosphere, or may be in both. . . . . After baiting judiciously over night the fish will have congregated upon the baited spot at daybreak, if not before, when they are on the forage for breakfast. The object in baiting over night, it must not be forgotten, is merely to produce an appetising effect on the next morning."

Cunning Old Roach.

Mr. Foster describes what he has found a very good plan to checkmate the cunning of old roach, who frequently, without appreciably moving the float, will suck off the bait. "A plan we have found to answer in these circumstances is to hang a scrap of the finest and best gut one quarter of an inch below the hook, and upon this excessively fine gut attach a small hook; upon this one half of a gentle is attached, with a full sized one, or even two, upon the hook above; this will not fail to 'fetch' the most finiking of the finny race in question."

The next following pages are devoted to barbel, carp, tench, bream, and chub fishing, with some useful hints as to how to ascertain the presence of fish in a water. We quite endorse our author's remarks on the absurdity of using brightly-coloured floats, which undoubtedly simply act as danger signals, to warn the fish away. The only part of a float which need be of any but a dull sombre colour (the natural cork varnished to preserve it is all that is needed) is the tip, which should have "a speck of bright colour (say vermilion) on it," to aid the angler's eye.

Silk-worm Gut.

"The best and strongest gut (silk-worm gut) is round and smooth, clear as window glass, or as the limestone spring. The milky-white glaring gut, so often met with should be studiously avoided. No fair means will take out the white glare from a batch of pearly gut. Boiling dye will effect the purpose, but the strength and usefulness of the stuff will have so deteriorated as to render it practically worthless. . . . . Spanish gut is superior to that either of India or China. The most disreputable is the Sicilian.† . . . . When gut is imported it is coated with a thin brittle, yellow skin, which is easily removed. We may here observe that often too much doctoring is practised in baking, boiling, bleaching, and unbarking the raw substance. A large class are prejudiced in favour of what they term a beautiful white tint. This taste, unfortunately, the fish do not share. . . . .

In clear water the gut used should be either stained a faint sky-blue, so as to offer no lighter or darker contrast to its background, or be left a transparent tinge undistinguishable in the water. Some rivers are habitually clear; others slightly this or that shade. The hue of the gut line should in each individual case tally. Our ancestors used sorrel, brown, and white, or even black hair; but when used under similar circumstances, with gut prepared as above, the tender, hollow hair is found far behind the age."

In the next chapter, on "Pike Fishing," we find many useful hints, for which we must refer our readers to the book itself; there is also a capital story of a fight the author had with a heavy pike, which towed him and the punt he was in about for a considerable time. Among some excited spectators was a farm-labourer armed with a pitchfork, who, when the fish was nearly brought to bank, suddenly made a terrific lunge at it with the fork, causing the fish to rush off again with renewed vigour, the pressure of the line availing little beyond keeping the snout of the fish above the water's surface. The winch "whirred" loudly, notwithstanding the deeply curved sturdy rod. "Hark, how the d——l squeals!" exclaimed the crooked individual in possession of the pitchfork.

The next chapter, occupying ten pages, treats of "spinning for trout" in the Thames and Trent styles, in discoloured and clear water, minnow flights and how to use them, artificial baits, the rod, line, &c. Then follows worm fishing for trout in its various styles. While there is nothing absolutely new in these chapters, the beginner will find them very safe guides, and the old hand may get some useful hints.

Grub-fishing for Grayling

Is the title of Chapter IX. Grub-fishing covers the use of all those baits which, when placed on the hook of what is known as the "grasshopper," proves so seductive to grayling. The "grasshopper," invented, according to our author, by Stewart Wheatly, is an imitation of a caterpillar, made by covering a lead-weighted shank of a hook with green worsted, placing a bit of straw along two sides, and securing them to the body by whipping at intervals with silk. A fourteen-foot rod is used and fine strong gut line. On the point of the hook a grasshopper, or a couple of gentles, or a wasp-grub, or caddis-bait is placed. Mr. Foster's directions for fishing this deadly lure are hardly explicit enough. He says:—

> "The bait must be raised and dropped rapidly and continually, after being duly delivered in the required places, which should be the known haunts of these fish. The line should not be raised more than some four or five inches from the bottom, as the grayling, like barbel, are given to grope for food. In some parts, a small quill is used, being attached with a wire loop at each extremity, in lieu of the ordinary runner. By this arrangement a certain amount of freedom is allowed the line, which admits of the float sliding. For our own part, we have always managed to use the bait comfortably without the aid of one of these articles."

Now we venture to think that anyone attempting to take grayling by following these instructions, would not be very successful. The rivers where this style of fishing is most practised, are the Teme, Lugg, Clun and Arrow, in Herefordshire and Shropshire. Indeed, so deadly is it in the hands of local experts that on the Teme its use is restricted as much as possible. Mr. Foster says "the bait must be raised and dropped rapidly and continually," and not raised more than four of five inches from the bottom. We have often in the neighbourhood of Leintwardine, watched Teme and Clun anglers using this bait and their practice is to swing the bait out gently over a swim, drop it gently into the water and as soon as it stops on the bottom, raise it again gently, not rapidly, eight or ten inches, and after repeating this movement once or twice, lift the bait out and drop it in again a few feet away from the spot just fished. But the grand secret of success in this this fishing is not mentioned by our author, viz., the way the fish takes the bait and how to know that it has done so, and it is just this that makes the float so useful and necessary. We will suppose the angler has dropped his bait into a swim with a depth of four feet, the float having been placed at three feet from the hook previous to the cast. Being loose on the line, as soon as the latter has sunk to three feet, the float slides up until the bait stops and the angler thus gets the exact depth, because the light float hangs on the line at the point where it has ceased to be pressed up by the water. Now the grayling does not seize the bait as it ascends, but rises to meet it as it descends; therefore, if the bait in descending, stops before the float reaches the water, the angler knows that a grayling has risen a few inches to meet it and he strikes gently at once. If he waits, the fish has time to reject the lure and an angler inexperienced in this method of fishing might have bite after bite without being aware of it. If the fish rose to seize bait as it was being pulled away from him, of course matters would be simplified for the angler, as the fish in nine cases out of ten, would be pricked, if not hooked. If no float is used, the difficulty of discerning whether the stoppage is due to the bait having reached the bottom or been stopped for an instant by the grayling rising to meet it, is vastly increased; moreover, there can be little fear of the float frightening the fish, as our author suggests, for the simple reason that it is so very small, perhaps an inch in length, and in the autumn and winter months when this lure is used, the surface of the river is generally dotted over with dead leaves and twigs.

---

* The Scientific Angler; being a General and Instructive Work on Artistic Angling. By the late David Foster, of Ashbourne (compiled by his sons), with illustrations. London: Bemrose and Sons. Ashbourne: D. and W. H. Foster.

† The Americans have recently introduced the silkworm most successfully into California, and we doubt not in time they will manufacture gut for fishing purposes on a large scale.—Ed.

The next chapter is entitled "Piscatorial Entomology," and its twenty odd pages are perhaps the most interesting and valuable in the book to the fly-fisher, giving as they do, a succinct description of the various kinds of land and water flies which appear during the year, their various changes, names and killing properties. Foster, as we have already mentioned, was an enthusiastic student of all insect life which has any utility to the angler, and his creed with regard to the best plan to go upon to deceive trout and grayling, is summed up in the following sentence:

"The real essence of the art lies in deceiving the fish *by a correct copy of any fly that may at any time be absorbing their attention.*" Without pretending to any such knowledge as Foster possessed in the wide domain of insect natural history, we have invariably put his rule in practice, by making use of such artificial flies as most nearly resembled the insects "on the water." On this question we entirely agree with our late correspondent, Mr. Robert Balderston, whose letters to this paper under the signature of the "Raven" on the "Theory of Flies," &c., will have been appreciated by our fly-fishing readers. We say late correspondent "because Mr. Balderston has recently started a paper of his own, which we wish may have every success, though we fail to see why our venturing to differ with him as to the relative value of gut and hair and the fact that the judges at our tournaments gave the fly-casters credit for any distances over twenty yards, should have caused him so much annoyance. That there is anything very wonderful in a twenty-three or twenty-four yard cast with a ten foot rod, we deny, seeing that casts of from twenty-seven to thirty yards have been frequently made in America. On this question of long casting, Mr. Foster has some remarks. He says:—"We never threw with a single-handed fly-rod more than twenty-nine and a half yards, but with the Acme wire-line we have been able to exceed this distance by some three yards." Mr. Balderston hints pretty strongly that though an angler may be able, by long practice, to throw a very long line, he may, nevertheless, be a very indifferent fisherman. Admitted, but who would be so foolish as to aver the contrary! All the same, most fly-fishers, we venture to think, will agree with us that the man who can command a long line will in most cases be able to use a short one properly.

A PERSONAL MATTER.

In case Mr. Balderston thinks we have not the courage of our opinions, we now state publicly, and shall send him this notice, that we will be happy to fish with the fly against him on any river he likes to name on three days next month. No fish under a certain size to count. We should prefer ten inches, but will reduce it to eight if he desires it. Eleven inches is the limit on the Derbyshire Wye. If he considers the capture of trout under the above sizes *sport*, we do not. As regards rods, lines, and flies, each angler to use his own choice. Mr. Balderston is now living not far from some celebrated Yorkshire streams, and if he likes to select one of them we shall be agreeable to journey north to meet him in a friendly contest, and shall feel no disgrace in being beaten by such a master of the art of fly-fishing as Mr. Balderston certainly is. Our experience of plaited silk casting lines, of gut casts, and hair casts is decidedly in favour of the plaited silk and gut; quite possibly Mr. Balderston's practice may convince us his views to the contrary are right. We should suggest that each angler choose a witness to be present during the fishing, Mr. Balderston's friend to accompany us and ours him. Mr. Balderston would be justified in thinking we feared to test our repeatedly stated preference for gut against his for hair if we did not make this suggestion Of course such a match is no real test of their relative values, because one man may be able to use an inferior line more successfully than a less skilful angler a superior one. To get over this difficulty, we suggest on the first day we use each our own preference in lines, on the second day, each our opponent's preference in lines, and on the third day whichever we may individually choose to use. If there is anything he may think unfair in what we have suggested, we shall gladly endeavour to meet Mr. Balderston's wishes respecting it.

We had for some time past intended to suggest this match to Mr. Balderston, and it was this very capital work of Mr. Foster's, with its remarks on flies and lines and casting which led us to introduce it here.

In taking leave of the book, the latter part of which is devoted to fly-making and fly-fishing for trout and salmon, and kindred matters, we can only repeat that it is in our opinion one of the most valuable works on angling which has ever been published, worthy of a place in every angler's library, and will, undoubtedly, prove a very great success.

FLY-FISHING NEAR SCARBOROUGH.

By R. B. MARSTON.

THERE is capital fishing of all kinds to be had near Scarborough, in the River Derwent; in the upper waters from the weir at Ayton (which is close to Forge Valley Station and only five miles from Scarborough) trout and grayling are found in abundance, as the water is well stocked and preserved by the Derwent angling clubs for some miles. The fishing is free, and very good, above the iron bridge, called Hilla Green Bridge, a mile above Hackness; but though no respectable angler is refused permission to fish, it is necessary to get permission from Lord Derwent to fish the so-called "free" waters. The Derwent Club's rules are—

1. Trout-fishing commences April 15, ends September 30.
2. Grayling-fishing begins 16th June, ends 14th March.
3. Fly-fishing *only* is allowed from Hilla Green Bridge (one mile above Hackness) to the New Cut.
4. Dead or artificial minnow-fishing below the New Cut, from 1st June to 12th August.
5. Other bait may be used below Ayton Low Mill, from 16th June to 14th March.
6. No trout or grayling to be killed under 8 inches in length.
7. No person to kill more than ten brace of trout or grayling in one day.

Day tickets can be had of Mr. Patrick, fishing-tackle maker, High Street, Scarborough. The charge is five shillings, and the ticket has to be countersigned by some member of the club. The New Cut mentioned above, is a cutting of some three or four miles in length, which carries the surplus flood water of the Derwent (at a point about a mile below Hackness) away to Scawby Beck. The river down to Ayton is the model of a trout stream, but difficult to fish in some portions below the New Cut. The scenery in Forge Valley is very fine, and every angler who goes to Ayton will be struck with the ruins of a building, once the fortified mansion of an old Yorkshire family, now extinct; the walls are of enormous strength. This ruin should receive more respectful treatment than it is getting from the farmer on whose land it stands.

The Derwent fish average about three to the pound, though larger fish are frequently met with, especially when spinning the natural minnow, a favourite method with the local experts. Above the New Cut only fly-fishing is allowed, and the fishing is not difficult; there are some long stretches of dead deep water full of fish, and if the angler is favoured with a breeze, he cannot fail to get fish from these pools if he fishes them properly. He should get down as near the level of the water as possible, and with a high bank on each side, is greatly saved from the observation of the fish. The fish in these pools, as a rule, rise right under each bank, and so of course the flies must be cast there; every little corner should be searched by the tail-fly, which should as often as possible fall on the grass and be gently pulled off into the water; if this has been carefully done and the fish are feeding near the surface, the angler will frequently get a fish in this way within two inches of the bank. The long pool above the New Cut contains fine trout and grayling and there are a few big chub. In this pool I one day got a 2¾ lb. chub. and a half-pound trout at one cast, and another day a three-quarter pound grayling and a half-pound trout; they gave capital sport. As an instance of the magnifying powers of water when looked down into from a good height, I may mention that one sunny afternoon I was standing on one of the old beams of the dam at the New Cut, when I saw what I thought was a grayling of at least three pounds, swimming over the planking in about three or four feet of water. I dropped my line from the top of the dam, so that one fly fell directly over him, and no sooner had the fly touched the water than the grayling rose, showing me his white belly as he came up, like an arrow almost. When he got to the top I saw nothing more of him, for the rise disturbed the water enough to cover his retreat, and for the next minute I played a pound grayling as gingerly as if it were the big fellow I had imagined. I had promised Mr. Bonvoisin a specimen grayling for his club, if I got one, but this was hardly a specimen as to weight, and so he plopped back and doubtless is not far from the New Cut now. The largest trout I saw was about two pounds, but such fish are very scarce, and the largest grayling was a real three-pounder, which rolled over my flies in the shallow water, close to the brink of the mill dam at Ayton. It requires a good long cast to reach the brink of this dam from the opposite side, but it is a capital grayling swim, and this grayling which rolled over my flies and would not rise again, was a veritable whacker. I was not mistaken about his size, as he put himself partly out of the water. This long, deep mill dam above Ayton Mill holds many and very fine fish; it is extremely deep in some places, in fact, the Derwent, even in its rapid upper course, has a larger proportion of really deep pools than any other Yorkshire stream I know, and deep pools invariably hold big fish and are the best protection against the poacher. The keepers on the club water look after it well, I am sure. The keeper I saw was Mr. Monkman, of Ayton, who will provide visitors with minnows at one shilling the score. I got a score from him, but never tried them, as the fly answered so well, A little glacialine placed in the bottle with them (when dead and the water poured off) kept them fresh and bright for some weeks, but they were not very tough; a little salt would have remedied this, perhaps. The Swan Inn is a comfortable little place to stay at, the hostess will get a good meal ready very nicely, in no time; for instance, I used to take the first train from Scarborough and have my breakfast at the Swan, and twice I had trout for breakfast which I had caught hardly ten minutes previously. And what trout they were! I have eaten all kinds of trout, but never fish of a better flavour than these Derwent fish.

I should mention that wading is not allowed, nor is it necessary, but it is advisable to wear short wading boots, as the banks are wet and the ground boggy in some of the best places. Below Ayton the river gets sluggish and holds few trout, fine, and I am told, fairly numerous grayling, jack, roach, chub, &c.; the club water extends some six miles below Ayton. As regards flies, for the present month and until the end of the season, the following will only be beaten by some local favourite, if at all: Sand-fly, olive-dun, Hofland's-fancy, whirling-dun, yellow-dun, small red palmer, small black palmer with silver twist, the light-dun, honey-dun bumble, and red and grey quill gnats, the last four especially for grayling; they must be dressed on small hooks, on fine gut, as the water is well thrashed and the fish are not to be caught at every throw, or by any kind of tackle.

Scawby Beck can be reached by a pleasant mile walk along the coast from Scarborough Castle. At the mouth of the Beck, there is an inn, called the Sands Hotel, and the proprietor reserves the fishing at the mouth of the Beck for his own customers; but he has only a couple of hundred yards or so, and his fishing is only valuable in the autumn, when there is a run of salmon or sea trout up the Beck. The Beck has a winding course, cut deep amongst the valleys, between the village of Scawby and the coast. It is thrashed and poached to a most unmerciful extent, and the wonder is it contains any fish at all, but it does, and very fine ones too; in fact, the local anglers reckon Scawby Beck fish better than Derwent fish. I was unfortunate in my two days on Scawby, such a gale of wind blowing each day that it was difficult to keep one's footing, and the fish did not rise. I caught a lot of very small things, which I returned. On another occasion, I walked out one evening and got three nice fish in about ten minutes, one, a plump little beauty of three-quarters of a pound was, without exception, the handsomest trout of many thousands that I have seen in my life, perfect in shape, richly spotted and covered with all the tints of the rainbow. Two anglers who were with me at the time could not sufficiently praise the beauty of the fish, it fought well and cut pink as a salmon. If Scawby Beck were preserved, it would afford most splendid sport, as the river is a good feeding river and there are many fine and deep pools and good streams. The time the big fish are taken, is just after a flood, I am told, and by spinning the minnow. The fishing is claimed by a miller who lives on the right bank above Scawby Mill, where the road crosses the stream. And above the dam at Scawby, it is certainly preserved, though of little account. What right the miller has I do not know, but it is not greatly respected from what I saw.

I have previously, in a note on striking from the winch, given an account of the sport I had on the Derwent. In the four days I fished it, I kept seventy trout well over the regulation 8 inches, and threw back at least double that number of fish, including a great many good grayling, Mr. Balderston sneers at my advocacy of striking from the winch. The above result on a well-flogged river (there were always about half-a-dozen rods in sight) is pretty fair testimony in its favour. Formerly, I invariably struck on a line held between the hand and the butt.

GERMANY AND THE GREAT INTERNATIONAL FISHERIES' EXHIBITION, LONDON, 1883.

LAST week we referred with regret to the statement in the German papers, to the effect that their Government had declined to support the exhibition, and suggested that nothing should be left undone to get this decision reversed if possible.

We have reason to believe that further steps are being taken in influential quarters, with the view of inducing the German parliament to take the matter up, and the chairman of the executive committee has intimated to Count Munster that the executive will give every facility, in order that Germany should be represented through her Government.

THE LONDON CLUBS AND THE GREAT INTERNATIONAL FISHERIES' EXHIBITION.

A REPORT is going the round of the clubs, to the effect, that the weights below which no specimen fish will be accepted for competition or exhibition are to be exceptional. For instance, we learn, on good authority, that no pike under twenty pounds will be allowed to enter the exhibition! We only mention this matter to state that we cannot believe it is at all likely that such excessive weights as the above will be finally insisted on. To place the weight of pike at twenty pounds would be extremely unfair to all, except those rich or fortunate individuals who get access to the best private waters in the country. How many London or Provincial angling clubs possess stuffed pike of twenty pounds weight? Again, this weight would exclude many of the handsomest fish, and we presume beauty of shape will count for something. If the above report is true, then, as far as we are concerned we shall lose all interest in what ought to be, as it was at Norwich and Edinburgh, a most interesting exhibition, in which the poor angler's pike of ten pounds has a place beside the rich angler's fish of twenty pounds. We feel we have a right to speak on this matter, seeing, that if it had not been for our action at the time, there would have been no London club exhibits, either at the Norwich or Edinburgh Fisheries' Exhibitions.

By the way, we may mention that during the time the exhibition is open we shall publish illustrated supplements, devoted to describing the exhibits, reporting lectures, &c.

NOTICES OF BOOKS, &c.

ANNUAL REPORT OF THE BOARD OF REGENTS OF THE SMITHSONIAN INSTITUTION, showing the operations, expenditures, and condition of the institution for the year 1880. Washington Government Printing Office, 1881.

The mission of the famous Smithsonian Institution is "the increase and diffusion of knowledge among men," and as proof of the enormous amount of valuable work done during 1880 it is only necessary to glance over the bulky "report" in which that work is epitomised. In reviewing the report for 1880 we gave a brief account of the Institution, which owes its existence to the liberality of an Englishman, James Smithson, who died in 1829, and bequeathed his property (£115,000) to found the above institution. In that review (which appeared in our issue for Oct. 8, 1881) we pointed out the enormous scope of the institution and the thoroughly earnest and practical manner in which its work is carried on. In the present notice we shall confine our remarks entirely to those portions of the report which deal with matters relating to fish and fisheries.

The Secretary of the institution is Professor Spencer Baird, who at the International Fisheries Exhibition at Berlin in 1880, received the gold medal given by the Emperor of Germany as the highest prize awarded, This was given not alone as an acknowledgment that the display of the United States was the most perfect and imposing, but as a personal tribute to one who, in the words of the President of the Deutscher Fischerei Verein, is regarded in Europe as "the first fish-culturist in the world."

During 1880 the additions of specimen fish to the U.S. National Museum were very large—larger than had ever been made in one year previously. "The most important contributions were the collections made by Professor D. S. Jordan and Mr. Charles H. Gilbert, of the Fishery Census. These gentlemen devoted a number of months during the year to the systematic investigation of the food-fishes of the western coast of the United States, and traversed the whole region from San Diego to Puget Sound in their researches." Many species new to science were obtained by these and other marine explorers.

Mr. N. K. Fairbanks furnished the Museum with a specimen of California salmon, caught in Geneva Lake during the summer, weighing about ten pounds, this being undoubtedly one of the young fish introduced into that lake some years before, hatched from eggs supplied by the U.S. Fish Commission.

EXTRAORDINARY GROWTH OF CARP IN AMERICA.

Another important specimen was that of a carp, which was one of a batch of fry sent in April, 1880 by the U.S. Fish Commission to Texas. Its length in April was four inches, and weight little over an ounce. Eight months afterwards it was returned by Mr. G. B. Mobley, of Texas, to the Commissioners, and it then measured 21 inches and weighed *over four pounds!* This is simply an extraordinary instance of increase in weight, and reminds one of those Chinese vegetarian fish—probably of the carp family—which are said to grow at the rate of a pound a month.

We next come to a most interesting account of the United States Fish Commission, its general objects and results. As we have said before, we earnestly hope that one result of the great

International Fisheries Exhibition, which is to be held in London next year, will be the establishment of a British Fish Commission, to undertake just such work as is so well and successfully done by the U.S. Commission. The President of the Commission is Professor Baird, and we must give a few extracts from his account of it, just to show our readers why we ought to have a similar institution in this country.

The United States Fish Commission.

"As explained in previous reports, the Commission was first established in 1871, for the purpose of investigating the alleged decrease of the food-fishes of the country, and of enquiring as to the best methods of remedying the decrease, should this be found to exist. It was not until the second year, or 1872, that the responsible duty of increasing the supply was added to the other functions of the Commission. . . . The division of inquiry has been held to involve a complete investigation of, and report upon all the physical conditions of the waters of the United States, and the nature, numbers, and general relationship of their inhabitants, together with an account of the relationship of man to the same, in the way of methods and appliances of the fisheries, and the history and statistics of his labours.

"The second division, that of propagation, of course, includes the protection of the useful fishes and their multiplication, either by capturing the fish and transferring them from one point to another, or by the process of artificial impregnation of the eggs, and the distribution of the young.

"The work of inquiry is prosecuted, for the most part, directly under my own supervision, from stations at different points along the sea-coast, with a suitable number of assistants (volunteers for the most part), for making the investigations referred to. The specimens collected are placed in the hands of experts, by whom they are properly investigated and monographed, and the results published, with suitable illustrations, in the annual reports of the Commission. The collections made, usually in very large numbers, are worked up at the same time; the reserve collection preserved in the National Museum, and the duplicates distributed to the various educational establishments of the country, or exchanged for objects desired by the Museum.

"The propagation division is conducted either at some permanent station, such as those of the salmon, white fish, and carp, or in temporary establishments, drifting their ground with the season, as is the case in large part, with the shad stations."

At various times we have given our readers particulars of the work done by the Commission. It has renewed failing fisheries, established new ones, re-stocked rivers, and of late has even increased the stock of sea-fish by means of artificial propagation. It possesses a splendidly-equipped sea-going steamer, built expressly for the purpose of hatching fish eggs and carrying them from one part of the coast to another. The amount of work done has been on a truly gigantic scale, the number of fish hatched out successfully and transported often for thousands of miles are counted not by the thousand but by the million! When *shall* we with our sea-fisheries valued at £11,000,000, and capable of infinite extension, be able to point to such a splendid work going on around our coasts as the Americans have had in operation for years on theirs? But it is not confined to their coasts, every inland, lake and river, and every valuable food-fish comes under the beneficial influence of the American Fish Commission. We do not for a moment wish to underrate the value of the work done by the English, Scotch, and Irish fisheries inspectors; considering the ridiculously inadequate means at their disposal, their work shows great results. It is not their fault if these results are nothing as compared with what they might be. Look at Ireland, for instance, there is an untold wealth of fish life round the Irish coast, and yet the Irish Commissioners, year after year in their report have to complain of the want of a vessel to be placed at their disposal for the purpose of ascertaining and marking out the position and extent of the fisheries. The work of our fisheries inspectors is practically little more than that of police; they keep salmon rivers open, collect taxes, regulate the sizes of nets. They have neither authority nor means to do much more than this. They certainly sometimes have most weighty and important national questions to consider, such for instance as whether the practice of trawling is or is not causing decrease in the stock of fish. Opinion on this matter varies, but we cannot help thinking that by stating that this trawling does not injure the fishing, and that the fish supply is inexhaustible, they have done our fisheries incalculable injury. These trawls often weigh tons, and they are dragged over the bottom of the sea; this kind of thing cannot be done without destroying the ocean feeding-places in time, and when the food goes the fish will go too. But this is a digression.

As our readers are aware, the United States have applied for ten thousand square feet of space for their exhibit in London next year. We look to that exhibit more than to anything else to stir us up in this country to a sense of what we ought to do in the interests of our fisheries.

The Influence of the Temperature of the Water on the Movements of Fish.

For some years past, at the instance of Professor Baird, records have been taken along the coast at light-houses, light-ships, life-saving, and signal stations, &c., of the temperature of the water and the movements of fish. "This year thirty or more fishing boats are carrying thermometers to record temperatures upon the fishing grounds. One practical result of the study of these observations has been the demonstration of the cause of the failure of the menhaden fisheries on the coast of Maine in 1879—a failure on account of which nearly 2,000 persons were thrown out of employment." We should much like to touch upon other matters of great interest in this invaluable American report, but space forbids. It does not require much prescience to foretell which nation will carry off first honours at our exhibition next year.

THE FRIENDLY ANGLERS' SUMMER OUTING.

Closely following the summer dinner of the venerable Society of Friendly Anglers, who hold their weekly meetings at the Albion Tavern, Albion Street, Hyde Park, is what is termed the summer outing, for which a sum of money is contributed by members, to be given in prizes for the greatest weight of fish from public waters on one particular day in August. This annual event took place at the end of last week. There were ten prizes offered, in amounts varying from ten shillings to thirty-four shillings. Seven of the prizes were won by members showing fish from the Thames, and three from the Colne. The prizes were awarded as follows: First, Mr. R. L. Pugh, with 24 lb. 13 oz. of barbel from the Thames, the three largest weighing respectively 8 lb. 2 oz., 7 lb. 2 oz., and 7 lb. 1 oz.; second, Mr. Batson, with 21 lb. of bream from the Colne; third, Mr. Howard, with 12 lb. 14 oz. of barbel, and 2 lb. 8 oz. of chub from the Thames; fourth, Mr. Mitchell, with 7 lb. 4 oz. of barbel from the Thames; fifth, Mr. C. Calcut, with 7 lb. 2 oz. of chub from the Thames; sixth, Mr. T. Barbel, with 8 lb. 2 oz. of barbel from the Thames; seventh, Mr. C. M. Le Good, with 4 lb. 11 oz. of roach from the Colne; eighth, Mr. Marsh, with a trout of 4 lb. 1 oz. from the Thames: 9th, Mr. Hunt, with 3 lb. 3 oz. of roach from the Colne; tenth, Mr. Berry, with 3 lb. 2 oz. of barbel from the Thames. Mr. Grant weighed-in 2 lb. 1[illegible] oz. of roach from the Colne, altogether representing a grand total of 109 lb. 8 oz. of fish. The day is thus set apart as one of pleasure and enjoyment, and not for any special competition for one particular kind of fish. It is therefore annually looked forward to by some of the members as a day out in the country, and to make their favourite sport the one great feature of the occasion. The barbel have been well represented this year, and the three large ones taken by Mr. R. L. Pugh are really specimen fish, for which this young member of the club has occasion to be justly proud. The Friendly Anglers, is one of the oldest angling clubs in London, and by no means wanting in energy and usefulness in keeping pace with the spirit of the age, in the advancement and promotion of all that relates to the best interests of the angling art.

B.

POISONING THE LEA.

Great Destruction of Fish.

A wholesale destruction of fish by poisoning is giving rise to great indignation in East and North-east London, occasioned by the discharge of a large volume of sewage matter or chemical refuse from one or more colourworks between Tottenham and Lea Bridge a night or two since. Thousands of fish are floating dead upon the water, including barbel, perch, roach, bream, dab, dace, carp, pike, eels, and other fish, great and small. Many persons have carried away baskets full of these poisoned fish, and as it is feared they have sold or otherwise disposed of them, dangerous consequences are expected. As a great many anglers and angling clubs fish in the Lea their anger knows no limit at this occurrence. They point out that they are obliged to take out a licence to fish, or otherwise pay a fee for the privilege of fishing in certain reaches of the river, while in this instance of wholesale destruction the offenders are likely to escape free. The general opinion is that the fish have been poisoned by a discharge from the sewage works at Tottenham, and as a similar discharge took place a few years ago with like results, the Lea Conservancy is accused of a neglect of its duties, and the Hackney Board of Works, through whose district the water runs, and where the greatest pollution and damage have taken place, is loudly denounced by the riverside inhabitants and the anglers. The water on Friday and Saturday was in a highly polluted state, and the stench in the immediate vicinity of the East London Waterworks was overpowering and sickening. Although the water company make use of a portion of the water of the river for the purpose of driving waterwheels for pumping, their supplies for public purposes are obtained through special channels of their own, their intake being a long distance up the river Lea, and far beyond the point of pollution.

[We trust every possible means will be employed to bring the offenders to justice.—Ed.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS.

MID-THAMES.

> " My business in this state
> Made me a looker-on."
>
> —Shakespeare.

My looking on angling matters during the past week has resulted in business of such a meague description that I am almost inclined to take my hook and cast my lines in more productive, if not pleasanter places. The river Thames at the present moment is as clear as "Old Tom," and the fish having consequently located in the weeds (from whence no floculent bran or enticing minced lobs will entice them), sport has during the last few days been of the poorest. At Pangbourne, a gentleman fishing alone has had about 11 lb. of chub per day for several goes in succession, the best fish, being had with a black palmer, 4lb. From Caversham and Sonning I glean that chub have been the only presentable fish, roach, perch, and even gudgeon being exceptionally shy, presumably in consequence of the brightness of the water. At Hurley, on Tuesday, Mr. George Hobbs gave a water party, which was attended by the *elite* of the neighbourhood, amid the distinguished company being recognised General Jackson, Colonel Matthews, Sir H. Gyngel, and Mr. Thomas Aldridge, the attendant sprites being Tom Street and "The Boy." I need not say that under the attendant state of the water the spirits of the party got down rapidly, until dull care was swamped effectually in the evening by an administration of "bitters," fried "eels and soles," roast ducks, and boiled fowls, after which came sundry toasts and potatoes (potations I mean), and the evening passed away obliviously; but that I for one must say the entertainment bore the morning's reflection. Thursday, 6 o'clock.—River as bright as possibly can be. Gudgeon are the only obtairable fish. Roach, perch, and jack are well in the weeds, from whence it is most difficult to entice them.—Marlow Buzz.

Ancholme District.

Owing to the continuance of fine dry weather, the water remains very clear. A large quantity of fine bream have been taken during the past week. A lighterman, fishing from a barge, hooked a roach of about 2 lb., and lifted it on to his vessel, but, lo and behold, the old adage, "There's many a slip, &c.," was verified. The fish, not liking its new quarters, took a final and successful struggle for liberty, broke the hook, and fell again into its native element. The water is too low for much execution on the trout streams. The angler's only chance during the bright sunny weather is dibbing behind the bushes with house-fly, &c.—Thomas Ford, Caistor.

Ballynahinch.

Since last report weather has been very changeable. From the 8th to the 13th we had strong sunshine, and little or no wind, but on the 14th the sky was overcast all day; and yesterday we had some very heavy showers, accompanied by a gale of wind. To-day it seems quite settled again. Takes of trout have been very small, not averaging a dozen a day for each rod.—Walter Blackadder.

Chichester.

With weather, wind, and water favourable, rodsters have this week had no reason to grumble. Fish have been well on the feed, with every prospect of continuing. Those well known Cicestrian knights of the angle, "Dad" and "Old Joe," have, as usual been successful. Mr. Young weighing-in 17 lb. of good bream and roach, while Mr. Summers had 18 lb.; Mr. Moses had a good show, and Mr. Cooke followed in his wake. Gentles are now the lure, paste fishing not proving satisfactory. Both mornings and evenings good takes have been made.—George F. Salter.

Dove.

This river has been in capital condition for either fly, minnow, or worm fishing all this week. The rains have brought on the rise that was so much needed, and the fresh has stirred up the fish wonderfully. Besides the fly, minnows, and worm, the wasp grub has been killing in first-rate style. Many large baskets of roach, dace, bream, chub, barbel, and eels have been captured, and as I write to-day (Thursday) sport continues better among coarse fish than it has been at any previous period of the present season. Now that the rushes are beginning to decay roach are frequenting the places where they grow, and I should advise the rodster to try these for them, in preference to any other spots. I hear of 7½ brace of trout being taken above Dove Dale, and another of six brace near Hartington. The former were caught on Monday, and the latter on Tuesday. I hear that the late Mr. David Foster's new book, which the editor of the Fishing Gazette, so kindly reviewed last week, is going off well. With favourable weather in the present condition of the Dove, we are bound to have any quantity of anglers out next week.—The Splodger.

Exe (Exeter).

The splendid weather we have been favoured with lately has induced an immense number of roach anglers to visit the precincts of the Quay. Bank holiday saw a motley crew, from the primitive "osier" to the more stately 16-foot bamboo roach rod fishing as close as possible to each other, making it almost inconvenient to cast a line at all; but with all these incumbrances these desciples of Old Izaak had very good sport taking it all round. The river had fallen considerably, consequently the fish were well on the feed, biting fairly well at gentles and paste, the latter preferred, and the largest takes have been early in the morning or last thing in the evening. Very few salmon have been grassed lately owing to the lowness of the river, and most of the anglers have retired until later on in the season, and as a rule they all seem to have done well with the early-run fish, Mr. Pearson having killed eighteen splendid fellows, the majority being taken with the sea lice upon them, showing their stay in the flesh had not been of long duration. Messrs. Lee, Baker, Prickman, &c., have been equally successful, but Mr. Pearson is the only one that I have heard as having taken a salmon with a fly this season at the Salmon Pool. Trout-fishing has been on the improve very much of late, and Mr. Dobles, of the Clifton Inn here, as per usual, has been very successful, which, for his perseverance and tact in manipulating flies to suit the seasons and water, deserves every fish he takes, which, as a rule, are all good sized ones, weighing from half a pound to two pounds each. The flies most taking are the "coch a vonddu," "soldier palmer," "red ant," and "yaller sally." The August "brown" has been seen, and should take in a few days. The net fishermen have done exceedingly well, and a quantity of peel have been taken; but I do not think the numbers are equal to last year, and I have noticed a quantity of north country peel for sale in various places in the country. Eels are very scarce, and perch small and shy. We have had a nice shower to day, which may add much to sport.—Frank Gosden, Exeter.

Exe (Tiverton).

The river is still low, having risen very little with the rains of the past few days. In the earlier part of the week a fair number of trout were taken with the red spinner, black ant, coachman, and red palmer. There is a fair number of salmon in the river, but will not sport until a rise of water. Five have been killed with the fly during the past week, weighing from 6 lb. to 9 lb. each. A good many large trout have been taken with wasp grub in the Lowman (a tributary of the Exe), some weighing over 2 lb. each.—Wm. Mudford.

Leicester.

The weather from Friday, up to and including Monday, was unusually hot, and the waters too bright for angling. On Tuesday it rained most persistently the whole of the day, but this most materially benefitted the waters, especially where the streams run sluggish. A considerable number of anglers have been out, and have met with good success during the latter part of the week. Amongst the takes which were most noticeable was that of Mr. Friend on Monday, who secured about 7 lb. of good roach from the local society's waters, the pick of his basket being a handsome fish weighing 1 lb. 5 oz. Mr. Shephard on Tuesday had a nice lot of roach and perch, one of the latter weighing 1 lb. 4 oz. Mr. Potter also showed a capital take of roach, the largest brace weighing 1 lb. 13 oz. Wednesday and Thursday found a good many anglers out and the majority had good takes of roach with wheat. Pike fishing has been quiet. From the Aylestone waters both roach and perch continue to bite fairly well. Since the holidays the Barrow waters have not received quite so much support, but those who have visited this locality have been rewarded with some fair sized bream, although not in any quantities. At the newly-preserved waters at Lyston there has been some good sport lately; Mr. North took a fine bream weighing 5 lb. from Miles' Mills; Mr. Lowe this week caught 20 lb. of roach Mr. R. Hartshorn 10 lb., Mr. T. Hurst 10 lb., whilst other fishermen have been proportionately fortunate. Some bream have also been taken. The number of anglers in these waters is steadily on the increase, and in time these preserves should furnish some of the best fishing in the neighbourhood. Almost daily a number of anglers visit the Wreake, and generally manage to bring back a good number of perch, roach, and dace. The first prize in the annual angling contest of Leicester British Workmen's Society was won by Mr. Bird, Mr. I. Hardy being second, and Mr. G. Ingram third. There were thirty-nine competitors, and the contest took place last Saturday at Wreake. At the time of writing the waters are very fine and clear.—Alert.

Medway (Tonbridge).

The cold of the last two days has not improved the fishing, but the water still remains as clear as possible, which makes angling somewhat difficult. Since last writing Mr. R. H Dallas Beeching has been trying for bream after baiting with greaves, and has been very successful. There have been several good jack taken below the town as well as bags of roach and bream above. The chub rise well to a fly, and some good ones have been lured with wasp grub just under water. What we want is for the water to become a little clouded and then we shall be busy.—Ye Medway Water Rat.

Suir and its Tributaries.

The river is literally swarming with both salmon and peel. The late floods brought up enormous quantities of them. Up to last week there was very little fishing, owing to the unsuitable nature of the weather. Good sport has been had on the upper waters, especially on Lord Donoughmore's preserves at Newcastle and Knochlofty. When on last week, Thomas Phelan Kilmanahan got eleven fish between salmon and peel; Messrs. Spencer Wilde and Arthur Tabor got, on the same waters, four on Friday, weighing respectively 13 lb., 9 lb., 4½ lb., and 4 lb.; on Saturday, one of 4 lb.; and on Monday, one of 7 lb. Mr. M. Hutchings was also successful at Math-o'-Gally, getting on one, a fine salmon of 20 lb., and the next day, another of 11 lb. and a peel of 5 lb. The net-fishing being now over, there ought to be good sport on the lower waters for the rods. The season will be over in four weeks more, just when the fishing on the lower waters is at its best. The trout-fishing is not at all good at present —Dora.

Thames (Eynsham).

The water is improved considerably from the showers we have had, and jack are biting freely at almost any dead bait. There were two trout, of 4½ and 5½ lb. respectively, caught at Pinkhill on Saturday last, with line. Gudgeon and several others have been seen to rise. Roach and perch are feeding well, but I have not heard of many chub or barbel being taken since my last report.—W. B. Howe.

Thames (Goring).

Water in good order for jack, perch, and chub, perch biting very well. On Friday and Saturday, 10 lb. of good perch and eight jack, largest jack 4 lb. On Sunday and Monday, some very good perch and jack, and ten dozen of gudgeon, fishing with E. R. Stanhane, of 3, Edwardes Terrace, Kensington, London, W.—John Rush.

Thames (Hampton).

J. Wheeler, fishing with Mr. Wild on Sunday, 13 dozen and 10 gudgeon, and 7 perch, largest 1¼ lb. Wednesday, J. Wheeler, fishing with another gentleman, 4 dozen roach. Thursday, with Mr. Wild, 4 dozen roach and dace, and at the weir had the good fortune to secure two fine trout, one weighing

7 lb. and the other 4 lb. (weighed at the Island Hotel). Water bright; rain wanted. An incident worthy of record is that another angler caught 32 pope (August 17th, bank fishing) and no other fish whatever.—E. Swan.

Thames (Twickenham).

Wind, N.E.; river in good condition. I am pleased to say we are now getting some good fish; several barbel have been taken this week, and a good sample of roach was brought in. I cannot be responsible for any person using my name upon the arrival of the trains at the railway station; all orders must be sent or given in at my house, the Two Sawyers.

N.B.—My patrons will kindly notice that any reports in the *Referee* do not come from my house. The correspondent does not know carrion from liver gentles, which my customers well know we have always a good supply.—Alfred Perrin, Two Sawyers.

Trent (Newark).

We have had a nice gentle rain, but nothing as yet to materially alter the water, which at present is very low and clear. Fish have not been biting well, as a rule, during the past week, although some odd piscators have done fairly well; I cannot as yet hear of any good catches of barbel being had, a few odd fish being about the extent of the catches; one fish I saw this week turned the scale at $4\frac{1}{4}$ lb., a good conditioned little fish. Barbel should come now, if the angler will bait for them properly. I understand Mr. T. Lee had a good catch of roach yesterday, 40 lb. of fish, several of them going 1 lb. each, malt being his most successful lure. One of our local anglers had a splendid roach from the Trent this week, going $1\frac{3}{4}$ lb., it is now in the hands of Cooper for preservation. Odd chub have been taken with wasp grub, and a few bream with worm, while gentles have also killed roach and dace. If no more rain falls, the water will be low and clear on Saturday, and most barbel swims fishable from the bank. Worms should now be plentiful; so barbel fishers, look out for a little sport.—The Trent Otter.

Trent (Nottingham).

The river here continues low but fine, and as a few heavy showers have descended worms have been slightly cheaper. Barbel, somehow or other, don't appear inclined to feed with any degree of freedom. The best takes have come from Shardlow and Collingham, one of the fish scaling $7\frac{1}{4}$ lb. From the upper reaches I hear of excellent sport having been met with in Mr. Smith's water near Burton-on-Trent. Several large takes of roach have been made at Weston and Shardlow with wheat, which has also proved highly satisfactory at Beeston and Sawley. Some big lots of chub have been killed with the wasp grub, one gentleman getting three fish over 4 lb. each. Fly-fishing has been moderately good and some nice lots of dace and roach have been forthcoming from Honeringham and Hazleford. Apart from the river grand sport has been obtained amongst the trout.—The Man at the Clubs.

Tweed and Teviot.

Owing to a continuance of fine and dry weather throughout the Tweed basin during the last fortnight, the basin and its tributaries are still very low, and consequently angling operations are virtually at a standstill. At the netting stations in the Coldstream district the takes have been considerably below the average catches. On Monday and Tuesday last the Cornhill water yielded eight salmon, twelve grilse, and three trout, one of the salmon weighing 17 lb. The other waters have nearly all been fished blank. All kinds of fish are scarce, and the current prices are—salmon and grilse 1s. 3d., and trout 1s. 1d. per lb. A flood in the river is anxiously looked for by anglers, and the beclouded aspect of the sky and the occasional showers that are now falling from day to day are regarded as affording indications of a coming heavy rainfall. Should this take place, a rise in the rivers will occur as a natural consequence, and the chances of the angler will thereby be greatly improved.—Maxwheel, Kelso.

Wharfe (Yorkshire).

The only opportunity for fly-fishing during the past week has been an hour or two in the evening, and even then the very finest tackle and the smallest of flies are a sine qua non. I killed a splendid grayling on Monday evening (the first since they again came into season); it was in first-rate condition and gave me some good sport before I succeeded in netting him. The fly that I have found kill the best this week is the pale evening dun; on one occasion the water was completely in a boil with fish rising at it, and while the fun lasted I had good sport. The majority of sportsmen, however, are off to the moors, and have for a time relinquished the rod for the gun.—Francis M. Walbran.

Wye and Derwent.

Both the above rivers are in first-class condition for fly-fishing, and very fair sport has been had the whole of the week, chiefly by the local fishermen, as most of the gentlemen that visit Derbyshire have gone on to the Moors grouse shooting, and, from what I can learn, they have had first-class sport amongst the grouse. The killing flies have been the small honey dun, bumble (red, ribbed with gold finish), and dotteril flies. Dibbing under the bush and trees has been followed with good success. Several large baskets of good-sized trout have been killed with the natural blue bottle flies. The bottom fishers on the Derwent only fish the last thing at night, chiefly with wasp grubs, and some heavy trout have been landed, also a few barbel.—George James Eaton.

CLUB REPORTS.

ALEXANDRA SOCIETY OF ANGLERS.

The members of the above society on Tuesday evening last, had a most excellent show of fish from Pulborough, Amberley, and the Lea. Messrs. Wicks, Miles, Gripton, Chipchase, and James Thompson being most successful. The members will fish a peg-down match at Windsor, Sunday, August 27th. A silver watch, three prizes of 10s, and several others to be given.—F. Wagner.

August 17th.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Medcalf, 10 lb. roach and bream from the Arun; Mr. Hutchins' roach from the same river; Mr. Larkman, 11 lb. roach and bream; Mr. Moir, 3 lb, both weights of fish from the Dagenham Lake; Mr. Squire, 1 jack, and some roach from the River Lea.—J. Worledge.

Aug. 13.

ANCHOR AND HOPE.

Fifteen of our members fished a peg-down match at Amberley on Sunday the 13th inst., with the following result: Mr. James Bowling, first, bream, 2 lb. $15\frac{3}{4}$ oz.; Mr. Thomas Bowling, second, bream, 2 lb. 6 oz.; Mr. R. Smith, third, bream, 1 lb. $1\frac{1}{4}$ oz.; Mr. H. Scott, fourth, bream, 14 lb. $\frac{3}{4}$ oz.; Mr. D. Liston, fifth, bream, 11 lb. $\frac{3}{4}$ oz. Mr. A. Glass and Mr. A. Shakel also had fish.

Aug. 16, 1882.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of £1 1s. donation from H. A. Little (Richmond Piscatorials), £1 from E. Clark, Portsmouth Waltonians; 10s. from Mr. Pratt, Treeswick Buckland Angling Society; and 5s. from J. C. Murray, chairman Central Association.—R. Ghurney, Secretary.

BERMONDSEY BROTHERS ANGLING SOCIETY.

There was a good show of fish at this club on Sunday last, the principal takes being by Mr. Benningfield, jack and bream; Mr. Frost, jack and bream; Mr. Goodred, jack; and Gafney, roach and dace.—A. S. Croker, sec.

BOSTONIAN ANGLING SOCIETY.

Our trays were well filled on Monday, August 7th. The most successful of our members were Messrs. Brothers and Goodge with roach from the Thames, plenty of them, but rather small. Mr. Jennings with a handsome show of roach, the two largest weighing 1 lb. $4\frac{1}{2}$ oz. and 1 lb. $2\frac{3}{4}$ oz. Mr. Constable, perch from the Wey. Other members with small takes, August 13th, Mr. Goodge, roach and bream, 7 lbs.; Mr. Jennings, roach and bream, 10 lb. from Amberley.—J. J., hon. sec.

August 15th.

CITY OF LONDON ANGLING SOCIETY.

On the 6th we had but a poor show of fish, most of our members staying an extra day at Amberley. The best was that of Mr. Chambers, 3 lb. $6\frac{1}{2}$ oz. of bream and roach; Mr. Mortimer, roach; and Mr. Warden, bream; all from Amberley. On Bank Holiday Messrs. Nitz, Pratt, and Mortimer had bream from the Welsh Harp; Messrs. Castell and Cottis had a variety of fish from Pulborough. On the 8th the former had some good roach from the canal at Brentford. On the 13th Messrs. Chambers and Hyde weighed bream from Amberley, Mr. Castell bream from Dagenham, and Mr. Nitz bream from the Harp.—Cas.

CLAPHAM JUNCTION ANGLING SOCIETY.

Since my last report several of our members have been out and met with the following success:—Mr. B. Wellman, weighed in $9\frac{1}{2}$ lb. of bream and roach; Mr. Maslin. 5 lb. $13\frac{1}{2}$ oz. of bream; Mr. E. Wakeford, 15 lb. of jack; Mr. E. Brewer, 2 lb. $3\frac{1}{2}$ oz. of roach; Mr. Valentine, a nice chub of 2 lb. 2 oz.; Mr. E. Withers, chub, roach, and barbel, 5 lb. 3 oz.; Messrs. G. Walkley, E. Wilson, C. Speed, G. Innes, roach, bream, perch, and barbel. Members are requested to attend on Thursday next for important business, at 8 p.m. sharp.—E. Wilson, hon. sec.

CROWN PISCATORIAL SOCIETY.

Several members of the above society were out on August 6th, Mr. Willcockson having about 12 lb. of rudd, perch, carp, and tench, two of the latter weighing 4 lb.; and Mr. Neagus a nice show of bream and roach. On August 13 Mr. Neagus had 10 lb. of handsome roach from the Thames. Next Sunday, August 20, the members fish at Amberley for three valuable prizes.—W. H. Burwash, jun., sec.

August 16.

FRIENDLY ANGLERS' SOCIETY.

Friendly Anglers' Summer Competition, August, 1882, for prizes value ten guineas, subscribed by the members. 34s., Mr. Pugh, barbel, Thames, 24 lbs. 13 oz.; 1 fish, 8 lb. 2 oz., 7 lb. 2 oz., and 7 lb. 1 oz. respectively; 30s., Batson, bream, Colne, 21 lb.; 27s. Howard, barbel, 12 lb. 14 oz., chub, 2 lb. 8 oz., Thames, 15 lb. 6oz.; 24s,, Mitchell, barbel, Thames, 11 lb. 4 oz.; 21s., C, Calcut, chub, Thames, 11 lb. 2 oz.; 20s. J. Barwell, barbel, Thames, 8 lb. 2 oz.; 18s., Le Good, roach, Colne, 4 lb. 11 oz.; 14s., Marsh, trout, Thames, 4lb. 1 oz.; 12s., Hunt, roach, Colne, 3 lbs. 2 oz.; 10s., Berry, barbel, Thames, 3 lb. 2oz; Grant, roach, Colne, 2 lb. 12 oz.; total weight of fish, 109 lb. 8 oz. I send the above report, having witnessed this splendid show of fish, Mr. Pugh's three barbel, Mr. Batson's bream, and Mr. Marsh's Thames trout being very fine specimens.—T. R. Sachs.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The society held their weekly meeting at the St. George's Wine Vaults, 162, King Street, on Monday. Present: A. Mitchell, Esq., M.D., president; P. Courtnay, Esq., vice; J. Heewtson, chair. The minutes of the previous meeting having been read and confirmed, the following gentlemen were unanimously elected:—L. Bonvoisin, Esq., honorary, Mr. Budds, Mr. Willshak, Mr. Francis, and W. Hammersley, Esq., of Islington also. Several gentlemen of other societies, chiefly London, were present. Dr. Mitchell, angling with Mr. Hewetson, caught some fine rudd and pike at Potter Heigham, which were much admired; Mr. Pond also about 30 lb. of rudd and bream, also Potter Heigham; Messrs. Chapman and Warnes about $\frac{1}{2}$ cwt. of bream and rudd on the Bure, but not sent in to the society, only two as specimen good clean fish, about 6 lb. the two, in fact, all the fish were in splendid condition. Mr. Lark, the secretary, also one good rudd, 11 inches long, caught that day in a stream leading from the Bure.—James Lark, secretary.

GRESHAM ANGLING SOCIETY.

At the weekly meeting held on Thursday last, D. Cartwright, Esq, occupied the chair. After reading the minutes, the reports from the Thames, &c., were given, Mr. King, of Windsor, reporting river very clear, several jack and chub being taken during the last few days. Bartholomew, of Goring, reports water very clear, a few good perch taken. Mr. White telegraphs from Scarborough an enormous take of gurnard, and his holiday toast was fully reciprocated. Mr. Crumplen stated that himself and Mr. George Austin attended the meeting at Cannon Street Hotel as delegates from the society, in reference to the new Thames bye.laws, and were very strongly in favour of the resolutions passed at that meeting, which would certainly be endorsed by every angling association; and the thanks of the Gresham were certainly due to the Thames Angling Preservation Society for the spirited manner in which (under the presidency of Mr. Spreckley) they had taken the matter up. Mr. Crumplen's name was added to the committee appointed. Mr. Crumplen mentioned that he had been very warmly welcomed by the Silver Trout anglers at their last meeting, had received a very hearty invitation to meet the Stanley Anglers, whose fame was more than Metropolitan, and also a request to dine with the Good Intents at the Rye House, on Monday next. These invitations, which were a few out of those frequently occurring, were to be regarded as marks of respect shown to the society of which he happened to be secretary, and clearly indicated the common spirit pervading true angling societies, which had all a common object in view. The usual discussion on angling topics followed, and the meeting concluded (after a little harmony) with hearty thanks to Mr. Cartwright for his able conduct in the chair.

HEARTS OF OAK ANGLING SOCIETY.

Good show of fish this evening. Mr. B. Cox having about 8 lb. roach and about 3 lb. bream; Mr. J. Holt, about 6 lb. roach and about 4 lb. bream; Mr. Fish had bream, and Mr. Layton had jack.—C. J. Millie, sec.

Aug. 13, 1882.

HIGHBURY ANGLING SOCIETY.

On the 13th inst. the trays of this society were abundantly furnished with jack, perch, roach, bream, and tench, contributed by Messrs. Higley, Payne, Howell, Anthony, Arnold, Charles, Ballard, Edward Wheatley, the Secretary, ane others. The tench produced by Mr. Higley were greatly admired, the largest scaling nearly 4 lb., which had been forwarded to Mr. Sanders for preservation. A spirited competition took place at the Welsh Harp for four valuable prizes, the first for the heaviest weight of all fish, and the remaining three for the best specimen bream. A capital day's sport was enjoyed, the honours being respectively awarded to Mr. Ballard, who secured two of the prizes, the other two being shared between Mr. Arnold and yours obediently—Jas. Edwd. Wheatley, sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

A most splendid show of fish was put on our trays this week, which was highly appreciated by all members and friends. Mr. C. Brown had ten nice bream, which weighed 27½ lb. Mr. Harwood had a nice show of roach from the Colne. Mr. Castle also had jack and roach from the Colne, Mr. T. Thompson also had some nice roach from King's Langley; Mr. H. Moore had bream, dace and gudgeon; Mr. Scott, roach and perch, and there were also several other members who weighed-in fish which, when all on the trays together, made a choice selection.—H. Moore, sec.

Aug. 17.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

Mr. Brockett had a fine show of bream; Mr. Blackledge had roach, dace, and perch from Broxbourne; Mr. Atkinson, roach and dace; and a great many of our members returned with blanks.—E. Dymond, sec.

August 17.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The return visit of angling clubs enrolled on the Central Committee was paid to the above society on Tuesday last, Mr. Obbard in the chair, Mr. Clark, of the Reform Angling Society, vice. Upon the roll being called the following clubs were represented: Amicable Brothers' Alliance, Amicable Waltonians, Reform, Great Northern Brothers, Odds and Evens, Convivial, North Eastern, the Star, Alexandra, Eustonians, Hoxton Brothers, Canonbury, City of London, Burdett, Bridgewater Brothers, Original Alexandra. The following also had representatives: Patriotic, Clerkenwell Piscatorials, Buckland, Crown, Second Surrey, Metropolitan, and St. John's. Several members were out on Sunday last and met with fair sport, Messrs. Crafford, Longman and Laundy weighing in. A special meeting will take place on Monday next, August 21st, at 9 o'clock to transact important business, I hope that all members will be present.—Thos. W. Lucy.

August 17.

PECKHAM BROTHERS' ANGLING SOCIETY.

The second match for the President's Cup was fished on the 13th at Weybridge, Mr. Stidolph scoring a win with 4 lb. 8 oz. Messrs. Page, Otjan, Lang, Garrad, Branches, also had fish. The next match will be fished on the 27th for three prizes given by Messrs. Reed, Garrad, and Begnall; open match, all fish to weigh.—W. H. Page, hon. sec.

QUEEN'S ANGLING SOCIETY.

Our members have met with very fair sport this last week. Mr. Pearce, 18 lb. 15 oz. of bream; Mr. Walford, 15 lb. 3½ oz. of bream; Mr. Morgan, 8 lb. 8 oz. of jack; Mr. Chick, 10 lb. of bream; Mr. Koopman, 2 lb. 5½ oz. one bream; Mr. Clayton, 2 lb. 5½ oz. bream. Several other members had small weights of fish.—S. Walford, secretary.

STANLEY ANGLERS' SOCIETY.

The following are the weights of fish captured during the week by our members:—Mr. Pistrucci, four nice roach scaling 2 lb. 6 oz., one of which was 1 lb.; Mr. T. Parsons showed 2 lb. 7 oz. of roach and rudd; Mr. Scull, forty-four roach for 13 lb. 7 oz., and twenty-one roach for 7 lb. 3 oz., also bream; Mr. C. P. Wheatstone, a very nice show of jack, chub, and perch, of the latter kind he had fifteen fish weighing 9 lb. 5 oz., and a chub of 3 lb. 6 oz., total, 18 lb. 15 oz.; Mr. H. Rose, perch and roach; Mr. W. R. Humby, perch and roach.

August 17.

STOKE NEWINGTON ANGLING SOCIETY.

The second annual dinner of the above took place on the 13th inst., at the Pied Bull Inn, St. Margaret's, Herts, a good muster of members and friends partaking of the good cheer provided by host Lyndsell, who, always liberal in his catering on this occasion, fairly excelled himself. Mr. J. M. Brookman, presided; Mr. F. Berry, occupying the vice-chair. On the removal of the cloth, the chairman, on behalf of the club, having thanked Mr. Lyndsell, the company dispersed to enjoy themselves, nothing occurring during the day to mar what was admitted to be a thoroughly enjoyable day's outing.—Thomas Gretton, sec.

Aug. 14.

UNITED LONDON ANGLERS' CENTRAL CLUB COMMITTEE.

At the Cheshunt Petty Sessions Court on Wednesday, August 16, John Bennett was summoned for taking from the River Lea at Hoddesdon, seven perch of less size than allowed by the River Lea Fishery bye-laws. Mr. G. Corbbe, clerk to the Conservancy Board, attended to prosecute. The case was proved by Mr. High, fishery bailiff, and Thomas Radfield, lock-keeper. Defendant was fined 10s.—R. Ghurney, sec.

UNITED BROTHERS' ANGLING SOCIETY.

This society is progressing satisfactorily, still increasing its numbers. The best good feeling and harmony prevails at all its meetings, each member studying its interest. Angling has not been of much account this last few weeks, owing to the want of rain. The water is too fine for any kind of angling. Mr. B. James has captured a splendid trout from the river Stour, weighing 2 lb. 6 oz., in fine condition, the largest captured for some years. Mr. A. G. Tilley and Mr. Lawrence, fishing in private water, caught 28 lb. of fine roach with the gentle in four hours, as well as two tench, weighing respectively 5 lb. and 4 lb. Also at the same water on Wednesday, August 9, with three rods, captured over 800 roach in splendid condition, averaging 6½ oz., in 13 hours with the gentle.—Edwin Laurence, sec.

UNITED BROTHERS.

Several of our members were out on Sunday, the 13th, but only the following were successful in doing anything:—W. Tyler, roach and bream; J. Eller, roach and bream from the Medway; and J. Currans with roach and bream from Pulboro'. On Sunday next, the 20th, the members of the above society will fish a pegged down match at Pulboro'.

Aug. 16.

MORE FISH FOR THE THAMES.

The netting of another reservoir is, in other words, another liberal gift of fish to the Thames. In this instance, the directors of the West Middlesex Water Works, through their courteous engineer Mr. Thomas Hack, gave permission to net another of their reservoirs at Barnes, contiguous to the one netted by the Thames Angling Preservation Society about three years ago, and selected Friday last, under very short notice, as available for the operation, the permission to net having been given some time previously. The energies of Mr. Thomas Spreckley and Mr. Geen, with the assistance of the secretary, were soon in active exercise, and a valuable division of labour was kindly undertaken by Mr. Geen, who resides close to the reservoirs, and who had been unable to attend the two previous nettings on account of the days chosen by the water companies interfering with engagements he could not relinquish, and whose absence was much regretted by all. All the arrangements were successfully carried out and the attendance had to be limited to those who could assist in the netting. Mr. Thomas Hack, the engineer, and Mr. Hughes, the superintendent of the works, gave every facility for the complete migration of the fish. The water was lowered to about three feet; three platforms were erected from the bank to the river. Mr. Thomas Spreckley occupied his post as general, in which he was most ably assisted in the punt duties by Mr. P. Geen, who was most energetic in the work, and by Mr. Robert L. Pugh in the despatch of the fish from the nets to the boats on the river. Amongst other assistants there were Messrs. H. J. Alfred, A. Allison, J. Mountstephen, J. Walters, Thomas Hoole, John Knechtli, Crewe, C. R. Stock, H. G. Penney, &c., &c. The checking of the pails of fish was kept as usual by Mr. W. H. Brougham, the secretary. The netting commenced about nine o'clock and the first three hauls, owing to the shortness of the net, were of very small result, and it was deemed advisable to send for an additional net to join to the other one. When this was done, the result improved, and when one haul at the end of the reservoir produced eleven large pails full of fish, great excitement prevailed. At one o'clock it was deemed necessary to give the water a little rest, and the interval was most agreeably filled up by accepting Mr. Geen's kind invitation to a nice cold collation at Lowther Lodge, his residence close by, and his kind attention on that occasion will not easily be forgotten. There was, however, no waste of time occupied in this pleasant and sociable gathering, and by two o'clock the net was at work again in the waters. There were several nice hauls of fish, and a remarkable one consisting principally of very fine silver bream. By five o'clock a very pleasant day, as far as the netting was concerned, was brought to a close; and shortly after that time the three peter-boats, laden with the fish, piloted by one of the Thames Conservancy steamers, were afloat on the river and bound direct for Kingston. There were on board Messrs. T. Spreckley, P. Geen, John Knechtli, W. H. Brougham, R. L. Pugh, Walters, T. Hoole, and Crewe. Owing to the heavy cargo of fish and a very heavy stream, the progress up the river was a necessarily slow one; it was nearly seven o'clock before Eel Pie Island was reached, and here for a brief interval the company landed for a slight lubrication. A telegram was sent to Mr. Alfred Nuthall, at Kingston, who had been unavoidably detained there on important business, notifying that the cargo of fish was on its way thitherward. It was eight o'clock before it arrived, and Mr. Alfred Nuthall was taken on board near to Kingston Bridge. The journey was then extended to Kingston Deep, known as the Town's End Hole, and there, in the presence of Mr. H. Dickinson and a large crowd on the banks, the entire contents of the three peter-boats were consigned to the river by Messrs. T. Spreckley, Alfred Nuthall, H. Dickinson, and P. Geen. And now as to the result. It was fairly estimated at about 1,000 lb. weight of roach (up to 1¼ lb.), perch, and dace; 24 large silver bream, up to 4 lb. each; 6 chub, of 2 lb. and 3 lb. each; 2 barbel, of 5 lb. each; one jack, of 7 lb., and some large eels. The result, though not so large as was anticipated, will prove a valuable addition to the Kingston waters, and the thanks of the Thames anglers are none the less due to the engineer and directors of the West Middlesex Waterworks for their liberal gift, and to the Thames Angling Preservation Society in its praiseworthy efforts of increasing the quantity of stock fish in the river. Major Boileau, the chairman of the directors, was present during the greater portion of the day, and repeatedly expressed himself anxious for a good result.

B.

"The Fern World," by Mr. Francis George Heath, author of "Autumnal Leaves," has just reached its seventh edition.

ANSWERS TO CORRESPONDENTS.

Angler.—There is very fair sea fishing to be had off Eastbourne in a boat, and you may get a few fish from the pier if you care for fishing with a crowd round you. At Brighton many fine fish are caught by putting down baited lines just when the tide is coming in, and taking them up when it recedes again. Take fifty or a hundred yards of strong water cord, fasten hooks with foot lengths of finer line on them at intervals of a yard or so along the main line; bait with lugworms (found by digging in wet sand well below high-water mark), mussels, &c.; fasten each end of the main line to a heavy weight, place it along the shore near low water mark, and you will probably find some good fish on it when the tide leaves it again. Of course you must mind no bathers or shrimpers get caught! We do not recommend this style of fishing, but have seen fine sea trout and other fish taken in this way at Brighton.

CORRESPONDENCE.

We do not hold ourselves responsible for opinions expressed by our Correspondents.]

WHO IS THE FATHER?

Sir,—I did not intend to have entered into the controversy under the above heading, as I have no wish to see my name at the end of a long letter claiming credit for what should be due to others; but in justice to my friend, Mr. G. Manning, I am bound to make a few remarks that ought to set this question at rest. I am willing to let any gentleman take credit to himself if it will benefit a good cause. I beg to state emphatically that months before the West Central Association was formed, or even thought of, I introduced the question (of forming a benevolent or provident society among the angling members of societies) to the Central Committee, but at that time it was not carried out, as there was a certain amount of dissent amongst the clubs. Some two years or more after, Mr. Geen and myself had a conversation on the same subject, when we agreed to bring the question before our respective associations. The West Central Meeting coming on first, the matter was laid before it, at which meeting I was present. It is from this that Mr. Geen must take his claim as the father. Mr. Manning was perfectly familiar with all the above facts, as he has been a member of the United London Anglers' Central Committee from its formation, nearly eleven years ago, and a constant attendant at all their meetings. Mr. Editor, I do not care who has the credit of being the father; my duty is to attend to the child, which I am pleased to say is beginning to assume some fair proportions, and I hope will continue to thrive by the assistance of my brother anglers and their friends.—I am, &c.,

R. Ghurney,
Secretary Anglers' Benevolent Society.

August 17.

[Mr. Geen last week quoted letters of ours to him, which show that in 1879 we considered he was the father of the Anglers' Benevolent Society. As our friend Mr. Geen will admit, this statement from Mr. Ghurney throws a new light on the origin of the society.—Ed.]

A NORTH-COUNTRY FLY.

Sir,—I enclose a fly which I caught on a paling adjacent to a large pond near the Tees on the 2nd inst. I have noticed that it appears every year about the middle of July and continues about a month. Could you inform me through your valuable paper what its name is? as I have made an imitation of it, which is not yet christened.—I am, &c.,

Richd. Alison.

Stockton-on-Tees, Aug. 3.

[Not recognising the fly very definitely, we sent it to Mr. Sang, of Barnard Castle, author of "The Dictionary of Trout-fly Synonyms," and he very kindly replies as follows:—

[Copy.]

"Barnard Castle, August 15, 1882.

"Dear Sir,—I am sorry to have been so long in answering yours of the 7th inst., but the fact was that, other than knowing the fly sent as one *Phryganea*, I could not give you the information required.

"Having a brother an entomologist, I forwarded the fly to him to name, but his line is in butterflies, moths, and beetles, so he sent it on to Mr. B. Cooke, of Southport, entomologist, collector, and general naturalist, from whom I have just received its remains. He writes, 'The Caddis-fly sent is the *Phryganea striata*, Lin., and has no English name.'

"I know the fly well myself, but it is not out here before the latter end of August and through September. Though this is an early season, I have not seen it yet. In some seasons it is rather common, yet for all that the anglers here never seem to have noticed it before I called their attention to it, unless the fly called in the 'Teesdale Angler' the 'grey grannam' is the fly, of which the following is the dressing there given:—'Dark feather, from night hawk or brown owl; red squirrel's fur, and fawn-coloured silk for body, ginger hackle for legs.' *P. striata* is much sought after and enjoyed by trout, and is generally about during cloudy, showery weather, with occasional gleams of sun.

"Salmon-fishing in the Greta, on the 24th of July, a house swallow settled on my rod as I worked the fly; also a white-throat settled on my knee and nestled under my waterproof, whilst I made four casts with my salmon flies. The day was very windy, with heavy showers of rain, which fully accounts for the tameness of the birds, which might also have been young ones (?), though they were able to fly well.

"Angling is very quiet here, the river being dead low.

"I am, yours very truly,

"R. B. Marston, Esq." "William Sang.

[The barm fly is the nearest imitation to the fly we know. Jackson's book will describe that fly, or in Francis Francis's "Book of Angling" it will be found. The barm fly is also *Phryganea*. These land flies kill best in windy weather.—Ed.]

A TROUT OVER NINE POUNDS IN WEIGHT FROM THE NEW RIVER.

Sir,—It may interest some of your readers to hear that last Monday a magnificent trout was caught in the New River at Ware by some angler whose name is unknown to me. It weighed 9¼ lb. and was 25¾ inches in length and 16 inches in girth. As possibly some anglers who see this may take it into their heads to go and do likewise, I conclude by saying that this water is not open to the public, but is rented by the Amwell Magna Club of the New River Company.—I am, &c,

C. E. Holford.

Springfield, Ware.

THE THAMES AND THE SEWAGE OF READING.

Sir,—I write for the purpose of getting a little information from some of your Reading readers. Perhaps the courteous secretary of the Reading Angling Society can help me.

In the recent report of the Thames Conservators, they state the sewage of Reading has been diverted from the Thames. Is it a fact that it is carried to a sewage farm, and that the managers of that farm, whenever they like, can turn the sewage into the Kennet and thus into the Thames? And is it a fact when they get, as they often do, an *embarras des riches*, they simply pull up the flood gates and send them into the rivers?—I am, &c.

Diogenes.

Greenwich, Aug. 12, 1882.

THE BIGGEST TAKE ON BANK HOLIDAY.—THE VALUE OF GROUND BAIT.

Sir,—About this time last year you kindly inserted a short account of a good take of roach made by me in a private pool in Herefordshire. Through the kindness of the owner's steward, I have again enjoyed the privilege of a day in the same pool, and the result has exceeded my most sanguine expectations.

I ground-baited plentifully with gentles and wasp grubs on the Saturday before Bank Holiday, about 5 p.m., and again on Sunday, at 3 p.m., and was on the water, with the punt moored and the tackle in order as the clock struck 4 a.m. It was only just light enough to see, as the pool lies in a valley, and is sheltered by trees; but I soon saw well enough that the roach were on ravenously, and I commenced at once to land them as fast as I could bait and cast a line.

I baited with wasp grub, and fished about one inch from the bottom in five feet of water, and was at it fast and furiously until 12 (noon), when the sun came out in full force and the fish entirely ceased biting.

On counting up I found a total of 241 roach, or 20 dozen and one, and one eel 1¼ lb., taken on the finest drawn gut, the capture of the eel I consider a good performance. The largest roach was ¾ lb., and the average, on being weighed the following morning, was just a little over four to the pound, so that the catch must have been about 60 lb.

About 6 a.m., when the fish were biting very fast, I took out my watch, and in one quarter of an hour I landed eleven fish and missed two; and later on, about 11 a.m., in half an hour I took fifteen; the average, therefore, was one fish every two minutes, about as fast, allowing for breakages, &c., as they can be hooked, played, and landed.

I have seen in your last issue some correspondence on the efficacy of ground bait. It may interest some of your correspondents to know that I fished the spot where these roach were taken for four hours on the Saturday evening, and got twelve fish only. I have detailed above the result after a judicious ground baiting, and if any one says he could have made the catch without ground bait, I should not believe him until I saw it done.

All my fish were taken with one rod, and I think the performance must rank high in the records of big takes. It is probable the quantity has been exceeded in a day's angling, but I should feel interested to hear if any of your readers have ever taken, or heard, of such a number being landed in the time given.—I am, &c.,

W. S. P.

King's Norton, August 14.

[At Slapton Lea, enormous takes are often had; the anglers get so tired of catching the fish that they pull them out on one side the boat and shake them off into the water on the other.—Ed.]

NET AND TRIMMERS CAPTURED.

Sir,—I hear that Captain Etheridge was at Oxford on Bank Holiday, and that while upon the University barge he was gratified by learning that Police-constable No. 23 (Edmund Butler) of the city force, being one of those to whom the conservators had granted the deputation, had taken a 12 yard flue net, of only ½ inch mesh, capable of catching a bleak, which net Alderman Carr asked the worthy salt to call at the police office and see; this the captain did. The charge in the police book ran as under:—Police-constable No. 23 (Edmund Butler) had taken from Joseph Beauchamp, No. 23, Fisher-row, Oxford, a single walled flue net, 12 yards in length, ½ inch mesh, on Sunday morning, at 4.20 a.m., July 30th. When questioned, Beauchamp stated he had not used the net, but that the police-constable was welcome to it, as he did not want to get himself into trouble, and that he would not do it again.

It would seem that the foresight of the conservancy in granting the sixteen deputations has completely crushed the systematic gangs of poachers in Oxford, who, however, are driven up the Cherwell, Windrush, and other tributaries of the Thames, which ere long, it is to be hoped, will find efficient protection from this class of marauders.

The captain also, on Tuesday, the 8th inst., secured two fine trimmers in the portion of the river supposed to belong to Mr. Kent, the ex-mayor of Abingdon, and railway carrier; and as this gentleman will not permit fishing in his supposed waters at Sutton Courtney—the old river Thames before the Culham cut was made, consequently the main river now—the query is, Who put them in the water? On the same evening the captain laid them before Mr. Simonds, the magistrate, of Caversham, who condemned them, and they were burnt at the Reading Police Office on Wednesday morning.—I am, &c.,

Creel.

GROUND BAITING.

Sir,—I am much indebted to you for your kind attempt to remove the charge that I am antagonistic to the practice of ground baiting. So far from this being the fact, the truth is quite the reverse. What I denounce, and still must denounce, as inimical to sport and in the highest degree wasteful, is the inordinate quantities of a composition of bread, bran, and clay which is sometimes thrown into the water, under the impression that, as it attracts the fish, the take will be in correspondence with the amount of the attraction. This is a fallacy. You do not gorge a man with a heavy luncheon before his dinner and expect him to come to the board with an appetite; but this is exactly what is done with the fish. I have seen quarts of carrion gentles thrown in, and yet the baited hook with the better lure has sailed amongst the shoals of fish unheeded, but not unsuspected. And if a single fish has been taken, these carrion gentles have riggled out of its vent and escaped alive from its mouth. Is it likely, with such a living cargo, the fish can have any desire for a bait, however tempting, which does not obey the laws of gravity, or comply with the natural movements caused by the varying eddies and currents of the stream.

I have known three quartern loaves, a peck of bran or pollard, and half a hundredweight of clay thrown into a single swim at Teddington. Is not this wilful waste? I have known a cart load of clay at a time to be pitched for the use of the fishermen close to the shore from which the ferry boat leaves for the opposite side. Now, what is the consequence? By trituration the bread and bran is washed out of the clay and the clay remains, for no one will venture to say that fish are clay eaters. The cart-loads of clay thus used between Teddington and Isleworth gradually paves the bottom of the river, and coats the hitherto bright and shining pebbles with an earthy covering of a slippery, if not a slimy, character, which not only destroys it as a spawning ground—all interstices between the gravel having been filled up, in which the spawn would have found safe anchorage—but prevents the fish, after their domestic duties have been performed upon the artificial smooth pavement of the bed of the river, from cleansing themselves, the spawn of several sorts of fish being washed away from the absence of the interstices which otherwise would secure it.

Mr. Francis Francis is obviously of my opinion that over-baiting defeats the object in view. His "Book on Angling" is an expensive work, and I am therefore glad of his permission to quote it whenever I may consider it may be of service to the fraternity. He writes: "The ground-baits for roach are as various as the hook-baits, but in using ground bait the angler should be careful not to overbait the swim. There is no plan so absurd, so literally destructive of sport as that pursued by the majority of Thames fishermen, with their huge piles of puddings of clay, bran, gentles, greaves, bread, and what not. When once the place has been baited, an occasional ball or two mixed up with clay, of about the size of an apple, is useful to keep the ground baited; but this is a very different thing to casting in five or ten balls at a time, as big as large oranges. For casting loose in eddies, either gentles, scalded greaves, or chopped worms may be used; but these baits are likely to attract barbel, for which roach tackle is not prepared, to the swim also; pearl barley and rice may be also thrown in loose.

"This is my plan"—I am still quoting Francis—"for mixing ground bait in a swim not too swift: I first get a three-quart basin, put into it refuse crust, broken up—it goes against my grain to cut up new loaves. The basin should be somewhat more than half full, to allow for swelling; pour hot water in it sufficient to soak the whole thoroughly, cover it up with a plate to keep the steam in; let it soak for two hours or more, then break it up so that there be no lumps nor hard bits in it, as, if these be not broken thoroughly, they come away and float up to the top of the water and are wasted. Then put the mass into a strainer and squeeze out as much water as you can. Then boil about two-thirds of a pint of common broken rice, and let the water drain from that too; put both into half a peck of fresh bran and scatter over it about a large breakfast cup and a half of flour or meal to make it more adherent; work it all up together thoroughly. Then take a number of small stones, each about the size of grape shot, or say an inch in diameter, and on to each stone press and squeeze a good big handful or more of the compost, working and squeezing it until the ball is quite tight and hard. The stone serves to sink the ball and to keep it on the bottom, and the ball breaks up gradually and disperses down the swim, a portion still remaining behind to keep the fish in the swim. If the bait is too moist, the balls will break in halves, and, leaving the stone at the bottom, come up to the surface and float away, or will break up and disperse too soon; and therefore the drier the bait is consistently with proper adherence the better. There is no ground bait I have ever tried that equals this; it is some trouble to make, but for bank fishing, more particularly in a regular roach swim, it is not easy to beat. In addition, when I am using pearl barley, I throw in a score or two of the corns now and then loose, so that they may ground in the swim, and, being scattered about it, they keep the roach on the move and searching about the swim. I have made takes of very fine roach with this bait. The quantities I have given will make about twenty balls about the size of oranges, which is enough for any moderate day's fishing in the winter time, which is the best time for good roach fishing. If, however, the angler prefers to use clay instead of stones, he can do so, as it is less trouble to use, and holds in the swim longer, but it is a much dirtier operation [and by its admixture spoils the better ingredients]. In this case, too, the flour or meal can be left out. Never keep your ground bait on from one day to another, for although you may not always succeed in spoiling your own sport, you will very often, as bran, &c., ferments when once wet and turns sour, and after that musty, and I do assure you a ball or two of such bait will drive every roach out of your swim. I once told my man to mix me some bait, he mixed it with some bran that stood under a drip from a tap for a time, and it was musty. I never found it out until the day was utterly spoiled; I had been having first-rate sport the day before, and could not understand why the fish would not bite, till accident gave me a whiff of the ground bait, and then I went in and talked kindly to my wicked servant, who dodged me round corners and kept out of my sight for the rest of the day. . . Never mind what any of your household promises, says, or does, always see to it yourself."—I am, &c., CREEL.

[We are glad "Creel" has spoken out on this subject, and also quotes Mr. Francis Francis's views on the matter. We have often pointed out the folly of over-baiting a swim.—ED.]

THE CARP BREAM AND THE SILVER BREAM.

SIR,—I shall feel obliged if you will inform me how I can always readily distinguish between the ordinary carp bream and the silver bream when they are very small.—I am, &c., HENRY GREENWAY.

The Firs, Cricklewood.

[The common bream, or carp bream (*Abramis brama*), is of a yellowish colour, and its throat teeth are placed in *one row* on each side, five in number. The silver, or white bream (*Abramis blicca*), is of a much whiter and more silvery colour, and its throat teeth are in *two rows* on each side, numbering two and five respectively. The common bream grows to a great weight, the silver bream rarely exceeds 1 lb. The two species exist in the Trent near Newark, and in many other English waters.—Ed.]

FISHING NEAR FOLKESTONE.

SIR,—If any of your numerous correspondents could tell me of any fishing (coarse) to be obtained in the neighbourhood of Folkestone, they would greatly oblige.—I am, &c., W.

CAPTURE OF POACHERS NEAR UXBRIDGE.

SIR,—On Sunday morning, at 4 a.m., I was on the canal side at Cowley Peachey, when three men, named Walter Tarrant, Job Tarrant, and James Holley, all of Yiewsley, came on to the top of the dock bridge, carrying a sack; they also had a fishing net and about 12 lb. of fish. They were valued at 5s. I took them into custody. They were charged and taken before the magistrates on Monday at Uxbridge, and fined 10s. each. The net was 12 yards long. Bail was refused.—I am, &c., C. H. CROOK, P.C. 103 X.

Yiewsley, near Uxbridge.

[We think Colne anglers should encourage Mr. Crook by a small reward for his services.—ED.]

GRESHAM ANGLING SOCIETY.

PRESIDENT: THE RIGHT HON. LORD GEORGE HAMILTON, M.P.

SPECIAL NOTICES.

NEW RULES.—The committee having completed their revision of the society's rules, will submit them to the society, for confirmation or otherwise, at a special meeting to be held at 11, Bishopsgate Street Within, E.C., on Thursday, August 31, the chair being taken at 7 o'clock precisely. A copy of the revised rules will be suspended in the meeting room a fortnight previous to the meeting, and may be seen by members at any time during that interval.

The committee are unanimous in recommending the revised rules for permanent adoption, and trust to see a large meeting on the 31st inst., when the rules will be formally submitted for approval.

ESSAYS AND DISCUSSIONS.—The Society will have a series of papers read regularly during the season, on the first Thursday in each month, commencing in September next.

SUMMER EXCURSIONS.—Members wishing for tickets are requested to make immediate application. Ladies may also take part in the excursion, and the committee will be glad to see a large attendance of members and friends. Arrangements will be finally completed as soon as a sufficient number of names have been handed in.—T. CRUMPLEN, hon. sec.

CITY OF BRISTOL ANGLING ASSOCIATION.

A CONTEST of the members of the above association was held in the River Avon, at the Long Reach, Saltford, on Monday, August 7, (Bank Holiday), when about forty members contested for prizes to the value of £10, given from the fund of association, and from tradesmen and private gentlemen. The catches were not so good as on former contests, but still they were fair, considering the very hot weather and the hour of the contest, namely, from 12 a.m. to 5 p.m.; however, only twelve succeeded in getting fish. A great many of the members returned to the clubhouse, the Morton Arms, Barton Hill. But, on account of the non-arrival of the president, the meeting was adjourned until Wednesday evening, for the prizes to be given to the successful competitors.

On Wednesday, August 9, the adjourned meeting was held; the president commenced the proceedings with expressing his regret at not being earlier on Monday night—said it was the trains that was late, and not him. He then proceeded to give the prizes; the first prize was a very handsome eight-day clock, given by the association, supplied by Messrs. H. Parry and Co., Castle Street; the second prize was a very nice pair of gentleman's boots, given by a member; the third prize was a black ebony inkstand, mounted with silver, complete, supplied by Mr. Thatcher, of College Green, and so on, until the twelve competitors had received their prizes. A vote of thanks was then proposed to those gentleman and members who had given them the prizes. Some six or eight prizes were handed back to the treasurer for the next contes , which will come off during the season. A vote of thanks to the president, vice-president, secretary, and committee closed the meeting, after which the members spent an enjoyable evening until eleven, with some really good singing.—J. H. STANTIAL, hon. sec.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. RICHMOND, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

ANGLING.

DOVEY VALLEY HOTEL, CEMMES ROAD, MONTGOMERYSHIRE.

Excellent Salmon, Sewin, and Sea Trout Fishing in the river Dovey, within a few minutes' walk of the Hotel. Terms for boarding £2 10s. per week.

ANNE RAMSAY,
Proprietress.

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. Established nearly a century. Boats 2s, and full bait 1s. per day; men provided. Terms for stopping visitors on application. Gravel and sandy soil.

River Lea at Ware.

Anglers visiting this favourite Fishing Ground will find excellent accommodation at

HOST FEARN'S, Lion and Wheatsheaf, High Street.

Live Baits provided, and any information given to visitors.

ILFRACOMBE.

TROUT AND SEA FISHING.

Genteel Furnished Apartments can be had in the house of an experienced angler, and permission obtained to fish in the reservoir—well stocked with fine trout.

For terms, address—

F. B., 24, Oxford Grove, Ilfracombe.

ABERYSTWYTH.

TO BE LET.—THE OLD RESERVOIR.

FOUR-ROOMED COTTAGE, beautifully and compactly fitted, slow combustion Stove, Ventilators in all the rooms, large Conservatory and Greenhouse. Reservoir, 60 yards by 12 yards, 12 feet deep. Prepared for stocking with trout. Watercress in properly-prepared beds, with continuous stream running through. Splendid Garden, heavily manured and well stocked. Two Aviaries, Shedding, Poultry yard, &c. Furniture included, £150.

SUMMER TOUR IN SCOTLAND.

GLASGOW AND THE HIGHLANDS.

(Royal Route *via* Crinan and Caledonian Canals).

Tourists' Special Cabin Tickets issued, entitling the holder to sail during the time specified, in any or all of the fleet of (21) steamers, and to any part of the Highlands at which they may call. For one week, £3 or two weeks, £5.

By Royal Mail Steamers,

"COLUMBA," OR "IONA,"

From Glasgow Daily, at 7 a.m., and Greenock (in connection with Express trains from London and the South) at 9 a.m.

Conveying Passengers for Oban, Staffa, Iona, North, and West Highlands.

Official Guide, 3d.; Illustrated, 6d., and 1s. Bil with Map and Tourist Fares, free at Messrs. Chatto and Windus, Publishers, 214, Picadilly, London; or by post from the Owner, DAVID MACBRAYNE, 119, Hope Street, Glasgow.

PULBOROUGH, SUSSEX:

"ARUN" FAMILY HOTEL, T. PEARCE, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. PEARCE, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

TROUT and CHAR. OVA and FRY.

Orders taken at the following low rates:—

OVA, *Salmo Fario*, £1; FRY, 30s.; OVA, *Salmo Fontanilis*, 30s.; FRY, £3 per 1000. Yearling *Salmo Fario*, 40s. per 100.—Address

THOMAS FORD,

Manor Fishery, Caistor, Lincolnshire.

TO ANGLERS.

J. BERNARD AND SONS

4, CHURCH PLACE, PICCADILLY,

SOLICIT an Inspection of their Stock of Salmon, Mahseer, Trout, and all kinds of Rods of the best quality of workmanship.

An unrivalled selection of Salmon and Trout flies for all parts of the World. Winches, Lines and Tackle of every description. Salmon and Trout Flies made to order.

SALMON AND TROUT

GREENHEART FLY RODS.

Why our rods are celebrated for their action, durability and finish is that, being makers on the premises, we have a large stock of well-seasoned, tough, straight-grained, springy wood.

No cross-grained, knotty, unseasoned timber is used, and all rods are hand-made.

Whippings are of the very best silk, and ferrules of the best sheet brass, thoroughly hammered.

Approval always allowed. Price lists gratis.

Address—

B. R. BAMBRIDGE,

Maker to the Royal Family, Eton-on-Thames, Windsor.

ESTABLISHED 1790.

HOLBROW AND CO.,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

DAVID WELLS,

11, and 15 LEITH STREET, EDINBURGH.

Fishing Rod and Tackle Manufacturer.

Flies made to any pattern or description.

Outfits for Norway, Canada, India, &c.

THE REGISTERED GLOUCESTERSHIRE SPINNER FOR SALMON, TROUT, AND PIKE.

Awarded the Government Silver Medal at Norwich, and Diploma of Merit at Edinburgh. It has received the patronage of royalty, the nobility, officers of both services, and many of the most distinguished anglers of the day. Its reflection in the water from its construction, spinning powers and durability cannot be surpassed. Numbers of most gratifying testimonials have been forwarded to the inventor from gentlemen using it in lake and river trouting. Price on application to W. WIGLEY, Cheltenham.

TO ANGLERS.—NOW READY.

SCOTCH LOCH-FISHING. By BLACK PALMER. Crown 8vo. Interleaved with blank paper for Notes, 4s.

"Both to the tyro and the expert angler 'Scotch Loch-Fishing' should prove a valuable guide."—*Bells Life in London.*

The Fishing Gazette.

SATURDAY, AUGUST 26, 1882.

ROACH FISHING.

By R. B. Marston.

In my opinion the *best* bait for roach all the season through is paste, and the best paste I have ever used is that made by grating on a bread grater a piece of the crumb of a two days' old milk loaf, then adding about as much of the powder sold by Mr. King, under the name "Natural Bait," and with a little water working the whole into a smooth stiff paste, with a clean wooden spoon. The addition of Mr. King's powder, which is now kept by most tackle dealers, is that it makes a beautifully white paste, with a sweet flavour, and which has the very great advantage of resisting the action of the water for a much longer time than paste made from bread alone. Another great advantage is that though it sticks on the hook swim after swim, in a most persistent fashion, it is not tough, and does not prevent the hook from catching in the fish's mouth when striking. Paste made from new bread is extremely tough, and frequently prevents the point entering; indeed, with this paste I have seen a roach take it in its mouth, and on striking have simply pulled it out again, without touching the fish.

The objection to using stale bread paste alone, is that the water soon dissolves it, and one has to be continually re-baiting the hook. Mr. King's bait has great advantages and no disadvantages that I know of, except that when used alone it makes too sticky a paste, and in wet weather it is very difficult to roll it into a pill with the fingers, as it sticks to them like glue; this difficulty is got over entirely by using a little bread with it in the way I have suggested.

In a deep river with rapid stream, paste of any kind is too delicate bait, hence on the Thames, Trent, and similar waters, the gentle is used, not because it is a more killing bait, but because it keeps on the hook. The practice of colouring paste with vermilion powder is often resorted to, and especially by the Norfolk roach and rudd anglers. I never found it any better than the white paste myself, except on one or two occasions, when fishing in the Yare. By the way, if any of my readers are wondering where they can get some really good roach and rudd fishing, let me advise them to go to Brundall Station, just the other side of Norwich. Close to Brundall Station is a comfortable inn called Coldham Hall. Host Browne's charges are very reasonable, he provides ground bait, "no noxious compound," simply bran, rice, and barley meal. He has several steady boats, which he lets out at one shilling per day, and the angler has miles of water open to him, all of it teeming with fine roach and rudd. The rudd run large, and fight with much more spirit than roach. A "Crystal" roach hook on fine drawn gut and drawn gut line, with a float which will carry four swan shot (about fifteen inches from the hook) and a light stiff, roach rod, are the tackle I prefer. The boat is moored by means of two long poles, parallel with the current—not across it as in the Thames style—and care must be taken not to moor it in the way of the numerous wherries which come silently sailing by. Their passing is hardly noticed by the angler, and never affects the fish, for I have frequently struck them when my float was gently rising and falling on the gentle undulating motion of the water they cause; very different from the angry wave thrown up by a steamer or yacht, which will occasionally set the angler adrift or upset his craft. At Buckenham and Cantley, the next villages on the Yare below Brundall, there are also comfortable inns, and the whole of this part of the river abounds with heavy bream, roach, rudd, pike and perch.

Another splendid river for roach is the Ouse, and the angler who can get a day or two's fishing at Littleport in the autumn need not look for a better place. Our excellent correspondent there, Mr. Charlie South, will provide ground bait, and take the angler to the best swims, which are in this case fished from the bank.

I forgot to remind the angler who visits the Yare for the first time that it is a tidal river at the places mentioned, and it is absolutely necessary to plumb the depth pretty frequently, so as always to have the bait within an inch or two of the bottom. I always use two hooks, one six or eight inches above the other, as roach often swim some distance from the bottom, especially at this time of year. Doubtless many roach anglers are unacquainted with a very killing way of angling for this fish at this time of the year, and as long as the common house and blue-bottle flies are about in any quantity. It is a curious fact that this method, although described by Walton, is generally overlooked by later writers, or else not correctly described. Walton says:—"In many of the hot months, roaches may also be caught thus, take a May-fly or ant-fly, sink him with a little lead to the bottom near to the piles or posts of a bridge, or near to any posts of a weir. I mean any deep place where roaches lie quietly, and then pull your fly up very leisurely, and usually a roach will follow your bait to the very top of the water and gaze on it there, and run at it and take it, lest the fly should fly away from him."

I have usually found that when the roach seem uneasy in their movements—swimming at mid-water or near the top, along the edges of a pond or river—that they will not take a float bait well. This is the time to rove for them with the fly. The plan is an extremely simple one, and only requires a very little practice for any roach angler to become an adept at it. Like many another angler, I had read Walton's description without trying it, until one very hot August day more than twenty years ago, when fishing what was then known as Noakes's Water, on the old Lea at Tottenham, I noticed a young disciple of "Papa" Walton—as Fitzgibbon irreverently calls him—leaning against the trunk of an old willow which hung over the water. His clothes were in rags and tatters and his rod was two hazel sticks, with a ferrule between them. Not thinking he had had better sport than most of the "crack" Lea roach fishers who were fishing and had not a half-dozen decent fish between them, I took little notice of my young friend, except to wonder how he had evaded the keeper, for he evidently could not afford the shilling old Noakes demanded for the privilege of angling in his waters. Fortunately for me a half-pound roach, which had been hidden under some grass, gave a kick and revealed himself and a half-dozen other of his species to my view. I then questioned the youth, a sharp lad of about fourteen, how he had managed to secure such a fine lot of fish with such primitive tackle, when no one else could touch a fish. "I copps 'em with a fly," was his laconic answer; but seeing I did not move on as he expected, he added, "T'aint no good if yer a going to stick there." I apologised, and told him if he would go on fishing I would keep out of sight and give him a couple of roach hooks. This quite appeased him, and he showed me how he "copped 'em." Attached to his rod was a good hair line with a small roach hook at the end, on the end of the shank was a single small shot. Screwed up in a bit of paper he had some house-flies alive. One of these was carefully impaled on the hook, the angler then crept back to his tree, stretched his rod out slowly over the water, and then let his bait sink slowly to the bottom, then as slowly drew it up to the surface. I could see the fly when it got near the surface, and it was not long before it was followed by a fine roach, which followed it up and at the last moment with a rush seized it, and after a careful bit of play was landed in a shallow bay just below. The way that roach came up and swallowed the fly I have never forgotten, and often since, when I have watched them take my own fly in the same way, I have thought of my first lesson in this pretty and at times most deadly method of roach-fishing. The great secret is not to frighten the fish as it comes up, by letting him see you or any movement you make, and the rod should only be moved by the wrist, in a perpendicular direction over the bait. Roach are extremely fond of the small house-fly, a blue, bottle is not nearly so good a bait; the fish will follow it to the surface, "gaze" at it, as Walton says, then dart away and return again, repeating this process two or three times and then often refuse it. I like to find them, as they will, taking it before it reaches the surface. You just catch sight of your fly coming up, then of a dark shadow following it, and the next instant a hearty tug—for your fish hooks itself—the line being tight and moving away from it. You will not get every fish you rise, by any means, and the way the fish criticise the bait will give you a high opinion of the roach's intelligence. A light, stiff, long cane rod is best suited for this fishing, because the fish swim near the edge, and you must stand as far from it as you can. I have often caught perch in this way, they will, like the roach, follow the fly to the top but generally leave it there; if they mean business they seize before it has got a foot from the bottom. Chub and dace I have also taken in this way, but rarely. I mentioned the Yare and Ouse as fine roach rivers, this fly-sinking for roach reminds me of another place I can most strongly recommend. When trout and grayling fishing in the Derwent some years ago, chiefly on the Rowsley and Darley Dale waters, I went once or twice to Whatstandwell Bridge (a station on the Midland), and when fly-fishing I occasionally caught some very large roach, the water seemed alive with them. There is an inn at the Bridge, the "Bull," if I remember rightly, and all the long stretch of deep, dead water below the iron railway bridge would well repay our "crack" Lea or Thames roach fishers. The "locals" seem to care very little about anything but trout or grayling, and when I picked my roach out from the trout and grayling in my creel to give to some poor body or other I did not get much in the way of thanks. I caught some fish which were fully two pounds. If I went there again I should certainly bait a place and fish with paste and gentles. The fishing is free, and there are some good jack in this water.

[It will be well for intending visitors to Littleport to ascertain from Mr. South if the water is preserved or not. I fancy only the 500 members of the Cambridge and Ely Angling Association can fish there, but am not sure.—R.B.M.]

See article, "Important to Anglers," which touches this matter, and will appear next week.

A CORRECTION.

In the article "Fly-fishing near Scarborough," last week, the Inn Mr. Marston mentions that he stayed at, at Ayton, near Forge Valley Station is named the Star Inn and not the Swan. Mrs. Penrose, the landlady, will make anglers comfortable, as all will dmit who put up at the Star.

THE GREAT LONDON FISHERIES EXHIBITION AND FOREIGN COUNTRIES.

It is with much pleasure we learn that in addition to the large foreign exhibits already promised, other countries have recently forwarded extensive lists of the goods they intend to send, among them Italy, Morocco, Hungary, some parts of Germany, and it is very probable that the great fishery port, Boulogne-sur-mer, will also be well represented at our exhibition.

TRADE EXHIBITS AND THE 1883 GREAT INTERNATIONAL FISHERIES EXHIBITION.

Having heard some complaints from fishing tackle manufacturers to the effect that the proposed compulsory marking of prices on goods was unfair and undesirable, and would tend to exclude good workmanship and material, and only benefit cheap goods, we informed them we did not understand that the marking was compulsory. However, to settle the question we wrote to the Secretary, and print his reply:

Sir,—I was careful to call the attention of the Executive Committee at their meeting this morning to your letter of the 11th, and to your remarks with reference to Regulation 32, and the Committee desire me to write and explain to you that the statement of prices is not compulsory, but that exhibitors are only requested to fix the prices on to their goods.—I am, etc.,

J. W. Mollet,
Secretary Great International Fisheries Exhibition.
24, Haymarket, London, S.W., 18 August, 1882.

HOOKS WHICH DO NOT RUST—A VALUABLE INVENTION.

Mr. CHARLES COURT, hook-maker, of Plymouth Works, Redditch, has sent us some samples of his make of all the various kinds of hooks. The hooks are of good temper and well made, and have an immense advantage over the ordinary hook claimed for them by Mr. Court, inasmuch, as he says, they do not rust. Some weeks ago we made the following experiment to test this matter; we took some ordinary triangle hooks and some of Mr. Court's, and placed them in a rusty garden watering can with a little water. The ordinary hooks became covered with rust in a few days, but Mr. Court's hooks a fortnight after were as bright as when they were put in. He claims even if you try them in salt water they do not rust. They are not japanned, but seem to us to be just the colour of Mr. Hall's eyed hooks—a kind of neutral olive-brown tint. As we said before, the temper of the samples sent is very good, and we intend trying some flies made on these hooks. The fly fisher often gets an unexpected ducking when wading, and then his flies are spoiled from getting wet and rusting in the fly hook; also for artificial baits these hooks will be most valuable, as the angler very rarely takes the trouble to dry each hook, when tired and putting up his tackle, to catch a train, and the consequence is, the hooks get rust eaten and unreliable. But rust is an enemy to all kinds of hooks, and also to swivels, and we hope Mr. Court may have great success in his valuable effort to give us a hook that will not rust, and that is of a capital colour and first-rate strength and temper. If he keeps these points in view, anglers will support him, unquestionably.

THE THAMES FISHERMEN AND THE NEW BYE-LAWS.

Some of the privileges which at present belong to the regularly brought-up fishermen of the river Thames will be altogether abolished under the proposed new bye-laws, and there are many good reasons why this should be so, although certain restrictions might hereafter become necessary or desirable. The first of these privileges is, "That no person shall follow the trade or business of a fisherman on the river Thames or waters of Medway unless he hath been, or shall be, brought up to the said business, or shall have served an apprenticeship to, or with, some person of the trade or business of a fisherman." In the present large increase of anglers, if this bye-law was carried out in its integrity, how very limited would be the number of fishermen to attend to the punts, and what great number of persons following the trade or business of a fisherman at the present time would be altogether thrown out of work. Under the new bye-laws any person will possess the right to set up the trade of fisherman, and will be on the same footing as those who now possessing the only right to become fishermen have not for many years been recognised as the sole occupiers of the river. Unless it become desirable at some future time in the interests of the anglers, in addition to the registration of punts, to compel such fishermen to take out a licence at a merely nominal fee, is at present an open question; but I cannot help thinking that a rule to prohibit fishermen angling by themselves or for themselves should not be deemed arbitrary. It has always been considered most objectionable to witness fishermen doing this, and I know many anglers have been driven from the river in consequence. It has not, however, been practised so much of late. The next privilege to be abolished is this: "That no person except those who have been brought up to the trade or business of a fisherman shall catch fish for sale, or sell them." Now this rule has frequently been enforced, and it is not many years since some of the "brought-up" fishermen in the tidal waters took action against one of the other fishermen who had not been "brought up" for selling some live dace as bait to an angler, and the magistrate had no other alternative than to levy a fine. There can be no doubt that both these privileges are of an arbitrary character and require either repealing altogether or to be greatly modified. These "brought up" fishermen are so few that any opposition from them in retaining their old privileges would be very feeble, and would have very little weight. There are, however, privileges belonging to a general body of fishermen that are entitled to respect, and I have been surprised at their remaining silent in the matter, and one of these is the proposed new bye-laws in reference to the taking of eels, "grig weels to be only used in the river below Richmond Bridge," thereby depriving all the fishermen above Richmond from catching eels altogether. The Thames Angling Preservation Society, supported by the recent Conference at the Cannon Street Hotel, has determined upon seeking from the Thames Conservators an alteration, and to ask them to allow the fishermen only to lay their grig weels anywhere, even in what is known as the preserves; but whether they will be able to attain this remains to be seen. The fishermen above Richmond Bridge all signed the memorial in 1860 to give up their right of netting, on condition that the Thames Angling Preservation Society sought to obtain the privilege of laying their grig weels in the preserves, but this the Conservators have hitherto refused. About three years ago, the Thames Angling Preservation Society very wisely took up the question of abolishing the laying of night lines, as it was proved beyond any question of doubt they were most destructive to the best fish in the river, and especially Thames trout. In this movement, and with opposition from some of the fishermen, the society succeeded in prohibiting the use of night lines, and a bye-law, approved by Her Majesty in Council, was passed to abolish the practice. The Thames fishermen will be able to recognise the action of the Thames Angling Preservation Society in endeavouring to secure for them a privilege they have long sought, and in seeking to obtain the alteration in the bye-law which would prevent grig weels from being laid above Richmond Bridge.

B.

ANGLING CONTEST AT LEICESTER

The third annual angling competition, promoted by the Leicester Angling Society, took place in the preserved waters on Saturday, when the large number of 128 anglers took part in the proceedings. Among those present were anglers from Barrow-on-Soar, Quorndon, Mountsorrel, Hathern, Nottingham, Syston, and other places. The weather was very unfavourable, but this did not deter a large number of spectators being present along the banks of the river Soar and canal. The swims were about twelve yards apart, and occupied a distance of about two miles. This year's competition is the most successful held by the Society. The first year there were 110 competitors, the second 117, and this year there was a further increase of eleven rodsters. The following is a list of takes and prizes:—Greasley, 1 lb. 6½ oz., first prize of £5, and the President's Prize of a watch, for the largest perch; Brown, 15½ oz., second prize, 30s.; Weatherhead, 9 oz., third prize, 15s.; J. Shelton, 7¼ oz.; fourth, 10s. The other prizes were as follows:—H. Brown, 6¾ oz., half dozen knives and forks, and a carver and fork; C. Clarke, 6¾ oz., a fishing basket; Dakins, 6½ oz., fishing rod; Mee, 6 oz., fishing rod; Bee, 5¾ oz., clock; F. Towe, 5¾ oz., cruet stand; A. Rudkin, 5½ oz, "The Complete Angler;" J. Fisher, 5¼ oz., "The Anglers' Souvenir;" R. Blount, 5 oz., pair of leggings; G. Hartshorn, 4¾ oz., silver mounted pipe; Hubbard, 4½ oz., reel; Burgess, 4½ oz., copper kettle; G. Fisher, 4½ oz., reel; Breedon, 4¼ oz., reel; Taylor, 4¼ oz., fisherman's knife; G. Lugdam, 4 oz., camp stool; Atherstone, 3¾ oz., hat; Roberts, 3¾ oz., case of fishing tackle; G. Sanderson, 3½ oz., fishing bag; Rudkin, 3½ oz., case of fishing tackle; J. Foreman, 3½ oz, 5s.; Freer, 3¼ oz., pike line; Fowler, 3¼ oz., walking stick; Braker, 2¾ oz, pike line; Tollington, 2¾ oz., roach line; G. Smith, 2¾ oz., roach line. Blurton, J. Kirby, Ridgway, Staples, and T. Blockley, each having caught the same weight, viz., 2½ oz., balloted for the prize, a roach line, which fell to Ridgway. The arrangements for the competition were satisfactory. The distribution of the prizes took place at the Old Town Hall Buildings on Monday evening, when Alderman Barfoot handed the rewards to the various anglers.

NORWICH CENTRAL FISHING CLUB.

The members of this club held their annual fishing match on Monday, the Rockland Reach of the river Yare being the place of contest. The competitors were supplied with boats from the yachting and boating stations of Messrs. Flowers and Co., at Brundall, and the weather being fine a very enjoyable time was passed. The wind, however, blew strongly throughout the day, and it was with difficulty that the craft could be kept at their moorings. Heavy tackle only was used, and the catches were consequently not large, for at times it was next to impossible to discern the float. It is worthy of note that the large pleasure steamers now running between Yarmouth and Norwich play sad havoc with the fishing, and we are informed that on Monday hardly a capture was recorded after the passing of one of these vessels. The match commenced at 10.30 a.m., and terminated at 4.30, and on returning to Brundall the members weighed in, and the winners stood in the following order:—1st, C. Mackie; 2nd, W. Hinds; 3rd J. Lincoln; 4th, J. J. Rice; 5th, W. F. Rackham; 6th, Burton; 7th, J. Barnes; 8th, J. Young; 9th, J. W. Whorton; 10th, E. Crisp, 11th, —. Wilson; 12th, W. Green; 13th, J. Sinclaire; and 14th, G; Chettleburgh. In the evening a substantial supper was partaken o. at the club house, the Oak Shades, Lower Goat Lane, when there was large attendance of members and visitors. The president, Mr. Alderman S. Newman, presided, and was faced in the vice-chair by the chairman of the association, Mr. Councillor Thirkettle. The tables having been cleared, the loyal toasts were drunk, and the prizes were then presented to the successful competitors. Mr. C. Mackie, who took the first prize, was also awarded the president's silver challenge cup, which now becomes his property, it having been won by him two years in succession. A presentation was made to Mr. Whorton, the hon. sec., in recognition of the valuable services he had rendered the society, and which, as the president observed, he richly deserved. Mr. Whorton responded, and thanked the members for this unexpected mark of their esteem. Numerous toasts were given and responded to, and Mr. T. Oldfield (of Chesterfield), in acknowledging "The Visitors," made some very comical remarks on the difference of fly and bottom fishing. Vocal contributions were given by Messrs. P Carman, J. Lincoln, J. Barnes, G. W. Whorton, &c., and the proceedings were brought to a close at midnight.

THE RIVER WENSUM PRESERVATION SOCIETY.

A public meeting of persons desirous of carrying out this object, agreeably with the resolutions of a public meeting held in the Corn Hall on the 20th ult., was held also in the Corn Hall on Wednesday forenoon, when Captain Robert N. Hamond, R.N., presided. This movement, which contemplates the preservation and proper cultivation of the fish abounding in the river, has secured the patronage of the Earl of Leicester, K.G., the Marquis Townshend, Lord Hastings, Sir W. Jones, Bart., E. Birkbeck, Esq., M.P., Captain Robert N. Hamond, R.N., Anthony Hamond, Esq., H. J. Lee Warner, Esq., H. J. Dugmore, Esq., J.P., C. A. Hamond, Esq. Mr. C. Horsley, jun., the hon. secretary, read a report of the proceedings of the committee appointed at the previous meeting to the following effect:—

In presenting the report according to the resolution proposed by the Rev. R. Rackham, and seconded by Mr. Southwood, at a meeting held July 20th, your committee are pleased to state that up to the present date the society has met with good success. The society has had verbal promises of the water from the back of Ryburgh mill to Sculthorpe mill, a distance exceeding six miles, but owing to a little difficulty in the appointment of a solicitor, these gifts have not yet been transferred by deed. Your committee are, however, glad to say that a solicitor has now been appointed, and these rights of fishing will be transferred to the society as soon as practicable. The work of the committee, since the last public meeting held in the hall, has consisted chiefly in arranging the rules and bye-laws of the society, which will be read to this meeting. The society now consists of twenty members, not including the officers or the committee. It has been thought advisable not to press for the addition of members until after this meeting. As no subscriptions have yet been received nor accepted by the society, there is at present no financial statement to submit to the meeting. The following gentlemen have been selected as officers of the society, viz.:—Capt. R. N. Hamond, R.N., president; C. A. Hamond, Esq., vice-president; Mr. W. B. Cowles, treasurer; Mr. C. H. Horsley, hon. secretary; M. B. Bircham, Esq., hon. solicitor. Committee—The Revs. E. W. Dowell and R. Rackham, A. Digby, Esq., F. Coomber, Esq., F. Atkinson, Esq., Messrs. E. W. Southwold, T. Charlton, M. W. Hodgett, W. Tuthill, and J. Tilson.

The rules prepared by the committee were read to the meeting by the Hon. Secretary, and approved, and the name of T. Goggs, Esq., was, by kind permission, added to the committee. A list of members was also presented by the secretary, which included several gentlemen residing at a distance, and several gentlemen present gave in their names in addition. Several persons spoke freely on various topics connected with the movement, and the chairman stated that gentlemen paying their subscriptions at once will be entitled to fish until January, 1884, when all subscriptions will be again due; and he hoped all the members would assist in clearing the river of weeds, &c., an operation which would shortly be commenced. The Hon. Secretary said he intends, at his own expense, to hatch from 10,000 to 50,000 eggs, if possible, to assist in stocking the river; and the meeting separated with the prospect of good fishing in course of time, and with the understanding that the society is now legally established.—*Norwich Mercury*.

CAMBRIDGE FRIENDLY ANGLING SOCIETY.

On Wednesday, the 23rd inst., Mr. Carvell had a very nice tray of roach and perch, weighing 13 lb. 10 oz., the largest perch 1 lb. 15¼ oz.. the largest roach 1 lb. 13¼ oz. Mr. C. very kindly presented the latter to the society, and it has been sent to Mr. Cooper for preservation, and will be a welcome addition to our already numerous collection of specimen fish.—W. Sutton, sec.

Aug. 24.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

SHREWSBURY ANGLERS.

We are glad to see from a long report in the *Shropshire Guardian* of August 19, that the Shrewsbury anglers are making great efforts to get the river Severn out of the hands of the poachers. The fishing in the Severn near Shrewsbury will under proper protection, improve incredibly, and in a very short time become amongst the very best in England. We may point out to the corporation that if the river were protected, it would soon be worth some thousands a year to Shrewsbury, in increased visitors, in the shape of anglers.

CLUB AND OTHER JOTTINGS

By L. B.

Though the clubs are increasing in numbers almost every week it is a remark frequently made, and the truth of which is admitted on all hands, that the attendance at return visits on almost every occasion show a decided decrease upon what it used to be in years gone by, and the causes of this are not far to seek. The visits are far too numerous; we have first the "West Central Association of London and Provincial Angling Societies," who count three distinct sets of district visits, taking in such societies as those situated at Acton and Ealing, Penge, Richmond, etc. Next, the "East Central United London Anglers' Committee" have two distinct sets; first, the local visits, next, the general visits, including all clubs enrolled with the said association, while the Central Association have a district visiting list of their own.

Add to this the complimentary—quite independent of the organised visits—and the benefits which are still held from time to time, and have not a little on common with visits, and it will be readily understood that with such an arrangement it is not at all unfrequent for two, three, or even more such meetings to take place on the same evening, while one is held in some part of London almost every night in the year, Saturdays and Sundays excepted. It must not be thought that I am running down the system of clubs visiting one another. On the contrary, I believe that at a time when we did not possess the amount of organisation we do at present it gave us splendid opportunities of exchanging opinions and very often led to some good practical decision being arrived at, but what we want is the present arrangement revised. The three associations are now working harmoniously on several important matters, why not unitedly grasp this question. I do not wish to be charged with being grandmotherly, but I do not hesitate to say the question is a far more serious one than at first glance appears. The associations organise these visits, and in several cases undertake the entire management of them, even to issuing the notices, calling the roll to ascertain clubs present, and making reports in the press of such meetings; and there is no doubt they, through their accredited officers, use their best endeavours to induce anglers to be present, so that if the present system has grown to be, or is likely to become, an evil, the associations for their own sake must look to it, lest they be charged by Mrs. Piscator—often a pale-faced, hard little body, who, as she truly says, has all her "work cut out to keep the little ones respectable, the home tidy, and make ends meet"—with ——. But no, I won't go on; I have touched upon this subject good-humouredly, though from the sincerest of motives, and I hope it will not be deemed unworthy of the serious consideration of the powers that be.

The West Central Association are to be congratulated upon their handsome donation of £5 5s. to the Thames Angling Preservation Society towards defraying the expenses of the recent meeting at the Cannon Street Hotel. If the Upper Thames Preservation Societies, and the East and Central Associations, all funded bodies, stump up in equal proportion, there ought, unless the expenses were unusually heavy, to be something over for the general fund.

Some good roach and dace, together with a few chub and a trout or two, have recently been taken at Ware, in Hertfordshire.

I was away on a fortnight's fishing trip, and was not able to be present at the conference at the Cannon Street Hotel, but right glad was I to see it was such a splendid success. One or two things, however, there were which somewhat astonishsd me, and to my certain knowledge have caused no little comment in club circles. Mr. P. Geen's opposing the Richmond Piscatorial delegate's proposition "that the Conservators be petitioned to free the Thames from Richmond to Kew Bridge from the chartered netsmen," for instance, is most inexplicable. Probably my able colleague can give some very good grounds for his opposition other than "that the present time was not opportune." I have the greatest reliance on Mr. Geen's judgment and discretion, but hope that in justice to thousands who were not able to be present at the meeting, yet take the deepest interest in this question, Mr. Geen will explain the course he adopted. At present I must confess to sharing a very generally expressed sympathy with the delegates from the Richmond Piscatorials.

I quite agree with our Editor that the restriction upon the number of rods is ridiculous in the extreme, though, as a fact, the angler who uses more than one rod practically handicaps himself.

Extending the close time for jack until the first day of August is a great mistake, and is practically extending protection to one kind of fish, and that a ravenous cannibal, at the expense of others. Moreover, and this is the strongest argument, it is opposed to the resolution passed at a recent meeting at the Society of Arts, where the necessary amendments to "The Freshwater Fisheries Act" were considered and agreed to. I cannot, however, go the whole length with Mr. Editor, and do not think many true anglers would care to see jack in the spawning beds or nearly so taken during the first fortnight in March—when an extended close time for jack on the Thames is proposed. We always have the trailers brought up. Would not a better way be to prohibit trailing altogether, as is done on several waters near London. At all events such an attempt would be better worthy of support than the would be restriction on the use of rods.

The following amusing paragraph occurs in the current number of "Chambers' Journal."

"The electric light has found a novel employment in the hands of some ingenious Frenchmen, who have lately by permission of their government been experimenting with it as a lure for fish. The lamp was contained in an air-tight globe, and was lowered at night into the sea, with the result that thousands of fish of all sizes were attracted to its brilliant light. Boats furnished with nets gradually closed in upon the living mass and made a great haul of fish. We hardly know whether this mode of enticing the finny tribes will be considered quite legitimate by the angling and fishing fraternities."

Haslett, of Chertsey, has been doing well among the gudgeon, averaging from 10 to 13 dozens per day, with here and there a bream and barbel or two. His report for this week has not yet come to hand, but I saw Mr. J. P. Wheatstone, on Monday evening, who had that day, fishing with Haslett, succeeded in taking 13 bream, weighing 33 lb. odd ounces.

The following notice has been posted by the Fisheries Society, and a number of smaller handbills containing the same matter are to be printed and distributed among members of angling societies and others.

NOTICE.

The whole of this river from Weybridge to Purford Lock having been rented as a fishery by the United London Angling Associations Fishery Society, this is to give notice, that all netting, night lines, or any other mode of taking fish other than by fair rod and line angling, will be dealt with as the law directs. The close time (during which no fish can be taken) as laid down by the Freshwater Fisheries Act, 1878, 41 and 42 Vic. ch. 39, section 11, and sub-sections 1 and 2; and observed on the River Thames, viz., from 15th March to 15th June, both days inclusive, will be strictly enforced.

Undersized Fish.—No fish under the following sizes can be retained: jack, 18 inches; chub, 10 inches; bream, 9 inches; carp, 8 inches; tench, 8 inches; perch, 7 inches; roach, 7 inches; dace, 6 inches; rudd, 6 inches; gudgeon, 4 inches. All to measure extreme length.

A reward of not less than one guinea will be paid to any person giving such information as shall lead to the conviction for any offence of the above nature. All communications to be addressed to the hon. sec., T. Hoole, 7, King's Road, Mortlake, S.W.

N.B.—The society's authorised agents have directions to prohibit the fishery to any person damaging the banks, using foul language, or otherwise misbehaving.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Medcalf, 6 lb. 2 oz. roach and bream; Mr. Sherry, 2 lb. 3 oz.; Mr. Howlett, 4 lb. 14 oz.; Mr. Moir, 8 lb. 2 oz.; Mr. Hunt, 1 lb.; Mr. Pealey, 10 oz.; Mr. Larkman, 12 lb. 2½ oz.; Mr. Partrick, roach, chub, and perch, 8 lb. 12 oz.; Mr. Brearley, and Mr. Carrington, bream. A pegged down match will take place on Sunday, September 3rd, at Weybridge, for seven prizes, to start from the Waterloo Station at 8.45 a.m.—Worledge.

August 20.

ANCHOR AND HOPE.

Several of our members were out on Sunday, the 20th inst., and succeeded in filling our trays with some very good fish. Mr. J. Bowling, bream, 5 lb. 4¾ oz.; Mr. H. Scott, bream and roach, 5 lb. 7¾ oz. (one roach scaling 1 lb 7¾ oz.); Mr. R. Smith, bream, 11 lb. 7 oz., two bream scaling 7 lb., and sent to Mr. Miller, East Street, Walworth, to be preserved.—D. Davis, sec.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

Our annual general meeting took place at the White Hart Hotel, on Monday, August 14, 1882, for the purpose of auditing the accounts, electing officers, &c. The minutes having been read up and passed, the auditors (Messrs. Inch and Cornish) gave their report as to finance, &c.; they were pleased to say that the accounts were very satisfactory, and that a handsome balance was left in the treasurer's hands. The next business was the election of officers, which were as follows: J. Hadden, president; H. Inch, vice-president; W. G. Leigh, treasurer; Lewis Wride, secretary; Messrs. Cornish and Barber, auditors. Committee of management: Messrs. F. C. Morris, F. H. Julion, J. F. Parsons, J. A. Everett, H. Powell, G. Pain, J. Inch, F. David, W. J. Harrison and W. Sparks. A slight alteration having been made in the rules, the members then proposed a vote of thanks to the presiding officers, and some of the members expressed regret that Mr. Morris, our late president, could not be with us that evening; they, however, elected him on the committee in his absence. The whole of the business having been gone through, the members retired at a reasonable hour.—Lewis Wride, sec.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 20th: Messrs. Chambers and Warden, a good show of bream, roach, and perch from Amberley; Mr. Castell, bream from the canal at Brentford; and Messrs. Nitz, Pratt, and Mortimer, bream from the Welsh Harp.—Cas.

CRITCHFIELD ANGLING SOCIETY.

The president of the above society, Mr. A. C. Critchfield, got amongst the finny tribe last week, sending up from his fishing quarters on Tuesday, the 8th inst., a basket of roach and dace, weighing 17½ lb., viz.; 19 roach, weighing 15 lb. (heaviest fish, 1¼ lb.); and 6 dace, weighing 2½ lb. (heaviest fish, ½ lb.); and on Thursday evening, the 10th inst., appearing in person with another take of 16 lb. 10 oz., viz., 19 roach, weighing 15 lb. 5 oz. (the heaviest fish, 1¼ lb.) 4 others, weighing 1 lb. 1 oz., and 1 lb. 2 oz., 1 lb. 3 oz., and 1 lb. 3½ oz. respectively, several more turning the scale at 1 lb.; also 3 dace, weighing 1 lb. 5 oz. (heaviest ½ lb.); altogether making as pretty a show of really good fish, as the most ambitious angler could desire. Mr. C. Hayward also secured 6 good perch, weighing nearly 6 lb.—J. F.

Aug. 12.

CROWN PISCATORIAL SOCIETY.

The members of the above society fished at Amberley last Sunday for three valuable prizes, and were won by the following gentlemen:—Mr. Wright first, with bream, largest fish weighing 2 lb. 2 oz.; Mr. T. Welsh second, with roach and dace; Mr. L. Gorsuch third, with roach; and Mr. Parker close up with perch; Mr. Harris dace. Mr. Neagus had a nice show of roach from the Stort, largest fish weighing 1 lb. A special general meeting will take place on Thursday, August 31st, and the members are particularly requested to attend by 9 o'clock sharp.—W. H. Burwash, jun., sec.

August 22.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

Mr. W. M. Jones, a member of the above, on Wednesday last had a fine show of roach, dace, and bream.—W. G. Gardner, sec.

August 14, 1882.

GOOD INTENT SOCIETY.

There was a fair show of fish brought in on Sunday evening last: Messrs. Maybury, roach; Haines, roach, dace, and perch; Philpott, jack; Murphy, trout and dace, and many other members had fish. Our annual dinner took place last Monday at the Rye House. About seventy sat down to a most excellent dinner served in Mr. Teale's best style, and a hearty vote of thanks was passed to Mr. Teale for the way in which it was carried out. We had for our guests, Mr. Ghurney, Mr. Morgan, Mr. T. Crumplen, whose healths were most enthusiastically drunk and most ably responded to, and an enjoyable afternoon was spent. Our distribution of prizes will take place on Tuesday, September 12. There will be a special meeting on Tuesday next, 29th inst., when business of importance will be brought on, hoping all members will attend. —R. Murphy.

August 24, 1882.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held, as usual, on Thursday last; C. S. Bentley, Esq., in the chair. Mr. Crumplen (secretary) read the minutes and correspondence, including a report from Goring—"water very clear, and few fish taken during the past week." The magnificent perch recently caught and presented to the society by their valued member Mr. Brett were now shown for the first time, and on the motion of Dr. Lloyd, seconded by Captain Alfred, a unanimous vote of thanks was passed to Mr. Brett for this very valuable addition to the society's museum. Mr. Jardine expressed his admiration of this case, one of the finest, if not the finest, he had ever seen, but it is unfortunate that one of the fish is under the minimum weight laid down by the exhibition authorities, so that, unless common sense prevails, they cannot be admitted into the 1883 exhibition; and, in addition, what is said to be the finest case of pike in the world, possessed by the society, would also have been excluded had the minimum weight of 20 lb., as first proposed, been adhered to. Dr. Brunton produced a very interesting line, with which he expressed his intention of taking a trout or two very quickly. It was made by Fiji Islanders entirely from human hair, and had been tested very favourably against the ordinary eight-plait line. This specimen was believed to be fifty years old, and was understood to be the work of several generations, one member of a family commencing and others completing. The memorial to the Thames Conservancy having been duly signed by the chairman and secretary, strong hopes were expressed that the new Thames bye-laws might be made to harmonise with the unanimous wishes of the entire angling world. Mr. George Austin and Mr. McDowall had weighed in bream and tench, and Dr. Brunton trout during the week. Mr. Crumplen mentioned that he had been in correspondence with the Rev. Hayman Cummings, and that gentleman had kindly undertaken to give a paper on "Trout Culture" at the Society's present rooms on Thursday, September 7, when a large attendance is anticipated. The proceedings closed with a very hearty vote of thanks to Mr. Bentley for his able occupancy of the chair.

HEARTS OF OAK ANGLING SOCIETY.

Good trays of fish last Sunday, among the best being:—Mr. A. Fish, 8 lb. bream; Mr. B. Cox, 6 lb. roach; Mr. T. Carrington, 5 lb. roach; Messrs. J. Holt. C. Walford, and H. Cook showed in roach and bream; and Mr. C. Cuthbert had a nice jack.—C. J. Millie, sec.

Aug. 23.

HIGHBURY ANGLING SOCIETY.

We were again favoured on the 20th inst. with a good show of bream, roach, perch, dace, and tench, the heaviest of the latter fish scaling a little over 3 lb. Members are earnestly requested to attend a special meeting of the society on Wednesday evening next, the 30th inst., at nine o'clock, in order to complete arrangements for the annual dinner at Mr. Lyndsell's, the Pied Bull, St. Margarets, on Saturday, September 2, on which occasion Mr. Sampson will preside, supported in the vice-chair by Mr. E. Wheatley.—Jas. Edward Wheatley, sec.

IZAAK WALTON ANGLING SOCIETY.

There was a fair show on last Sunday evening. Mr. G. Bliss had a tray of very fine roach, which weighed close upon 7 lb. Mr. W. Mecham had roach and dace. Mr. E. W. Turner had a tray of very nice bream.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our trays were well filled on Sunday with a most splendid assortment of fish of all kinds, which highly delighted all our members and friends. Mr. G. Townsend headed the list with a first-class lot of bream. Mr. R. Hopton came next, also with bream; Mr. Scott followed with some fine roach, dace, chub, and perch; Mr. Hurwood had roach, dace, and gudgeon; Mr. Humphreys had dace, perch, and gudgeon; H. Moore, bream and a nice jack; Mr. Letch, bream; W. H. Evans, chub, roach, and perch; and A. Evans, roach, which made one of the best shows of fish in the club ever seen.—H. Moore, sec.

August 24.

NORTH WESTERN ANGLING SOCIETY.

Mr. North weighed-in 10 lb. of nice roach one day in the week—this is the only take worth noticing that we have had. On Sunday, September 3, we fish for eight prizes at Boxmoor, All members wishing to go by road are requested to attend the club on Thursday next, the 31st inst.—H.

August 23.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We fished a pegged-down match at Ponder's End on Sunday last, Mr. Blackledge taking the prize with a fine show of roach. The weather being so unfavourable, several of our members returned with blanks. The next eastern district visit will be paid to this club on Tuesday, August 29th, 1882.—E. Dymond, sec.

Aug. 21.

PISCATORIAL SOCIETY.

The annual bream competition came off on Monday last. There was an attendance of about thirty members in the evening at Ashley's Hotel, Covent Garden, to witness the return of the competitors. Mr. J. Foreman ably presided on the occasion, and awarded the prizes as follows:—The first prize of two guineas to Mr. C. P. Wheatstone, with thirteen bream weighing 33½ lb, from Chertsey; and the second prize of one guinea to Mr. M. H. Blarney, with thirteen bream weighing 22 lb. 15 oz., from Shepperton. Mr. Blarney also weighed in two barbel of 3 lb. each, and Mr. James Lander one bream of 4 lb. 5 oz. from the Ouse. The roach competition is fixed for September 4, from public waters.—B.

QUEEN'S ANGLING SOCIETY.

Our members found a few fish although the water was so lumpy. Messrs. Pearce, 19 lb. 15 oz., bream; L. Walford, 9 lb. 10 oz.; F. Barrett, 5 lb. 14 oz.; Morgan, 2 lb. 5½ oz.; Koopman, 3 lb. 13½ oz.; Barrett, 15 oz. All the above were bream.—L. Walford, sec.

August 21.

STANLEY ANGLERS' SOCIETY.

Notwithstanding the fact that many of our members have, this last week, been far and near in quest of sport, we regret our inability to record any great successes, as one and all complain of the excessive brightness of the rivers. The best fish shown in was undoubtedly a roach taken by Mr. H. Rose, scaling 1 lb. 7½ oz., the fish having come a long journey had lost weight. Our indefatigable president had a nice little show of fish, 5 lb. 9 oz., and Mr. Pistrucci roach.—G. E. Walker.

THE STOKE NEWINGTON ANGLING SOCIETY.

Very little doing, although the members have been very active during the past few days. Messrs. Davis, Wilkinson, Watkyns and Gretton fishing the river Medway, took a variety of fish, consisting of jack, perch, roach, bream, flounders and eels, but all small. On the 20th inst., some nice roach were exhibited, Mr. J. Gretton having five fish weighing 3 lb. 2 oz.; Mr. W. Read, a fish, weighing 1 lb. 1¾ oz.; Mr. Whitmore also had 2 lb. 6 oz. roach; Mr. Charles Martin, 15 oz. dace. Messrs. Tomkins and Lewis have been trying the Thames, but without success.—T. Gretton.

Aug. 21.

UNITED BROTHERS, DEPTFORD.

Our trays were well filled on Sunday, the 20th inst. W. Tyler had 32 lb. 14½ oz. of splendid bream; J. Eller, 17 lb. of bream from the Tunbridge Association waters (below the town); F. Belton, roach from the Medway. Several of our members went to Pulborough on Sunday, the 20th, to fish for a series of prizes. The winners were as follows.—H. Tyler first, G. Belton second, F. Watts third, J. Currans fourth. Others also weighed in fish.—W. Belton.

August 23.

WALTONIANS.

On the 20th Mr. Thos. Watkins had a fine barbel of 6 lb. 4¼ oz. and 4 lb. 4 oz. of roach and dace; Mr. Giles, 3 lb. 3¼ oz., of roach; Messrs. Togwell and Horsford also weighed in fish.—A. J. Marriott.

WALWORTH WALTONIANS.

On the 18th, Messrs. Delehaye, pere et fils, visited Feltham. They managed to get among some roach and dace. On the 19th, Mr. Weatherhead, returned from Heigham Sound, bringing home with him some very good specimens of Heigham rudd, roach, and bream, several of which, Mr. J. Lancaster, of Camden Town, has received for preservation. The result of the competition that took place on the 21st is as follows:—Mr. C. Bansback, roach, from Ponder's End, won the first prize, a dressing case given by Mr. Raynor; M. Piolaine took second, a musical instrument, and Mr. R. Cain, the third, 10s. 6d. Members are requested to attend on Thursday next, to discuss as to where and how, the prizes given for competition for Sept. 10, 1882 shall be competed for.—Pixie.

AMERICA AND THE FISHERIES EXHIBITION.

The United States Government is building at Wilmington, Del., a splendid iron steam-ship, which will cost nearly 200,000 dollars, and especially constructed for the Fish Commission to gather and preserve sea fish. The vessel (says an American journal) will be sent to London with millions of specimens of small fish and sea bugs, to be exhibited at the great fish exposition to be held there in May. She is to be christened the Albatross. She is 200 feet long, 27 feet 6 inches beam, 15 feet 9 inches depth of hold, and of 800 tons burthen. She will be supplied with a deep sea dredge with eight or ten miles of wire rope, for the purpose of dredging up specimens of animal life which may be found miles below the surface of the ocean. Past Assistant Engineer G. W. Baird, is superintending the construction of the ship, which is being built at Pusey, Jones, and Company's yards, and will be launched in about four months. The Albatross will be under the direction of United States Fish Commissioner Baird, who will go with her to the London Exposition, which will be the greatest fish show ever seen in the world. There will be on exhibition there every kind of animal known to exist in the seas and rivers of the world, from a whale to a tadpole. All the leading fish culturists and dealers in the United States will send exhibits, which, in addition to the millions of preserved exhibits sent by the Government, will probably make our display the most complete of any on exhibition. The largest number of the Government exhibits will be microscopic specimens, but thousands of curious and valuable specimens preserved in liquor, and now at the Smithsonian Institution, will be put on board the Albatross and sent over.

RIVER REPORTS

MID-THAMES.

"Amongst the views of many, mine."
—Shakespeare.

Very little has been attempted, and still less done, in the angling line on the Thames during the past week. This has been in consequence of the extreme clearness of the water, gudgeon being easily discernible when the sun shone, at a depth of eight feet. Roach of any size have been most difficult to obtain, three or four possibly coming to hook in a swim, and then the angler might watch and pray for an hour without so much as a nibble, a state of things enough to make any roachist wet his gut in *pongelo* and shed a tear in despair. The fact is, the big roach, and indeed some other fish, are in the weeds—and are indulging in a *dolce far niente*, and smoking the calumet of peace in their greenhouse. Heavy rain visited the valley of the Thames on Tuesday evening and Wednesday morning, and I opine this influx of juice will play the deuce with the present repose of the fish, and make them inclined to appreciate the wrigly tail of a lob, or the gentle twirl of a maggot. Between Pangbourne and Caversham on Monday, Tuesday, and Wednesday a gentleman landed 27 chub, all over 1 lb., best fish being 2 lb. 3 oz., the smaller fish by the dozens being returned. At Medmenham Tom Street, with three patrons, has been getting some 6 dozen roach and perch on two or three occasions, and at Hurley Messrs. Bryan and Brooksbank have been paying their attentions to roach, gudgeon, and perch, and been accepted by many dozens, the best catch being a beauty in the perch family of 1½ lb. Mr. Hughes, an artistic angler, also in the Hurley waters, has been executing some "pictures" of chub, the best fish, done by scale yesterday, going 3 lb. Marlow, Cookham, and Maidenhead news is very meagre, but from Windsor comes an item of interest, Mr. G. H. Stevens, of Barnes, whilst fishing for barbel with worms, having captured a splendid trout weighing 11½ lb. The fish was taken in Old Windsor weir, and I understand Mr. S. has recently taken four other trout of some 3 lb. each. Thursday Evening.—Heavy showers have been falling all the day, which will materially assist in taking the brightness from the river, and fair all-round sport may confidently be anticipated during the ensuing week. Wind, a strong south-west.—Marlow Buzz.

Ancholme District.

Bream-fishing has been very successful during the past week. One man had ten fish weighing between 3 and 4 lb. each. Another specimen was caught which was nearly 5 lb. The waters are still very fine and clear. But little has been done on the trout streams, which are very low. I hope to try some southern waters this week.—Thomas Ford.

Ballynahinch.

For this last week angling has improved well, as will be seen by the undermentioned report:—On the 16th, Mr. Deverell, 24 trout; same date, Colonel Hay, 1 salmon, 6 lb., and 7 trout; Messrs. Moore and Osborne, 1 salmon, 8 lb., and 15 trout; Mr, Waddle, 12 trout; Mr. Bury, 1 salmon and 5 trout. On the 17th, Mr. Deverell, 24 trout; Colonel Hay, 16 trout; Messrs. Moore and Osborne, 13 trout; Mr. Waddle, 18 trout; Mr. Bury, 16 trout. On the 18th, Colonel Hay, 13 trout; same date, Messrs. Moore and Osborne, 30 trout; Mr. Waddle, 18 trout; Mr. Bury, 21 trout. On the 19th, Mr. Deverell, 36 trout; same date, Colonal Hay, 7 trout; Messrs. Moore and Osborne, 1 salmon, 8 lb., and 13 trout; Mr. Waddle, 12 trout; Mr. Bury, 20 trout. On the 21st, Mr. Deverell, 2 salmon, 7 and 8½ lb.; same date, Colonel Hay, 6 trout; Mr. Parkinson, 1 trout; Mr. Waddle, 6 trout; Messrs. Nevill and Grissel, 16 trout; Mr. Bury, 9 trout. On the 22nd, Mr. Deverell, 7 trout; Colonel Hay, 12 trout; Mr. Parkinson, 30 trout; Mr. Waddle, 1 salmon, 6 lb., and 4 trout; Messrs. Nevill and Grissel, 18 trout; Mr. Bury, 17 trout.—Walter Blackadder.

Coquet (Welden Bridge).

I have had nothing to report up to the 22nd. Then the Rev. Mr. Oliver killed 2 doz., Mr. Abbit 1½ doz. last night, and there was a change of weather, the rain came on at night and went on for 16 hours. The river was down this morning, which will make a slight improvement in the fishing.—A. Glass.

Dove.

Rough winds have prevailed all this week, and anglers have had all their work cut out to keep a line in the water. Fishing has, in fact, been miserable work in consequence, though our river is in first-rate order, and all kinds of fish have been biting freely. Trout and grayling have risen best in the middle of the day when the sea has been out. The nights have now turned much colder, and there is very little rise on in the evening. There have been several nice baskets of trout and grayling taken, running from five to seven brace. The wasp-graub has been "fetching" roach, dace and chub best, while I think barbel, bream and perch have preferred the worm. Large quantities of coarse fish were captured last Saturday and Monday with the baits named. Eels are running well, and some nice pike have fallen victims with spinning baits. Weather still very showery and unsettled.—The Splodger.

Exe (Exeter).

Angling is now in full fling, both in the river and canal, amongst the perch, dace, and roach, principally the latter, with the addition of a few tench. On the whole many were very successful in their catches, although very many of these anglers understand very little of the art of angling and only succeed when the fish are well on the feed, or are inclined to be voracious. To catch them, or even attempt to do so, on Tuesday or Wednesday last, when it was blowing nearly a gale, was evidently not their *forte*, and practically speaking it was as well the sport was suspended. But in spite of the boisterous elements many anglers caught fish, and some a good many. I saw one who had a fine roach trying to land it, at the same time holding like grim death to the quay-chains to save being himself blown into the river. Salmon are falling off in numbers, but peel are plentiful and giving good sport upwards. Trout are really numerous. In fact, I was told this morning by an old resident and thorough angler, that there are more trout in the tidal portion of the river than there has been during the past ten years, and from the numbers grassed during the past season fully endorses his views. Eels, as a rule, are remarkably small, but strange to say several have been taken in various parts of the river and canal during the week weighing from 2 lb. upwards; these are worth taking, but the small ones are very provoking to the bottom fisherman. The flies most taking are the coch-y-bonddhu, red palmer. The lion and autumn brown mackerel are not plentiful, but they are larger than usual. "Shad" have come in goodly quantities, and very fine herrings scarce. Lobsters, crabs, and prawn very plentiful, the latter fetching three shillings per hundred. Whitebait plentiful, but rather large.—Frank Gosden.

Exe (Tiverton).

The water is just clearing from the recent storms, which raised it only a little. There has been very little sport during the past week. A few trout have been taken with the blue upright, half stone, black ant, and red palmer. Three salmon have fallen victims to the fly since my last report.—Wm. Mudford.

Ilfracombe.

The weather for the past fortnight has been very changeable. Friday 11th, several boats out with their fishing parties, their catches of fish averaged about 40 lb. each boat, of bream, whiting pout, and tamlin cod. Saturday, weather very oppressive, with strong lightning. Sunday, very showery, about 20 crabs was taken from the holes at Beacon's Point, weighing from 2 to 3 lb. each. Monday and Tuesday, blowing a gale from the West, accompanied with heavy showers, no boats out. Wednesday, W.N.W., with heavy sea. Thursday, moderating a little, a porpoise and badger washed ashore at Woolacomb sands, and large shoals of bass are seen play in shore at Morthoe Bay. The wind has been blowing from W. to W.N.W., with too much sea for parties to attempt the Bay. Some fine prawns have been taken from the pools between Woolacomb and Mort Stone. Also some large lob sters and crabs. Some good strings of fish have been caught from the jetty with rod and hand lines. Yesterday a few boats with their fishing parties ventured off the harbour and caught from 20 to 30 lb. each boat of whiting pout and pollack. Weather still squally.—E. Comer.

Lea (Ware).

Since my last report, excellent sport has been had in this district, principally among the roach and dace, although some number of jack have been obtained, not of any great weight, unless I except a fine fellow of 22 lb., taken at Stanstead, by Mr. Taylor. This fish had been frequently seen during the season, and Mr. T. deserves credit for his persistency in his many attempts to lure this fine fish, and has triumphantly been rewarded, as it seldom happens to the luck of an angler in getting a jack of this weight in the Lea. On Sunday last, Mr. Chart, of the Reform, had a nice show of roach, while several other gentlemen were equally successful; the takes, with few exceptions, varying from 6 to 10 lb. The rain we have had and still are having are bringing the fish on the feed. I saw a good take of dace by Mr. Hall, while a number of small jack are being taken daily. I myself have secured several during the week, varying in weight, but none have exceeded 5 lb. The water is now nothing like so bright as last week, but we still want a great deal of rain to make it in really good condition. —Lion and Wheatsheaf.

Leicester.

The past few days have not been favourable for angling operations, as since Friday we have been treated to plenty of cold east winds and some heavy storms which seemed to have-kept the kept the fish from biting. On Friday a few good takes of roach were had from the Leicester Society water with the wheat; but during Saturday, most of the cracks being engaged fishing in the match, very little else was done. During the earlier part of the week a fair number of anglers were trying for roach, but the wind was evidently in the wrong quarter, so very little was done, and inquiries only elicited the answer, "only a few;" in many cases "nothing doing" was the reply. At Aylestone matters are a little quiet, and but few fish have been caught. The Aylestone anglers seem to feel with deep regret the sudden death of A J. Hamel, Esq., on the 20th inst., as he was not only an ardent fisherman himself, but always ready to assist in helping to preserve waters that were likely to be of any benefit to the town. From Barrow-on-Soar, although a fair number have been trying the deep for bream, the cold winds and rain seem to have affected them in this locality, as with the exception of a few bream and roach and a few pike, but little has been done. The annual contest of Barrow-on-Soar Society will be held on Saturday, September 2. Anglers still continue to visit the Wreake, and several appear to have met with success during the past few days, as some returned home with good takes of perch and fair-sized pike. The waters are not too high, and being coloured a little, some good fish would be taken, providing the wind would only shift out of the east.—Alert.

Suir and its Tributaries.

Although the weather is so cold and changeable, we hear of some salmon being caught on Lord Donoughmore's preserves at New-Castle and Knocklofty, by Messrs. Arthur Tabor and Spencer Wilde, where on Tuesday they got one peel of 6 lb. On Wednesday they trout-fished the Comeragh Lakes, getting several dozen trout. On Thursday, at New-Castle, they landed a salmon of 16 lb. and a peal weighing 6 lb. On Saturday, a salmon of 10 lb. Notwithstanding a great deal of poaching going on, still the river continues to be full of fish. Trout-fishing continues bad, we hear of only one good basket got by Master Hart and party. The killing flies are yellow rails and wrens.—Drea.

Thames (Goring).

Water low and clear. Four days' fishing with Mr. Hue, of 231, Camden Road, Holloway, London. Best day—two dozen of good perch, four jack, and about four dozen of gudgeon; are biting well. One rod can take twenty dozen a day.—John Rush.

Thames (Hampton).

Water clear, weather stormy, and Thursday gale of wind. Barbel commencing to feed. T. Wheeler, fishing with different gentlemen, averaged six barbel and a few dozen roach and dace per day. Best bait for barbel, worms; they do not seem to take clay ball at all kindly. Bank fishermen have done fairly with the roach, paste fishing. Below the weir (Moulsey) Davis and J. Smith have had average catches of barbel, and some large roach, 1½ to 2 lb. each, with cheese paste.—E. Swan.

Thames (Monkey Island Hotel).

Gudgeon are feeding well, getting twenty and twenty-five dozen a day and a few good perch. The barbel are feeding very badly; what one do get are very small. Out with Mr. J. Knechtli to-day, (Wednesday), got a few small barbel, one jack, 8 lb., one 2 lb., and lost a very fine fish in the weeds. We want a little rain now, and we should get some good all-round fishing.—R. Plummer.

Thames (Shepperton).

Mr. M. H. Blarney, whose piscatorial exploits in this portion of the Thames have become proverbial, has this week been again distinguishing himself. On Monday and Tuesday last, attended by Herbert Kerr, he caught something like 120 lb. weight of barbel and bream, the result being achieved from two causes—first in having the swim well baited and then by first-rate skill and perseverance—in both of these Mr. Blarney possess undoubted pre-eminence.—H.

Thames (Staines).

There was a time when Staines was the most popular fishing ground in the Lower Thames, and from the recent returns of angling in that locality it would appear its former prestige is being again developed. During the last week Mr. Currie Banfield, of the Swan Hotel, has had two days' fishing; on the first day he got seventeen good fish, the largest 4 lb. 3 oz.; and the second day nine nice fish, the largest 4 lb., with a supplement of one perch and four dozen of roach; another day amongst the barbel, when he got ten fish weighing 40 lb., the largest 6 lb. 3 oz.; and another day amongst the lively gudgeon, who gave him some excellent sport as a reminder of former glorious days, with one rod he took thirty-six dozen of gudgeon and eight perch. Mr. Banfield was attended by John Keene senior, whose address is at the hostelry, of which Mr. Banfield has become the piscatorial proprietor.—H.

Thames (Twickenham).

Wind, N.W.; river in good condition, and the strong winds have passed over which caused us an amount of trouble on Thursday, it being almost impossible to fix a punt. I have had twenty-one punts out during the week and every night as the takes are brought in they improve both in size and quantity. Spong, one day with Col. Adcock, of Putney, took 11 doz. good fish; one day with Mr. Wiggans, of Hounslow, 6 doz. and two barbel; one day with Mr. Walker, Old Kent Road, 7 doz. in four hours. Our Joe, with Mr. Dawson, 8 doz and 2 barbel, one day; and with Mr. Walker 6 doz. and 2 barbel, one day. Captain Wilson, 5 doz. of good fish. Dick Moffat and Farmer have both had good takes. My customers will find it a great advantage by wiring or writing in advance, as the punt is ready fixed when they arrive, the swim well baited and the rods ready to be used at once.

N.B.—Pert. Hammerton and George Coxen are not in my employ now.—Alfred Perrin, Two Sawyers.

Trent (Newark).

The water has been in fairish condition most of the week, but the weather has been against successful and comfortable angling, heavy winds and frequent showers having been the order of the day. Some fairish catches of roach have been had during the latter part of last week, malt and creed wheat having been the most successful lure. Mr. T. Lee caught on one day with malt 66 roach, averaging 11 oz. each, and on the next day 45, showing an average of over ¾ lb. each fish. Mr. J. Chatterton had also a good bag of roach with malt, and several other catches of those fish have also come under my notice. One of our local anglers had a splendid roach, taken with wasp grub, weighing 1 lb. 9½ oz. I saw a bream taken on Tuesday with worm that weighed nearly 5 lb., a splendidly-shaped fish. A few barbel have also come under my notice, but a good catch of those fish I have not seen as yet. Chub are still taking the wasp grub; one bag I saw contained a nice fish. We have had some frequent and heavy showers most of this week, but the water has not altered much as yet; but probably we shall have a few inches extra water, but it is still in capital condition for general angling.—The Trent Otter.

P.S.—A few odd pike have also been taken, but nothing of any great weights.

Tweed and Teviot.

Salmon angling in the river and its tributaries is at present destitute of the excitement which gives it its charm, the captures being few and far between. This state of affairs is owing chiefly, if not exclusively, to the foul and low state of the streams, and unless a flood speedily takes place the end of the present season will prove a complete blank. On the Sprouston water on Monday, Mr. Charles Kerss captured one salmon, and on Tuesday he was again successful in securing a grilse to his rod. The few fish that are being caught are for the most part light weights. Trout fishing in the evening may now be regarded as being over for the season, and day fishing will prove very uneventful until a flood occurs. The reports from the netting stations in the tidal parts of the river continue to be very discouraging. These fishings have now less than a month to run, and the improvement which should take place in the takes of salmon and grilse at this season has not yet been experienced. The scarcity of the latter fish has been the remarkable feature of the season, just as their abundance was the principal characteristic last year. This circumstance does not augur well for the prosperity of the fishings during the ensuing year, because it is feared that the existing scarcity of grilse will have the effect of causing a dearth of salmon next year. In contrast with the state of matters on the Tweed, some extraordinary catches of salmon have been obtained on the Tyne, it being reported that fishers on that river have had a golden harvest of late, a number of old veterans having no recollection of salmon having been so plentiful in their experience.—Max Wheel.

Wharfe (Yorkshire).

There has been several flushes of peat-coloured water during the week but the fish have risen very badly at fly, and although a great number of bottom fishers have been out with both maggot and wasp grub their takes have been far from satisfactory. I heard that a perch was taken in a mill dam near Rawdon weighing 3½ lb., but did not see it myself; if the report is correct it is a heavy weight for this district. Weather cold, stormy, and inclined for rain.—Francis M. Walbran.

Wye and Derwent.

The past week has been a very bad one for angling. Very few fish have been killed with either top or bottom, owing to continual flushes coming down the river, and the wind being so very boisterous at times. Last Tuesday night we had a very great deal of heavy rain fall all over Derbyshire, which caused both rivers to have nice little flushes on them. To-day (Thursday) a very fair quantity of both trout and grayling have been killed, chiefly off the Darley Dale Club waters, with wasp grubs and gentles. Last Saturday I went down to Whatstandwell to wait on one of the London leading gunmakers for a day's bottom fishing amongst coarse fish, on strictly preserved water, where there is any quantity of fish. We fished for something like seven hours, and only got three bites the whole of the time, and killed two fish—one roach and one grayling. We had any quantity of baits, viz. wasp grubs, gentles, and worms; besides, the places had been ground baited the night before, so it was quite evident that the fish were decidedly off the feed. I don't know that I ever knew such a thing to occur before in my whole experience. The river was in good condition till about six o'clock in the evening, when a nasty porter-coloured water came down the Derwent from the heavy rain which had fallen in the woodlands. No doubt the fish were waiting for this water coming down before they began to feed. Eels have been running well lately. There has been several killed by anglers bottom fishing with wasp grubs—one of 3 lb. 6 oz., and a number of smaller ones. Both the Wye and Derwent ought to be in first-class condition for fly-fishing by Monday, if no more rain falls. Bumbles and little red, ribbed with gold twist, and black gnat, are killers for either rivers.—George James Eaton.

ANSWERS TO CORRESPONDENTS.

H. Beatley, Queen's Park.—In our article on roach fishing you will find some places near Norwich mentioned that will just suit you, and for bream you should try the Yare at Cantly and Reedham (good inns at both places); or else go to Ormesby Broad, nine miles from Yarmouth by rail and a walk of a mile or so.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

REPLY TO R. B. MARSTON, ESQ., EDITOR OF THE "FISHING GAZETTE."

Sir,—The editor of the Fishing Gazette, desirous of cutting the Gordian knot, has practically accepted a challenge such as "Herne the Hunter" defiantly threw at him, though he takes no notice of that challenge, and evidently claims the honour of the initiative. It happens that I am the person named as the individual challenged, so that it is now incumbent upon me to reply. In the first place, I must state that about nineteen months ago I invited Mr. Marston to fish with me for a week in the rivers over which I was once conservator; that twice at least this year I have expressed the wish by letter to this gentleman that he would or could fish with me, in order that I might show him what could be done with the tackle he considers good for nothing. Of none of these letters and invitations has Mr. Marston taken any notice. In the next place, the editor of the Fishing Gazette was challenged by "Herne the Hunter" to mortal combat, and the editor took no notice of the challenge, and refused to publish it in his columns, though I am aware it was sent to him as a registered letter, as have my letters for the last eight months or more. These refusals I take as definite; and, on this account, if I now accept any engagement of the kind, I consider that, as all my overtures have been ignored, it is my place to stipulate conditions, and that, if no agreement be effected, Mr. Marston's previous refusal throws the onus of failure on himself.

In the first place, then, we have to picture Walton and Cotton having a fishing match. Gracious shades of old anglers! In the next, we must consider the work Mr. Marston has set before him: all is pleasant if he be beaten by me; he is, so he says, beaten by a "master of the art," and can account for defeat in this manner, whilst adding, in relation to hair and silk lines, &c., hair and gut, "of course, such a match is no test of their real value." This being the case, I for my part have nothing to gain, but all to lose, if defeated; for there is no doubt, in that case, the matter would be considered settled. This is the case as taken from a plain, ordinary point of view; but, from my own, I may tell Mr. Marston that I will not fish him on even terms; that, if I have to fish, the the work I set down is much more formidable. I will engage in nothing less than a week's flood fishing, and a similar term for dead low water in streams of different descriptions; that, in this case, for every two fish he shall catch in flood, I must take three, and for every two at dead low water, I must get four, giving on both descriptions of water a proportion of four to seven; but, considering that perhaps Mr. Marston may be superior to his brother fishermen, I would make it a condition that during the fourteen days' fishing I must get three for every two trout caught by him (6—4), all fish to count, and the average weight of each of my fish must exceed that of his also; the flood-fishing to be next Easter, and the low-water fishing in the following July, as for such as unequal contest I would have to make some preparation in several respects. But how even in the time named a verdict on rods, lines, gut, hair, hooks, striking, and personal craftsmanship is to be made, I am at a loss to understand, for every one of these is a debateable point. I omit long casting—it is worthless. The general conditions I have named; there will be plenty of time for the special. Finally, I must advance one preliminary condition—That, as Mr. Marston has ignored my previous challenges, he is now bound to refute the general points which bear on this matter, and which I shall forward to him in printed form. In this statement no difference in personal craftsmanship can affect the question so long as it is granted that the tackle advocated by both partisans can be used. If Mr. Marston cannot overthrow the facts which I shall put into his hands, and which can be tested by anyone, I am certainly no longer bound to engage in what in that case would be a useless and empty contest; but if Mr. Marston can disprove the truth of my position, then I suppose it will remain for me to beat him, if I can, by the aid of superior craftsmanship alone on the battle-field.—I am, &c,

Robert R. Balderston.

[On receipt of the above letter we wrote to Mr. Balderston apologising for not having inserted the letter of his which follows this (in a footnote to that letter we have given the reason for its non appearance before). We also agreed to give him the honour of being the first to challenge, as that is a point we care nothing about. We declined absolutely to meet him on any other than a perfectly equal footing as regards the fish to be caught by each angler. Finally we said all we could to get him to arrange a trial on the river *now*; and not put it off to next year. We print his reply, received within a few minutes of going to press, and will only say that if we can possibly arrange it we will accept his own conditions, so that there may be no reason for putting off the match. Any fly fishing reader of Mr. Balderston's letter must agree with us that the chance of fishing in his company and seeing a display of the skill he mentions will be worth giving almost anything for. If we can arrange to get away from town a fortnight earlier than we intended we will have much pleasure in fishing a private match with Mr. Balderston. Perhaps a personal acquaintance may convince Mr. B. we do not intentionally act "unfairly."—Ed.]

Armorial Cottage,
Skell Bank,
Ripon, Aug. 24, 1882.

R. B. Marston, Esq.

Dear Sir,—In reply to your questions, I must answer to the following effect:

(1) That I have not time for arranging a match in my present vacation, and that as there is no trout fishing at Christmas, I could not meet you before Easter, as stated in my last reply.

(2) That I cannot agree to any restrictions as to size, which do not admit the capture of trout, 6 inches long, the first size admitted assizeable in my own notes.

(3) That as in most burns the majority of the fish fall below the measurement you name, and that as in many of these the trout are more wary than fish of the southern and larger streams—thirty times the size; and since in this case it is as great a feat to hook a trout 1½ oz. as one of your 3 lb. trout, you desire to handicap the finest hair tackle to the extent of about 80 to 90 per. cent. in the case of the usual class of mountain streams.

(4) That as the question relative to the merits of hair concerned all streams in which the fish did not exceed 1½ lb., and averaged less than 1 lb., I could not allow that the ordinary mountain burn should be excluded altogether from the test—a day or two would be needed in such waters.

(5) That the contest be limited to open hard fished waters, where the fish are wary, and not very numerous, or at least reach only to such preserved streams as owing to the low subscription are practically open to all comers; for heavy baskets in well protected waters are no tests of tackle; waters which elicit a display of little that emanates from a master of the art.

(6) That you name the 20th September to October 1st as a time when we could meet, but I must state that if we were to meet now, I could not do so after September 9th, and in this case the engagement would have to take the form of a private expedition and not a public contest, for which, as I have already shown, I cannot make arrangements before next Easter.

(7) That the fishing shall always be in each other's presence.

(8) That under the foregoing conditions I can meet you privately at once, and, according to the terms of the previous statement, at the time mentioned therein.—I am, &c., Robert Balderston.

P.S.—(9) That the total result of the whole fishing of both opponents, with one kind of tackle be compared with that taken by the other, and that this shall decide the issue if both use hair and gut.

SILK AND HAIR LINES, HAIR CASTS, &c.

(See foot-note before reading this letter.)

Sir,—I am afraid the lure which I threw to "The Logger-headed Chub" has proved to that fish a decidedly fell deception; for he certainly has quite misunderstood, either designedly or owing to some other mental caprice, my meaning. I must, however, make a passing comment relating to the insinuation, that the defence which I have advanced to protect anglers from error or imposture relating to piscatory facts, is "diabolical" in nature. "The Logger-headed Chub" appears to view Herne as simply an incarnation of the foul fiend; but I would advise that sceptical fish—for whom A.R.I.E.L. should throw a palatable frog or toad—to read the legend of my hunterself, that he may become aware of the causes which formerly, as now, conduce to my assumption of the antlered helm. Ho! ho! ho! Will you throw a line to catch a fish with Herne? Take a shot at my antlered brow and listen to the rattle of the rebounding bullets. Ha! ha! ha! Ho! ho! ho!

But to the letter. My fishy opponent evidently desires to make the readers of the Fishing Gazette believe that I took up a position, which I never for a moment attempted to maintain. I wrote very favourably in relation to the finest drawn gut, insomuch that I said this substance is at times nearly, if not quite, as good as hair; and that remark had a general and not a special signification. Throughout the world the bulk of trout average far less than 1 lb.; I was not simply alluding to seven southern waters, I was writing of ninety-nine out of a hundred; the facts I stated are true, hair casts are, when the sun is bright and the water low, incomparably superior to the finest drawn gut, provided they have sufficient strength for the fish that have to be caught, and are not too greasy. When I have fished for trout in the Kennett, Thames, Lakes and other waters where the fish are large, or when the wind has had too much pressure on the rod, I have constantly employed the finest drawn gut; not because of its being nearly as good for hooking the fish, but merely in order to avail myself of a stronger material. In waters where few fish are caught above 1½ lb., and of such does the bulk of the streams throughout the world consist, I frequently, though by no means generally, use the finest drawn gut casts that are to be obtained for money, provided the fish are not shy whilst the water is fairly full and the sky overcast; but with conditions the reverse, hair is the "dernier ressort," is absolutely essential for my demands. You, Mr. Editor, and Mr. Francis both visited the Dove last year; and owing, some authorities say, to improper flies, others to improper tackle, your joint takes were not as large as they might have been, as were those of other anglers. You, Mr. Editor, frankly and like a true follower of Cotton, acknowledged the fact, but Mr. Francis is merciless on gut casts; it would be no use advising him to employ hair, in fact its adoption on his part would be downright folly; but here again I must give Mr. Francis his due, for like an honest man he owns to his fault in this respect, as a true fly-fisher of great experience, who also is an advocate of the hair and silk line.

"The Logger-headed Chub" is not satisfied with two examples of what may be done with hair tackle, though I could write a volume full of actual facts for his benefit. I did not wish to encroach too much on your space, Mr. Editor; but I must say that it would be a profitable enterprise on the part of Messrs. Sampson Low, Marston, Searle and Rivington, were they to publish "The Logbook and Diary of Herne the Hunter" verbatim, for the perusal of such sceptical individuals as my opponent of fishy personality. It is needless to add that though I do not advocate hair for trout above 1½ lb., it is unnecessary for me to fill your columns with facts from my diaries when some northern fly-fishers have had skill sufficient to fish for salmon with hair casts. Where are your southern anglers with their gut and 3 lb. or 4 lb. trout, for a description of whom I refer the readers of The Fishing Gazette to a late number of the *Sportsman?* There is no doubt that for large trout hair would surpass gut, had the angler skill sufficient for landing his fish.

The only other remarks of your correspondent, Mr. Editor, which are aimed at me, have to do with assertions relating to the possibility of catching an abundance of large trout with drawn gut. Now, it happens that I never breathed a doubt as to such a feat being impossible; my remarks were only comparative. I merely demonstrated that, where hair is sufficiently strong for its work, it will catch more fish. No allusion was made by me to any special department of fly-fishing, such as dry fly casting. The facts brought forward were general as applied to a master of the art, and not to the advocate of a single style, who has not even proved his case, except in relation to strength, a point that had already been granted. I certainly would not advise an angler, who, in playing his fish, breaks five drawn gut casts in two days, to use hair. If such a wielder of a flail be "second to none," I had rather be styled a pretender than be designated such a king of the art, whilst adding—

"Who that pretender is, and who that king;
God bless us all is quite another thing."

And now, sir, in relation to your own editorial remark, I would most sincerely like to tackle some of your big trout in your company with drawn gut, and even if I were limited to hair—though I then should have to use somewhat stouter material than I now do for fish of the size named—I fear you would have to lower your laurels to the son of the most redoubtable fly-fisher in the world. I will not lower mine to any man's *ipse dixit*, I will only lower my antlers to rebut, until such time as my assailant shall prove by the water's side who is, in a piscatory way, of the line royal. Can you bring to the earth my royals? But you mention hair and gut, and in relation to this matter I must remark that your allusion to the tackle I use is, in my opinion, exceedingly unfair. As you have never seen my rods and tackle, as you have only had sent to you a dozen casts of gut and hair to show the kinds of flies I employed, the mode of attaching droppers, and the way in which I was in the habit of making up casts of different material, colour, and thickness; and as these casts were sent to you at your special request about two years and four months ago, when it was not the fly-fishing season, when I was amongst the mountains, where exquisitely fine tackle was not required, when I reduce my own gut by means of a gut drawer if necessary, and when one might naturally be expected to be sparingly supplied with the finest casts both of hair and gut, which generally are worn out during a busy season. I think you should not have so strongly expressed your opinion in relation to the thickness of the material which I use, which, had it been in the case mentioned only one half thicker than your own, would even then have killed more fish than gut. I can simply say there was only one fine hair cast in the number, and that if you could fish with it on a Derbyshire stream, you would have loved the Dove much more dearly, whilst at the same time I have just obtained from a friend a sample of Cummin's finest-of-all fine drawn gut, and compared it with my own obtained from Hutchinson's, and I find that some of the latter is much thinner, and what is more, rounder than the former. Thinner drawn gut is not practicable, for mine is so fine that it will not stand more than one, or at the most, two days' of good fishing. Besides this, I have compared the hair I use for very untoward conditions of water, and I find that the thickest hairs of the tail are just of the same thickness as the foregoing gut, whilst the rest are much finer, and consequently less heavy both in specific gravity and bulk.

Lastly, there is the insinuation as to selfishness; can I believe my eyes? Mr. Editor, what! Is it you, my friend, who are writing? Et tu, Brute! One feels goaded to down with the antlered helm and gore the offender. but this time the assassin blow glances away and leaves him scatheless, who has yet to meet the man that can claim a better right, as heir to his father's matchless cunning.

Will you meet, my wizard might,
Will you prove to all who's right,
By mountain beck and bustling burn,
Yourself, fair sir, or Hunter Herne?
Ha! ha! ha! ho! ho! ho!

Yours, &c., Herne the Hunter.

[This letter had, on account of its length, from want of space, been held over so long that we thought it had appeared. "Herne the Hunter" must surely see that we did not insinuate selfishness on his part. Mr. Francis Francis averaged over eight brace a day, and no fish under 11 inches, on the Wye, a fortnight later than we fished the Dove. In fact, we stated that we were just too late for the best of the trouting, and too soon for the best of the grayling fishing, and we are convinced we should have done much less than we did if we had used hair. "Herne the Hunter" must acknowledge that we have never put the question of whether gut or hair is best on the footing he suggests. We do not say that one angler using hair may not kill ten times as many fish as one using gut, but that if the more expert angler also used the fine drawn gut we recommend he would kill a still larger proportion of fish. However, in a few days' time we hope to meet him for a friendly match, gut against hair.—Ed.]

HAIR AND GUT AND STRIKING FROM THE WINCH.

Sir,—I see you are holding a controversy anent the relative merits of hair *v.* gut, the length of a cast, and also in striking from the reel. Now, I reckon to know a little about most of those questions, and I am certainly with you in your opinions. Hair, perhaps, might have been better than gut in those days of yore when gut was only made thick or thin enough to kill the heaviest salmon that ever leapt the weirs; but lately gut has been introduced to the public that is much finer than hair. I have some fine drawn gut, 18 inches in length, and nearly as fine as the human hair, and much finer than the finest hair in my possession. Hair is hollow and elastic. When a few fish have been landed the hair becomes stretched to its utmost tension, and the next heavy fish you hook breaks the hair. On reference to my note-book, I find that when I used hair I could not do any better than I do now in using the very fine drawn gut under precisely similar circumstances—I allude to roach fishing. About a fortnight ago I killed in two days ninety-two roach, many of them very good ones, and I landed the whole of them with one of these very fine gut tackles and one hook, without a single breakage. Careful practice tells me that gut is the best, if you get it very fine drawn. I have tried my light, single-handed dace rod (fly), and I find that on the grass I can and have thrown 25 yards, measured from reel to fly, and we have a fly fisherman here who can beat me easily.

Have you ever seen a Nottingham centre pin reel, with a strong double action ratchet check in it? Now it is the correct tip to strike a fish from these reels without holding the line tight to the rod. One of our best fly-fishers found this dodge out by accident about two years ago. He found that the check in the reel was plenty strong enough to hook a chub in fly-fishing with double-handed rod and 4½-inch reel, as described. He says he very rarely misses a chub with that plan. I have with mine struck at a chub, and the force of the stroke only allowed the reel to revolve some 2 inches. I have, when picking up my line off the water in order to make a fresh cast, made it without the reel revolving at all. And, now, in using these reels we very seldom take hold of the line, but strike from them. There is a little brass pin at the side of these reels, and after the fish is hooked we just shift it a quarter of an inch and the check is taken off, and the reel revolves very rapidly. One thing is certain with these reels, we can hook a chub neater and cleaner, and not miss so many as when we used to strike from point of rod with line held tight. It does seem very singular, but such is the fact. Perhaps the strong ratchet check in the reel will partly account for this. These reels cost 15s. 6d. each—rather expensive.

If you like, and you can spare me half a column in your correspondence, I will write a letter on these very vexed questions, and give you my opinion from actual careful experience on the matter, and perhaps that will strengthen your argument a little, for I am decidedly of opinion you are in the right and Mr. Balderston is wrong this time.—I am, &c., THE TRENT OTTER.

"WHO IS THE FATHER?"

SIR,—Permit me to say that I had no conversation or agreement with Mr. Ghurney, or any member of his committee, previous to bringing the subject of an Anglers' Benevolent before the committee of the West Central Association. When I had explained my idea, and it had been discussed by our committee, Mr. Ghurney was invited to bring it before his committee, with a view of its being open to East and West End clubs alike. This invitation he accepted.

I now invite Mr. Ghurney to produce a single line or word from among the numerous letters which I have written him on this subject, or witness to any conversation or agreement in justification of such a statement, as, "Mr. Geen and myself had a conversation on the subject when we agreed to bring the question before our respective associations."

I have since learnt that an attempt was made by Mr. Ghurney to start a benevolent in 1875. I also know that the Good Intent and the North Western Angling Societies have Benevolent Funds, but that is not the question that concerns me here. I care not a rush "Who is the Father," but I do care to clear myself from the charge of an attempt to filch credit from Mr. Ghurney.

That I, and I alone, was responsible for the starting of the present Anglers' Benevolent Society cannot truthfully be denied.—I am, &c.,

PHILIP GEEN.

Lowther Lodge, Barnes.

AN INVOCATION TO A.R.I.E.L.

SIR,—Many months ago your graceful correspondent, A.R.I.E.L., promised particulars of his fly-fishing spinning tackle, and his mode of using it after a little further experience of its merits. I hope he will think its merits sufficiently tested by the 6 lb. 7 oz. trout, and the six weighing 20 lbs. killed by him with it recently. If so, Mr. Editor, would you "bid your faithful Ariel fly" a little for us in your next number, and he "will discourse" to our great delight.—I am, &c. A CONSTANT SUBSCRIBER.

Bradford, August 18.

[Come, A.R.I.E.L., you are fairly challenged again.—ED.]

A TWELVE POUND TROUT.

SIR,—In perusing the correspondence in the FISHING GAZETTE I notice that C. E. Holford notifies that a large trout (over 9 lb.) has been caught in the New River at Ware. On the 11th August G. H. Stevens, Esq., of Barnes, caught and landed, after an hour and a half's play, a trout going over 12 lb. This was taken ledgering with a lob-worm at Wraysbury.—I am, &c.,

TROUT.

WILL TROUT SWALLOW FROGS?

SIR,—A friend has just seen a trout swallowing a frog? Is this unusual? I have asked him to send me a note of the circumstance for you.—I am, &c.,

F. G. HEATH.

[We think it is rather unusual, as frogs are never used in trout fishing, at least as far as we know. Chub will take a young frog with as much relish as an alderman will an oyster. When hungry, trout will dash at anything that looks like a possible bit of dinner.—ED.]

FISHING NEAR WHITBY AND SCARBOROUGH.

SIR,—Would you or your correspondents kindly give me some information as to the fly-fishing in the neighbourhood of Whitby and Scarborough, and also whether the sea-fishing is good. Any information as to flies, tackle, &c., would be exceedingly welcome,—I am, &c., J. A. HUTTON.

[We have, in last week's number, described the fishing near Scarborough for trout, &c. There is good sea fishing in late autumn. The fishing in the Esk, above Whitby, is fairly good, trout and salmon.—ED.]

DE OMNIBUS REBUS.

SIR; —Your exhaustive review of the "Scientific Angler" does not say one word too much in its favour, for, although I have read almost every angling work of note that has been issued during the past twenty years (and they are not a few), I do not know anyone that has given me so much pleasure as the one in question. The portion of the book that I am most delighted with is the chapter on "Piscatorial Entomology" and the "Notes on the Months." Anyone after carefully reading them cannot fail but be impressed with the immense amount of knowledge that the author had acquired by his minute observations and keen research into the insect world. Mr. Francis is the only author that I am aware of who previously has drawn attention to the great importance of having a good supply of all the shades of the various duns and their imagos the spinners, and by similar experiments to those of Mr. Foster, although not so complete as his have been. I have long since come to the conclusion that many flies which other writers have called by distinct names are really only different shades of the same fly, and Mr. Francis gives proof of this on page 198, 4th edition of his valuable work in which he points out that "ephemera" in his list of flies for March, reproduces the "blue dun" under four different names. It is a great pity that Mr. Foster did not publish the result of his labours during his lifetime, so as to have received the congratulations of anglers, and especially fly fishers, of every class; but it is a source of gratification to know that his family are reaping the benefit of it.

I should agree with you that the fly mentioned by Mr. Alison in last week's FISHING GAZETTE is the "barm fly." Mr. Francis speaks very highly of it as an evening fly. Jackson gives the following dressing for it: Wings, feather from outside of a brown owl's wing; body, orange and ginger-coloured silk; legs, ginger hackle. He also gives as the dressing for the grey grannom that is quoted by Mr. Sang. Mr. Francis adds that on the Colne it is known under the local name of the "nobbler," which is at least a very suggestive title.

My friend, Mr. T. Ford, a few weeks ago drew attention to the fact that it is almost impossible to get a bright yellow silk for tying flies which will retain its colour for any length of time after being wet. I have repeatedly noticed this, and as that colour enters into the composition of a great many useful flies, anyone who can invent a new dye to meet the difficulty would confer a great benefit on the craft.

Lastly, reverting once more to the vexed question of single hair versus gut; since my letter on the subject some weeks ago I have given the latter a fair trial. I procured a really splendid sample from Mr. Cummins, of Bishop Auckland, each length sixteen inches, and exceedingly fine. I followed Mr. Marston's advice with regard to the striking from the winch, and must admit that for trouting it is certainly superior to hair. I tried them one against the other for the sake of comparison, and found that the fish did rise more freely to the drawn gut cast; I still adhere, however, to my own opinion that hair is the best for grayling fishing, as one grayling weighing nearly 1¼ lb., which I caught late one evening, so ravelled and twisted my gut cast as to render it wholly unfit for further use, although I had previously killed eight trout on it without the least damage. I sincerely hope that Mr. Balderston will accept Mr. Marston's friendly challenge, as I consider that the result would be of great interest to all fly fishers. For my own part I am always open to conviction, and consequently I have made the above statement. I may add that Mr. Cummins declares in favour of drawn gut, where the fish are of any size, but I do not know what his opinion is respecting grayling fishing, perhaps he will be glad enough to tell us; the opinion of such a practical man as he undoubtedly is ought to be worth something. Trusting that you will pardon me for occupying so much of your valuable space,—I am, etc. FRANCIS M. WALBRAN.

Pool, Wharfedale.

ANGLING PILLS.

SIR,—I see in your last issue a quotation from Mr. Francis' "Book on Angling," which runs thus: "There is no plan so absurd, so literally destructive of sport, as that pursued by the majority of Thames fishermen, with their huge piles of clay, bran, gentles, greaves, &c., &c." My belief is in many cases they know the absurdity of it just as well as Mr. Francis, if they do not, the persistent manner in which they follow this absurd custom shows a degree of ignorance truly deplorable. As usual, there are two sides to the question: there are some "customers" who insist upon excessive ground baiting, and whilst the gent, who may be a "casual" customer, thinks he is doing a very clever thing, the fisherman knows perfectly well the casual is only preparing the swim very nicely for a "regular," who is coming down in two or three days time.

I have no wish to say one word against Thames fishermen as a body, they have a good deal to put up with of which the general public are not aware; but still it is a most extraordinary fact that on one occasion more especially I recollect perfectly well going out with two friends with a Mr. C.

Mr. C. was evidently a knowing customer. He had three zinc pails (I like to be particular) full of the celebrated mixture. If you have ever seen a countryman mix up boiled potatoes and bran for his pigs, it will give you some idea of the process necessary to be gone through to get the bait to the proper consistency.

After mixing up about twenty or thirty balls, about as large as a cricket ball, he took us to a splendid hole; it was in November. Now every angler must know, and if he does not, it is about time he did, that as winter gradually approaches, the fish require less and less ground bait, until in the very cold weather they require very little indeed, and this applies more especially to all mixtures, therefore in the winter months I should say never mix. If you fish with paste, throw in a little bread; if you fish with liver gentles, throw in a few carrion ditto; if you fish with pith, throw in a little brains; if with barley, throw in a little rice, and so on.

This hole had been well baited overnight, at least so he said; in spite of this, directly he had fixed the punt he began dropping in the balls, or, as he called them, "C———'s pills." In less than three hours he emptied two of the pails, and the result was two little roach. I ventured to observe, "Your pills don't seem to have the desired effect," and the answer was ready in a moment. "Oh, this hole is not deep enough for the time of year; we must remove into deeper water."

Now, Mr. Editor, if a well-known place called the deeps, in contradistinction to all the rest of the water for miles and miles, is not deep, then I should like to know what is.

However, we removed to another hole, and quite two-thirds of the remaining mixture was dropped into it, with nearly the same result as before. "Now," said this artful gentleman, "I will take you to a place where I am sure we shall catch some. I was waiting for this." We had just got about two hours more to fish, and we struck across the river into a very still place under some willow trees. I had got the needle, and said, "We will not have any pills thrown into this place." "Eh! what," observed Mr. C., thunderstruck. I said, "No pills here, if you please." "Excuse me, sir, you will get no fish here without my pills." "Then," I said, "we will keep up the charter and go without."

I never saw a man more miserable in all my life. They generally are when you won't let them have their own little way. After a little judicious baiting with some carrion gentles he had in an old pan, they began to bite beautifully, and the result was we took between two and three dozen really good roach in prime condition, and a few good dace, all with gentles.

What I went to know is, supposing he had persisted in pitching in his pills would our success have been as good? I have no hesitation in saying it would not. In conclusion, perhaps our good friend Mr. C., if he sees this, will say we know nothing about it; in reply, I can only say—that is a matter of opinion.—I am, &c., MARK ANTONY.

[It is the abuse, and not the use of ground bait that is wrong.—ED.]

ARE EELS TO "WEIGH IN?"

SIR,—There has been a competition on the Medway for three prizes, the first for largest weight of all fish, excepting pike, second for largest weight of pike, third for the heaviest specimen fish other than pike.

Now, one member claims the first and third prizes, the third prize he claims to have won with an eel. The first prize he wins anyhow, independently of the eel, but the eel was the largest fish weighed in other than pike.

Some of our members contend that an eel is not allowed to be weighed in, but we have no rule to that effect; on the other hand, in the schedule of our measurements the eel is not mentioned at all.

The society has determined to decide this by vote, but, before voting, would like to have the opinion of your journal upon the subject, and be guided by that opinion in all future competitions.—I am, &c.,

DAVID W. PINE, Hon. Sec.

[As far as we aware, although fully appreciated as a dainty table fish, the eel never figures amongst the fish which are allowed to be weighed in at angling clubs; doubtless the fact that it may be so easily "caught" alive in any fishmonger's shop has something to do with its exclusion from taking prizes. In the case of the above club it was evidently never intended by the gentlemen who drew up the rules that the eel should "weigh in" with other fish for prizes, or they would have included it in the list; and we think they have the general body of anglers with them in excluding this fish from the scales (not because it is scaleless itself, as that is not the case, though nine anglers out of ten think so. For our own part, we have considerable respect for *anguilla*, whether at the end of a fine line or in a pie —ED]

WASP GRUBS.

SIR,—Can any of your numerous readers inform me if the above are a killing bait used during winter months for roach, perch, &c.? It so, how are they best preserved?—I am, &c.,

W. J. M.

[It is curious that in our issue for October 15 last year, Mr. J. H Keene gave a recipe for preserving wasp grubs as being better than whiskey, recommended by another correspondent signing himself J. W. M. Mr. Keene said: "Take the fullest grown and whitest from the comb, and, putting them on a colander, pour boiling water gently over from a kettle. Then drop them in a basin of bran and toss them about till quite dry. Now make a syrup of sugar, or treacle will do quite as well, and drop them into it. They will keep almost as long as you like, and come out hard and as sweet as candy." Wasp grubs are a splendid bait for almost all fish.—ED]

A DOVE PIKE.

SIR,—A young hand fishing for roach in the River Dove hooked one about ¼ lb., he was just going to land it when a sudden swirl and snap, and behold a monster from the depths, seizes his fish and goes below with the complete line. After ten minutes' interval he rigs up another line and catches another roach, which he, hastily changing his hook, &c, puts on a gimp one, and sinks the bait as before, where the monster came from. Soon after the bait is seized, and, after a struggle, the fisherman is left minus another float, &c., and six yards of line. He tries now again for roach, but none are biting, so he leaves the spot for two hours, and after catching some chub and perch, an idea seizes him of putting up two gimp hooks tied together with a strong piece of twine he has with him. Succeeding in doing this, he goes to the spot, pops on a bait, and after an interval the pike takes it, and is fairly hooked He calls for assistance, and some people being near they try to haul it in. After about ten minutes' trial off goes the pike again, with landing net, hooks, and part of line So he left for the night, estimating the fish to weigh from 12 lb. to 15 lb. The next night he returns with more experienced hand, armed with stouter tackle, &c., and shows him the place where the monster was. After a little while the bait is collared and the hooks driven home safe; and after great excitement for fully twenty minutes, the prize is landed on the grass. When it was weighed it scaled 17½ lb., and was in splendid condition. When cleaned it was found to have three hooks in its mouth and two rats and several fish in its inside.—I am, &c.,

Oxford. M.

THE KEMPTON ESTATE FISHERY.

SIR,—While at Kempton Estate Fishery, on Wednesday last, I heard with surprise and regret, on very good authority, that the keeper in the service of the Race Course Company is in the habit of shooting pike, &c., in that portion of water that flows through their estate. By publication this may come to the knowledge of some one who has a voice or influence to suppress such a mean, despicable way of killing fish, for as long as it continues the owners of the water at first referred to cannot expect to have many fish in their portion.—I am, &c.,

THOS. POOLE.

Covent Garden Market, W C., 21st August.

FISHING NEAR CHICHESTER.

SIR,—Will you or some of your correspondents kindly answer the following questions for me?

(1) Is there any fishing of any account on the Chichester Canal nearer Littlehampton than Chichester? If the answer is in the affirmative, I should like to know the stations and likely spots.

(2) What is the distance from Chichester Station to the canal, and is the fishing free?

(3) Is there any bank fishing to be had on the *rivers* near Yarmouth or Lowestoft? If there is, what rivers and parts are the best? I can understand that boats are a necessity on the broads, but I should like to know whether they are also a necessity on the rivers I have looked through Mr. Dane's book, and also the reprints from the *Norwich Argus*, but do not find any reference to the point.—I am. &c., LEX.

[There is fair coarse fishing near Chichester, we believe; but, doubtless, our river reporter there will answer this query. There is *very little* bank fishing to be had on the Norfolk rivers and broads, the reason being that, except at the landing places and near them, the sides are fringed with tall reeds; but even if the reeds were not there, as a rule, there is a belt of reeds between the edge and the channel, and the angler can rarely get at a swim from the bank But on the Yare the charge for boats is only one shilling per day. Lex will find if he rows through Oulton Broad, and up the dyke, that on the right bank there are often many bank anglers; but, as a rule, they are pic-nic parties, who do not care much what they catch.—ED]

FISHING NEAR BEDDINGTON.

SIR,—Could you inform me whether any jack, perch, or trout, &c., fishing is to be had within the vicinity of Beddington (Surrey)?—I am, &c.,

Maida Vale. A. P.

[The only fishing we know is for trout, and that is strictly preserved. At Mr. McRae's place at Mitcham there is some jack, perch, and roach fishing in the millhead above the flour mill and near the tanyard, but we are not sure that leave is given to strangers—we think not. There is fishing to be had in the lake at Cavan Villa, Whitehorse Road, Croydon, we understand, but have not tried it personally. Perhaps some reader who is acquainted with these parts will kindly give information.—ED.]

COARSE FISH CULTURE.

SIR,—Having a good place for breeding fish, I have looked very anxiously in your GAZETTE for your article on "The Propagation of Coarse Fish." Please inform me where I can obtain the article—I am, &c.,

Middleton, near Manchester, Aug. 5, 1882. B. F. CROMPTON.

[It appeared in our Tourist Number on Aug. 5.—ED.]

ROD LOST AT DATCHET.

SIR,—On Sunday, August 6th, waiting for the quarter to nine train to London, I left my rod on the platform, or may have dropped it in getting into the train. As some one may have found it, would they kindly write to the address below.—I am, &c.,

H. S. HAYES.

13, Malvern Terrace, Carlton Road, Kilburn, N.W.

CATCHING A COLT.

SIR,—Thinking the following might amuse some of your readers versed in matters piscatorial, especially those fond of the comic, I send you the following, for the truth of which I can vouch:—A friend of mine the other day, while trying for trout in one of the moor streams, between Launceston and Bodmin, with a fly—a man who is considered a good hand at the sport—unexpectedly hooked a colt by the mane. The colt had walked up behind him without his observation, and my friend, never having had any previous practice at playing so extraordinary a fish, failed to bring him to creel; but instead thereof had the poor consolation of walking home some five or six miles with a broken rod and minus his cast and the greater part of his line, which, from his description of the affair, was more galling to him than the being unable to basket and carry home so weighty a capture.—I am, &c.,

C. B.

DESTRUCTION OF FISH IN THE LEA.

SIR,—I read in the *Morning Standard* of the 18th inst., a letter from Mr. Pope, engineer of the Tottenham Sewage Works, in reply to a statement attributing the quantity of dead fish found in the River Lea, near Tottenham, to the influence of the outfall from the Sewage Works into the river, and in which letter Mr. Pope argued that it could not arise from their works, as at the outfall into the river fish abounded, and there were always from twenty to fifty anglers there stationed. Will you allow me to point out to Mr. Pope, through your columns, that it does not follow, because from the attraction of an extra amount of impure food at a given place fish there preponderate, that therefore these fish are in a natural healthy condition, but rather the contrary; fish will live and thrive in a certain way, apparently, both on proper and improper food, but in the one case they will live a natural life, in the other a forced and unnatural one; and, in the latter case, where the amount of the impure and unnatural food at any time superabounds, the fish will die; this I have no doubt whatever has been so in the River Lea. The impurity of the food arises from the sewage matter, which flows into the river from the Sewage Works this matter produces what are by anglers called "blood worms," a minute red worm, scarcely thicker than a thread, and about half-an-inch in length. When pressed, this worm exudes blood, but not *pure* blood. On this worm fish feed ravenously, but nevertheless, arising from impurity, it is an impure food, and the fish gorging on this delicate morsel in the black mud at the bottom of the river, take in with it a certain amount of sewage matter, and I have been well assured that the fish both roach and dace, which certainly assemble in large numbers in the vicinity of this delicious spot are utterly unfit for human food, as they are found to turn perfectly rotten in the course of a few hours, and contain a large amount of black stinking matter. In my school days, now some twenty five years ago, we used to get "blood worms" from the stagnant ditches, near Tottenham, and fish with them for gudgeon on the gravelly bottom of what was then a clear and pleasant stream all the way from Tottenham to beyond Lea Bridge, but, sir, mark the difference. We then got blood worms to take fish in *pure* water. *Now* the fish feed on them as the food of the river itself in the contaminated mud. Surely, some means could be adopted to prevent the sewage water, which settles and leaves sewage matter, being carried into the river at all; until this is done a great part of one of our finest streams will still remain little better than a sewer.—I am, &c., AN OLD ANGLER.

Canonbury, Aug. 22, 1882.

THE DESTRUCTION ARMY ON THE THAMES.

WITH the exception of the last paragraph the following account from the *City Press* will be read with anything but pleasure by Thames anglers:—"The annual 'swan upping' of the Vintners' Company took place last week, when the young cygnets, our royal birds, which form so grand an addition to the charms of the Thames, claimed the attention of Her Majesty's swan marker and the swan markers of the Vintners and Dyers' companies. As showing the importance attached to the operation of swan marking, it is a curious fact that the law regards the theft of a marked swan as a felony, whilst stealing an unmarked swan is simply treated as a misdemeanour. The process of swan marking has in recent years been considerably modified, and little, if any, pain attends the operation. Starting from London Bridge on the Monday, the swan uppers (or markers) completed their first day's marking at Ditton, having travelled over twenty miles, but finding in all only thirty-one birds. Between Ditton and Staines (a distance of about sixteen miles) ninety-five birds were caught, forty-two of them being young ones, thirty-four, however, of which fell to the Queen's marker. The third day enabled Bray to be reached, eighty-seven birds being marked *en route*, thirty-six of which were young ones. The distance traversed was about twelve miles. Between Bray and Henley, the last day's field of operation, and which covers an area of seventeen miles, 204 birds were caught, 150 of which also fell to the Queen's marker. The result of this year's marking was that over a distance of sixty-five miles, 417 swans were actually taken, the numbers being made up as follows:—The Queen's, 207 old birds and ninety-two young ones; the Vintners', forty-four old birds and sixteen young ones; the Dyers', forty old birds and eighteen young ones. Considerable losses were sustained during the past winter, owing to the floods and otherwise, and a large number of birds are to be found below bridge, particularly in some of the dock basins."

THE UNITED STATES AND THE LONDON INTERNATIONAL FISHERIES EXHIBITION.

CONGRESS having accepted the invitation of the Government of Great Britain to participate in the great International Fisheries Exhibition, to be held at London, in May, 1883, the Commissioner of Fish and Fisheries has been instructed to prepare, under the auspices of the Department of State, a complete and systematic exhibit representative of the fisheries of the United States.

Preparations for the exhibition are already in progress, and there is no reason why it will not be possible during the nine mouths which remain before the opening of the exhibition to provide for a display which shall do great credit to the extensive fishery industries of this country. In order to accomplish this result it will be necessary to secure the co-operation and aid of all persons interested in fishing, fish-culture, the fisheries, and the related industries. I cordially invite correspondence, therefore, from any persons having articles suitable for exhibition, or willing to suggest plans by which the display of the United States may be rendered more effective.

Two classes of articles will be carried to London for exhibition, viz.:

First—Those which make up the "collective exhibit of the United States;" and

Second—Those which are entered for competition.

In the collective exhibit will be shown, in a systematic and synoptical manner, illustrations of our marine and fresh-water animals of economic value, together with the apparatus and methods of their capture and utilisation, and the commercial, scientific, social, historical, and legislative aspect of the fisheries. It will include the most striking features of similar exhibits made by the Fish Commission in the Philadelphia Exhibition of 1876, and the International Fishery Exhibition at Berlin in 1880, together with many additional ones never previously attempted. The major part of this display will be borrowed from the collections of the National Museum in Washington, but it will be necessary to secure a considerable number of new objects. I wish to reserve the right of placing in this department such of the private exhibits as can there be shown to the best advantage, it being understood that these are not to be excluded from competition, When objects are purchased to fill gaps in this exhibit, it will be with the definite understanding that they cannot enter into competition, and the name of the person from whom they were obtained will not be mentioned on the labels or in the catalogue.

It is considered especially desirable that the department of competitive exhibits shall contain a very complete representation of the various food preparations of fish—canned, dried, pickled, smoked, etc.—there being a constantly increasing demand in England for goods of this description, shipments to that country amounting, in 1881, to more than 2,000,000 dollars, in addition to the very large exports to other parts of Europe and to the European colonies in the East. Manufacturers of boats and boat-fittings, angling apparatus and costumes, and other similar articles, are also urged to contribute. Medals in gold, silver, bronze, and diplomas of honour will be awarded by a jury of experts.

I am prepared to act, both in this country and London, as the representative of individual exhibitors, and to attend to correspondence relating to applications for space, etc. Goods to be exhibited, if delivered in Washington, Philadelphia, or New York, will be carried to London and installed at the expense of the government; special arrangements may be made for the return of articles at the close of the exhibition.

Prospectuses, blank application forms, blank "lists of exhibits proposed to be shown," and any information desired will be furnished on application. Applications for space for competitive displays should be made before the 1st of September, 1882.

The exhibition, which is under the patronage of the Queen of England and the presidency of the Prince of Wales, will be opened on the 1st May, 1883, in buildings now being erected in the Horticultural Gardens at South Kensington, and will continue for a period of six months

SPENCER F. BAIRD,
U. S. Commissioner of Fish and Fisheries.

U.S. Commission Fish and Fisheries, Smithsonian Institution, Washington, July 20, 1882.

IMPORTANT ALTERATION IN THE CHARGES FOR THE CONVEYANCE OF SMALL PARCELS BY PASSENGER TRAIN.—The London and North Western and the Midland Railway Companies have sent us prospectuses of their new scale of charges for parcels. This arrangement will be an immense boon to the public, as it is now possible to send a 1 lb. parcel up to 50 miles for 4d., and up to 400 miles for 6d. and at reduced rates per lb. for heavier parcels.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

JAMES OGDEN, 28, Winchcomb Street, Cheltenham

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. RICHMOND, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch; Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for " season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

SATURDAY, SEPTEMBER 2, 1882.

SEA FISHING AT WEYMOUTH.

In obedience to a mandate from the *Mater*, who insisted that the children required a change, I made arrangements to spend a week during the month of June last at this pleasant watering place. Although I thoroughly enjoy a sojourn by the seaside,, promenading up and down an esplanade, listening to the band, &c., is not my form ; so I had no sooner got my belongings settled in comfortable quarters than I was on the beach making enquiry as to the fishing to be obtained in the neighbourhood. I had, during my journey by rail, taken note of the pretty trout streams which we crossed in the neighbourhood of Dorchester, but I was informed that the fishing was strictly preserved, and that there was no chance of a stranger getting a day, so I made up my mind to go in for sea fishing only, for which I had come prepared with the requisite tackle. I had a chat with various boatmen as to the probabilities of sport, and from all I received the same discouraging reply "that the weather was too squally," but as I came with the determination to have fishing I engaged a boat, and the next morning at 10 o'clock we (that is my wife, eldest boy and self) were afloat. I had heard from a friend who had spent a month there during the preceding summer of wonderful sport with bass in the Fleet, which is a piece of water running up some miles between the Chisel Beach and the main land. Thither we decided to make our first attempt. The wife and boy quickly got our whiffling lines baited with ragworms, of which and live shrimps we had a plentiful supply. I also trailed a long line astern mine attached to a short jack rod. There was a stiffish breeze off shore, and we scudded along merrily across the bay until a squall struck the boat and nearly capsized her. The boatman assured us it was nothing to be alarmed about, as he knew what sail she would carry to a pound ; but that was cutting it a bit too fine for me as a landsman, and I insisted on his hauling down the mainsail. We ran on quite fast enough for fishing under the foresail and jib. When off the Nothe Fort we dropped anchor and tried ground fishing, but with no result. It is true I hooked a fish of some sort, apparently a heavy one, as, after playing it some time, when I was unable to bring it to the surface it fouled me round a rock, and our connection was immediately severed. It was probably a rock fish. We then weighed anchor and sailed slowly along the shore by Sandsfoot Castle to the railway bridge, a noted locality for both pollack and bass. We took four small pollack only. We then rowed up the Fleet, I substituting a small spoon for the ragworm. I hooked a fine bass, but it broke away when within a short distance of the boat. As it was getting on for four o'clock, and the sea air had created in each of us a longing for our dinner, we proceeded homewards. I was afterwards told by a resident of Weymouth, who makes bass fishing his particular hobby, that capital sport may be obtained in the Fleet during the months of July, August, and September, but that it was very fluky earlier in the season. The next evening we angled for sand smelts off the Backwater Bridge, and caught a rare lot of these toothsome little fish. There, too, in the months above-mentioned, at the flow of the tide good bass fishing may be had either with the fly, or spinning the india-rubber bait; and all the way up the harbour I was informed small flat fish and eels may be taken ground fishing. I did not go in for this, not caring much for it, but I saw some men returning from there with a lot of fine eels in their boat. Off the pier, too, small pollack and smelts may be caught. I noticed that each day three or four boats belonging to fishermen were anchored off the Nothe Fort ; assuming that the occupants must be getting something, thither I next proceeded. We did not anchor, but kept on rowing gently over the ground, the boys whiffling, whilst I, as usual, fished with a rod. The sea was very rough, nevertheless, in a short time, we caught half a dozen pollack, the largest upwards of 3 lb., and as I took it on fine tackle, it showed some sport before it was got aboard. One of the youngsters then succumbed to sea sickness, and we were compelled to return. The weather continued cold and squally during the remainder of our visit, and we had to give up all thought of fishing until the last day, when I determined, in spite of the weather, to make one more venture. I had been given to understand that at Portland Breakwater, sport of some sort could always be had ; if nothing else, you could make sure of plenty of pout, so with a good supply of bait we made an early start. We had a rough time getting there, but, when the lee-side of the Breakwater, the sea was fairly smooth and we anticipated making up for our former ill-luck ; but after fishing from 10 a.m. until four in the afternoon, when we did not get so much as a nibble, we gave it up. On putting in at Portland to refresh the inner man, before starting for our long, hard pull home, we were informed that early that morning the bay was visited by a shoal of porpoises, which accounted for our lack of sport. On our way back, by Sandsfoot Castle, I took two pollack with the india-rubber bait. In fact, all the fish I caught during the time I was there (except smelts) were with it. They are made by Messrs. Hearder of Plymouth, and can be obtained at all the tackle shops ; they are killing baits for both bass and pollack.

Although during my stay at Weymouth, sport was almost *nil*, I believe that with better weather and later in the season, good sport may be obtained at the places I have mentioned.

The charge for boat and man is 2s. an hour, or 10s. a day ; but if you are out two or three times a week with one man you can engage him on easier terms.

RED ANT.

FISHING NEAR CAMBRIDGE.

IT is with much pleasure we ask our roach and pike-angling readers to take careful note of the letter which appears in our columns this week from Dr. Cooper, the President of the Cambridge and Ely Angling Society. Dr. Cooper cordially invites anglers to join the society, which has twenty or thirty miles of splendid water under its control. The annual subscription being only 2s 6d. and 5s., which also confers railway privileges. We can personally endorse Dr. Cooper's remarks respecting Charlie South and the Littleport water. Littleport can be reached in two hours from Liverpool Street Station,

THE PRESIDENT OF THE CAMBRIDGE AND ELY ANGLING SOCIETY.

MR. JOHN WILLIAM COOPER, LL.D., Barrister-at-Law, the President of the Cambridge and Ely Angling Society, has been appointed a Magistrate for the Borough of Cambridge. The Rev. Dr. Porter, Master of St. Peter's College and the predecessor of Dr. Cooper as president of the same society, has also been placed in the Commission of the Peace. Dr. Cooper is an enthusiastic angler, and gets away roach or pike fishing whenever he can spare time, which is not often

AMERICAN OPINION OF THE BLACK BASS.

MR. MATHER, Editor of the New York *Forest and Stream*, kindly sends us the following letter :—

"DEAR MR. MARSTON,—I have yours of the 29th of July. Yes, I see that you are struggling with the bass question, and hope that you will succeed in getting them. If you could come over and go out with me, and take a few you would say as I do, 'Let them eat up all the fish except salmon, trout, and grayling if they will, for why should not a first-class fish replace inferior ones ?'

"I do not value the black bass as a table fish, but many do,—a mere question of individual taste ; but if you could have seen one of ¾ lb. fight me on a 10 oz. trout rod for ten minutes last week, you would have a high opinion of their staying powers. At one time it sulked, like a salmon, and as this is uncommon for them, I imagined it had taken a turn around the anchor line, and ordered my boatman to lift the anchor to see. Before he got it up, however, I had the fish started, and he then came up and waltzed around on his tail on the surface, and shook his head like a terrier when he has a rat. The black bass often leap from the water when hooked. If this fish should replace your pike even, it would be a gain, but the pike exist with them here, although the bass are most plentiful when the two are in the same waters. They eat fish, but do not confine themselves strictly to them as a diet, taking worms, insects, Mr. Silk should not come before September, as the bass are difficult to keep alive now ; a lot that I brought to the city last week and placed in an aquarium at Mr. Blackford's, Fulton Market, are mostly dead from heat. These fish would probably do well in the Thames, and after they became plentiful, your anglers for barbel, dace, and other cyprinoids would have a new revelation when a black bass struck their hook. They take the fly at seasons, and I would recommend them for all waters not inhabited by trout or grayling.—Cordially yours,

"FRED MATHER."

THE MUMMY OF AN EGYPTIAN KING TAXED AS DRIED FISH.

"PROFESSOR MARSPERRO is at present engaged in a systematic examination of all the Egyptian pyramids, and recently found in a pyramid near Sakhara, the mummy of King Merenera, which had already ages ago been pulled out of its coffin and plundered by robbers. Robbed of every bit of covering, the body lay on the floor like a log of dry wood. The valuable "find" was despatched by the Professor to Cairo, in order to be deposited in the museum there. On the arrival of the cart with the body at the bridge leading into Cairo, the driver was stopped by the custom's officer. When the royal body was "declared" as a mummy, the uneducated officer said he knew nothing about such things. Nor did the statement that the object was for the Cairo Museum have any better effect on him. In this difficult situation, it fortunately occurred to one of the men accompanying the body, that a large fish caught in Upper Egypt is often dried in the sun and then (much like a mummy in appearance) sent to various parts of the country. 'Do you not see,' said he to the custom officer, 'it is a dried fish from the Upper Nile ?' The officer looked up 'dried fish' in his Custom's book, weighed the royal mummy, and charged accordingly. Thus did the once powerful King Merenera, weighed and taxed as dried fish, make his entry into Cairo. – From the *Deutsche Fischerei Zeitung.*

PRESERVATIVE FOR FISH-HATCHING BOXES AND TRAYS.

HERR MULLER, of Tschischdorf, Germany, gives the following recipe for waterproofing zinc, wood, &c., used in hatching apparatus and fish carriers : "To two parts of pitch add three parts of spirits of turpentine, and warm them until they mix well together. The mixture can be applied cold, but it is better to put it on warm. It is cheap, especially as anyone can make and use it." Mr. Silk, of Burleigh Park, Stamford, uses a similar preparation on his zinc troughs, and finds it answer admirably ; the water he has to use is so hard, that unprotected zinc soon gets a thick coating of lime on it. Mr. Silk is, perhaps, the most practical pisciculturist in this country, having had many years experience in America with some of the first American pisciculturists. Mr. Silk has at the present time, a magnificent lot of yearling trout and also trout fry for sale.

THE PROPOSED NEW THAMES BYE-LAWS.

THE amalgamated committee of Thames Angling Preservation Societies, the Central Associations, and the London and Surburban Angling Clubs, appointed at a large and important conference at the Cannon Street Hotel, on Tuesday evening, the 15th of August, met again at the Cannon Street Hotel, August 18, and settled when the memorial should be delivered to the Conservancy Board and appointed a deputation to wait on the Conservators. The memorial has been delivered by Mr. Brougham, and there this matter rests at present.

THE PROPOSED THAMES CONSERVANCY BYE-LAWS.

A MEETING of the committee appointed at the recent conference of the representatives of the Thames Preservation Societies and various angling clubs was held last night, at the Cannon Street Hotel, for the purpose of deciding upon the memorial to be sent to the Board of Thames Conservators on the subject of the proposed new bye-laws for the Thames. The chair was taken by Mr. Thomas Spreckly (Thames Angling Preservation Society), and the following gentlemen were present:—Mr. W. H. Brougham, of the same association; Mr. F. Clench, President Richmond Piscatorial Society; Captain Alfred, Gresham Angling Society; Mr. R. B. Marston, Editor FISHING GAZETTE; Mr. C. Hatfield, of the Central Association ; Messrs. R. Plummer and Lock, Windsor ; Mr. T. Hoole, Secretary West Central Association ; Mr. A. J. Little, of the T.A.P.S. ; Mr. Wheeldon ; Mr. T. Crumplen, Secretary Gresham Angling Society ; Messrs. Sharpe and Wood, Maidenhead, Cookham, and Bray. On the motion of Mr. Clench, seconded by Captain Alfred, it was resolved that a letter be sent to the Board of Conservators of the Thames, enclosing the proposed alterations in the bye-laws, and requesting that the Board would appoint a day for receiving a deputation on the subject. A deputation of gentlemen was then appointed to wait upon the Board of Conservators when called upon.

IMPORTANT TO ANGLERS.

At the Ely Petty Sessions, on the 17th inst., before the Rev. H. Pigot, J. Martin, T. Vipan, M. Pate, and H. T. Luddington, Esq., a charge was preferred against James Adkin, a sergeant in the Ely militia, for unlawfully fishing in private water on the 3rd instant. The prosecution was instituted by the Cambridge and Ely Angling Society, who are the lessees of the fishery.

Mr. Rogers, solicitor, of Ely, who appeared for the society, explained the law to the Bench, and cited the case of Pearce *v.* Scotcher, heard on 31st of March last, which decided the question of angling by the public in non-tidal rivers. The case came before the magistrates for the County of Denbigh on the 3rd December last, and they declined to convict the defendant who set up a right to fish, the public generally having hitherto during the whole period of the memory of living witnesses exercised the assumed right of fishing in the river in question. From this decision Pearce appealed, and the appeal was heard by Mr. Justice Grove and Baron Huddlestone, on 31st March last as before stated. Scotcher, as one of the public, claimed to fish in the river Dee, at a place many miles above the tide, but which was a public navigable river. Scotcher had no property near the river, and both banks belonged to Arthur M. Owen and others, who let the fishery to a tenant. Held that the Justices were wrong in dismissing the summonses, on the ground of there being a bona-fide claim of right, for it was impossible that the public could acquire such a right. Mr. Justice Grove, in giving judgment, said: I think that this case is determined by authority, and that the Justices were wrong in their decision. The decisions of the Courts hitherto have been uniform and consistent on the subject, and in favour of the appellant. The cases quoted by Mr. Matthews, Q.C., all show that the public right set up in rivers like this has been negatived. No doubt the public may have *prima facie* a right of fishery in all navigable rivers, where these are tidal, for we know that the soil of tidal navigable rivers is said to be vested in the crown for the benefit of the public. But where the river is not tidal the property in the soil belongs not to the Crown but to the owners of the banks on either side. There may be a right of the public to navigate parts of rivers above the flow of the tide just as there is a right of passage in a highway, but the right of navigation is no evidence of any property in the soil of the river in which the navigation is exercised The step from navigability of waters to a right of fishery in these waters is great. The mere fact of a person sailing over the water gives no right of ownership to such person in the water or to the fruits of such ownership. No case has been cited which shows that a right of fishery is an incident of the right of navigability, or that people lawfully passing over the surface of navigable non-tidal rivers can fish in those rivers. The cases are all the other way. If we take the cases of Race v. Ward; Murphy v. Ryan; Hudson v. MacRae; they raise all these points. Hargraves v. Deddams is a case still stronger than the present, for there the river was made navigable by Act of Parliament, and yet the Court held that that did not confer a right to the fishery in the waters made navigable. Then there is the case of Mussett v. Burch, in which my brother Cleasby and myself held that though the public had fished for forty years without interruption in a navigable non-tidal river, yet they had not acquired any legal right of fishery therein. And that any such public rights could not exist in the private parts of a river. All these cases go in one way. Then against these cases Mr. McIntyre (Q.C.) cites the dictum of Cockburn, C. J., in Reg v. Burrows; that was at most a mere dictum, and has not since been carried further, and in that case it is to be observed that the person claiming was not a mere member of the public, for he had a cottage and land on the banks of the lake, and so might have relied on some riparian right. Again, another dictum of Whiteside, C. J., is referred to, but that learned Judge seems to have given reasons why he thought the law ought not to be as it had been decided to be, rather than to be disputing that the law had been settled. We are not here to say what the law ought to be, but merely to say what the law is. There may be dicta therefore against the appellant, but they are nothing more, and the substantial current of authority is all in favour of the appellant, namely, that in the non-tidal parts of rivers the public never can establish any right of fishery such as was here claimed. Therefore our judgment will be for the appellant. Baron Huddleston concurred. Mr. McIntyre asked for leave to appeal.—Mr. Justice Grove: We have no power I believe to give leave, and we have no doubt at all about the matter.—Judgment for appellant with costs, and the case was therefore transmitted back to the magistrates for conviction of the defendant.

Mr. Cooke (clerk to Messrs. Archer) proved the letting the water in question to the Cambridge and Ely Angling Society, for £5 a-year on lease, the water belonging to the South Level Commissioners.—Wm. Benton, of Ely, watcher of the society, proved seeing the defendant fishing on the 3rd of August; asked him if he were a member of the Angling Society; he replied, "No; but it will be all right; I'll see Mr. Allen," the Ely hon. sec. Mr. Purchase, the secretary at Cambridge, also gave evidence, and produced a letter of apology written by defendant to him.

The defendant said: I have been a member of the Angling Society for about ten years. Hitherto, I have been asked for my subscription, and I have paid it; presuming that I should be asked this season I went to fish, intending to pay. This paying at once is new, and I was not aware of it, otherwise I should not have infringed the rules of the society. Rather than to have prosecuted me, an old member, it would have been far better for the watcher to have pounced upon poachers. However, I admit that I am inadvertently wrong, and adhere to the apology I sent to Mr. Purchas.

Mr. Rogers: That apology we accept. Our case is made out; the desire of the society is to show that persons who do not belong to the society have no right of fishing.

THE GREAT ALL-ENGLAND ANGLING SWEEPSTAKES.

Last week Mr. James Wragg, host of the Queen's Inn, Scotland Street, Sheffield, decided his great angling sweepstakes, for which he gave the sum of £100. These events have proved a great success in past years, and this being his sixteenth venture, it proved a wonderful success, trains from all parts journeying to the scene of action, which is situated on the river Witham, a well-known resort, noted for nearly all kinds of fish, and is under the superintendence of the Boston Association. During the past four years 515 is the smallest number that have taken part in the contest. On August 26, 1878, at Dogdyke, out of 588 fishermen, F. Bardsley, of Attercliffe, won with 10 lb. 1½ oz. In the following year, on August 25, at the same place, 515 competed, when H. Taylor, of Sheffield, took the first prize with 7 lb. 4 oz In 1880, on August 30, 597 competed, when R. Gregory, of Sheffield, took the first prize, with 9 lb. 6 oz., and last year, in the same waters, on August 29, there were 580 fished, and this time the first prize fell to Hydes Graham, of Horncastle, with 8 lb. 5 oz. During the past week the weather has been very unfavourable, rain falling nearly every day, and it looked anything but promising. On Saturday afternoon by the train which leaves the Victoria Station shortly after four, several hundreds went down, the weather being splendid, and to all appearances looked like continuing. The prizes were on exhibition on Saturday night, and some hundreds visited Mr. Wragg's to see them, and they will be on view until Thursday next. The money is divided into twelve prizes, as under:—First prize, £30; second, £20; third, £12; fourth, £9; fifth, £7; sixth, £5; seventh, £4 10s.; eighth, £3 10s.; ninth, £3; tenth, £2 10s.; eleventh, £2; twelfth, £1 10s. The principal ornament on the stand was a large frame bearing the words "J. Wragg, £100," surrounded by a line of half-sovereigns, and this was the centre of attraction. Early yesterday morning two heavy trains left Victoria Station, the first containing thirty and the other twenty-two carriages. Nottingham was also fairly represented, 300 coming by specials, and these were headed by their celebrated brass band to the station, and some hundreds witnessed their departure, all being gaily dressed. On arriving at Dogdyke shortly after eleven o'clock the weather was anything but promising. Some at once went to refresh the inner man, and others went on each side of the water to try the different drains. Their appearance was something novel, as the fishermen hailed from Oldham, Staleybridge, Ashton-under-Lyne, Manchester, Bolton, Stockport, Wigan, York, Leeds, Derby, Nottingham, Bradford, Ilkeston, Thorne, Doncaster, Wakefield, Grantham, Lincoln, and Sheffield, but the countrymen came to the fore in droves and far outnumbered the Sheffielders, and the success was the greatest we have ever seen. Shortly after one o'clock the draw commenced, and it was not until nearly three before time was called, when 514 fishermen cast in. Rain fell heavily at this time, but fortunately a strong breeze got up and continued the whole of the time. At 5.30 time was called, the men having been fishing two hours and a half. The weighing in at once commenced, and it was nearly nine o'clock before it was finished. The following were the principal prize-takers:—1st., J. Lee, Sheffield, 9 lb. 11¼ oz.; 2nd, H. Noble, Sheffield, 6 lb. 8½ oz.; 3rd, W. Wilson, Leeds, 5 lb. 12¾ oz.; 4th, A. Woodhead, Mosborough 4 lb. 14 oz.; 5th, R. Shilleto, Eccles, 4 lb. 10½ oz.; 6th, Nicholson, Nottingham, 4 lb. 10 oz.; 7th, J. Lee. Sheffield, 4 lb. 6 oz.; 8th, W. Lumley, Sheffield, 4 lb. 1½ oz.; 9th, W. Darley, Sheffield, 4 lb 1 oz.; 10th, W. Darwin, Sheffield, 3 lb. 14¾ oz.; 11th, C. Langley, Sheffield, 3 lb. 14 oz.; 12th, G. Wilson, York, 3 lb. 11 oz. The officials were Messrs. Wragg, Spell, and others, whilst a large staff of men attended at the other posts.

The angling club held at the house of Mr. J. Marsh, Rising Sun Hotel, Matthew Street, fished their annual match on Monday, at Keadby. Twenty-six took part in the contest, thirteen of whom caught fish, the following being the first eight—S. Marshall, 14 oz.; A. Rudiforth, 10½ oz.; T. Tomlinson, 9 oz.; A. Hoole, 7½ oz.; G. Deakin, 5½ oz.; W. Marsh, 5¼ oz.; J. Marsh, 3¾ oz.; F. Atkinson, 3 oz.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This society continues to prosper and will eventually become one of the best in the Eastern counties, especially when it is known to have the support and assistance of such anglers as A. Nuthall, L. Bonvoisin, Mr. Crumplen, and a host of others who have honoured this newly-formed society by becoming not only members in form, but in reality, as regards advice and assistance, which is very much required in all new societies. The eel sets in the rivers are now occupying the attention of the society in conjunction with the Preservation Society; as regards the legality of placing a net across a river from shore to shore, some different opinions exists. Of course, it is absurd to think that the nets stop any other fish except eels, but your humble servant and Miles's Boy says they catch all that come; if the owner puts them back again, so much the better. All fish that come to the net is the rule, not the exception; some may say, prove it; well, not ten in all your subscribers, which number hundreds in this county, ever saw them make a draught. Why? Since our last report some good catches have been registered by A. Mitchell, Esq., the president, Mr. Hewetson, chairman, Mr. Pond, Mr. Bennett of the Gresham. Last Monday brought in 46lb. of good bream from Messrs. Warnes and Chapman, and a good catch from A. Nuthall and Mr. Hewetson. On Thursday next the society angle for prizes: 1st, a splendid combination rod, given by Mr. Hannant; 2nd, angler's waterproof coat, given by Mr. Green of King Street; 3rd, line and reel, complete, given by Mr. Budds of Howard Street; the spot chosen is Potter Heigham. Speaking of Potter Heigham, I am exceedingly sorry to say that the conduct of visiting anglers to Heigham Sounds, in breaking down reeds, &c., whilst angling, has caused the gentleman who rents the fishing and shooting to give public notice that the sole right of fishing is in his hands, and it is now forbidden to fish there. The wild-fowl would soon be driven entirely away, by the liberty taken by some London anglers, who seem, some of them at least, to think they have only to get a boat from some place or another and do exactly as they like. The reeds here make money, as well as affording a cover to the birds; and as the land is rented, it is not right to destroy without caring who it may injure; elsewhere, it is generally the rule to ask permission to fish in water that is leased or rented. No doubt many a London angler who reads this will be very sorry to know he is forbidden in future to fish where rudd of 13 inches in length can be caught, but whose fault is it?—J. Lark, Secretary.

ANGLING CONTEST AT OAKHAM.

The annual competition of the Oakham Angling Society took place last Saturday in the society's waters at that place, under rather favourable circumstances. Forty-two members entered for the competition, which commenced at two o'clock with the drawing for places, and shorly afterwards the anglers commenced the task of endeavouring to make the fish bite. Some amusement was caused when on three separate occasions large fish were hooked and, owing to the too great anxiety of the fisherman, broke loose again. Mr. Barfield managed to land a very fine roach, which turned the scale at 1 lb. 10 oz., and another weighing 1 lb. 2 oz.; these placed him at the head of affairs. The next to him was a youth named George Welch. Everything connected with the match passed off exceedingly well. Appended is a list of the prize-takers: T. Barfield, first prize, with 2 lb. 12 oz.; G. Welch, second prize, with 2 lb. 3½ oz.; A. Stapleton, with 1 lb 13 oz., third prize; W. Sewell, with 1 lb. 11 oz., fourth; T. Gilby, 1 lb. 2 oz., fifth; and G. Jones, 15 oz., sixth. The other prize-takers were: E. Smith, H. Dugley, W. Burton, J. Allaway, J. Welch, H. Hardwick, H. Crook, T. Smith, J. Healey, S. Beaver, A. Warne, J. Palmer, T. Dobney, J. Bryan, A. Keely, A. Crook, and E. Carter.

CLUB AND OTHER JOTTINGS

By L. B.

In my notes last week, *re* club visits for "hard little woman," read "hard working little woman."

I met my good friend, Mr. Imey Da Costa, the other day, who gave me a graphic and immensely amusing account of his recent capture, from the bank at Reading of a very fine barbel, illustrating the same with suitable and most energetic pantomimic action. The whole battle was fought over again from baiting the hook with a carefully-selected bit of greaves to the triumphant landing on the finest of tackle of a handsome 7-pounder.

I hear that the Great International Fisheries Exhibition, 1883, will probably contain a portrait of this well-known worthy, either in the act of casting the fly, or, if roach-fishing, just "tapping a growser," while Mrs. Da C. will be represented looking on in the dual capacity of judge and referee, for which offices her piscatorial knowledge so well fit her.

The jack are moving somewhat at Elstree reservoir, and some decent fish have been taken.

From Maldon, in Essex, a friend writes:—"I have been having some fair takes of roach and bream lately, but the present unsettled weather is all against us, particularly in angling for bream, in fishing for which I do not so much mind bright low water or sunny days' provided the nights are warm."

The usual monthly meeting of the United London Anglers' Central Committee will take place on Monday evening next at the Bald Faced Stag, Worship Square, Finsbury, Mr. T. Morgan in the chair, when it is hoped, seeing the number of important piscatorial matters just now agitating, all delegates who can possibly do so will attend.

I hear on the best authority that a well-known piscatorial writer, and an A 1 all-round angler, has taken the Bridge Hotel at Chertsey. Brother rodsters will unanimously agree in wishing him success, and few will be in the neighbourhood without dropping in and having a look at their old friend, J. P. W., as mine host Wheeldon.

A meeting of the West Central Association working committee will be held on this Friday evening, when a new society will be proposed for enrolment, and other business brought forward for discussion and settlement.

A West Central, No. 3 district, visit was paid to the Peckham Perseverance on Tuesday, the 29th inst., when the following clubs were represented:—Anglers' Pride, City of London, Anchor and Hope, Peckham Perseverance, Peckham Brothers, Excelsior, Clapham Junction, and Kenningtonians. Mr. Tapenden took the chair punctually at 9 p.m., Mr. Jewell the vice. Some capital songs were rendered by the following members and friends:—Mr. Jewell, "John Barleycorn;" Mr. Fernival, "Shouldn't advise you to do it," and "It's a mistake, John Bull," encore; Mr. R. Smith, "Paris Exhibition" and "Our Christmas Ball"; Mr. Bignall, "The Æsthetic Young Man," and encore "Poor Jane"; Mr. Davis, "Our Great Statesmen"; Mr. Bonn, "Its a Rum World"; Mr. Duke, "Jack's Come Home from Sea To-day"; Mr. Tapenden, "The Good-bye at the door"; Mr. Davis, "My village home"; Mr. Parkins, "Speak of a Man as You find Him"; Mr. Haines, "Welcome, ever Welcome"; Mr. Page, "Going Bathing"; Mr. Matthews, "Shall England Rule the Waves?" Several other songs were equally well rendered, and the company appeared to thoroughly enjoy themselves. The next visit goes to the Peckham Brothers, Tuesday, September 12.

In the event of the fly-fishing match coming off between Mr. R. B. M—— and the "Raven," I hear that those of the angling community who are of a sporting turn of mind are offering to lay long odds on the former, who is well known to be a capital and essentially practical all-round angler, and an A 1 hand with the fly-rod to boot.

The question of coarse fish culture, or rather the making of a practical experiment of some, so promptly taken up by the United Associations Fisheries Society, at a recent public meeting, when other funded and old-established associations came not forward as it was hoped they would, is not being lost sight of, and the committee are in treaty with the proprietors of two or three waters, a portion of any of which would be admirably suited for the purpose in view.

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Shury, 3 lb. 8 oz. roach and bream; Mr. Howlett, 3 lb. roach; Mr. Moir, 7 lb. 14 oz. roach and bream; Mr. Larkman, 11 lb. 8 oz.; Mr. Medcalf, 1 lb. 12 oz. A pegged-down match will take place at Weybridge for eight prizes on Sunday, September 3. Mr. Larkman won Mr. Mee's prize of £1 1s. for the heaviest weight of fish during the month; weight of fish 35 lb.—J. Worledge.

ANCHOR AND ANGLING SOCIETY.

On Sunday, the 27th inst., we had a fair show of fish, the following members weighing in:—Mr. H. Scott, bream and roach, 8 lb. $5\frac{1}{4}$ oz.; Mr. R.-Smith, bream and roach, 4 lb. $8\frac{1}{4}$ oz.; Mr. D. Davis, bream and roach, 5 lb. $0\frac{3}{4}$ oz.; Mr. A. Shakel, bream and roach, 1 lb. $6\frac{1}{4}$ oz.; Mr. T. Bowling, bream and roach, 1 lb. $9\frac{1}{4}$ oz.; Mr. A. Glass, bream and roach, 2 lb. $3\frac{3}{4}$ oz. Several members returned with blanks.—D. Davis sec.

August 30.

BOSTONIAN ANGLING SOCIETY.

We had some good fish on Sunday last. Mr. Brothers had a nice show of roach from the Thames; Mr. Jennings roach and dace, one dace in fine condition, weighing 11 oz.; Mr. Marshall and Mr. Garner a nice show of roach from the river Yare.—J. J., hon. sec.

BROTHERS WELL MET.

About forty members of this old established society held their annual dinner at the Rye House, on the 27th, under the able presidency of Mr. W. Newton, faced by Mr. W. Hanson, and Mr. Secretary Hunt strove with might and main to promote the comforts of those present, and a vote of thanks was accorded these gentlemen. The members were at their swims true to the time appointed and eager for the contest. After dinner was concluded the company quickly dispersed to enjoy the beauties of the grounds and gardens.

CRITCHFIELD ANGLING SOCIETY.

The president of the above society, Mr. A. C. Critchfield, has been successful in making another good show of fish, by taking, on Friday last, in addition to a variety of roach, rudd, perch, &c., ten tench weighing 25 lb., the heaviest being a little over 3 lb. Messrs. Featherstone and Hayward have also had fish, being moderately successful. The latter gentleman, on Saturday last, fishing in the Wey, hooked a roach which he believes would have scaled at least 3 lb., but he, unfortunately, failed to land it. Mr. H. also believes this fish to be the last of his race in that river, as he had not a single touch before nor after hooking this one. The next general meeting will be held on Thursday, the 14th September, at 8·30 p.m., and the general meetings, in future, will be held on the second Thursday in each month. Members are requested to kindly make a note of this.—J. F.

Aug, 29th.

GOLDEN BARBEL.

On Aug. 28, Messrs. Mitchell, Whitehead, G. Hall, and J. Green had a nice show of roach, dace, and bream, from the Arun and Rother. Mr. Chapman had some jack and bream. On the 30th, the Brothers Entwistle had some sport among the jack on the Midland. A general meeting was to have been called, but, owing to an unavoidable accident made on the part of the secretary *pro tem.*, it has been postponed until the 12th September.—Pixie.

Aug. 31.

GRESHAM ANGLING SOCIETY.

The special meeting of the society to consider the proposals of the committee in reference to a revision of rules was held on Thursday evening, Dr. Brunton being voted to the chair. The attendance was larger than on ordinary occasions. It may be noted that the chairman (Dr. Brunton), following up his promise of last week, weighed in a nice brace of trout, which were caught with the identical line shown last week to the society, made by Fiji islanders entirely from human hair. The interest of the evening centred in the discussion of sundry alterations in the rules suggested by the committee, which, with trifling exceptions, were carried, Mr. Jardine and others vigorously debating them, one by one. Mr. Crumplen said that his experience of the angling world, or rather a few individuals who posed in it, was certainly unsatisfatory, and the more he knew of them the more he disagreed with the selfish objects they seemed to have in view. Mr. Frost, Dr. Lloyd, Mr. A. W. Parker, Mr. J. F. Clarke, and other gentlemen took part in what proved to be a very exciting debate, but in the end the recommendations of the committee were virtually carried, and a somewhat stormy meeting closed very amicably with a cordial vote of thanks unanimously tendered to Dr. Brunton for his able occupancy of the chair. It should also be mentioned that, by the kindness of Mr. Hatfield, of St. Martin's Lane, a number of copies of the "Guide to the Broads of Norfolk" were presented and distributed by the secretary among the members present. On Thursday next the society will have an important gathering, the Rev. H. Cummings having promised his long expected paper on trout culture. All members of angling societies, or any gentlemen interested, will be welcomed to this meeting, and it is hoped that a large attendance will be secured. Captain Alfred, Mr. A. W. Parker, Dr. Theodore Cash, and Dr. Brunton will follow with sundry papers of interest to anglers at the moment.

NORTHAMPTON WORKING MEN'S ANGLING CLUB.

On Sunday last the members of the Northamyton Working Mens Angling Club held their first series of prize fishing in the river Nen, on the Upton Estate, when about sixty members of the above competed for the following prizes:—£2 – First, 15s, Mr. White; second, 10s., Mr. Page; third, 5s., F. Chambers; fourth, Mr. Garlick, 4s.; fifth, 3s., Mr. Billingham; sixth, Mr. Garrett, 2s.; seventh, 1s, Professor Sadd. Messrs. Brown, Ball, and Darby superintended the fishing, and T. Jones at the scales, at W. Rugby's, the club house, Bridge Street. Our little demon, Billy Ball had a nice basket of bream on Tuesday morning, weighing 47 lb., making a total of 150 lb. in three mornings, besides some very fine roach in the lower water of the Nen Angling Club.—T. F.

ORIGINAL ALEXANDRIA SOCIETY OF ANGLERS.

Mr. Brockett, a fine show of bream from Dagenham; Mr. W. High, roach, from the Chalmer; Mr. Blackledge, roach and dace, and Mr. Tiffin, chub, from Cheshunt. Our country member, Mr. Stanton, had a fine show of barbel, from the Thames. There will be a pegged-down match at Dagenham Lake on Sunday next, for six valuable prizes.—E. Dymond, sec.

Aug. 31.

PRINCESS OF WALES ANGLING SOCIETY.

The members of this society paid a visit to the Royal Aquarium, Westminster (by the kind invitation of Mr. F. Robson, their secretary), on Monday, the 28th inst. They were first conducted to the various tanks of freshwater fish, and great was the admiration of the fine specimens of carp, tench, chub, barbel, perch, roach, dace, and especially of the handsome Thames trout presented by Mr. C. Hatfield (a well-known Brother Knight of the Rod). They were then taken to the picture gallery, where a much longer time might be most enjoyably spent than they had to spare; and after viewing the various silk spinning moths (bred in the Aquarium from larvæ and cocoons), they adjourned to the central stage, where a capital variety entertainment was provided. At the interval, which takes place at 9 45, they were conducted to the seal tank (in the annexe), where an extraordinary and most pleasing performance was gone through by the seals. Various other objects of interest having been viewed, they returned home highly pleased with the evening's amusement.—E. Percy, Chairman.

QUEEN'S ANGLING SOCIETY.

Our members fished for two prizes on Sunday, Mr. Pearce being the most successful with 7 lb. of bream; Mr. Walford second with 6 lb of bream; Mr. Koopman, 3 lb. of bream; Mr. Pratt, 3 lb. of roach,; Mr. Morgan, $2\frac{3}{4}$ lb. of roach.—L. Walford, sec.

RODNEY PISCATORIALS.

In consequence of the removal of the Royal Piscatorials to Brixton, several gentlemen in the neighbourhood have resolved to form a society of the above title at the Albion, Rodney Road, Walworth. As the secretary, pro. tem., I beg to inform my brother anglers desirous of joining a society that the accommodation is everything that can be desired for an angling society. The proprietor, Mr. T. Hughes (who is a great lover of the sport, as the decorations on the walls of the Albion and also those of the Foxley Tavern can verify) will give the society his support in the shape of some valuable prizes. I shall attend on Wednesday and Sunday evening to take the name of any gentlemen who might wish to join, and also to give information as to the rules and regulations of the society.—Pixie.

ROYAL PISCATORIALS.

This society has removed from the Albion, Rodney Road, Walworth, to the Foxley Tavern, Elliott Road, Brixton, where all communications for this society are to be sent.—Pixie.

Aug. 31.

ST. JOHN'S.

If Walton got takes of fish like we are having lately, I am thinking he would have written a very different work to what he did, as one tray is enough to hold the fish now on meeting nights. On Sunday last, out of a number of members, the following had fish:—Messrs. C. Fudge, Bray, Reynolds, Hebben, Stevens, and Rushton, the lot being a very small one of roach, dace, and jack, from the Lea. Members will please take notice that at the last committee meeting it was resolved that the club dinner shall take place on the last Sunday in September, also that Mr. Thorling's prize and Mr. Rushton's prize will be fished for on Sunday, August 27; notice of the same to be seen in the club room. Our show of fish on Sunday last was very good, Mr. Reynolds winning Mr. Rushton's prize with a very fine show of roach from Rickmansworth, several going over 1 lb. each; Mr. Fudge winning Mr. Thorling's prize with roach and jack from the Lea; Mr. Hebben had some fine roach from the Lea, one fish going 1 lb. 3 oz. Mr. Bray, perch from the Lea; Mr. Hunt, roach and bream from Pulborough, all small fish. I beg to remind secretaries that our West Central No. 2 district visit will take place on Wednesday, September 20, when we shall be glad to see as many of our friends as can make it convenient to attend.—F.T.

Aug. 29.

SURREY PISCATORIALS.

On the 23rd several prizes were given for competition among the honorary members of this society. As none of those gentlemen showed up at the head-quarters in the evening, it is supposed they have all got blown away in the gale that prevailed during the day. Messrs. Beckett and Boalch were out with C. Brown, of Richmond, and managed to get about 7 lb. of nice dace, which, considering how the wind blew, was not bad. Speaking of the wind, these gentlemen assured me that the wind blew a large Windsor chair clean out of the punt and Mr. B. nearly after it.—At the meeting held on the 30th ult. it was decided that for the next competition members be allowed to fish where and how they like. Mr. Boalch gave in his report of the meeting he attended at Cannon Street Station, which caused a great deal of comment. The size of the fish spoken of at the meeting was considered by a member as a deteriorato the "Eye and York" time, and endeavouring to preserve trout and jack at the expense of all other fish by extending the fence months for trout and jack and allowing the other fish to be taken at such a small size.—Pixie.

Aug. 30.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Most of our members were out again this week, and worked hard to produce as good a show of fish as the last, and in which they were almost as successful. Mr. G. Letch had some first-class bream, Mr. Hurwood had dace and perch, Mr. Welch had a pretty show of roach, dace, and gudgeon; H. Moore also had roach, dace, and gudgeon; Mr. Petrie roach, dace, and perch; Mr. Raine one nice jack. Mr. Scott was out on Wednesday, 30th inst., and brought home some very nice roach, and one jack. Several other members weighed in, which made a good show of fish in the club again this week.—H. Moore, sec.

P.S.—A most laughable coincidence occurred on Sunday last while out fishing with two club members, Mr. Welch and Mr Gibbs, and a member of the Marylebone Angling Club. Mr. Gibbs, intently watching his float, did not perceive a bullock behind him watching his tackle, who politely walked up to his box and took his rod case off the top and ran away with it, eating it as he went along. Calling Mr. Gibbs' attention to it, he bolted after him, and after a long chase managed to get it. About an hour after, a gentleman fishing lower down took out his bag to have some food, which he laid down by his side, and which all of a sudden he lost, Mr. Bullock taking it and going on the feed himself. Later on in the afternoon another gentleman also had his rod case taken by the bullock, who completely gnawed it to pieces.

August 31.

THE STOKE NEWINGTON ANGLING SOCIETY.

On the 26th inst. Mr. E. Machin had a jack from Pulborough, weighing 6 lb.; a large fish, but in very poor condition, also a few roach. Mr. C. F. Robinson, bream and roach from Amberley; Mr. W. Robinson, roach; Mr. S. Wilkinson fishing at Broxbourne last week, had a very good day's sport, 13 perch and 3 roach, on an average 6 oz. each, falling to his rod. The annual excursion of members and friends, by road to Dagenham Lake, will take place on September 10th; to leave the Middleton Arms, Mansfield Street, Kingsland Road, 6 o'clock sharp. Eight prizes will be competed for. The distribution to the winners taking place on Wednesday, September 20th.—T. Gretton.

TRAFALGAR ANGLING SOCIETY.

The members of the above society had a nice show of fish on Sunday. Mr. Wilson, bream from the Mole, the largest 3 lb. Mr. Humphries, roach from Amberley, one weighing 1 lb. 4 oz. J. Gaze, roach and dace, and one jack of 5 lb. from Pulboro'. Messrs. Lord, Dewem, Goldstine and Richardson, roach and bream from the Wey.—J. Gaze, sec.

August 28.

UNITED BROTHERS, DEPTFORD.

Our trays were not quite so full on Sunday last, the 27th, as on the previous Sunday. but still there was a very decent show. The following members weighed in fish:—W. Tyler, roach and bream; G. Belton, roach and bream from Pulborough; F. Watts, bream, J. Eller, roach and bream from the Medway; J. Currans, bream from the Wey.—W. Belton.

UNITED LONDON ANGLERS.

The monthly meeting of the Central Committee will take place on Monday evening next, September 4, at 9 o'clock, Mr. S. Morgan presiding. Angling societies enrolled are invited to send two delegates to the meetings in future. Secretaries will greatly oblige by sending particulars of any alteration as to change of club-house, secretary, or nights of meeting, to enable me to get out correct new lists.—R. Ghurney, sec.

August 31.

WALTONIANS.

Mr. Waltham, roach, 3 lb. 1¼ oz.; Mr. Crabb, roach, 14¼ oz.; Mr. Watson, roach, 1 lb. 13½ oz.; Mr. Malcom, roach, 1 lb. 1¼ oz.; Mr. Rushbrook, roach, 14 oz.; Mr. Good, jun., roach, 2 lb. 12½ oz.; Mr. Phillips, roach, 6 lb. 12¼ oz. —A. J. Marriott.

August 27.

WALWORTH WALTONIANS.

At a meeting held at the society's head-quarters on the 25th of August, Mr. Russell in the chair, it was decided that the pegged-down competition for the 10th of September shall take place at Paddock Wood. Messrs. Cain and Bedford were appointed to go down and mark out swims. Gentlemen desirous of going will please communicate with Mr. Boalch, who has made special arrangements with the railway company for that occasion. On the 30th, Mr. Green and gentlemen belonging to the Larkhall exhibited some nice perch and jack, the largest perch turned the scale 1 lb. 12½ oz.; Mr. Green's largest fish weighed 1 lb. 5¼ oz.; they came from Tring. Conditions for Paddock Wood competition, tight line fishing only, all fish to weigh, according to club rules.—Pixie.

Aug. 30.

TROUT FLIES DICTATED BY RELIGION AND MUSIC.

The construction of trout flies has long been a subject of argument and discussion between fly-fishermen, one side reasoning, with a good show of being right, that an exact imitation of nature was the most likely to take trout (of course with the same amount of skill in using them), the other side claiming that any monstrous combination of fur and feather, the like of which never was seen in the water or out of it, was the most killing. There are few rules without an exception, and both sides make a good showing when arguing from an experience with single fish, and not on a general average. There is no accounting for what an individual trout may do, any more than there is what an individual woman may do. Trout sometimes take the fly under very strange and incomprehensible circumstances.

But I am wandering from the idea I had in view when I commenced writing, which was that with the exception of a few standard makes, like, for instance, the May-fly, Coachman, etc., the style and colouring of flies as made and sold, is governed, not by what the trout like, but by national music, and national religion, the last being the most powerful, governing the former. In this country we have no national music nor national religion. Neither, as a rule, have we native fly-makers. They are either Scotch or Irish. The fish, waters and climate are not materially different in the two countries in which they learn the art of fly making, but the men and their habits of thought are as different as possible. They leave the impression of their thoughts on their work.

The Scotchman has the most depressing of all religions; has very little expectation, or hope of his final salvation. If he sings at all at his work, which is doubtful, he chooses the saddest of all songs—

"When Jamie had been gone a twelvemonth and a day,
My Fether brak his arm and our cow was stole away,
My Mither taken sick and Jamie on the sea,
And old Robin Gray he came courting me—

My Fether argued, sair, my Mither dinna speak,
But she looked in my face 'til I thought my heart would break,
She gie him my hand, my heart was on the sea,
And old Robin Gray he came a gudeman to me."

Who with such sad thoughts and sad music could make a bright gay fly (unless working from a model) that would skip over the rippling waters like a thing of life.

The Irish fly maker, on the contrary, takes no thought of the morrow. His religion sits lightly upon him and is not depressing. If he sins, he confesses the same, and is forgiven. He has then no responsibility of the past or fear of the future. He goes to his work with cheerfulness, combines the bright colours with an imagination not weighted by the doubt of his "election." In every bright feather he sees a possible trout he expects to take next Sunday after an early mass. He sometimes takes a little whisky with a slight aroma of peat smoke in it. If he sings, it is—

"I've a wife to wed, and shure I am willing to take her,
But there she lies in the bed and the devil himself can't wake her,
Don't say nay, charming Judy Flanigan,
Don't say nay, you love Barney Brannigan."

In the two songs, if you know the music, you can see the two schools of fly making. Try the former, they are proper, conventional, each adapted to the various months of the year, and with them you will take a few small trout. When your arm aches with fruitless casting, if you are beside some deep pool where there should be large trout and you would have a great joy the memory of which would last you even to the time when you can fish no more, sit down, light your pipe, smoke it most out, then look over your book until you find a perfect nightmare of colours combined on one hook made by the man who cracked with his buckthorn stick at the bulge in the tent, and when told that that was his father's head, said he "couldn't help it, the chance was too good to be lost." Put it on, drop it lightly on the water and you will not wait long to have a "Donnybrook Fair" all to yourself.—L.S.—*In the American "Forest and Stream."*

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Tedding on; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS

MID-THAMES.

"Amongst the views of many, mine."
—SHAKESPEARE.

Since my last note the angling condition of the river has gradually improved, but even after the continuous rainstorms is still as bright as unbroken gin, and the fish consequently decline to be enticed from their pleasant and aromatic weeds. These said weeds are at present as green as grass and lively as snakes, and until a little "rot" sets in the fish will decline to leave such pleasant and gastronamic quarters. Roach are still feeding extraordinarily shyly; perch, however, are bolder, and are being had up to a decent weight after "the rake's progress" in gudgeon swims. Barbel are still most difficult to obtain except in mill-tails, and then much of the infant stamp about them, the parents evidently putting their fins into their nose at the enticing baits offered and at the sweet cherub of an angler sitting up aloft in a punt. Chub are certainly affording the best sport just now with a fly; and as to jack, I would advise them to be left alone for at least another month, when the weeds will have begun to decay, and Mr. John Pike will perforce have to seek more open and salubrious waters, if less, to him, happy hunting grounds. From Windsor and district I hear of the Rev. A. C. Pearson capturing 48 lb. of barbel and a jack of 4½ lb., and Messrs. Hannis and Mitchell on one occasion 9 barbel and 2 chub, together scaling 20 lb. Messrs. M'Kirrell, Jerrome, and Brooke, have also had some good barbling in the Windsor district and Mr. Runieles and Paine of Eton, have had a trout each of takeable size. At Marlow, Mr. Wright has taken two jack, going respectively 4½ lb. and 5lb, and the Hurley Waters Messrs. Bryan and Brooksbank, out daily with "The Boy," have had 6 dozen gudgeon daily, besides roach, dace, perch, and a pretty takeable trout, all being had by fishing between the beds of weeds with brandling or lobworm. At Medmenham, Tom Street has been out with varying success amid roach, perch and gudgeon, and tells me that a good game just now is to run a minnow or small gudgeon down, live bait fashion, in the clear channels amid the weeds when if an observant and hungry jack or perch espies the same he is likely to be tempted by the struggles of the finny prisoner.

Thursday Evening.—The Thames is still so clear that anything like good sport can hardly be expected. The rain that has fallen has evidently not found its way into the river, but been mopped up by the thirsty earth. Weather unsettled and gloomy, with wind chopping from south to west, with an occasional dash of north.—Marlow Buzz.

Ancholme District.

Owing to heavy rains, the fishing was spoilt for a day or two during the past week, but on Monday the waters had cleared again and some good sport was had amongst the roach and perch. My son has caught a nice lot of pike during the week, but they were rather small in size, running from 2 to 4 lb. Fishing in the trout streams has, owing to fresh, much improved, and the second hatchings of the spring flies are putting in an appearance. I am taking holiday on Southern and Midland waters, and on Saturday caught twenty carp before breakfast. There were plenty in the pond up to 10 or 15 lb. in weight, but these wiseacres were not to be caught, so I had to be content with fish up to 2 lb. in weight. I finished the day with a nice trout of 2 lb., caught in a mill just below the water-wheel, under circumstances of the greatest difficulty. I hope to try the Great Ouse next week in the neighbourhood of Bedford, but am truly sorry that, owing to previous engagement, I have been obliged to decline a courteous permit for a day on the Wycombe waters.—Thomas Ford, Caistor.

Ballynahinch.

Since last report angling has somewhat improved, trout being a good deal larger since the nets were taken off. The following is the number of fish killed. On the 23rd, Mr. Deverell 15 trout; same date, Mr. Parkinson 1 salmon 5¾ lb., Messrs. Nevill and Grissel 5 trout, and Mr. Bury 9 trout; on the 24th, Colonel Hay 5 trout; same date, Mr. Parkinson 1 salmon, 7¾ lb., and 2 trout, Mr. Grissel 19 trout, Messrs. Nevill and Grissel 9 trout, Mr. Bury 21 trout; on the 25th, Mr. Deverell 3 salmon, 7, 8½, and 10½ lb., also 9 trout, Mr. Grissel 12 trout, Mr. Waddle 10 trout, Messrs. Nevill and Grissel 18 trout, Mr. Winthorpe 1 salmon, 6½ lb., and 17 trout, Mr. Bury 11 trout; on the 27th, Mr. Parkinson 19 trout, Mr. Grissel 16 trout, Messrs. Nevill and Grissel 40 trout, Mr. Parkinson one salmon, 8 lb., Mr. Grissel 25 trout, Mr. Winthrope 4 trout, Mr. Bury 24 trout; on the 29th, Mr. Deverell 1 salmon, 7¾ lb., Master Deverell, jun., 9 trout, also two days previous about a dozen of trout each day. Mr. Parkinson 10 trout, Mr Grissel 16 trout, Mr. Winthrope 9 trout, Mr. Bury 1 salmon, 13 lb, and 6 trout.—Walter Blackadder.

Coquet (Welden Bridge).

On the 24th, Mr. Wood Linden killed a good salmon 9¼ lb.; on the 25th, the Rev. Mr. Oliver killed a good basket trout 6½ lb.; on the 30th, Mr. Baker Stanton nice dish. The river is very small and bright, but the trout are taking the fly again since the flood.—A. Glass.

Dove.

This river is in splendid order for all kinds of fishing. Many rodsters were out on Saturday, Monday, and Tuesday last, and succeeded well amongst not only trout and grayling, but chub, roach, dace, bream and barbel. The last-named fish are now feeding better than at any previous period of the season, though I don't think it can be fairly represented that sport is proving as successful as last year. The wasp-grub and worm continue to kill best of the bottom baits. The spinners have lured the largest trout, and a few pike have fallen victims to the live minnow at the Dove's Junction with the Trent Weather has much improved since I last wrote, and I fancy the Autumn wind-up amongst trout will be more satisfactory than the opening.—The Splowger.

Exe (Dulverton).

The Rev. Mr. Jellicoe took two salmon yesterday with the fly, about 5 and 8 lb. each, in the Exe, about two miles from Dulverton station.—C.W.

Exe (Tiverton).

The river is now in very good order for salmon-fishing, and a good many fish have been taken, ranging from 5 to 16 lb. Three and four a day have fallen to the lot of some rods. The trout season ends to-day. Very little has been done during the past week. At the Petty Sessions to-day, before the ex-Mayor, E. M. Winton, J. D. Frazer, and H. S Gill, Esqrs, Frank Miller was charged with, on the 10th inst, of killing a salmon otherwise than with rod and line in the Exe, at Tiverton The case was proved by Maria Davey, wife of Henry Davey, who deposed seeing Miller in the river under her house take the fish with his hands (the water being very low) and carry it to the opposite bank and kill it by treading on it with his heel and afterwards wrap it in his jacket and carry it away. Prisoner asked to be dealt with leniently. The Bench said that fish, in running up, must be protected, and they must inflict such a penalty as would deter parties from committing a like offence. Fined 25s. for killing the fish, and 20s. for the fish, or one month's imprisonment with hard labour. Prisoner took the latter.—Wm. Mudford.

Lea (Ware).

Owing to the river being let low for the purpose of cleaning out Steam Mill ditch on Sunday last, very little sport was obtained among the roach, but several anglers out on Monday were fairly successful, and during the week takes have been moderately good. I obtained two fine jack on Thursday afternoon, while a friend fishing near me secured one. The water is in fine condition now, especially that part lying between the Town Bridge and first lock down.—Lion and Wheatsheaf.

Leicester.

Angling notes since my last have been rather quiet. This may be attributed in a great measure to the weather, as we have been treated to both cold easterly winds and rain. Saturday last being an exception, with better prospects for fishing, induced a considerable number of anglers to visit both the Soar and canal, and some fair takes of both roach and perch were had; roach being taken principally with wheat and cad bait, and the perch with the tail end of a lobworm. At Aylestone some good roach have been had, and several have been trying for the large chub, of which there are a good number in these waters, but they do not appear to be on the feed. From Barrow-on-Soar the takes are not in proportion to the number of anglers that have visited these waters, and the catches of bream have been but small. Some fair-sized roach have been had, and a gentleman spinning on Monday, took a brace of good pike weighing about 14lbs. At the Wreake very little has been done during the last few days. Thursday morning opened with good prospects, and a fair number of anglers were out, but towards the afternoon the weather changed again, and we are having a lot of rain. The waters are fairly high and slightly coloured.

Medway (Tonbridge).

The water is still in splendid condition, and during last week some good bags of all kinds of fish were made. On Sunday, J. Eller and W. Tyler, fishing at High Bridge Hole, caught 50 lb. of bream, but it would be a little more graceful of London anglers when they come down and have the benefit of the work of the local society, if they contributed a small sum to the funds and took out tickets, like the majority of the local anglers. The same day, some other Londoners had bream from the same Hole. Above the town, Mr. Holloway has taken some decent bags of bream and some good perch and several jack. Mr. Buley has been amusing himself amongst the chub, which take a wasp grub with avidity. On Tuesday and Wednesday, Mr. E. Greenwood and G. Payne fished the High Bridge Hole after a liberal baiting. On the first day they captured 74 lb. of bream, some of them weighing 4 lb, and on the second day 50 lb., notwithstanding the wind was blowing great guns all day. Other anglers have been out with various successes. If people will only arrange to bait a good stream, excellent sport may be had.

P.S.—The cold weather of the past week has not been productive of good sport amongst the bottom fishers, though the water still continues in excellent condition. Now that September has arrived we shall have to record some sport amongst the pike, who, in the upper reaches of the river, have been enjoying a good rest. With a little few warmer nights than we have had lately bream and roach ought to be seen on the feed again well.—Ye Medway Water Rat.

Ouse (Littleport).

Plenty of roach &c., plenty of weeds, bed of river carpeted with flannel weed and the fishing, in consequence, is something awful, and looks like being so for two or three weeks longer. Mr. Allpress, of Ely, caught a nice pike live baiting the other morning, going a trifle over 10 lb.; this is the only item worth mentioning. Shall have grand doings when the weeds clear off.—C. South.

Thames (Goring).

Water low and clear. Not much doing in fishing; gudgeon are biting well. Sunday, two dozen of perch; Tuesday, a few very good chub and perch.—John Rush.

Thames (Halliford).

The river is still very low and bright. Since my last report different gentlemen were fishing with me, and their takes have been as follows, viz.: 1st day, Mr. M. Palmer, 7 dozen roach and dace. 2nd day, Messrs. M and C. Palmer, 6 dozen roach and dace; most part of them returned to the river again. 3rd day, Mr. Geo. Palmer 5 bream, 2 jack and 1 perch, altogether weighing 16½ lb. 4th day, Mr. Draper, one dozen and a half roach and dace, and one perch. 5th day, Mr. Geo. Palmer, 5 barbel, 1 jack, 5 bream, 1 chub and 1 roach, altogether weighing 21 lb.½ 6th day, Mr. Geo. Palmer, 4 bream, 3 jack, 5 barbel, 2 chub and some roach, altogether weighing 24 lb. 7th day, Mr. and Mrs.

Blake, 15 dozen gudgeon and 2 dozen roach and dace. 8th day, Mr. Geo. Palmer, 3 jack, 1 barbel, 1 bream $2\frac{1}{2}$ lb., and two dozen roach and dace.—GEORGE ROSEWELL.

Thames (Hampton).

Wheeler this week, fishing above weir with different gentlemen, averaged eight barbel per day, and to-day with Mr. Chandler, of Epsom, landed a very fine one, weighing $7\frac{1}{4}$ lb., with a live bait. I took a jack, 31 inches in length, bad condition, weight $7\frac{3}{4}$ lb., from the bank of the island. J. Smith, below the weir, had a wonderful take fishing with Mr. John Ive, viz., forty-four barbel weighing 73 lb., last Monday On Tuesday, with me, twenty barbel and on Wednesday twenty-one barbel. On Sunday, 100 roach, some over $\frac{1}{2}$ lb. Bank fishing no good. Worms, barbel; gentles, roach and dace.—E. SWAN.

Thames (Twickenham).

Wind S.W., with light showers nearly the whole of the day. I am pleased to say the fish are now making their way towards us, in good condition and very plentiful, and it is predicted by those who are most competent to judge that the autumn fishing will be most excellent. I might state that it is a source of great satisfaction to me to see so many of my old customers availing themselves of my oft repeated advice by wiring or writing in advance. Spong in one day, with Mr. Long, of Kensington, took eleven dozen of roach and dace and two barbel, another day eight dozen, also six dozen. Our "Joe," with Mr. Butler, of Hanwell, took four good barbel, weighing from 2 to 4 lb., and six dozen of roach and dace. Captain Smith took five dozen of roach and dace; Mr. Stevens in one day four dozen and two barbel; Dick Moffett, with Mr. Cook, of Wandsworth, seven dozen roach and dace; with Mr. Evans, four dozen; and each of the other punts averaging fair takes.—ALFRED PERRIN.

Torridge.

It has been raining hard all the morning, which will rise the river and good sport may be expected next week. Since last Thursday there have been 24 peel and 116 trout taken, most of the peel with the improved bright Devon minnow as the water has been thickish after Tuesday's flood; the coch-y-bonddhu has been the favourite trout fly, but many trout have been taken in the small streams with the worm.—PRACTICAL ANGLER.

Torridge (Woodford Bridge).

On Monday, Captain Briscoe, from Truro, killed, in the Upper Torridge, three dozen very fine trout and seven dace. Since then, the water has been in a very indifferent state, owing to thunderstorms raising the water, and so many small streams running into it soon gets foul water. There is still very little prospect of better weather. The flies used by the above were the blue upright red palmer, with the maggot.—JOHN BLAKE.

Trent (Alrewas).

I have not heard of a respectable basket of fish being taken the whole of the week, and very few anglers out owing to the unsettled state of the water and the weather. I intended giving the barbel a trial the latter end of last week, but on account of a rise in the river and heavy rainfall, I had to put it off until the water fined down. I am glad to report there are a few still to be had in this portion of the Trent. Mr Adams Parker, the vice-president of the Birmingham and Midland Piscatorial Association, nobbled a nice brace nearly 12 lb. a fortnight ago ledgering, and unfortunately lost a much larger one, who broke his tackle and got away. Mr. W. Reynolds to date, has taken the best basket of roach and dace, weight 21 lb., the small cockspur worm doing the principal execution. River reported to night (Thursday) above the usual summer height and discoloured. Rain has fallen, but not heavily, since noon, which will not improve matters. While the water remains discoloured worms will be found the best bait for all-round fishing; ground baiting with chopped up lobs.—JAMES GREGORY.

Trent (Newark).

Since sending off my last report, we have had an extra foot or so of water in the river; but not much colour with it; but at the time of writing, the water is in capital condition for general angling, and some fair catches of fish have been had by various anglers. I noticed one very nice bag of roach taken with malt this week. A nice bream, weighing nearly 5 lb has been "weighed in" this week, and also two very good roach weighing 1 lb. $9\frac{1}{2}$ oz. and 1 lb. $5\frac{1}{2}$ oz. respectively. Weather has been wet and generally uncomfortable for angling this week; but when the weather was anything like, sport was pretty good. Roach may now be taken with creed wheat and malt; chub will take the wasp grub, while worms will be found successful in luring barbel and bream to destruction; and jack are rather inclined to run at a spinning bait, the wind and the slight frosts of the last morning or two having woke them up a bit. Thursday night prospects pretty fair. Water in fairish condition. Wind in a good quarter, and fish waiting for the hook.—THE TRENT OTTER.

Upper Wye.

Floods for the last week; the water rises and falls very much in the upper waters. Saturday, few salmon were taken, and four this day. The waters are now supposed to be very full of salmon. Some few baskets of trout have been taken this last week about 4 lb. baskets to 6 lb baskets. Visitors staying at this hotel (Lion) can have very good salmon and trout fishing early in the season, we often have 10 lb. to 14 lb. baskets of trout. Next week I will give you fuller particulars.—W. W.

Wye and Derwent.

Both rivers have had nice flushes on them since my last report, especially the Derwent, which has now at the present time a most beautiful woodland water on it, and I am pleased to say that some first-class baskets of both trout, grayling, and coarse fish have been killed with fly and bottom. Yesterday (Wednesday) a good many fishermen were out on the Derwent between Darley Bridge and Whatstandwell, trying their hands with wasp grubs, gentles, and cockspur worms, and baskets from 6 to 15 brace per angler were made, chiefly with wasp grubs. To-day (Thursday) some large baskets of both trout and grayling have been killed with the fly, chiefly with the honey dun, bumble, little red, and dotteril flies. Both rivers are now in first-class condition for all kinds of angling; fish well on the feed.—GEORGE JAMES EATON.

The Chatsworth fishery last three days water swollen; but previous there has been good baskets killed with the blue and yellow fly and bumble. Water will be in fine condition to-morrow (Friday) if weather fine.—J. EADES.

Wharfe (Yorkshire).

Up to Saturday last only very indifferent sport was experienced, both by bottom and fly fishers, even though such favourite flies as the little pale blue dun, the August brown, and red ant were at times strongly on the water. On Monday, however, a grand water came down, and some good sport ensued. J. Bland, an enthusiastic bottom fisher at Pool, killed three trout in less than an hour's fishing on Tuesday evening, one a real beauty, scaling 1 lb. 5 oz. This fish once again exemplified the fact that the finny tribe feel little or no pain when hooked, as the tackle in question was broken, and in the very next swim landed this trout with the broken tackle hanging from its mouth. Several undigested minnows also came out of its throat, showing that it had been thoroughly "on the feed." Trout are now beginning to show signs of decline, and in another week or so grayling fishing will be in full swing.—FRANCIS M. WALBRAN.

ORIGIN OF UP-STREAM WORM-FISHING.

"LET me here record a statement often made by Charlie Ebdy, a statement which I believe to be perfectly true.

He declared that worm fishing up-stream, in clear water, was as a high branch of the piscatorial art first practised by the Witton-le Wear schoolboys, from whom Charlie himself learned it about 1826. The earliest really successful angler in this way of whom I ever heard, was Mr. John Chaytor, son of Sir William Chaytor, first Baronet of Witton Castle, and he informs me that he learnt it from his uncle's gamekeeper, Dick Pattison, who again brought it from Northumberland, but from what particular district is unknown.

Mr. Chaytor, after practising the art in many Yorkshire streams, did thus fish in the Wear, near Witton-le-Wear, in the year 1823 and subsequently, and it is easy to understand how a style of fishing so profitable, and at that time so unusual, should be narrowly watched, and ere long adopted by many. It is certain, however, that during my early visits with Charlie to the Coquet, Glen, Till, Tweed, and Whiteadder, commencing in 1831 and spreading over several weeks of each year, we never met with or heard of any one who fished with worm up stream, and hence our wonderful success, in the months of June and July, caused us to be closely observed by some who were desirous to find out our secret, and denounced by others as in fact no better than cunning poachers.

I am not prepared to assert that no really good anglers with worm existed previous to Dick Pattison's arrival from Northumberland, but certain it is that, if such there were, the number must have been extremely small. Dick fished in this way as early as 1820, and all my researches fail to establish an evidence of any one else doing so at an earlier date. At the present time there is not a border river which has not numerous worm fishers so expert as to call forth the praise of every really good judge of the matter."—From "My Life as an Angler," by Wm. Henderson.

[We consider Charles Cotton is the Father of this system.—ED.]

EDITING A NEWSPAPER.

THERE is one editor who has achieved the feat of running a newspaper to suit everybody. Occasionally, to be sure, he has complaints, but he never fails to satisfy the complainers that they are in the wrong. It wasn't always so with him. He only adopted the system after he got desperate. It was one day after he received seven complaints that he tried it. A man came in and said: "Why in tophet didn't you print the whole of the proceedings of the Society for the Prevention of Cruelty to Hogs, instead of a brief abstract?" The editor replied: "Oh, you made a speech that wasn't in the report, eh?" Then he went around the counter. The dust flew for a few minutes, and then he became more quiet. The editor relaxed his grip on the man's throat sufficiently to let him speak, and he said that he guessed the article was all right, and he had only come in to renew his subscription. He was let up, paid the money, and left, and as he went out he collided with a man who had an ugly glare in his eyes, and dancing up to the editor, said: "What d'ye mean, sir; I pay for a sensible newspaper, and here I got a lot of stuff about cruelty to hogs. You ought to be put in jail for printing such rot." The editor went around the counter again, and again the dust flew, and cries of "Take your teeth from my ear!" "Let go o' my hair!" &c., were heard. It was full five minutes before the editor could get the man's coat torn off and put him on the floor with his head in the coal scuttle. But he did at last. Then he jumped high in the air and sat upon the man's stomach, and the yell that man gave, echoing in the coal-scuttle, sounded awful. The editor was about to repeat the operations, but the man said: "We needn't prolong this agony. Your paper is the best in the world. It is all right. I'll take it for ten years in advance." Eight more visitors had the same experience. Then came one that the editor couldn't thrash. It was a woman. "What d'ye mean by publishing fashion articles from a three-year-old magazine?" she asked. "I made a bonnet according to your directions, and its three years behind the style. Oh, you wretch! you mean, horrid, insignificant—oh-h!" "My dear madam," he said, "you are right. I'm not fit to run a paper. I'll stop at once." (To a reporter.) "John, don't send up any more copy. Kill that article saying this lady was belle of the ball last night." "Stop!" she cried. "Your paper is a household treasure. I don't care about the bonnet, and came to ask you to our house to tea to-night." The editor says he wouldn't drop the rule for anything. Everybody leaves satisfied with his paper.—*Boston Post.*

AT Lake Anna, near Fort Bidwell, Henry Woodson has a fishery. He commenced operations three years ago with 2000 common brook trout. Now he has realised so handsomely from them that he has sold 30,000, and 12,000 spawn have been sent to Germany The trout attained a weight of 7 lbs. in thirty-one months, which is remarkably rapid growing. He supplies the whole of Bidwell county with fresh fish. The lake is forty-five acres in extent. He has also a small lake of six acres stocked with catfish. Mr. Woodson has made it a profitable business, and every year adds to his wealth.—*Reno* (*Cal.*) *Journal.*

THE GREAT INTERNATIONAL FISHERIES EXHIBITION.

AT the large and influential meeting held at Norwich to support the above undertaking, Mr. E. Birkbeck, M.P., made a most interesting speech, from which we shall next week quote certain passages, giving much information about the prospects of the Exhibition, which are most encouraging. We must thank Mr. Soman for sending us an early copy of his 'Argus' Report.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

[Pressure on our space prevents our inserting several letters this week.—ED.]

AMONGST THE CHALLENGES.

SIR,—Amongst the challenges published in your last week's paper, I see that I am made the subject of *two*, one of them being by "A Constant Subscriber," to perform my long-pending promise by writing those articles on fly-fishing-spinning for trout; and the other from no less an angler than "Herne the Hunter," to chuck "a palatable frog or toad" to "The Logger-headed Chub." Whether

> "Each gives each a double charm,
> Like pearls upon an Ethiop's arm,"

I don't know. And where is there a palatable toad? and who "The Logger-headed Chub" may be? are esoteric questions, into which I am not careful too curiously to inquire.

Touching my promise—it has not been forgotten. And if it has not yet been performed, that is not because the merits of fly-fishing-spinning have not yet been sufficiently tested. For long before the capture of those trout to which "A Constant Subscriber" so flatteringly refers, the test was quite complete. What I have been waiting for these "many months" is "more light," greater experience, not of the merits of so high an art, but in the practice of all its arcana.

That "invocation" is very, very *fetching*. Natheless, I must not let it call up my contribution, like

> ". . . . . the moon
> Rising unto some sorcerer's tune
> *An hour too soon.*"

One part of the preliminary experience I had set myself has just ended; but another has now to begin. Ere your next issue is out I shall, I hope, be off for my annual holiday to one of the very best trout and salmon rivers in England or Wales. And by the time "A Constant Subscriber" reads these lines, haply my first holiday trout or troutlet may have found its trust betrayed. But when sweet September will have given place to "chill October," and our trouting rods and tackle are all stowed away till next spring, I shall have returned to Town; and before the freshness of the recollections of the past season of the angle has faded away into dimness, I will jot down my views of the new art, and hand them to you for the benefit of "A Constant Subscriber" and any others of your readers who may take an interest in the matter.

In those articles, I may have a word to say on the issues of Hair *v.* Gut, and Hair *v* Silk, and Hair *v.* Silk and Hair, and Silk and Hair *v.* Silk, which are exciting so much sensation. And, in the meantime, you need not doubt that I shall not fail to watch most eagerly for the bulletin announcing the first encounter between the Editor and the Professor. And whoever in that contest may be the victor, I pray to Mars the other will "live to fight another day," and not be "in battle slain" outright.

One of your correspondents asks whether it is unusual for a trout to take a frog. The following anecdote was told me this summer by a gentleman, a millowner on the Gade. It shows that a frog at least is not always unpalatable even to a trout. My informant was walking with a friend by the waterside, when they observed a fair-sized trout feeding. They caught a small frog and tossed it to him. He had it in an instant. They then threw ten more, one after another, to him. He snapped them all up or ever they could swim a stroke. A twelfth he let go a yard or so before he made a dash at it, evidently "This way and that dividing the swift mind" as to whether 'twas good enough. And No. 13, not an unlucky number that time— went untouched away. It was clearly a case of *quantum suff.* But he might have made up a baker's dozen whilst he was about it. What do you think? That the wise trout moderates and enjoys? Or that they ought to have tickled his jaded palate more toothsomely still with a tempting toadling?—I am, &c., A.R.I.E.L.

GROUND BAITING.

(*Continued from page* 402.)

SIR,—Mr. Greville Fennell relates the following incident in his "Book of the Roach":—"Old Corbett, a Peninsular veteran, used to bring heavy baskets of roach from the Lea, and finding him upon one occasion at Ware, in Hertfordshire, we watched him closely from a respectful distance. He was seated upon a cane box, made by himself, to hold his tackle in the one-half, and his fish were dropped through a slit in the other, without his having to quit his seat. This box he moved from swim to swim. 'Why,' we enquired, 'do you shift your swim? You have just taken a good-sized roach at the last, and yet you leave it.' 'Yes, your honour, I have five pitches here within thirty yards, and I always make it a rule to move to another swim after taking a fish.' As this was somewhat new to us we asked the reason. 'Why you see, your honour, I have ground-baited each of these five swims, and I have found by experience that the noise and bustle made in landing a fish at one place drives the lot off, and they go to the others, where, if I throw a little fresh ground bait in, I get them about me again.' Upon this the veteran cast in a piece of ground bait not bigger than a hazel nut, and shortly landed another plumper. There was something, we thought, odd about the ground bait, and we therefore picked up a small piece he let fall and asked him bluntly what it was composed of. He frankly told us it was nothing but oatmeal—that pollard would do—browned over the fire in a frying-pan, and then mixed into a paste with treacle or molasses. He had learned this from his Colonel (Williamson), a very expert and successful roach fisher, and he found it the most attractive ground bait he had ever used."

This Colonel Williamson wrote "The Complete Anglers' Vade Mecum," 1808, and was the Captain T. Williamson.

In ground fishing in gently flowing waters the aim should be to distribute and disperse the bait as much and as soon as possible, that all may get a taste, but few a surfeit, which latter they easily do by prodigal and senseless baiting.

Mr. W. Baily, of Nottingham, whom I believe to rank amongst the first of observant anglers, and whose writings will one day be more appreciated than even now, speaking in one of those paragraphs which he favoured the Press with during the angling season, says: "The latter fish (roach) have begun to take white wheat, and I understand lower down the river this bait has taken roach much better than anything else, with stewed crushed malt for ground bait. This sinks more quickly than grains, and keeps the fish all in one spot, but only a small quantity must be thrown in at a time. In fact, when roach are fairly on at malt, they are so fond of it that if a lot is thrown in they gorge themselves in a few minutes, so that the safest plan is to give them only a small quantity at a time, and that only when the fish begin to slacken biting."

The ground bait generally used in the Suffolk and Norfolk rivers is brewers' grains thrown broadcast in the stream, which seems particularly attractive for bream. But, when Mr. Greville Fennell went down to Cantly on the Yare, with his fisherman, Harry Crystall, and cheekily announced in the *Field*, to the Norfolk anglers, that he was coming down to show them that they might add at least six weeks or two months to their roach season; and that they left off when they ought to begin. He adopted the Thames style, by both mooring the boat athwart the stream, and using adhesive ground bait, such as is described by Mr. Francis Francis. Crowe, the landlord of the inn, told them that they were welcome to a boat, but that they would be throwing their time away; they might, perhaps, catch two or three roach, but the probability was that they didn't get a bite. Instead of this being the case, they got upwards of 84 lb. of good roach, greatly to Crowe's astonishment, who had known the Norfolk waters from boyhood, and never in his life saw such a thing for the time of year. The fact is, no one had tried.

That fish may be gorged and surfeited even naturally, we have proof in regard to trout, in the May-fly season, as D. Foster, in his "Scientific Angler," truthfully remarks, after feeding on the ephemera. "By the time the season of the drake terminates, the fish have so regaled themselves upon this lusty ephemeral, that for a week or so they find it incumbent upon them to retire to the deep still water, to doze off the effect of the excess, after which they again resort to their accustomed posts, which are not forsaken until the spawning season again comes round, except when forced to retreat in the face of what in Highland phraseology is called a heavy "spate."—I am, &c., CREEL.

"DON'T BE LET IN BY ADVERTISEMENTS."

SIR,—Your correspondent, "N. Devon," in your issue of Aug. 12, writing under the heading of "Some queries about hens," &c., advises gents who are about to go on a fishing trip, "Not to be let in by advertisements." With this I quite agree, and only wish all those seeking fishing quarters would first consult the rivers report columns of the FISHING GAZETTE, and read for themselves the various reports, which are mostly signed in full, and would communicate with the writer before venturing upon their trip, or even writing you (Mr. Editor), who, I am sure, would give the requisite information, beside giving the names of correspondents, who, from practical experience upon the waters selected would only be too willing to do the same, which would save many extra miles of travel, and, of course, unnecessary expense. I have had during the past and present seasons numbers of gentleman here from London, Wiltshire, Berkshire, Gloucester, and various other counties, who have written me through reading the FISHING GAZETTE, and who have returned, heartily pleased with the splendid sport they have all had. One gentleman has just left here, after a three weeks' sojourn, for London, having had to return rather earlier than anticipated, much to his displeasure; his average takes being about a score of trout per diem. One or two salmon peel a week, and during the time one fine salmon. This is but one case in point. Your correspondent also states: "I know a gent who has lately come into Devon for fishing, and he has taken his house with a distance of nineteen miles to go by train, and had he first applied at the right quarters, eight would have been the farthest distance, without a change of trains." With this, my words are verified, and I consider all those who so willingly give this information, and saving of expense, entitled to some small remuneration for such, as a good puntsman mostly gets for placing a customer on a good swim; even a dish oftrout would be acceptable, which might be easily picked out from the day's sport. The smallest are as sweet as the large, to those who willingly and often foolishly part with their knowledge so cheap. I am not speaking on my own account, there are many needy but good anglers here, who have been in the habit of giving the best of advice to visitors, who seem to take it for granted, that as strangers, the advice and whereabouts should be freely given; so with thanks for your kindness they depart.

Excuse me for trespassing so far upon your valuble space, but should those through THE FISHING GAZETTE, or any other medium, read this, it may remind them that there is such an institution as the Anglers' Benevolent Society, who would thankfully receive any donation, however small, with this note attached: On account of the successful day or days or weeks fishing from such and such a part from advice freely given when in Devon, York, Berks, &c —FRANK GOSDEN, Exeter.

[If anglers would take the trouble, even to merely consult the ordnance map, they would see in a moment how far their lodgings will be from the river. The further from a railway-station the better the fishing, is our view of the matter. We insert no misleading advertisements, as far as we know.—ED.]

LARGE BREAM.

SIR,—My bream of 7 lb., the capture of which was recorded in your journal, is well preserved by Cooper, and can now be seen at Hatfield's, the Star and Garter, St. Martin's Lane, where it will remain for a short time.—I am, &c., THOS POOLE.

August 29.

THE WHARFE AT POOL.

SIR,—Would you or any of your numerous readers kindly give me any information respecting fishing in the Wharfe at Pool, as I am about having a day or two there?

What kind of baits, tackle, &c.; and if there is any fly fishing to be had there, and best kind of flies? Any information respecting the above would greatly oblige.—I am, &c., YORKSHIREMAN.

[We believe there is good trout and grayling fishing there. Tickets can be obtained for a short length of water.—ED.]

THE CAMBRIDGE AND ELY ANGLING SOCIETY.

SIR,—In your excellent article on "Roach Fishing" in last week's GAZETTE you seem to be in doubt as to whether the water at Littleport is preserved or not.

As president of the Cambridge and Ely Angling Society, I should like to state through the medium of your columns that the right of fishing in the society's waters is confined to members. The various fisheries hired by the society are as follows:—The Corporation Fishery, from Sheep's Green, Cambridge, to Barnwell Pool, from Barnwell Pool to Ditton Dock, from Ditton Dock to the Jolly Anglers, near Upware, from the Jolly Anglers to First Horse Jump. The Wicken Fishery, from the last mentioned place to Dimmock's Cote, is not at present in the society's hands, but from Dimmock's Cote to Pope's Corner is in the society's possession, and so to Ely Bridge. The fishery of the South Level Commissioners, extending from the old Fantail mill, just below Ely Common, Muckhill Bridge down to Littleport Bridge, including about a mile and a half of the river Lark from the branch cut, is also hired by the society. In all, the extent of the society's water in the Cam and Ouse is considerably over twenty miles.

It is all preserved for the use of the members, and the committee have recently appointed a keeper, who is very vigilant in inquiring of anglers whether they are members of the society. The subscription is only 2s. 6d. a year, and the payment of this sum entitles the person to fish in all the society's waters for roach, &c.; but to enable an angler to fish for pike in the South Level Cut—that is the Littleport Fishery—a minimum subscription of 5s. is required. I may also add that 5s. subscribers are supplied with a ticket which, on production at the offices of the Great Eastern Railway, entitles the holders to travel to and from Littleport from Cambridge, Ely, or Newmarket at single fares, a concession not granted to 2s. 6d. subscribers.

Our committee have also passed a bye-law, enabling members to introduce a friend for the purpose of angling, except for pike, on giving their names to the secretary, Mr. Purchas, of Cambridge, or Mr. Allen, of the Club Inn, Ely; but this privilege only extends to persons not resident within the county.

There is every prospect next month of excellent roach fishing, and, as our subscription is not prohibitive, I hope many anglers at a distance will join. From experience I feel sure they will not regret it, for the roach fishing in September and October in the South Level Cut is certainly the best in this part of the country. I have frequently secured a bag of 12 and 14 lb. in a few hours' fishing. Charlie South knows every inch of the water; he supplies anglers with every requisite, while the extremely moderate douceur he expects is but a poor recompense for the attention he displays and for the geniality with which he renders anglers such essential service.—I am, &c.,

J. W. COOPER, President C. and E. Angling Society.

Cambridge, August 26.

"GRANDMOTHERLY LEGISLATION."

SIR,—I thank you for those words. they ought to have been printed in gold; you are quite right, sir, we have had far too much of that grandmotherly legislation of late years. Fancy, Mr. Editor, the legitimate roacher, who is down at his fishing quarters and naturally anxious to drop his line in at the first streak of dawn, having to wait till sunrise. Fancy that, Mr. Editor. Why, he frequently would have to wait a whole week in this uncertain climate. How about the lads that stop out all night to get a favourite swim, will they keep their rods in the case till the sun rises, well knowing the first hour of dawn is the best? Will it suit your bream fisher, who well knows the moment the sun rises bream leave off feeding. What will this grandmotherly legislation bring us anglers to if we stand it much longer.—I am, &c., A. J. PORTER,

4, Hampton Street, Walworth, August 26.

[It is curious that, although we meet great numbers of anglers who agree with us that this craze for legislation is to be deplored, they do not care to express their views publicly, and go against those highly moral anglers who jump with delight when they have got some fresh rod made for their backs. We presume they feel their own inability to go straight in angling matters without laws, bye-laws, and without grandmotherly assistance from fussy individuals proud of a little brief authority. We should like to know why a man should be prevented from fishing all night if he cares to. The answer that it encourages poaching is absurd. It encourages poachers to find that their enemy the angler is out of the way. Again, prohibiting eel fishing during the fence months is simply allowing this ravenous fish to destroy millions of fish eggs and fry, which the fence months are supposed to secure.—ED.]

TROUT TAKING FROGS.

SIR,—I see in the FISHING GAZETTE of last week an inquiry is made by Mr. G. F. Heath whether a trout taking a frog is unusual. I beg to venture to say it is not, as I have known of three cases, and have never tried it over half a dozen times. Once, spinning with artificial minnows at a piece of water, Lamberhurst, Kent, I hooked and landed a trout of about 2 lb. with a large frog in the gullet and its two hind legs protruding out from the sides of the trout's mouth; digestion had not begun, as we pulled the frog out and examined it, and it appeared not to have been long taken Yet it took the spinning minnow; I presume it was pretty hungry to do this.

On another occasion, in the Darenth, Kent, my son saw a young frog jumping, and called to me on opposite bank, asking if he should try it as a bait. I told him yes, and he hooked it in the back and dropped it in the running current. No sooner had it got under some overhanging boughs than a trout seized it and pulled it clean off the hook, and darted under the boughs. Therefore I think it conclusive that trout like frogs, but as a sportsman I now use fly only.—I am, &c., COLIN TERRILL.

Maidstone.

THE WATFORD ANGLERS.

SIR,—I enclose copy of the rules of the United Angling Society (Watford). This society has been started by some old anglers who, anxious to protect their rights in waters once public in the neighbourhood, have joined themselves together, and I have no doubt will receive support from the London clubs.

I regret to say there are rich men in this neighbourhood who have succeeded, in a fair or foul way, to drive the poor angler away from the waterside. Lately a so-called society has started, who have stopped us using our nets and laying night lines in a piece of the Colne which runs through the town. This they pretended to have thrown open to the public. Certainly anybody can fish, but they put the standard of sizeable fish as under:—Trout, 12 inches; jack, 18 inches; dace, 6 inches; roach, 7 inches; chub, 10 inches; barbel, 12 inches. I am sure all fair anglers will agree with me that to put fish at these sizes is just the same as closing the water altogether.

The new society's will be as under:—Dace, 5 inches; carp, 5 inches; chub, 9 inches; jack and barbel, 12 inches; perch, tench, and roach, 7 inches; trout, 12 inches. I trust the Watford United Anglers Society ere long will prove a great success.—I am, &c. G. V.

[The only length we think too long is that for roach, which might be 6 inches fairly enough.—ED.]

PRESERVING MINNOWS, &C.

SIR,—I should be obliged if you, or some of your correspondents, would kindly inform me if they know of any more satisfactory way of preserving natural spinning baits than by putting them in a bottle of methylated spirits. I always find the brilliancy of scale to be impaired by this method.

I should also be glad to know whether there is good roach or chub fishing to be had at Boroughbridge (near Ripon).—I am, &c.,

RUS IN URBIS.

[The "Angler's Diary" says: Pike, perch, and a few trout and grayling are to be had at Boroughbridge. We should advise "Rus in Urbis" to write to the Postmaster and ask him—if he does not know himself—to ask some angling friend. We have never known this plan fail; of course, stamped envelope for reply must be enclosed. To preserve minnows bright we should suggest trying the following plan (which we referred to in "Fly fishing near Scarborough"): Put a teaspoonful of water into a soda-water bottle, then drop in 20 or 25 minnows, and shake them about a little, then put in a tablespoonful of glacialine powder; shake up and cork up, and the minnows will be found quite bright weeks after. They must be washed when taken out of the bottle, the powder soon melts off. A little salt added might make the fish tougher.—ED.]

A VISIT TO KESTON PONDS.

SIR,—London anglers who are continually complaining of the scarcity of fish, and more especially of fish worth capturing, can hear plenty of plunges and splashes from good fish by visiting Keston Ponds.

But they must stay all night to hear this sweet music. I performed this feat one night last week, being told, if I wished to be successful, this was the proper course to adopt; and never in my life did I hear so many proofs of good fish being present, or made more sure of a terrific catch.

Anglers who are continually pluming themselves on their extreme cleverness and cunning in capturing the finny tribe will here find ample opportunity to bring those two angling virtues into play.

The place is perfectly free to all.

There are trains from Loughborough Junction to Bromley. It is a lovely and pleasant walk through old English country lanes from Bromley to Keston, and if you are fond of ferns you can get a cart-load on Hayes Common. You can get tea near the Fox and Dog, within half a mile of the ponds; and in case of rain there is splendid shelter under some fine fir trees, and in natural shanties amidst the magnificent fern and furze.

Fish with honey paste and worms, using the ledger, and throw out well into the middle. The meadow crake will cheer you with its singular note all night long, and early in the morning the loving coo-coo-coo of the stock dove falls sweetly and soothingly on the ear.

Given a fine night, two or three jolly companions, and you cannot help being happy. But don't expect any fish.

"Oh," you say, "how is that?"

I will tell you how it is. They have become so highly intelligent and so marvellously deep from being so long and constantly practised upon by anglers of every kind, that they treat all your baits with supreme contempt. There are the fish (principally carp)—of this there can be no earthly doubt—and if you can succeed in catching three or four you must be very clever indeed. If you do not believe it go and try.—I am, &c., MARK ANTONY.

N.B.—I forgot one thing. You can have a capital bath and swim if you go in before eight in the morning.

LEEDS MARQUIS OF GRANBY ANGLING SOCIETY.

SIR,—A club has been formed under the above title since the 3rd July, 1882, with the sole object of stocking and preserving private waters for the use of its members, who, up to the present time, number over 70. I enclose a report of this week's weighing in, and shall be glad to forward you a weekly report, as your paper has a large circulation in this town. The following are the names and weights of some of the members takes:—Mr. Green, 17 roach weighing 14 lb.; Mr. J. Mitchell, roach, chub, and dace weighing 25 lb.; Mr. F. P. Hammill, roach and dace, 2¾ lb., among them one roach which weighed 25 oz, which is being preserved for the club; Mr. A. Haddock, also a splendid catch of roach, one weighing 21½ oz.; Mr. Ward, 2 pike which scaled 19 lb., the best fish weighing 12 lb.—T. H. SETTLE, hon. sec.

[Shall be very glad to have the reports.—ED.]

FISHING IN GERMANY.

SIR,—I enclose you a letter just received from a friend of mine (W.C.B.H.), who is on a fishing excursion in Germany. If you would like to publish the same in your valuable paper, you can do so.—I am, &c.,

South Gate Chichester, August 21. ARTHUR PURCHASE.

"MY DEAR SIR,—According to promise before leaving England, I give you a brief account of the fishing here. I have just come back from two hours' barbel fishing with seven fish, the largest not much over a pound. I caught three this morning, weighing 2, 1½, and 1lb. You will say that is very small, and so it is. I have only taken one of 3 lb. here this year. Last year I caught several that weight. The reason there are none larger is that netting is allowed from 1st September to 1st May, the peasantry looking upon the river Lahn as a means of subsistence during the winter and spring, when there are no visitors. I have taken a few small perch and heard much of pike, but have not caught any as yet. Am going to have a day to-morrow, but I believe that fish is more plentiful Nassau way. Last year I was generally successful with a float, but this year have had to catch my fish—barbel and large roach—ledger fishing, and trying work it is to one's temper and patience. The bed of the river is all large stones, in which you are constantly finding your line hard and fast. I have lost three and four of a morning. My theory is that the barbel sink your bait (Gruyere cheese) under the stones. I have had a ring made which goes over the winch and rod, and I find it answer very well in saving my hooks. The best fishing gear for this place is a light and not too long bamboo rod, fitted with winch and light silk (dressed) running line, landing-net, and a good supply of leads and hooks, perch size. I tried a Nottingham travelling float, but I did not find it answer. Current was too strong, owing to the quantity of rain we have had. It comes down in earnest here when it does rain. We had two such showers yesterday, the like of which we don't see twice in a year in old England; consequently, the water has been rather thick, and the barbel bite very gingerly; so you have to strike sharply and quickly, as I could do once, before years had made my right hand lose its cunning. One characteristic of the fish in the Lahn is that they do not go in shoals as with us, neither barbel nor roach; and ground bait will not bring them together. Please understand I am only speaking of fishing here as a pastime and amusement. The river is alive with fish, and were it not for the netting before mentioned, would be worth coming here for sport alone. We are surrounded with lovely hills, wooded down to the water's edge, making the place a lovely spot, and the waters I found very beneficial last year for my cough. I must now conclude this long yarn. —I remain, dear Sir, yours very truly,

"Darmstadt, Ems Germany, August 18. W. C. B H."

[Many thanks.—Ed.]

DISASTERS AT SEA.

Sir,—How terrible to hear that 800 lives are lost upon our coasts every year, or fifteen each week, and that this is an average of the last six-and-twenty years; making a total during that time of 20,800. If a quarter of this great number of lives were sacrificed in any other way the nation would not hesitate in mitigating such a calamity; but since it is principally in the ordinary occupation of fishing that the loss is incurred, it is erroneously regarded by most people as absolutely inevitable.

A society has at last been formed for the promotion of increased places of safety on our coasts for fishermen and mariners, and if the work is carried out it cannot fail to attain its object. It is proposed that convict labour be used in the construction of these harbours—a point already alluded to in the House of Commons, by the President of the Board of Trade—so that many who have injured their country in the past, and who are being supported by it in the present, may render some service in the future. The country is now aware of the vast and influential support which this society has already received, but surely it cannot know that the work is almost at a standstill for lack of funds. Our nation has the well-earned reputation of suppovting worthy institutions and coming to the relief of immediate necessity in a most generous way, but are we not too eager to relieve suffering abroad before we have rendered assistance at home? Let this not be the case now. All may help in this national enterprise; even the smallest contributions will be thankfully received by the hon. sec., Mr. F. Johnson, Norman Road, St. Leonards-on-Sea. Knowing this society from its formation, I heartily commend it to your readers, trusting that small subscriptions, as well as large, will flow in, that so great a work as it is pledged to undertake may not suffer from lack of help.—I am, &c.,

(Rev.) James Weller.

Hastings, August 14, 1882.

[This is a good work, and deserves hearty support.—Ed.]

A NIGHT IN SCOTLAND WITH THE SEA-TROUT.

THE anglers are few that have no stories to tell of big baskets made in wondrously exceptional circumstances, and they are fewer still that are not deeply sceptical about the whole of the angling folk-lore. I am well aware, therefore, that I am taking upon myself an ungracious task. Still, you know, one must run some risk in this world. So here goes, and, "to put myself in order," as they say in Parliament, "I will conclude with a motion."

Last week my Inverness-shire friend, Patricius Rose, Willie Rhodes and myself set out for Nydie, on the Fifeshire Eden. Nydie is about five miles from St. Andrew's Bay, into which the Eden flows, and when there is a flood sea-trout and salmon, in their season, come up into the stream. At Nydie there is a weir so high that, save when the flood is very strong, the visitors from the sea are unable to get further up the river. The reaches immediately below are thus very populous with "big fish," as they are locally called, and the first "spate" of the season having just come down, we found ourselves at Nydie with fairly high expectations.

But, gentle reader, here come the angling excuses already; wait a bit, though—the sun was clear, there was no breeze to ripple the water, the fish would not rise. In short, as night was falling we had met with very meagre success. Patricius had four yellow-trout of about a quarter of a pound each; Rhodes, who had been using a more attractive midge, had six similar fish, and I myself had two. A standing dispute I had with Patricius as to the relative merits of the Highland and the Lowland streams seemed, therefore, to be resolving itself adversely, and although, naturally enough, his joy was of a mixed kind, Patricius was correspondingly exultant.

But—this, gentle reader, is a "but" of another kind—good things come to him who waits. "They'll tak' the nicht, or my name's no Jock Scott." Somewhat disgustedly, we were taking a farewell look at the water as that remark sounded from the recesses of the shrubbery behind. Looking round we found that the speaker was an old man resting from his work of pruning down the thicket bordering the stream. "Aye, they'll tak' the nicht, ye may be sure, if ye try the mauchs," he repeated, with an odd, solemn eagerness.

"The mauchs!" ejaculated Patricius, whose Inverness-shire vocabulary contains few of the broadsounding words of the Lowland dialect. "What are mauchs?"

"Mauchs, ye English deevil!" replied the man, irritated a little at the thought that an "Englisher" was looking at him as at a curiosity. "Mauchs are just mauchs!"

"Maggots," I suggested, for the sake of conciliation.

"Aye, maggots, if ye maun ha'e it sae. Are ye no' for tryin' them the nicht? They've been gettin' fine baskets o' sea-trout since the spate."

After all, there seemed still a chance that the reputation of the Lowland streams might be vindicated, so I asked Scott if he could give us some maggots. He could, and did. With good-natured cynicism, Patricius agreed to stay a little longer and try the maggots.

The moon had now risen from behind the hill, and, gleaming through the foliage skirting the stream, was casting fantastic shadows on the calm water. Not the most favourable night for maggot-fishing, I reflected, as the rods were being put up again, for the wily trout can rarely be persuaded to look at this bait save in the darker shades of night. Yet the moon was low in the heavens, and, in the shadows of the trees, there was here and there a patch of water gloomy enough, probably, for the purpose in hand. A coble belonging to the lessee of the net fishings was resting by the banks of the stream. Immediately down from it was a likely pool, and at Scott's suggestion—Scott evidently was waiting the revenge of events—Patricius took up his quarters in the boat. In maggot-fishing, you see, you do not need to move about much; if you think there are fish at the place, you cast your line slowly over the same water many times. Rhodes and I took up positions by the edge of the waterfall from "The Pooch" immediately above.

Then our endeavours were renewed. How pleasant it is to be fishing in a midsummer night! How calm is everything; how "eerie" the flight, swiftly, buzzing through the still air, of the moths and the bats; and in the words of the beautiful glee,

> "Listen, listen, listen, listen,
> To the waterfall!"

Musing after this fashion, though—just think what a funny conjunction poetry and the bait we are using make?—musing thus is not compatible with angling even in the best of circumstances; and in the shades of night it is ridiculous. The nibbles then are usually in keeping with the subdued activity of visible nature, and you are certain to miss capital opportunities if you are not watching, or rather feeling out.

And here, I declare, is a dubious sensation by the line between my forefinger and the rod! Just the ghost of a bite, as it were, but it is quite enough. The "strike," as hesitating almost as the nibble, certainly hooks something. There is a stubborn wriggling in the water six yards off, and hope reasserts itself. Alas! it is only a wretched line-tangling eel!

"Never heed, sir," said the sympathising Scott. "Ye're sure tae ha'e fine sport when the sea-trout come up wi' the tide, and I see the water's risin' already."

Looking up from the vexing mess into which the eel has put my cast, I notice that Patricius's boat gives a rapid lurch. His rod is bending nearly double. Then the glinting moonbeams flash suddenly athwart the silvery sides of a fine fish leaping a few yards off from the bow of the boat. No eel this time; a splendid sea-trout rather. Off rushes Scott to the neighbouring cottage to get a landing net, an implement with which, expecting nothing big enough for the honour of its function, we had not provided ourselves. He is back in a few minutes, and after some lively play the fish, a beautiful two-pounder, is safely basketed."

"Just a chance, though," said Patricius, who is still sceptical.

"A chance! Ma conscience! Ye re an ungratefu' loon!" ejaculates the saturnine Scott. "Ye dinna deserve tae catch anither!"

An all-round application to Patricius's flask—the customary and proper proceeding at the drawing of "first blood"—soothes down Scott's wrath at our friend's jocular way of treating Lowland sport, and the fishing is begun again with heightened hopes. It is now half-past eleven o'clock, there is no time to spare, so my ravelled cast is cut off and replaced by a fresh one.

Scarcely has the new cast touched the water than a quick swirl, the eccentric heaving of the surface water which to the experienced angler indicates the rise of a heavy fish, elicits from Scott an energetic exclamation of "Strike man!"

I do strike, and swish goes the fish straight towards the opposite corner of the pool.

"That's a topper!" observes Scott admiringly.

"And here's another!" says the cheery voice of Rhodes from the near neighbourhood, and the rattling music of the reels grow fast and furious.

"Keep him tight!" cautions Scott. Scott is still a little cantankerous, but expert fishers like him do abhor anything unsportsmanlike in the playing of a fish, and it is true that neither of us is the neatest of anglers.

After much ejaculation, suggestion, and general excitement, however, both fish—fine ones they are, too—are landed.

"I tell't ye ye would get them the nicht," says Scott, his temper mellowed a bit by the encouragement we have had. "Ye'll be for wettin' the een o' these beasts tae—will ye no?"

Well, yes. We will "wet the beasts' een," but if it continues, and if it is at each turn to be thus celebrated, success will ere long be "turning our heads" in a very literal sense.

"The net! the net!" It is Patricius again; and a big one surely he has hooked that he calls for help so wildly. We are soon at the coble with the net.

"I can't get his head up stream," complained Patricius. His line was slowly but surely being run off the reel.

"Oot o' the boat, then, ye doited deevil!" cries Scott, seizing the rod from the rightful owner.

"Oot o' the boat" Patricius gets accordingly. Then he resumes his rod, grudgingly given up by Scott. "A five pounder at the least, I should say," he ventures to remark.

Scott is strangely silent.

"A dour brute, too," continues Patricius, evidently astonished at the fish's sullen perseverance down stream.

"Gey daft, I maun say, tae droon himsel' o' his ain free will," philosophises Scott, who is also perplexed at the unusual direction the fish is taking; "but keep ye a grip o' him, and he'll gi'e ye a spree yet."

Then, just at the tail of a shallow rush, there is a sudden stoppage.

"Let's feel his mouth," says Scott.

Patricius hands over the rod, and our cicerone "feels the fish's mouth."

"D——d queer!" he remarks, in dubious tones. "Gang and get the coble."

The boat is brought, and, having given back the rod, Scott paddles back towards the place where the fish has rested.

"Is he moving yet?" he asks.

"As steady as a rock," replies Patricius.

"Pu' yer line hard."

Patricius does as he is bid, but still there is no movement of life. Something, however, comes away; and, as Scott had apparent been surmising, it turns out to be a bit of fence wood?

The fiasco, however, has taken much less time to develop than I have taken to narrate it, and the flask soon sets matters to rights again.

Back to the fishing ground, we find that Rhodes has landed two other sea-trout in our absence. Patricius and I begin again, and just as the new day is dawning—how rapidly and pleasantly the time has passed!—all the three of us have made very excellent baskets indeed. Then the flask is finished off—as the reader will have been thinking, it is a big one—Patricius and Scott become "as thick as thieves," and, in the fine cool air, we set out for home.

Now, gentle reader, I conclude as promised. I move a resolution that fishing for sea-trout at the time and in the manner I have endeavoured to describe, is a highly agreeable variation of holiday sport. I assure you I have not exaggerated the fun of it. So, all ye statesmen and politicians of Great Britain, if it be that your master this summer is to let you have any holiday at all, fill up your fishing-books with casts of good stout gut and biggish fly-hooks. A tussle with a sea-trout in the stilly eve is pleasanter far than a tussle with the Land Leaguers in the thicker air of St. Stephen's. May you have sufficient of the former to compensate for what you have had of the latter!—W. E. Hodgson, in *Life*.

PROTECTION ON SEA AND LAND.

The alarm concerning the possibility of the entire fleet of 100 menhaden steamers being drawn off and sent mackerel fishing on account of the scarcity of menhaden has somewhat subsided, from the fact that the last experiment, according to late reports, says *Boston Herald*, has been pretty thoroughly tried without success which will warrant its continuance at present, at least. It appears that one of Joseph Church's steamers, the *A. M. Hathaway*, after being out in pursuit of mackerel three weeks, landed 700 lb. fresh stock in three weeks' time, only a trifle over 2000 dols. Such success would hardly pay a sailing vessel, to say nothing of a large steamer, which expects to secure, under a favourable catch, about 1,000 barrels of menhaden a day. This steamer has been drawn off and ordered south for menhaden. Some pretty good hauls of these fish are reported to have been made the past week in the vicinity of Long Island sound.

Still, the theory that the taking of mackerel by steamers would soon exhaust these fish, just as it has done the menhaden, is no doubt the correct one, the opinion of Mr. Church and Professor Baird to the contrary, notwithstanding. The whole fleet of 100 menhaden steamers, each carrying enormous purse seines capable of surrounding an acre of water and pursing up 1000 barrels of fish at every draw, will exhaust in a short time any class of fish which swim the ocean and collect in schools on the surface of the water. It is useless to argue that sharks, dogfish, bluefish, whales, and all the enemies of the moss bunker and the mackerel, destroy daily more of these fish than are caught by all the arts of men. The destruction by these natural enemies of the fish is always going on, and the addition of the engines of men, with all the swiftest implements of death which can be invented, will make pretty sure work with any species of fish or game inhabiting our waters or forests. It is the business of government to prevent such wholesale slaughter. There is no more sense in permitting the destruction of such a valuable food fish as the mackerel by such wholesale catching as the menhaden exterminators propose than there would be in farmers slaughtering all their cattle because they can get a good price for beef. The stock of breeders must be kept good. . . . . . Public fish and game must be protected by government, or it will soon disappear from the abundant feeding grounds of the ocean, the lake, the stream, and the forest. Soon, at the present rate of destruction, millions of acres of land and water, capable of producing food for the million, will be barren of game and sterile of fish, simply because selfish hunters and fishers have been suffered to destroy even the seed.

[The above interesting article is from the American *Sea World* (August 3), and we would earnestly commend it to the notice of all who are interested in our sea fisheries—probably nine-tenths of the whole nation. In our notice of the annual report of the Smithsonian Institution for 1880 we referred to this question.—Ed.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

A TERRIFIC COMBAT.

The following account of a fight between a snake and a rat is extracted from a Californian paper, the *Stockton Mail*, near which city the encounter is said to have been witnessed, and has a rather less impossible air about it than most newspaper yarns in which the "Ophidia" play a part. I transcribe it *verbatim*, in the hope that it may prove of passing interest to your readers, not in illustration of any principle:—

"The snake was of unusual size, and of a different appearance from those commonly found in water. The rat was of the ordinary brown variety, and was running along the shore when the fight began. The snake was coiled upon a little point of mud just above the water, sunning itself, and probably asleep. The rat, apparently without noticing the snake, jumped directly upon the folds of the serpent's body.

"The snake struck instantly, fastening its fangs between the rat's shoulders. Then began a contest that, in its small way, was truly thrilling. The rat, struggling violently, endeavoured to shake itself free, while the snake as persistently endeavoured to drag the head of its victim into its own mouth.

"This feat it was at first unable to accomplish. The rat writhed in its convulsive efforts to escape, bit the big snake severely in the neck, just at the back of the head, until the blood flowed and mixed with its own.

"These counter attacks became at last so savagely painful, that the snake loosened its grip, remaining, however, in half-coil. But the respite was too brief to afford the rat an opportunity to escape, for again the snake's fierce jaws descended and closed, this time around the rat's head.

"The heavy body of the rat swayed violently, but dragged with it the head of the snake, until the latter was completely out of eoil. By this time, however, the rat's struggle had become comparatively faint, and the snake was apparently the victor.

"But the next moment the snake in its turn began to struggle violently, as if to release its adversary's head, but ineffectually, and the reason was soon apparent.

"The rat had bitten quite through the snake's throat, and its sharp teeth could be distinctly seen in the narrow slit they made.

"The writhings of the snake were now intense. It lashed the ground with its tail, and raised its thick folds to almost half its length from the ground.

"The spectator stood hesitating, scarcely knowing whether he ought or not to interfere. The next moment, the snake, with one last convulsive effort, threw half its length into the muddy water, and the doughty twain sank together to a common death."

Capture of a Sturgeon in the Lune.—The Messrs. Bagot, fishermen, Sunderland, last week captured alive in the Lune below Laucaster, a fine sturgeon, of over 2 cwt. It was disposed of to two officials at the Blackpool Aquarium, where it is to be hoped it will prove an attraction to the visitors. I am certain it would to those who attend the Westminster Aquarium, but the difficulty of taking so enormous a fish so long a journey by rail would be very great.—Sprout.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

ALFRED YOUNG
"The GOLDEN PERCH,"
402, OXFORD ST.
London, W.
TRADE GOLDEN PERCH MARK.
FISHING RODS and TACKLE
of every description.

W. G. Davidson, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. Richmond, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. Established nearly a century. Boats 2s., and full bait 1s. per day; men provided. Terms for stopping visitors on application. Gravel and sandy soil.

River Lea at Ware.

Anglers visiting this favourite Fishing Ground will find excellent accommodation at HOST FEARN'S, Lion and Wheatsheaf, High Street.

Live Baits provided, and any information given to visitors.

DAVID WELLS,

11, and 15 LEITH STREET, EDINBURGH.

Fishing Rod and Tackle Manufacturer.

Flies made to any pattern or description.

Outfits for Norway, Canada, India, &c.

GREAT EASTERN RAILWAY.
SEASIDE.

The SUMMER SERVICE of FAST TRAINS is now running to YARMOUTH, Lowestoft, Clacton-on-Sea, Walton-on-the-Naze, Harwich, Dovercourt, Aldeburgh, Felixstowe, Southwold, Hunstanton and Cromer.

Two Months, Fortnightly, and Friday or Saturday to Monday (first, second, and third class) Tickets are issued by all Trains to the above stations at reduced fares.

BROXBOURNE and RYE HOUSE.—Excursion Tickets are issued daily by any train before 3 0 p.m. Fares: 3s. 6d., 2s. 6d, 1s. 6d.

For full particulars see handbills and time tables.

WILLIAM BIRT, General Manager.

London, August, 1882.

SUMMER TOUR IN SCOTLAND.
GLASGOW AND THE HIGHLANDS,

(Royal Route *via* Crinan and Caledonian Canals).

Tourists' Special Cabin Tickets issued, entitling the holder to sail during the time specified, in any or all of the fleet of (21) steamers, and to any part of the Highlands at which they may call. For one week, £3 or two weeks, £5.

By Royal Mail Steamers,

"COLUMBA," or "IONA,"

From Glasgow Daily, at 7 a.m., and Greenock (in connection with Express trains from London and the South) at 9 a.m.

Conveying Passengers for Oban, Staffa, Iona, North, and West Highlands.

Official Guide, 3d.; Illustrated, 6d., and 1s. Bil with Map and Tourist Fares, free at Messrs. Chatto and Windus, Publishers, 214, Picadilly, London; or by post from the Owner, David MacBrayne, 119, Hope Street, Glasgow.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, Furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, No. 57 and 58, Chancery Lane, E.C.

JOHN STONE, Secretary.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

TROUT and CHAR. OVA and FRY

Orders taken at the following low rates:—

OVA, *Salmo Fario*, £1; FRY, 30s.; OVA, *Salmo Fontanilis*, 30s.; FRY, £3 per 1000. Yearling *Salmo Fario*, 40s. per 100.—Address

THOMAS FORD,
Manor Fishery, Caistor, Lincolnshire.

TO ANGLERS.

J. BERNARD AND SONS

4, CHURCH PLACE, PICCADILLY,

SOLICIT an Inspection of their Stock of Salmon, Mahseer, Trout, and all kinds of Rods of the best quality of workmanship.

An unrivalled selection of Salmon and Trout flies for all parts of the World. Winches, Lines and Tackle of every description. Salmon and Trout Flies made to order.

SALMON AND TROUT
GREENHEART FLY RODS.

Why our rods are celebrated for their action, durabilit, and finish is that, being makers on the premises, we have a large stock of well-seasoned, tough, straight-g springy wood.

No cross-grained, knotty, unseasoned timber is used, and all rods are hand-made.

Whippings are of the very best silk, and ferrules of the best sheet brass, thoroughly hammered.

Approval always allowed. Price lists gratis.

Address—
B. R. BAMBRIDGE,
Maker to the Royal Family, Eton-on-Thames, Windsor.
Established 1790.

HOLBROW AND CO.,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

Broads and Rivers of Norfolk

POPULARLY DESCRIBED.

The writer has aimed at giving practical advice to Anglers, Yachtsmen, and lovers of Nature, Science, and Art; pointing out where and how each may find splendid resorts for the pursuit of their several pleasures. The writer records his own experience as far as it has gone, and in all cases the information given can be relied upon. Such a guide has long been wanted, and this issue, it is hoped, will supply the want.

Norwich: P. Soman, *Argus* office, and 84, Fleet Street, E.C. Lowestoft: *Standard* Office. Also may be had of Alfred and Son, Moorgate Street; Little, 15, Fetter Lane; Williams and Co., Great Queen Street, W.C.; Young, 402, Oxford Street, W.; Carter and Sons, 137, St. John's Street Road, E.C.; Allcock, Redditch, and all Bookstalls on the Great Eastern Railway.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of The Fishing Gazette, *No. 12, Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.

The Fishing Gazette.

SATURDAY, SEPTEMBER 9, 1882.

R. BALDERSTON *v.* R. B. MARSTON.

Gut *v.* Hair.

THE readers of the Gazette having taken considerable interest in the fly-fishing match which was announced to take place between Mr. R. B. Marston and Mr. Robert Balderston (who also calls himself the "Raven" and "Herne the Hunter," &c.), we will now give them a short account of the affair, the absolute truth of which we guarantee.

Mr. Marston reached Ripon on the evening of the 31st August, and immediately called upon Mr. Balderston, whom he found to be a man of about his own age. After a long and pleasant chat it was arranged at Mr. Balderston's suggestion, that on the following day (Friday) the two anglers should have, not a regular match, but a sort of ramble together on the Laver, a small trout stream which flows into the Yore at Ripon, after joining another small stream called the Skell. However, the "ramble" soon changed itself into a competition, Mr. Marston using Bullmer's "gossamer" drawn gut as "cast," Mr. Balderston using fine hair, and having omitted to bring his net, had to land his fish without. Mr. Marston laboured under the disadvantage of feeling so unwell the first part of the day as to be hardly able to hold the rod, a new one, which he had never used before. At Mr. Balderston's suggestion, he took one pool or stream, and Mr. Marston the one above it, then Mr. B. took the next above Mr. M., and Mr. M. the one above that again, and so on. Mr. Marston used a short, stiff ten-foot rod, Mr. Balderston a longer and much more whippy rod. The water was in capital order for the fly, having nearly cleared off after the fresh. Both anglers used, of course, nothing but the artificial fly. The fish were not well on the rise, and both anglers had to work hard for what they got.

The result of this day's fishing was that Mr. Balderston got twelve trout, Mr. Marston got eleven, but threw back three at the commencement of the fishing, not supposing that they would prove only too fair a sample of the small fish in this stream. Mr. Balderston weighed the two lots, and Mr. Marston's eight weighed more than Mr. Balderston's twelve, so most anglers would say Mr. M. had won.

On the Saturday, both anglers fished on the Yore below Ripon, but the water was high and coloured, and the result was almost *nil*, Mr. Marston getting a fair roach and dace, and Mr. Balderston a dace; both used fly.

On Monday, at Mr. Balderston's suggestion, the Laver at Laverton was agreed on as the scene of operations, considerably against Mr. Marston's wishes, as the fish to be got were such small things. The fishing was in the same style as the first day, one rod taking one stream and the other the one above, in rotation. Mr. B. began with hair. At lunch time, on comparing baskets, Mr. Marston had eighteen trout, and Mr. Balderston only ten or eleven; Mr. M.'s fish were also a better average size. The day was very bright and hot for the most part. In fishing back after lunch, Mr. M. got four more to Mr. B.'s one. On reaching Laverton Mr. B. seemed to have had enough of it, but after a little refreshment both anglers started off down stream, Mr. M. going ahead, and finding another angler fishing the stream he had intended to fish, walked a mile or more down stream to get to the end of the dead water. In the streams below the mill, Mr. M. got three more fish, one a trout of half-a-pound. During this day's fishing, Mr. M. having broken his landing net, landed most of his fish without it, the small size of the fish making it an easy matter to do so. It should also be mentioned that after lunch Mr. B. had changed from hair to gut. A trap had been ordered at Laverton to be ready between six and seven, and Mr. M. left off fishing about six and walked back; on the way he met Mr. B., who said he was feeling cold, and intended to walk to Ripon. Mr. M. tried to dissuade him, but without avail; in fact, Mr. B. seemed in a very sad mood. He said he had caught two or three more. Mr. M. saw nothing more of Mr. B. until next morning, when Mr. B. called at the hotel with the following extraordinary epistle for Mr. M.

> R. B. Marston, Esq.
>
> Dear Sir,—I enclose my ticket for Hackfall, which you can use yourself. I shall not be able to accompany you to-day, as the skin is off my feet and I have some business to do. I have not yet got an answer about the Cover stream, but if this be satisfactory, I can meet you on Wednesday or Thursday on that river; but after the fiasco of yesterday, and the fish which could not bear inspection, but needed apology, I must insist on the conditions I laid down, and which you have so transgressed, that the fish be sizeable at six inches, and that we fish alternately in each other's presence, as I cannot waste my time leaving my own fishing, as I have had up to the present to do, running after you to see what you were about. Wishing you honest sport to-day.
>
> I remain, dear sir,
> Yours truly,
> Robert Balderston.

In answer to this letter, Mr. Marston at once replied as follows:—

> Sir,—Your letter proves you to be no gentleman, and I will have nothing more to do with you. I can imagine nothing meaner than your base insinuations. I return your permit to fish at Hackfall, having no desire to be under any obligation whatever to such a mean-spirited man. I will, as I said before, have nothing more to do with you.
>
> R. B. Marston.
>
> To Robert Balderston, Esq.
>
> P.S.—You are at liberty to publish this letter if you like.

Mr. Marston feels it quite unnecessary to defend himself against such mean and absurd charges. As he never dreamed of watching Mr. B.—trusting to his honour as a gentleman to fish fairly—he cannot say how Mr. B. fished, but he can most emphatically say that he caught more trout and larger trout than Mr. B., and that every fish was caught "honestly," with the artificial fly only. Mr. Marston treated Mr. Balderston as a gentleman, and now considers he was mistaken in doing so. Most of the readers of this paper will remember that one of the conditions Mr. B. laid down at first was, that "considering Mr. M. might be a little better fisherman than the average, he, Mr. B., would undertake to kill six fish to Mr. M.'s four, and also kill a greater weight." This was a rather bumptious statement for one angler to make with regard to another whom he had never seen; and seeing that Mr. M. killed more and heavier fish than Mr. B.; perhaps that accounts for Mr. B.'s mean suggestions. However, Mr. Marston has had quite enough of Mr. Balderston, and will leave that gentleman to his own devices. Mr. M. went on to Tanfield-on-the-Yore next day, and in three hours and a half caught, with the fly, seven dace weighing three pounds, two grayling weighing one pound, and two trout weighing together two pounds one ounce. Fishing again the same evening he got two brace more of good half-pound grayling and two good dace.

Whether *gut* or *hair* is best may still be an open question: the foregoing account, however, is triumphantly in favour of *gut*.

DOES THE WATER-OUSEL EAT FISH ?

This is a question which is causing quite an embittered dispute between the bird protectors and the fish protectors in Germany. The German "Bird Protection Society," and certain "scientific ornithologists" affirm that the water-ousel does not destroy fish; and, according to Professor Dr. Metzger, in the German *Fishing Gazette*, these gentlemen attack with truly fanatical zeal all who do not accept their views on the matter. It appears Dr. Metzger has, for a considerable time, devoted himself to solving the problem, and that, too, in the only practical way, viz., by a careful microscopic examination of the contents of the stomachs of the birds themselves. Here are some results of his investigations, which would appear to answer the question conclusively. He says:—"At the end of January this year, I examined three water-ousels which were killed on the River Solz, near Hersfeld. The stomachs of these birds, which for brevity I will call Nos. 1, 2, and 3, contained in addition to the remains of insects (principally the larvæ of the May-fly) also the remains of small fish. Thus I found:—

In No. 1. The right and left throat bones of a cyprinoid, apparently the perfect remains of a minnow's teeth; also some vertebræ and parts of skull bones.

In No. 2. Some vertebræ and other bone fragments.

In No. 3. Four throat bones, all with the thin ends broken off, the part armed with teeth (of minnow) remaining; also the hook-shaped bent thorn or spike from the gill-cover of a bull-head, and sundry remains of bones, and an ear-bone (*otolith.*)

This bird must thus have had at least three small fish at its last meal.

On the 25th of April this year I received from the Upper Kinzig River, near Voltmerz, two old birds and five unfledged young ones, taken from a nest. The two old ones had besides some scanty remains of water insects, a number of skull bones of the bull-head. The contents of the stomachs of the young birds, consisted, besides remains of larvæ, of:

In No. 1. Eleven ear-bones (*atoliths*).
2. Twelve ditto.
3. Four ditto.
4. Fourteen ditto and two spikes from gill-cover of bull-head.
5. Eight ditto and one spike from gill-cover of bull-head.

These ear-bones appeared from comparison to belong to the bull-head, and trout. Now, inasmuch as a fish has but two of these ear-bones, it follows that the old birds must have fed the five young ones very shortly before they were killed, with at least five and twenty fish."

Dr. Metzger then quotes from an article entitled "The Water-Ousel as an Angler," from the pen of a well-known ornithologist, the Rev. Karl Muller, of Alsfeld, published in the German "Zoological Garden," in 1880.

Herr Muller says:—"As long ago as the year 1865, I was fortunate enough to observe, one fine summer's day at a waterfall on our trout stream, the Schwalm, how a water-ousel with the greatest ease, by diving into the water, caught and swallowed a small fish." Here follows a description of the observation, concluding with the words "it was a wee trout that was captured, and after being carried to a rock, was despatched with four strong blows from the bird's bill and then swallowed whole."

"From this observation," writes Herr Muller, "I not only learned that the water-ousel fishes, but also that in the summer, spite of his great liking for water insects, which abound in the Schwalm, he evinces great partiality for fish diet." "Since then," says Herr Muller, "I have devoted much time and trouble to investigate the angling propensities of our favourite little river-bird." And he gives a long account of these investigations. "On one occasion I found amongst the stones near a water-ousel's nest in a mill dam, remains of vertebræ and other bones of small fish, with which the old birds had fed their young. To-day, I entertain no further doubts on the matter." He also mentions having seen a water-ousel kill a fish half as long as his hand, "the bird dropped it off the stone into the water and took no further notice of it. The small spinous fishes seem to be preferred, these he devours in immense quantities."

We have only translated a small part of Dr. Metzger's interesting paper, those of our readers who may like to see the original, will will find it in the *Deutsche Fischerei Zeitung*, for August 8.

The water-ousel has always been a great favourite of ours. Hundreds of times on trout streams have we met the pretty dark plumaged, white-throated, plump, little fellow, either flitting swiftly along the turns of the stream, or sitting on some moss-covered rock in the water, bobbing up and down and keeping time with head and tail jerks. That observant naturalist, Mr. John Colquhoun, in his charming work "The Moor and the Loch," refers to the water-ousel as a great devourer of fish-spawn and water insects, and mentions having seen the bird a foot under water hunting for insects; he appears to think that its feet being webless, would prevent its catching fish, but the testimony we have quoted above proves this is a mistake. On some trout streams these birds are seen in large numbers. They generally go in pairs. It is quite evident that a bird which goes hunting along the bottom of a river devouring fish eggs, snapping up young trout and other fish from beneath the stones, is one which the trout preserver should keep both his eye and his gun on, We should be very sorry to see them exterminated, but in the interests of the fishery, their numbers should be kept down.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION.

A Meeting of the General Committee of the Great International Fisheries Exhibition was held yesterday at their offices, 24, Haymarket, at noon. The meeting was well attended, and the Earl of Ducie having taken the chair, called upon the secretary (J. W. Mollett, Esq.) to read the minutes of the last meeting, which being done, his lordship called upon Mr. Birkbeck, M.P., to read the report from the Executive Committee. The Earl of Ducie stated that since the last meeting the work of the exhibition had been well pushed forward, and an estimate for the erection of the additional buildings required to accommodate the large amount of exhibits had been received from Messrs. Peto Brothers, of Pimlico, at the same time drawing attention to the necessity of increasing the amount of the guarantee and general prize funds. His lordship then called upon Mr. R. K. Causton, M.P., to move the adoption of the report. Mr. Causton, in doing so, referred to the indebtedness which this committee felt towards the executive committee for the arduous labours which they have so successfully carried out in arranging the details of the coming exhibition. In seconding this motion, Professor Leoni Levi expressed his pleasure in endorsing Mr. Causton's remarks, and added that he was most anxious that all parts of the world should send representative exhibits to the exhibition. In reference to the prize for £600, offered by the committee for the best lifeboat, Professor Leoni Levi stated that he thought the offering of such a prize, as tending to diminish the loss of life at sea, was one of the most important objects of the exhibition. The report was carried unanimously. Sir Saul Samuel, C.M.G. (Agent-General for New South Wales), moved the second resolution on adopting the tender of Messrs. Peto Brothers for the erection of the buildings, and informed the committee that his colony was preparing an exhibit, the Government having already granted the sum of £500 to carry the same into effect. This resolution was seconded by the Marquis of Exeter, who stated that he last night had been authorised to state that the Japanese Government would be exhibitors, and give every assistance to the exhibition. His lordship added that he would give a prize value £25 for the best system of life insurance for fishermen, and of insuring boats, gear, nets, &c., expressing the hope that other persons would come forward and take up some of the special prizes in the list now published by the committee. The resolution was then carried unanimously. Professor Leoni Levi inquired what arrangements had been made to procure a lecture hall suitable for the holding of conferences. Mr. Birkbeck, in reply, stated that the Royal Albert Hall had been unanimously placed at the disposal of the exhibition by the Albert Hall Council for conferences, public meetings, or any ceremony connected with the opening, and that there was also the council-room at the Royal Horticultural Gardens, which would be available for smaller meetings. Mr. Birkbeck added that the arrangements for flooring and the erection of aquaria tanks would be undertaken by, and receive the special attention of, the committee. Mr. Chamberlain moved, and Mr. E. Jex, C.C., seconded, a vote of thanks to the Earl of Ducie for his kindness in taking the chair. The same being carried unanimously, the committee then separated.

THE FORTHCOMING INTERNATIONAL FISHERIES EXHIBITION.

AN influential meeting of county gentlemen and citizens of Norwich, was held at the Guildhall, in this city, on the 26th ult., for the purpose of affording support to the International Fisheries Exhibition which is to be held in London next year. The Mayor occupied the chair, and there were present—the Sheriff of Norwich (J. J. Winter, Esq.), E. Birkbeck, Esq, M.P., Sir R. J. Buxton, Bart., M.P., R. T. Gurdon, Esq., M.P., J. H. Tillett, Esq., M.P., Sir Reginald Beauchamp, Bart., the Deputy Mayor (S. Grimmer, Esq.), C. S. Read, Esq., A. Hamond, Esq., A. W. Upcher, Esq., S. L. Buxton, Esq,, J. H. Gurney, Esq., jun., I. O. H. Taylor, Esq., H. Stevenson, Esq., J. D. Smith, Esq., W. O. Chambers, Esq. (Lowestoft), Messrs. H. Woods, R. N. Bacon, H. Barwell, J. Stanley, A. J. N. Chamberlin, E. A. Field, Lovewell Blake, E. S. Steward, G. C. Davies, H. W. Stafford, F. Sutton, C. J. Greene, T. E. Gunn, W. Chettleburgh, and others.

On taking the chair, the Mayor said a few words explaining the object of the meeting, and his worship then called upon Mr. Birkbeck, M.P., (chairman of the executive committee), to address the meeting, and the hon. member said—The executive committee of the International Fisheries Exhibition have done their very utmost to follow up, and if it is possible develop, the great success of the National Fisheries Exhibition of last year to which you, Mr. Mayor, have just alluded. The prospectus will be placed on the table, so that those present may see what the committee have done towards making the forthcoming exhibition one that will meet the requirements, not only of the great fishing industries of the United Kingdom, but also those of the entire world. Being an international exhibition, they have had that point always before them. Thanks to H.M. Government the prospectus has been distributed—through the Foreign, the Colonial, and the Indian Offices—throughout the whole length and breadth of the world, and that action has been followed up by despatches which have been sent by Lord Granville to all our foreign ambassadors and consuls. All praise is due to Lord Granville for the part he has taken in helping us, for it has not been one despatch that has been sent, but there have been a number forwarded from the Foreign Office, and this week a very important one has been sent to all quarters (hear, hear). The result of these despatches has been highly satisfactory, for America, the Netherlands, Norway, Sweden, China, and even some portions of Africa, have not only promised to send large exhibits, but they have also voted money in support of the exhibition (applause). And in many instances our colonies have done the same. Canada has taken a very prominent part in the movement by voting money direct for the purposes of the exhibition, and also by making grants in support of the exhibitors (hear, hear). Newfoundland has done the same, and I had a letter only this morning from the Governor-General still further pointing out what they are going to do. Jamaica, New South Wales, and New Zealand have also promised to take part, and have voted money, and this is all independent of private action that is being taken in the colonies. I mention these facts as being of great interest and importance (hear, hear). This meeting will naturally ask what can be done to further develop, and make this exhibition known in a county like Norfolk. I am not at all sure that the exhibition is not better known abroad and in our colonies than it is in England, but it is by the operation of meetings of this sort that we hope to make it more known and well supported among our own countrymen. In March last the Lord Mayor of London sent letters to every Mayor throughout the kingdom, and meetings have consequently been held in various quarters; and I might especially mention a meeting that took place in Cornwall, the result of which has been an action which may well be followed by other countries. A strong general committee including the county members was formed at that meeting, with the Lord-Lieutenant of the county at their head, and they are raising funds for three purposes. One is to encourage the fishing interest to send exhibits; another, which I think is a grand idea, is to give cheap tickets to fishermen on the coast to attend the exhibition; and the third is to hand over any surplus that may remain to the executive committee. That action has been followed by other counties, and meetings are about to be held in Worcestershire and Gloucestershire for the same purpose, while a large meeting has taken place in Cheshire with the Duke of Westminster as president. In the large towns, too, meetings have been or are about to be held; and by the papers that will be laid upon the table, it will be seen that the executive committee have recommended special prizes which, if not subscribed for by public bodies or from private sources, they will find the money for. There is one prize of special interest. Originally £100 was recommended by the committee for the best lifeboat that could be produced, adapted not for steamers or for sailing vessels, but for putting off to a stranded vessel through the surf. I am happy to say that prize has been supplemented from a certain quarter by £500, making £600 (applause), and I am sure it will give the greatest possible satisfaction and excite the keenest competition all round our coasts (hear, hear). Another matter I would refer to, and that is that the site we have obtained, the Horticultural Gardens, covering 22 acres, is the best site in London; and we are now in treaty with the best builders in London to erect such buildings as will be necessary in addition to those at present existing. Every possible convenience and arrangement are being made to constitute the exhibition in every way as interesting as it possibly can be; and from an agricultural point of view there is one matter introduced from abroad which will be of great interest. At the annual meeting of the International Meteorological Conference held at Copenhagen in the first week of August, it was decided by the delegates of every foreign power represented to have their weather-forecast system shown at the exhibition, and I have reason to believe that what is known as the "storm warning" from America will be exhibited for the first time, I believe, in Europe (hear, hear), so that we shall see the most perfect known system of weather-forecasts (hear, hear). During the Session a memorial has been signed in Parliament asking her Majesty's Government to give State recognition and a grant in aid of the exhibition, and this has been handed in by a small deputation which I had the honour of introducing, and I hope the Cabinet will see their way to assent to the proposition (hear, hear). It may be of interest to know that 316 Members of Parliament have signed the memorial, and I think the Prime Minister, to use his own words, cannot help "seeing it is the evident sense of the House" (laughter) that this help should be given (hear, hear). I might add that three hon. members were so eager that their names should not be omitted that they signed the memorial twice over (laughter). One other matter in which the Government have rendered assistance is that they have given us free postage (hear, hear), so that everything that goes from our office or that is sent to the secretary goes post free. The sum of £12 or £15 a-day is saved in postage alone; therefore, I hope that any gentlemen who may have any communication to make with the secretary will not stamp their letters, as it is unnecessary to do so (hear, hear). I have only to add that I hope this meeting will feel the importance of supporting this exhibition, especially after the great interest that was shown in the success of the one held last year; and any help they see it in their way to give, whether by assisting fishermen to visit the exhibition, or by voting a sum to one of the special prizes, or by supporting the guarantee fund, which we hope and believe, as was the case in Norwich, will never be called on, will be most gratefully received; and I am sure the result of this meeting will be hailed with great delight by the executive committee, who wish me to express their warm thanks to the Mayor for having called this meeting for the purpose (applause).

The Mayor said all present were obliged to Mr. Birkbeck for his clear statement.

Several other interesting speeches were made, which will be found in the *Norwich Argus* for September 3.

IMPORTANT THAMES FISHERY PROSECUTION.

THE INTERFERENCE OF THE POLICE.

THE importance of the conviction for snatching fish which was obtained at Kingston last week by the Thames Angling Preservation Society, cannot be over estimated, as it was made a test point whether the police can interfere in those cases where men are found practising the unmanly and unsportsmanlike system of snatching fish from the banks, and in this the action of the society was successful. The police at Kingston have always been ready to assist in protecting the fishery, and Mr. Alfred Nuthall, who resides there, is a member of the committee of the T.A.P.S., and holds a deputation, has all along used his valuable inflnence in that direction. In the present case it appears that one of the police on duty near to Kingston railway bridge, reported to Inspector Bond that he had detected a man in the act of snatching fish, and in taking hold of his rod the offender broke away the hooks and threw them into the river. Inspector Bond, acting on this information, reported the case to Mr. Alfred Nuthall, who happened to be at that time on a visit to Bloaterland, but the report was forwarded to him. Mr. Nuthall, without any loss of time, sent the report to the secretary of the T.A.P.S. to act for him, who immediately consulted Mr. Thomas Spreckley, the chairman of the committee, in reference thereto. Mr. Spreckley at once saw the importance of the case and the great value that would be attached to the interference of the police in connection with it, directed the secretary to pay a personal visit to Mr. Hickson Briggs of Isleworth, the society's solicitor, and if action could be taken on such evidence to give immediate instructions to proceed. The result of this interview was that Mr. Briggs decided steps could be taken if one of the river keepers laid the information with the attendance of the police officer to prove the charge. This was accordingly done, and on Wednesday in last week the case came before the Borough Bench at Kingston, Mr. Briggs appeared on behalf of the T.A.P.S. The defendant pleaded "not guilty," but the evidence of the policeman fully established the charge, and a fine of seventeen shillings including costs, was imposed. The value of this case in the neighbourhood of Kingston, where snatching is so disgracefully and persistently carried on, will be realized from the position which is held there by Mr. Alfred Nuthall, in holding a deputation as a honorary river keeper, and who is always at hand to lay information on the evidence of the police. The society's solicitor, Mr. Briggs, is prepared to conduct the case, and there is no one more ready to act in the great interests of the fishery, than Mr. Nuthall himself. The action of the policeman and the inspector is highly to be commended, and there can be no doubt as to the West Central Association, through Mr. Thomas Hoole, recognising the services of the former by the reward of one guinea, which it offers in all cases of convictions. The river keepers are always watched by the men who practise this system of snatching, and their efforts up to the present time have not been attended by any marked degree of success; but now that the delinquents will find the police, who are always on duty, can assist in suppressing the evil, the system will be influentially checked. The influence of Mr. Alfred Nuthall in getting the Surbiton commissioners to prohibit angling on the parade was a glorious work, and now that the police at Kingston can continue in an important degree to connect the link of usefulness lower down, we may soon expect to hear that the death blow has been struck in suppressing the cruel slaughter of fish which for years has been practised in the neighbourhood of Kingston. I can only repeat that the case referred to is one of an important character, and if the true disciples of "Old Isaac" will also assist in this matter, and they can undoubtedly do so, in more ways than one, then there will be greater and more glorious days in store for the anglers, with a combination of interests seeking to preserve the Thames fishery from unfair and illegal practices. B.

SYSTEMATIC EXAMINATION OF PUNTS.

The periodical examination of punts, especially in the tidal waters of the Thames, is a most necessary duty to discharge, and owes its origin some twenty years ago to the valuable suggestions of Mr. Francis Francis in the columns of the *Field*. It was arranged for one of these visits to be made on Thursday afternoon in last week, the start to be made from the steps at the Anglers' Hotel, near to Teddington Weir. There were present to take part in this movement Mr. Thomas Spreckley, president, and Mr. W. H. Brougham, secretary of the T.A.P.S., assisted by river keepers G. J. Rough, Alfred Thompson, and James Drewe. Mr. Spreckley took occasion to address the Teddington fishermen in reference to the proposed new bye-laws, which, if carried in their present form, would prevent the laying of grig weels above Richmond Bridge. The T.A.P.S. in this matter had taken up the interests of the fishermen, and were seeking to obtain such an alteration as would allow them to lay their grig weels anywhere. The men were evidently much pleased with this interference on the part of the society, and resolved upon getting up a memorial asking the conservators to accede thereto, and pointing out the destructive character of the eels to the fish of the river, and the necessity of all efforts being encouraged to catch them. One o'clock was the time fixed to commence the examination of punts, but the rain came down in such torrents it was found desirable to wait until it had subsided. There was therefore a delay of at least half-an-hour, with no prospect of a thorough clearing up. Mr. Spreckley gave orders to start, and during the entire journey to Richmond Bridge the rain continued. There were, however, nearly twenty punts out, and in several of them the lady angler element prevailed. The reception of the inspectors was, with one trifling exception, favourably given, both by anglers and fishermen. Every punt was closely examined, some of the occupants expressing great satisfaction at the movement. The contents of the punts varied in the number and quality of the fish. In a few instances there were a few unsizeable dace, which the anglers had retained for jack fishing, their retention being of course permitted for such a purpose, especially as the numbers were very small. In some of the punts there were some good sized dace, and a few very fine roach. The best show was made by two gentlemen fishing with H. Wheeler, of Richmond, near to Petersham Ait. They had not been out long, and had taken seven good-sized barbel in the hour. By the time Richmond was reached—close upon four o'clock—it was flood, and the river opposite the residence of the Duke of Buccleuch was alive with fish, dancing and chopping about in all directions; in fact, the scene presented was more like a water frolic! In the face of this spectacle, to be told there was no fish in the river was distinctly negatived by the fish themselves, and, like most other complaints received, fully proved how hard it is to believe those who should be the first to help the T.A.P.S. in the preservation of the fishery, and who are unfortunately endeavouring to prejudice the minds of their clients against the society. The examination proved on the whole very satisfactory, and when the crew arrived at the steps at Richmond Bridge they were none the worse for the exposure to the weather. It was intended to have gone lower down, but the tide was coming up like a flood, and with a fearfully strong stream, it was considered necessary to terminate the visit at the classic town of Richmond. B.

IMPORTANT NOTICE TO ANGLING CLUBS.

The Proposed New Bye-laws for the Thames.

We have been requested to ask those clubs who have not yet done so to send in their memorials in support of the alterations and additions which were so unanimously agreed to at the conference on the 15th of August, with as little delay as possible, to Mr. W. H. Brougham, Swayfield Villa, Hounslow, as it is most important the assent of all the London and suburban angling clubs should be given. Some of the clubs have returned their memorials properly signed, but without the designation of the society, and are, of course, valueless. One has been returned without the name of the club and minus the signatures. The following clubs are reported through the General Post Office as "gone away," and their whereabouts not known:—Carnaby Castle, Doddington, First Surrey, Free and Easy, Golden Tench, Junction Brothers, Old Bower, and Stoke Newington. Replies are wanted from the following clubs, some of which may be amongst those whose name is not inserted:—Acme, Albert, Acorn, Albert Edward, Act on the Square, Atlas, Bloomsbury Brothers, Brentford, Barbican, Battersea Piscatorials, Cadogan, City of London, Clerkenwell Amateurs, Convivial, Carlisle, Clapham Junction, Canonbury, Clerkenwell Piscatorials, Critchfield, Crown Piscatorials, East London, Excelsior Eustonian, Friendly Citizens, Golden Barbel, Good Intent, Hearts of Oak, Hampstead, Isledon Piscatorials, Isaac Walton, Junior Piscatorials, Jolly Piscatorials, Kentish Perseverance, Kenton, Kingfishers, Kentish Brothers, Limehouse Brothers, Little Independent, Metropolitan, Marylebone, Nautilus, Nelson, Nil Desperandum, North London, North Western, Norton Folgate, New Globe, Odds and Evens, Old Artillery Ground, Original Alexandra, Pike and Anchor, Perseverance, Royal George, Royal Piscatorial, South Essex, South Kensington, Suffolk, South Essex Piscatorial, Savoy Brothers, St. Pancras, Stratford Brothers, South Hackney, Sons of the Thames, Sociable Brothers, St. James and Soho, Three Pigeons, Trafalgar, United Brothers, United Society of Anglers, United Marlboro' Brothers, Woolwich Invicta, and Walthamstow. Several of these clubs were represented at the conference, and it is important each club should further support the movement by returning the memorial properly filled up.

THE RIGHT OF FISHING IN THE THAMES.

At Maidenhead, on Monday last, Mr. J. Granville Layard was summoned by Mr. Tyrrell Lewis for taking a trout and for attempting to take fish by angling in the Thames, near the eel bucks above Maidenhead Railway Bridge, between the Thames Ait and the house on the Berks shore in the occupation of Mr. Graham Smith, alleged to be the private fishery of Mr. Lewis. The case came on before Mr. W. B. Farr, the mayor, and a full bench of borough magistrates. Mr. R. A. Ward appeared for the prosecution; Mr. Layard conducted his case in person. The prosecution attempted to shew that they had over sixty years' title to the fishery, but none of their deeds granted the soil of the river to Mr. Lewis, or to his predecessors in title. Mr. Layard cited various old charters, statutes, and cases, some dating as far back as Richard I., in support of his contention that the soil of the river Thames was vested in the Crown, and consequently the public had a right to angle thereover; and even if this were not so, the prosecution had failed to shew that they had obtained the fishery under a grant from the Crown as far back as the last year of Henry II., subsequent to which the power of making such grants was taken away from the Crown by Magna Charta. After a hearing lasting about four hours, the magistrates gave the following judgment for the defendant, with costs:—

"In this case of a complaint by Lewis *v.* Layard, the magistrates, after considerable deliberation, do not consider that the complainant has established his right to the soil of the bed of the river, and therefore cannot claim, and indeed does not appear to have enjoyed the exclusive right of angling in the river. The magistrates, therefore, must dismiss the summons against the defendant."

Mr. Ward applied for a case, which the magistrates said they would grant on any point of law arising out of their decision.

Mr. Layard has expressed his thanks to Mr. William A. Crump, solicitor to the Thames Rights Defence Association, for his valuable advice and loan of books and documents, which materially contributed to the success of the defence.

This is another victory to be scored to the Thames Rights Defence Association, as the decision, although founded on justice and common-sense, was greatly attributable to the authorities given to the defendant (Mr. Layard) by Mr. Crump, of Philpot Lane, the solicitor to the association. The work of the greatest use being the "Brochure of Legal Decisions," &c., published at Marlow, and signed "Piscator."

FISH POACHING.

Petty Sessions, Watford, Tuesday, September 5, 1882.—Present: W. R. Woolrych, Esq., in the chair; A. J. Copeland, Esq., J. S. Gilliat, Esq., H. C. Finch, Esq, the Rev. A. H. Baker, and the Rev. H. J. A. Birchell-Herne.

James Petrie, Richard Allen, and Henry Jackson, of London, were charged with angling, unlawfully and wilfully to take certain fish, the property of the Grand Junction Canal Company, Charles Francis Humbert and Mr. Edward Moon having the private right of fishing.

Allen said that he was guilty of fishing, but did not know that he was on private ground. He was on his way from Langley to Rickmansworth, and was trying to keep his bait alive.

Petrie said he was merely attempting to catch a few minnows for bait.

Jackson denied that he was fishing. His rod and line were on the bank, and he was sitting down, eating some bread and meat.

Mr. H. M. Turner said he was instructed to make this charge by Mr. Humbert, who holds the right of fishing in the canal from Lord Clarendon's Park at Cassiobridge.—Mr. E. Moon's keeper, who saw them there, would say distinctly that he saw them fishing. He need not tell the Bench that the man who put his line into private water could not be released from the charge by saying he was only keeping his bait alive. He would state, by way of explanation, that there was also a charge of assault against Allen and Jackson, but he would keep the charge of fishing separate.

Charles Francis Humbert produced a lease from the Grand Junction Canal Company, under their seal to himself, granting him the right of fishing in the canal from Bridge No. 166 Grove Mill, extending southerly down to and terminating at Cassiobridge, from the 25th December, 1866, for twenty-one years. The lease, he said, was granted with Lord Essex's free consent, because he, by that means, hoped to keep Cassiobury Park free from trespassers. Men like the defendants fished the canal on Sundays, and became a great nuisance.

Noah Bygrove: I am gamekeeper to Mr. Edward Moon. On Sunday, September 3, I saw the defendants at 7 o'clock in the morning fishing in the Grand Junction Canal between Cassiobridge and Cassiobury Park, near Cassiobridge Lock, in the lock, and Johnson was a little lower down, between the lock and Cassiobridge; Petrie was with Jackson. I went to Allen and said, "Good morning." He said

"Good morning." I said, "You know you are not allowed here fishing." There is a board facing the road at the Halfway House warning persons not to fish there, and three others along the towing-path. I said, "You will have to go with me to Mr. Moon's." He said, "No, I shall not." I took hold of his jacket and said, "Come along." He began to put himself about, and I took hold of his collar and dropped his rod over into the garden of the cottage.

Mr. Finch: What has Mr. Moon to do with it?

Mr. Turner: Mr. Moon has Mr. Humbert's liberty to fish there.

The Chairman: How long has the board been put up at Cassiobridge?

Witness: About a month. While I was tussling with Allen, Jackson came up with a handful of stones. I said to him, "What are you going to do with those stones?" He said, "Throw them at your head." He then threw one, which hit me on the leg. I then let Allen go, and he then said, "Stop a minute," and he put his hand into his pocket, drew out a knife, and said, coming towards me as I drew back, "I'll run it into your ——— heart." He said he did not care for me or Mr. Moon either. I asked him for his name, and he said "Allen." I asked what address, and he then used the most filthy language. I went towards Cassiobridge, and Allen drew the knife again there.

By Allen: I have no witness to say that you drew the knife.

Allen: I have a witness who knows that you grappled me by the neck before I had time to speak.

By Jackson: You did throw a stone at me, and I saw you fishing. Your rods were not packed up on your back, and you were not lying on the grass.

Allen, in defence, said it was not quite daybreak when he left Sells's to go to King's Langley to a "favourite swim" they knew of. Having fished for an hour here without success they resolved to go to Rickmansworth. They proceeded along the canal until they came to a swing iron gate, which he thought divided private from public fishing. He had only one bait, and he dabbled it in the water to keep it alive. Jackson and Petrie were lower down, one with his rod over his shoulder. The keeper came up and said, "Don't you know you are doing wrong?" and he replied, "If I am doing wrong I will go away." Without another word the keeper grappled him by the neck, and said, "Hold hard, you are going with me." He told the keeper he was abusing his authority in treating him as if he were a thief and a vagabond. The keeper pointed to the boards, and he told him he could not read. The keeper replied, "That's an old game, none of you can read." Then the keeper brandished a stick over his head and threatened to dash his head in if he did not go with him to Mr. Moon. A bargeman saw it, and said that the keeper was doing wrong. They then went past Shell's and fished the first lock, after which a policeman came up and took our names and address. The knife instead of being in his hand, as the keeper said, was lying on the ground with his haversack. He never threathened to stab the keeper.

Mr. Finch said he understood the fishing was open along the towing path of the canal, as he had seen lots of people fishing there.

Mr. Copeland: I received information from Mr. Thomas, the company's engineer, that no one has right to fish the canal without permission.

Mr. Turner: There are a great many angling societies.

Mr. Boydell: I may say the society held in this town, viz., the Watford Piscators; are in treaty for the water from Mr. Humbert's water, at Cassiobridge, to Brasley's Lock.

Chairman: The Bench consider that there can be no claim set up in this instance, the case is one of poaching. We shall fine each of the defendants 10s. and costs, which was afterwards remitted to 5s., the cost being so great.

The defendants asked for time to pay the fine, which was not granted; so the prisoners were removed to custody for seven days in default.

The charge for assault was withdrawn on account of confusion in the service of the summonses.

CLUB AND OTHER JOTTINGS

By L. B.

MR. T. HOOLE, the secretary of the West Central Association of London and Provincial Angling Societies, is from home, enjoying his well-earned annual holiday. He will probably be back about the 15th or 16th; so secretaries of angling societies having occasion to correspond with Mr. Hoole and not receiving a reply as promptly as usual, will be able to ascribe it to its true cause, and not to any intentional neglect.

A meeting of the Executive Committee of the Society for Renting Fisheries will be held on Monday evening next at the Star and Garter Tavern, St. Martin's Lane, W.C., at nine sharp. Committeemen will oblige by attending, as business of importance will be brought forward for discussion and settlement.

At the committee meeting of the West Central Association on Friday last a new society was enrolled, viz., The Wellington, held at the Prince Regent, Beresford Street, Walworth; secretary Mr. W. Palmer; meeting nights Wednesdays and Sundays.

A No. 2 district West Central Association visit will be paid the St. John's Angling Society, Three Compasses, Cow Cross Street, Farringdon Street, on Wednesday evening, September 20th. As the St. John's is a good visiting society, and the notices to clubs in the district will by the time this is in print have been issued some days, a good muster is confidently anticipated.

The next Central Association return visit will be paid the Buckland Angling Society, Middlesex Arms, Clerkenwell Green, on Tuesday evening, September 12th.

A good many of the readers of the FISHING GAZETTE, besides the writer of these notes, must have been considerably puzzled by the letter which appeared in last week's issue from a member of an angling society recently started at Watford, and signed G. V. As far as the letter is intelligible, it is in substance a complaint that a hitherto unprotected and much poached water has been rented by our good friends the Watford Piscatorials, who, actuated by a laudable Waltonian spirit, have thrown it open to all fair anglers, subject, of course, to certain very necessary restrictions as to size, fence season, and the total abolition of night lines, wiring, netting, and kindred abominations. The minimum sizes of fish are those adopted by most angling clubs in London, and, indeed, in several cases far higher measurements are enforced. Even in the case of roach, placed at 7 inches from tip to tip, and weighing from this river (the Colne) 2½ oz. to a little over 3 oz., according to season, the restriction is very lenient; but, strange to say, what the person responsible for this epistle seems to most take exception to is the abolition of night lines, netting, &c. There is no getting away from it, and the writer has, speaking apparently on behalf of his brother anglers (save the mark!) in the newly-formed society, registered his protest against the abolition of these practices.

From Haslett, of Chertsey, the following report comes to hand:—"I expect you have been waiting to hear from me, but I have had very few customers. Gentlemen seem to forget that now is the very best time of the year for barbel. I have had three days since the Piscatorial Bream Competition, in which Mr. Wheatstone, who fished with me, came in first—viz., two days with Mr. C. Hatfield, 100 lb. of bream and barbel, heaviest barbel 6 lb., one eel about 1 lb., several bream 4 lb. and over, and a splendid trout, 10 lb. I was out again on Thursday, result—9 barbel, 4 good bream, and 1 perch, heaviest barbel, 5 lb. You see the fishing speaks for itself.' A No. 3 West Central Association district visit will be paid the Peckham Brothers' Angling Society, Prince Albert, East Surrey Grove, Peckham, on Tuesday evening, September 12.

The usual monthly meeting of the United London Anglers' Central Committee was held at the Bald Faced Stag, Worship Square, Finsbury, on last Monday evening, Mr. S. Morgan presiding. After the reading and confirming of the minutes of the previous meeting, we were treated to a long and most interesting discussion *re* private, public, and manorial rights in a certain portion of the Lea navigation—not a hundred miles from Broxbourne—in which Messrs. Beckett, Murphy, Manning, Secretary Ghurney and others took a most earnest share. I cannot help thinking, however, in cases of this kind, the adoption of some clear and well defined course is far more satisfactory, not to say dignified, than the policy of masterly inactivity—or as one delegate called it the "Micawber" like system of "waiting for something to turn up."

Mr. Ghurney reported that he had taken out, on behalf of the Lea Conservancy, several summonses against persons taking undersized fish from the river Lea, all of which would be heard in a few days, and he hoped—in fact he had no doubt, the offences being very clear and conclusively proved—they would obtain a conviction in every case.

Mr. George, of the Act on the Square Angling Society, was elected delegate from this association to the Fisheries Renting Society, and Mr. Williams, Hearts of Oak Angling Society, to be Honorary River Lea Bailiff, both in the place of Mr Philips, deceased.

Mr. Manning then inquired of the secretary what action, if any, was being taken in the matter of the recent poisoning of the river Lea. He thought it was an anomaly that, though a poor man was liable to be summoned and fined, or in default imprisoned, for taking a few unsizeable or unseasonable fish, wealthy manufacturers and others might poison whole reaches of the river, destroy thousands of fish, and go scot free. Mr. Ghurney stated in reply that action was being taken by a certain influential and wealthy body interested in the abolition of so reprehensible a practice; he might term it such, for this was by no means the first time they had had to lament a similar occurrence.

The Rivers Pollution Act is a measure difficult to understand, and one which has puzzled the most learned judges and lawyers; to take action and seek redress under its provision would entail no little expense, and some influence to move the Local Government Boards, &c. It is, therefore, a matter for congratulation that a powerful funded body who, in this case have interests in common with us, are taking steps to discover and punish the offenders, and prevent a repetition of this great and surely unnecessary waste.

All clubs enrolled on the central committee's books are agreeably to a minute part at the last meeting entitled to send two delegates to every meeting, and circulars are to be sent to every society suggesting this minute be acted upon.

It was also decided that the delegates' annual dinner should take place at the Rye House on the last Sunday in this month, September 24th. Members' friends will be welcome. Gentlemen intending to be present should send their names in to Mr. R. Ghurney, not later than Thursday, 21st inst. A cordial vote of thanks to the chairman brought the meeting to a close.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS

MID-THAMES.

"Amongst the views of many, mine."—Shakespeare.

Once more a list of sunshine has been vouchsafed, and punts may be seen dotted here and there on the surface of Father Thames, with the occupants busily engaged in landing the succulent gudgeon or the brilliant roach or dace, all of which class of fish since the rain are well on the feed. Chub are taking the black and white palmer fly in the early morn and dewy eve, and may be tempted in mid-day with a dainty bit of Gruyère or Cheddar cheese, the beasties being connoisseurs enough to choose the latter with a vein of blue mould therein. The late rains have much freshened up the river, although not discoloured it to any appreciable extent, so now is the time to go in for barbel, and not begrudge baiting with a few thousands of lobs, if good sport is to be deserved. My reports from Pangbourne, Sonning, Hunley, Marlow, and Maidenhead all tell of the roach having come on all at once, takes of 20 lb., 17 lb., 14½ lb., and 12 lb. having been had since Tuesday. At Hurley, three piscators, hailing from The Bell, have had 14 lb., 8 lb., and 5 lb. respectively; and at Medmenham, Messrs. Bryan and Brooksbank, out with Tom Street on wet Tuesday, nobbled some 10 lb. of good roach, and Mr. Bryan yesterday, out with "The Boy," in the same waters got 6¼ dozen clinking roach in two hours, all had with gentles, and rubble and bread for ground bait. Sweet flakey bran with bread is *par excellence* the best attraction for roach; but in its absence, rubble pollard, or barley meal mixed up with bread, sand, or light clay, is an excellent substitute. With an immense amount of pleasure I have to report that the public right of fishing in the Thames has been upheld by the Maidenhead bench of magistrates. Mr. Robert J. Granville Layard, of 5, Fenchurch Buildings, London, was summoned by Mr. Tyrrell Lewis, of Albany Court Yard, Piccadilly, for having on the 3rd of August fished in water in the Thames in which the complainant stated he had a private right of fishery. After a deal of argument and evidence on either side, the magistrates, after grave consideration, gave the following decision. "In this case of Lewis *v.* Layard, we do not consider that the complainant has established his right to the soil of the bed of the river, and therefore cannot claim and enjoy any exclusive right of angling in the portion of the river in question." Costs followed a decision which was received with applause in a crowded court. Friday evening: Water in excellent all-round trim, and most river fish endued with biting proclivities. Wind N.E. Weather to-day dry and pleasant.—Marlow Buzz.

Ancholme District.

The water has been discoloured during the past week by the heavy rains. This has, however, had the effect of putting the fish well on the feed. Several large catches have been had, but the best was by a gentleman on Wednesday last who caught, half way between Brigg and Brandy Wath, no less than 5 stone of fine bream and one stone of roach and perch (total 84 lb.) The fishing, too, in the trout streams has much improved. I am taking a holiday on some southern waters. This week I am on the Great Ouse, near Bedford, and am having some very large catches with the artificial fly, often getting two at once. I get mixed baskets of chub, dace, and roach. The largest fish thus far is a chub of 2 lb. 2 oz. I hope to spend the rest of this week on a private pike fishery belonging to the Duke of B——, and anticipate a large haul.—Thomas Ford.

Camel and Inny (Cornwall).

River full of water and fishing splendid, never better. Good baskets of trout are being taken every day, together with many peel and a few salmon in good condition. Some large fish are now reported to be coming up the river. Baits to be used. Flies: August and September duns, light blue dun, whirling dun, cinnamon, female willow, blue bottle, red palmer. Minnows: Brass minnows for peel and salmon. Devon bait for both trout and peel.

Coquet (Welden Bridge).

The river is very small at present, and we have no company in at the present time.—A. Glass.

Chichester.

A change for the better in the weather has materially added to the success of rodsters in this locality. On Saturday evening some good takes of bream were made, Messrs. Young and Summers, as usual, being to the fore. On Monday a large pike was hooked, played, and almost landed, but at the eventful moment broke tackle and escaped; Mr. Young computed it at 16 lb. Myself on Wednesday, while angling with Mr. W., hooked a couple of large carp in the lower water. The first broke a stout gut cast; the latter was not firmly hooked, after some minutes' play breaking hold. Since the clearance of weed from the canal, fish seem much healthier and stronger, big fish breaking away almost daily. Paste and gentles are most killing.—George F. Salter.

Derwent (Chatsworth).

River is in splendid condition, and weather very favourable. Anglers are now having good sport, killing from half a dozen to ten brace per day with sand-fly, bumble, and needle-fly. Last Saturday, Mr. Hogg made a good basket with the wasp grub, one trout being over 5 lb. in weight. Grayling are rising very freely to-night (Thursday).—J. Eades.

Dove.

There has been a nice shade of colour in this river since my last, at least, so I am informed, as I am now for the present located at Scarborough, and have to derive my information partly second-hand. I may mention that the sea-fishing here has been and is now very good. The visitors and natives are enjoying excellent sport, amongst others my own son, a youth of fifteen, having been very successful. My last advices from the Dove are to the effect that the Autumn dun, the honey dun, bumble, and the intermediate are killing best. The largest fish are trout, falling to the spinning baits, such as the Derby killer, the Gregory, and the Gresham. Roach on Saturday were biting eagerly at the wasp grub, while barbel would scarcely touch anything. Capital sport has also been obtained in the Dove's tributaries, as well as the main river.—The Splodger.

Eden.

Owing to heavy rains the latter part of last week, the rivers were very much flooded on Saturday and Sunday; on Saturday evening a Carlisle gentleman got a nice dish of trout in the Armathwaite club waters, one weighing over a pound weight. On Monday, J. Bird, gamekeeper, Lazenby Hall, landed a fine salmon in the Barrow Wood waters. The river is in capital condition, but the last few days it has been too bright and hot for much fishing; the netting season closed on the 31st of last month.—Skiddaw.

Exe (Exeter).

The river is now in excellent ply, and anglers generally are having a splendid time of it. Some of the heaviest creels have been made during the past week. Perch have been taken up to 2 lb. weight, and roach and dace from ¾ lb. to 1¼ lb. each. Rudd have also been had in goodly numbers, while a few carp and tench have also been brought to grass. Anglers should now pay a visit to Exeter, and fish the various streams that can be reached, east, west, north, or south, by rail or road in a short space of time. The weather is delightful, the scenery beautiful, and the waters in splendid condition. I have heard of a grand dish of trout, forty in number, of good size and condition, being grassed by Mr. Williams, a gentleman of whom I have had the pleasure of reporting upon several occasions; also with the above trout he had three salmon of the following weights: 5½ lb., 8½ lb., and 10½ lb., these were all taken in the upper waters of the Exe, some fifteen miles from Exeter. Messrs. Prickman and Baker have been doing exceedingly well, Mr. Pearson also keeps adding to his double numbers; in fact, the salmon fishermen all round have had a splendid season, and everything promises well for the closing portion. The flies now taking are so numerous as to be scarcely worth recording, each angler praising his own flies—some their browns, some the drakes, some the duns, many the blue bottle, others the palmers and flesh fly; so from this long list, since the heavy showers we have had, nothing seems to come amiss. I have not been able to do very much myself, having other fish to fry, but during the last week I have had a parcel containing many packages of King's Natural Bait, for roach, bream, carp, &c., which I have distributed, and hope next week to give you the opinions of several rodsters here. Mr. J. A Keily, as usual, continues to have excellent sport with coarse fish, and is now fishing with some friends on purpose to test this bait, the result of which shall be forwarded, when I hope to astonish your readers. As for myself, and without wishing to flatter the proprietor, I must certainly say it is the best, most convenient, easily made, adhesive, luring bait I have ever by chance had to mix or use. Two gentlemen have just returned with from ten to twelve dozen roach and dace each from the canal and river, both having used this bait. Mackerel and pilchards are coming along in the estuary, the latter very fine and the former altogether so very small, taking as many as eighteen and twenty to weigh 1 lb., and are being sold for 2d. and 3d. per dozen. Prawns, crabs, and queens plentiful. Laver is now in season.—Frank Gosden, Exeter.

Exe (Tiverton).

The water is now in good condition for salmon fishing; a good number have been taken during the past week.—Wm. Mudford.

Holmrock (Cumberland).

The rivers Est, Irt, Hean, and small tributaries are all in splendid order for fishing, and more rain this morning. The river Irt fishing has been, and is good, one tradesman alone having killed over eighty fish, and several from 30 to 50 each, myself among the lot.—A. Brocklebank.

Ilfracombe.

Sea fishing for the past fortnight has been very slack—raining and blowing every day, so that no boats could venture outside the harbour; and the strong spring tides have swept away nearly all the lobster pots. The fishermen are lamenting what a bad season—plenty of visitors here and plenty of fish, but no weather to catch them. Tuesday, the weather slightly changed, and a few boats put out, and they got from 16 lb. to 20 lb. whiting pout and pollack. Wednesday, a few strings of whiting and tamlin cod were brought in by fishing parties. Several small conger eel and dabs have been caught from the pier-head with rod and hand lines. The weather at present moderate.—E. Comer.

Lea (Ware).

A good fall of rain on Tuesday has put the water in excellent condition here, and good sport has been had among the roach and dace. Jack continue to be taken daily, but no fish of any size worth recording have yet been captured, although some really "growlers" are frequently to be seen. On Sunday a fine carp weighing over 4 lb. was caught by a London angler off the Wharf; this is an exceptional take for this part of the river. Perch are now on the feed, and some fair captures have been made amongst these fish during the week.—Lion and Wheatsheaf.

Leicester.

Fishing has greatly improved in this locality since my last, as some fair takes of roach and perch have been had. On Saturday, Mr. Boon, amongst a nice lot of fish, had a perch weighing 2 lb., and a roach 1 lb. 8 oz. Mr. Bird, on Monday, took twenty-seven very good roach. Mr. Elliott also weighed in between 4 lb. and 5 lb. of roach on Wednesday, whilst several other good takes of roach and perch have been landed from the waters of the Leicester Angling Society. At Aylestone matters have been rather quiet during this week, but from the Wreake reports are more favourable, as several good takes of roach and perch have been secured and large pike have fallen to gentlemen from Leicester whilst spinning. The Barrow waters are quiet, and the match fished there last Saturday ended in a complete fiasco. One of the conditions under which the contest took place was that no angler should be awarded a prize if he had not caught 4 oz. of fish, and to the utter surprise of the committee, not one of the anglers could raise enough to weigh the stipulated quantity; the match, therefore, has to be fished again this Saturday, when it is to be hoped that the elements will be more propitious.—Alert.

Medway (Tonbridge).

The water is as clear as gin, and, as I prophesied last week, the warmer weather has had the effect of bringing the bream well on the feed again. On Wednesday and Thursday, near Tonbridge Castle, Mr. R. A. Dallas Beeching and Messrs. Bartram were making good bags, after liberally ground baiting with lob worms.—Ye Medway Water Rat.

Nen (Northampton).

The water is getting into good condition again for angling. The heavy rains on Friday last caused the over shats to flow and bring down the polluted water, which affects the stream for two miles down. On Monday last, by permission of W. Rigby, landlord of the Half Moon, Broad Street, Messrs. Eyte, Turner, Seal, Burnell, and Garlick enjoyed a nice day's fishing in his private water. The roach being well on the feed they each had a nice bag of fish, Seal taking the cream with a 10 lb. bag. On Thursday W. Williams had a very nice chub weighing 3 lb. Our Little Demon Bill Ball had another grand day on Thursday, killing about 40 lb. of bream in his old spot in the lower water of the Nen Angling club.—T. F.

Ouse (St. Ive's).

Roach well on the feed—some excellent catches this day, varying from 1 lb. to 2 lb. Splendid chub noticed under the old bridge, from 5 lb. to 7 lb.—nine caught over 4 lb. Water in good condition. Weeds dying off fast. Seventy-five pounds weight of pike caught between this and Huntingdon.—Tom Adams.

Thames (Goring).

Water in good order for all round fishing; roach biting better, gudgeon biting well. Sunday some good perch, Monday a few good roach and perch and four jack, Tuesday two dozen of roach and few perch. Prospects look well for the next few days.—J. Rush.

Thames (Halliford).

The river is still low, but improved since the rain, and by judicious baiting some fair bags are to be had. Different gentlemen fishing with me since my last week's report. Their takes have been as follows:—1st day, Mr. Martin, 4½ dozen roach and dace; 2nd day, Mr. G. Palmer, 24 lb. of bream and 10 lb. of barbel; 3rd day, Mr. Bennett, six barbel, weighing 16½ lb.; 4th day, Mr. Geo. Palmer, 30 lb. of barbel and 3 large bream; 5th day, Mr. Young, four good bream (largest 4½ lb.), a barbel of 2 lb., two good chub, and a perch; altogether, 18 lb.—George Rosewell.

Thames (Hampton).

Barbel-fishing is in good force in this district, and it is remarkable here and in other portions of the river that trout are frequently taking the lobworm. John Smith, one day, twenty barbel; another day twenty-three, and another day thirteen, and a trout of 4 lb. He also caught another trout of 2 lb. Thomas Wheeler has been getting about ten barbel each day.—H.

Thames (Richmond.

The river is now in splendid order for fishing, and the fish are feeding very well. All the punts have been out this last week, and all had very good sport, and the barbel have began feeding a little better than they had previously done. Up till now it has been the worst season I know of for four years, and the fish have been running very small, but are improving a lot now as the roach are feeding, so that we are not confined to dace fishing alone. The average takes of sizeable fish have been from four to seven dozen per punt per day. I can say for safety now that it is worth having a day's fishing, which I have not been able to say before this season, though it is better late than never. I can also say we have got a river keeper now, which the Thames Angling Preservation Society has kindly let us have on our own water at last, which every angler who visits Richmond should be thankful for.—John Bushnell.

Thames (Windsor).

Very little has been done the last week. I have only heard of one decent take of barbel, by Richard Gray, with a patron, 30 lb., on the 3rd. I have been out three times since my last report; have not had a blank; might have had a good catch if the rods had been in the hands of experts. The bank anglers have been encouraged by the roach, the best bait for them being paste, morning and evening. A gentleman out with Vicars hooked a very fine jack from 8 to 10 lb., but after a struggle he succeeded in running him foul of a root. The water has not improved, notwithstanding the heavy rain of Tuesday.—G. Lumsden.

Torridge (Torrington).

River in order for fishing and plenty of water to bring up the fish; so we may look forward to good sport for some time to come. I have heard of one salmon, twenty-four peel and lots of trout and dace being taken since last report. Peel have sported well at the fly this week. One gentleman lost a large salmon through his line catching in the reel. We have had some heavy showers this week, but to-day it is fine.—Practical Angler.

Torridge (Woodford Bridge).

There has been but very little fishing this week. The water is much improved within the last day or two, but the catches have been small. One gentleman killed nine trout and five dace on Wednesday; and another gentleman, thirteen trout and three dace, Thursday. The favourite flies are the coch-y bonddhu and yellow fly. The small minnow has been of some service.—John Blake.

Trent (Newark).

The weather has decidedly took a turn for the better during the last day or two, heavy rain and wind having been the order of the day. Sport has not been so good as I had anticipated, probably the adverse state of the elements having something to do with this; but, as I have just said, the weather has very much improved to-day, hope it will continue. The water is now fast getting into trim, and by the time this is in print will be in capital condition for any sort of angling. I have been out one day this week, and tried my hand with the roach, but I had to content myself with fifteen very nice roach, going nearly 10 lb. I got them on the feed capitally, but the wind was so rough that I could scarcely tell when I had a bite; plain bread paste was the bait I used, and a moderate supply of good sweet ground bait, made from bread, creed rice, bran, and a handful of barley meal, nicely mixed. The ground bait is of more consequence than the hook bait in my opinion, for unless you judiciously administer the ground bait your chance of success is not a very good one. I believe I should have made a heavy bag of roach if the wind had not been so rough. Creed wheat, malt, or bread paste will be the best baits for roach just now, while the worm can be tried for bream, &c., and should the water fine down sufficiently the wasp grub will kill chub.—The Trent Otter.

Trent (Nottingham).

Sport has varied a good deal during the week, and it is singular that throughout the season so few barbel have been caught. How to account for this I am at a loss to conceive, as the fish in the upper reaches are plentiful enough, especially at Shardlow. Mr. R. Fish has taken a very fine roach in, I suppose, Mr. Smith's reach at Burton-on-Trent. It weighed 1 lb. 11¼ oz., and was added to the already long roll of fish at the Wellington Hotel, in Station Street.—The Man at the Clubs.

Wharfe (Yorkshire).

Beautiful weather has prevailed in this district during the past few days, but I have not heard of many anglers being out; possibly the gun is occupying their attention at present. The only dish that has come under my notice was one of nine fish, trout and grayling, taken with the fly on Monday.—Francis M. Walbran.

Wye and Derwent.

Sport, both on the Wye and Derwent, since my last report, has been very fair, and some nice baskets of both trout and grayling have been killed The killing flies have been the honey dun, bumble, little red and black flies, along with a very small light dun. The abundance of flies that are now upon both rivers, makes fish very particular about the kind of flies they take; both the Wye and the higher lengths of the Derwent above Rowley, are in first-class condition for fly-fishing. The bottom fishers, on the Derwent, did well both on last Saturday and the beginning of the week, killing good baskets of both trout and grayling, both with wasp grubs and cockspur worms; below Cromford several barbel, chub, roach and dace have been landed. chiefly with wasp grubs for baits. Weather hot and bright to-day (Thursday). Many anglers are on both rivers.—George James Eaton.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

The members fished a pegged-down match at Weybridge with but a very bad show of fish. The water chosen was below the White Hart Inn. Eighteen were pegged-down and five others roaming. Mr. Say first, Mr. Shury second, Mr. Worledge third. The remaining prizes will be fished for at Cheshunt next Sunday, all to go down by the 7.25 a.m. from Liverpool Street Staton. The train calls at all stations down the line. Mr. Partrick had a very nice show of roach, weight 11 lb. 10 oz.; Mr. Larkman, bream, 1 lb. 1 oz., roach, 1 lb. 2½ oz., from Dagenham. – J. Worledge.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge, with thanks, the receipt of £1 1s. from G. Chambers, Esq., per the Gresham Angling Society.—R. Ghurney, sec.

September 6th.

CLAPHAM JUNCTION ANGLING SOCIETY.

Members weighing in fish since last report were Mr. Bousseau 5 lb. 9½ oz. of roach; Mr. Martin, 4 lb. 3 oz. of bream; Mr. Walbrook 2lb. 8 oz. of roach; Mr. Wright 2 lb. 1 oz. of roach; Mr. Pannifer 4 lb. 3½ oz. of roach and chub; Mr. C. Speed, 3 lb. 5 oz. of roach; Mr. Willoughby, 3 lb. 12½ oz. of bream; Mr. E. Wilson roach, chub and perch; one nice fish, scaling 3 lb 9 oz., is now being preserved and will be added to our stock of preserved fish. Members are requested to attend on Thursday next.—E. Wilson, sec.

GOOD INTENT ANGLING SOCIETY.

There were a good many of our members out on Sunday last, but their takes were small, the best coming from Ware, by Mr. J. Robinson. On Tuesday last we had a good number of members at the club, the object of the meeting being to receive Mr. T. Crumplen as an honorary member of our society. It was with a very great deal of pleasure he was received, and I hope the hearty welcome which he had will leave a pleasant recollection on his mind. After being duly admitted a member his health and also the prosperity of the Gresham Angling Society were drunk. Mr. Crumplen responded in an excellent speech, which was warmly applauded. Our distribution of prizes takes place on Tuesday next, the 12th inst. They will be on view at 7 p.m.—R. Murphy.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This society continues to prosper, and it is now decided to make the entrance fee 7s. 6d., and 2s. 6d. annual subscription; honorary members, 10s. On Thursday last, the second competition took place, at Potter Heigham, A. Mitchell, Esq., being referee. First prize awarded to Mr. Warner, for 14 lb. of fish; second to Mr. Chapman, for 4 lb.; third to J. Hewettson, Esq, of Putney, for 3 lb.; the spring tides acting very much against good catches, as will be seen by the fish weighed in during the week. The bream are now well on the feed in the Broads, and in the Bure some good catches of roach have been reported, but not registered—some of our London anglers having splendid sport, but not reporting it to the society, no doubt not knowing that a society is in existence, which next season will be better known.—J. Lark, sec.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday last was exceptionally interesting, the Rev. Hayman Cummings, F.R.H.S., &c, reading his long-promised paper on "Trout Culture," Charles Bates, Esq., in the chair. The rev. gentleman, who was warmly welcomed, dealt very ably with all the various points relative to this branch of pisciculture, giving a popular and scientific account of everything relating thereto, from the deposit and impregnation of the ova, to the time when the fish were able to take care of themselves. It is needless to say that his great motto was "follow nature," and in this following of nature, he thought laid the secret of all true success. The paper, evidently the result of deep thought and practical experience, will shortly be printed and distributed to the members of The Gresham, and we only regret that space compels us at the moment to notice it so briefly. Mr. Frost put a series of queries to Mr. Cummings, founded on his own experience, and these, ably replied to, proved of very considerable interest, adding to the information already given;

Mr. Jardine expressing the pleasure he had derived from the paper, and the discussion it had evoked. Captain Alfred moved a hearty vote of thanks to Mr. Cummings, in seconding which Mr. Crumplen said he hoped at some future time to hear how far the experiments of Mr. Cummings might have a bearing on the culture of what are called "coarse fish," in which anglers were now so much interested. The recent takes of fish by members have been exceptionally good, Dr. Brunton has weighed in trout, Captain Alfred, barbel. Mr. Miller, barbel, chub and roach, Mr. Bennett (of Yarmouth) perch, and Mr. Young brought up a capital show of bream, chub and barbel just as the meeting closed, one of the former going 4 lb. 3 oz. Parker (the keeper at Waltham) reports several recent takes of pike by Mr. Morris and others from the society's water. A notable incident of the evening was the presentation of a reading desk, by A. W. Parker, which, designed, by himself, was in addition furnished with a beautifully embroidered cover, the badge of the society being worked thereon from a sketch by Mr. Holroyd, whose portraits of Walton and Gresham adorn the society's walls. Mr. Cartwright presented a bound copy of Wheeldon's "Angling Resorts" to the library, and Mr. Crumplen added a fac-simile copy of the original edition of "The Compleat Angler." Mr. Crumplen was on Tuesday elected an honorary member of the Good Intent Angling Society a large number of members being present, notwithstanding the weather. The health and prosperity of the members of The Gresham being enthusiastically given. The Anglers Benevolent box having been duly shaken, a very cordial vote of thanks to Mr. Bates concluded the proceedings of a very enjoyable evening.

HAMPSTEAD ANGLING SOCIETY.

The annual supper of this society took place on on August 30 at the Cock and Crown, when a pleasant evening was enjoyed by the members. Mr. Jackson was at the piano. After the toasts of the evening, the distribution of prizes was made by Mr. Stedall, the chairman, with Mr. Blatchley as vice. Gross weight prizes, given by the club—First, 18s., for gross weight of all fish, taken by Mr. Blatchley; second, 10s. 6d., for ditto of roach, taken by Mr. Woodward; third, 10s. 6d., for ditto of perch, taken by Mr. C. Messenger; fourth, 10s. 6d, for ditto of bream, taken by Mr. Cheil; fifth, 10s. 6d, for ditto of jack taken by Mr. W. Messenger. Special prizes—A silver cup, given by Mr. C. Busbridge for best specimen fish taken during the season, won by Mr. C. Messenger; a rod, given by Mr. Dillon, tackle maker, for roving match, won by Mr. C. Messenger; 10s. 6d., given by Mr. H. Busbridge, for gross weight of perch taken during the season, won by Mr. W. Messenger; a handsome rod, given by Mr. R. George for roving match, not less than 5 lb. of fish to win the rod, won by Mr. W. Messenger; this was fished for on August 27. Mr. W. Messenger taking it with 8 lb. of roach. Several other members weighed in. Mr. Blatchley, bream and barbel; Mr. C. Messenger, roach and rudd.—W Broom, sec.

HEARTS OF OAK ANGLING SOCIETY.

The above society fished for prizes last Sunday, which were won respectively by Messrs. A. Fish, Furlong, W. Rider, and R. Ford. I might also mention that the annual dinner of this club will take place next Sunday at the Black Swan, at Hertford.—C. J. Millie, sec.

JUNIOR PISCATORIAL SOCIETY.

Within last fortnight have had weighed in the following:—Mr. J. W. Cathel, roach, 3 lb. 5 oz.; Mr. Mills, roach, 2 lb. 12 oz.; Mr. Geo. Woodman, from Datchet, 4 lb. 14 oz., roach, 5 lb. 13 oz, tench, 1 lb. 11 oz., barbel, 9 lb. 2 oz.; Mr. John Warne, from Staines, barbel, 4 lb. 3 oz.; Mr. George Woodman, 6 tench, 13 lb. 2 oz., roach, 8 lb. 6 oz., perch, 2 lb 11 oz. Mr. T. Jenkins, 1 bream, 1 lb. 10 oz. On Monday next the members of the above society will have a peg-down match on Truss's Island, near Staines, for numerous prizes, which will be presented to the successful competitors at the dinner to take place at Mr. Currie Banfield's Swan Hotel, Staines Bridge—Alf. Bisley.

LEICESTER JOLLY ANGLERS' CLUB.

The members of the above club held their first fishing contest last Saturday, when twenty-four members took part in the competition. A brake and three horses started from the headquarters, the Earl of Leicester Inn, Infirmary Square, and conveyed the merry party to the village of Rearsby, where the waters of C. Woodcock, Esq., had been generously lent for the purpose. Owing to a strong south west wind, the catches were not large, and the following are the prize takers. First prize, Mr. H. Starkey, a splendid fishing rod and reel; second prize, Mr. G. Broadhead, half a dozen knives and nickel silver forks; third, Mr. C. Clark, inkstand; fourth, Mr. G. Gask, writing desk; fifth, Mr. Bonner, reel; sixth, Mr. Sheriff, fishing basket; and seventh, Mr. R. Greasley, roach line.

LONDON AND SOUTH-WESTERN RAILWAY ANGLING CLUB.

At our meeting on Friday last a pegged-down match was arranged to take place at Weybridge, on the 17th inst., for two silver cups kindly presented by R. Toomer, Esq. Members please note that all competitors must give their names to the chairman on Friday, the 15th inst. Our members have not been so fortunate as others, but, as young beginners, satisfactory. R. Fortescue has taken two handsome specimen bream, weight 7 lb. 7 oz., which are being preserved. Any brother anglers wishing to join a society in the neighbourhood of Vauxhall could not do better than see Mr. Bulmer, 62, Wandsworth Road, who will with great pleasure give all information and answer any questions.—J. Woodcook, sec.

September 4th.

NORTH WESTERN ANGLING CLUB.

Forty of our members had an excursion to Boxmoor on Sunday last, to fish for eleven prizes, but on account of ounces instead of pounds being the order of the day, only nine were taken; Mr. Wynn 1st, Smart 2nd, Underwood 3rd, Hayes 4th, Harris 5th, L. Roxbee 6th, Foreman 7th, Billings 8th, and G. Lemon 9th. Four-horse 'bus and three-horse brake were the vehicles engaged, and a most enjoyable day was spent in true North Western style. H.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

There has been some good fish shown. Messrs. T. Longman, Laundy, Crafford, and Obbard, and Dr. Lavender had roach, bream, and perch; Messrs. Richardson and Laundy also weighed in some roach.—J. Obbard, sec.

Sept. 4.

PECKHAM BROTHERS' ANGLING SOCIETY.

The match for the prizes given by Messrs. Reed, Garrad, and Bignall resulted as follows:—Mr. Stidolph, first; Mr. Lang, seeond; Mr. Otjan, third. The next match, for the president's cup, takes place on the 10th, at Maidenhead. The next return visit West Central Association, No. 3 District, goes to the above club on Tuesday next; A. Brodie, Esq., in the chair, faced by W. R. Matthews, "Sloper." As it is expected that the president, chairman, and secretary of the West-Central Association will be present, we trust that the members of kindred societies will turn up in large numbers.—W. H. Page, hon. sec.

Sept. 5.

PECKHAM PERSEVERANCE ANGLING SOCIETY.

Members of this society fished a peg-down match on Sunday last at Amberley. There was a fair show of fish. F. Cook, weighed in 8 lb. of bream; a splendid one weighing 4 lb. was sent to Mr. Miller to be preserved. The next match takes place on Sunday 10th, at Windsor, for four prizes.—W. Arnold, sec.

PIKE AND ANCHOR ANGLING SOCIETY.

On Sunday last, a Mr. Wallace, of the Alexandria Fishing Society, took a very fine perch weighing 1 lb. 14 oz., which was weighed before thirty or forty other anglers. This fish was taken out of my back water close to the house; it was taken with a gudgeon last night. Mr. Joe Woodie took a very fine barbel close to the same place.—H. Puddicombe.

Sept. 6.

PISCATORIAL SOCIETY.

The roach competition for fish taken out of public waters took place amongst the members of this society on Monday last. Owing to so many London anglers visiting the broads and rivers of Norfolk and Suffolk and others enjoying the sea breezes, the attendance at the clubroom, Ashley's Hotel, Covent Garden, on that evening was not very numerous. Mr. Murray was voted into the chair, and about twenty members were present. Mr. R. S. Fennings won the first prize with 27¾ lb. of roach from Ringwood; Mr. Walker took the second prize with 18 lb. 14 oz. of roach. The following other fish were weighed in:—Mr. G. Robinson, 18 lb. 8 oz. of roach and 6½ lb. of perch from Ringwood; Mr. Kisch, a Thames trout of 4 lb. 12½ oz.; Mr. H. Gray, a trout of 3 lb. 2 oz.; Mr. Fennings, 6 lb 6 oz. of roach; and Mr. Walker, 12 lb 6 oz. of roach and a perch of 2 lb. 10¾ oz from Ringwood. The next competition on October 2 is also for roach, but limited to the Thames, and no fish to be weighed in under 6 oz.

QUEEN'S ANGLING SOCIETY.

Very few of our members went out on Sunday. Mr. Walford had 14 lb. 6½ oz. bream; Mr. Barrett, 6 lb. 6 oz. bream; Mr. Pratt, 2 lb. roach; Mr. Morgan, 1 lb. 8 oz. dace.—L. Walford, sec.

RODNEY PISCATORIALS.

On the 3rd, at the headquarters of the above, about 20 lb. of roach and dace were exhibited by Messrs. Diggins, Grant, and Marsh, from the Thames and the Lea. At the meeting held on the 6th, Mr Diggins in the chair, the following gentlemen were elected as members of the society:—Messrs. W. Luland, F. E. Diggins, G. W. Diggins, F. Smith, J. Marsh, G. Grant, W. G. Howell, G. Miles, and H. King. The following prizes have been promised for competition during the remaining part of the season: £5 5s. by Mr. T. Hughes, £1 1s. by Mrs. T. Hughes, £1 1s. by Mr. King, and a perambulator by a friend. —Pixie.

Sept. 7.

THE HIGHBURY ANGLING SOCIETY.

The annual dinner of this most flourishing society took place at Mr. Lyndsell's, the Pied Bull, St. Margaret's, on Saturday last, the 2nd inst. The weather being somewhat unfavourable prevented the attendance of many of our members and friends, but a goodly number sat down to a most excellent repast provided by the worthy host. The chair was efficiently occupied by Mr. Sampson, and ably supported by Mr. Edward Wheatley in the vice-chair. After the usual loyal and customary toasts were given and duly responded to, the chairman gave the toast of the day, "Success to the Highbury Angling Society," which was most enthusiastically received with what is known as the Highbury Whisper, namely, three times three. Some excellent songs and recitations were effectively rendered by the company, and altogether a very enjoyable day was passed. A capital show of jack, tench, roach, dace, &c., took place on the 3rd inst., by Messrs. Higley, McDermott, Charles, Rose, Payne, Howell, and others, the result of a keen competition for two valuable prizes, which were respectively won by the two former gentlemen.—James Edward Wheatley, sec.

Sept. 5.

WALTONIANS.

On Sunday we had very fair shows. Mr. Jos. Moor had roach, 5 lb. 8¾ oz.; Mr. J. Dodge roach, 5 lb. 6 oz.; Mr. Read roach, 5 lb. 1¾ oz.; Mr. Packman roach, 3 lb. 6 oz.; Mr. E. Watkins roach, 3 lb. 11 oz; Mr. Waltham roach, 2 lb 9½ oz.; Mr. Starr, 1 lb. 10 oz; Mr. Good, jun., bream, 4 lb. 5½ oz., and roach, 1 lb. Mr. Togwell also weighed in fish.—A. J. Marriott.

WESTBOURNE PARK PISCATORIAL SOCIETY.

On August 28, our members fished a match at Godfrey water West Drayton, and at the same time had a photographic group taken. 1 lb. 14½ oz. took first prize, which included one roach of 1 lb. 7½ oz, the largest yet weighed in. On Tuesday, September 5th, Mr. Oatley was successful with two handsome dace from the Kennet, scaling 12 oz. and 15¾ oz., the largest ever weighed in this club, though we have one in the room, caught by a member at Godfrey, of 16¼ oz.

On Wednesday evening Mr. Huber, who had previously made a tie with Mr. Young, each having taken a trout of 4 lb. 10¼ oz., succeeded in catching a splendid Thames trout of 6 lb. 1 oz., spinning from the bank near Monkey Island. Harry Wilder, who was fishing with two gentlemen in a punt, kindly assisted in landing the fish. Mr. Huber having kindly presented it to the club, it will be preserved, and in due time grace the walls of the Pelican, with other fine specimen fish.—W. Adeane, sec.

Sept. 6.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

GUT *v.* HAIR.

Sir,—Having had considerable experience with both, I can quite endorse the "Trent Otter's" opinion. I have frequently caught from 20 to 40 lb. of roach with the same hook, without a single breakage. Some time ago I quite annoyed an old friend of mine (who knows everything) because he would have it that hair was finer than gut; but on sending him some of the finest drawn gut for roach fishing with wheat, he was so thoroughly convinced he was wrong he now uses nothing else. Besides, playing very large roach on a single hair line, 6, 8, 10, 12, or 15 minutes, as the case may be, although it may be, and undoubtedly is, highly exhilarating, not only plays the very deuce with your swim when roach are on the feed, but too often attracts the "unwelcome visitor" described in your issue of July 22—at least so I have found it; and I need not inform your readers after his arrival no more sport need be expected.—I am, &c., Mark Antony.

FLY-FISHING CHALLENGE.

Sir,—I have read with interest the controversy anent "Gut *v.* Hair," in the last few numbers of the Fishing Gazette, and note with pleasure your proposed match with Mr. Balderston. I am an advocate of the use of gut as against hair. I was tutored in this (as in what piscatory accomplishments I may possess) by the talented author of the Scientific Angler, whose able advocacy of the finest and genuinely scientific modes of fishing was ever borne out by results. (Angling contests, forsooth, he met, and acted a chief part in them weekly during the greater part of his career). Results indisputable, for he was never known to have been defeated. But now the world-renowned "David" is no longer with us, thanks to his exertions in the promotion of the angling, cause; his example of high and able proficiency, and withal his reverse of egotistic disposition, he has left many anglers who are proud to own him as their tutor and mentor, and who are willing and able to raise the high standard of efficiency he uplifted and so ably upheld till death did intercede. The writer is willing to meet either "Herne the Hunter," or any other reviver of old time customs upon the most difficult of all noted trouting streams, The Dove. The disputed point being "Hair, *v.* Gut"—I am, &c., W. H. Cooper.

Prospect House, Ashbourne, Aug. 26, 1882.

HAIR *v.* GUT.

Sir,—I have read with no little interest the controversy Hair *v.* Gut—al-othe challenge proffered and accepted, but as I dont see any practical result from it, as the result will depend far more upon the skill of the angler than his use either of gut or hair. I submit the following: No men are more prejudiced than anglers (especially fly fishers in country districts), as it has fallen to my lot to be brought out by one of the best, but, at the same time, the most prejudiced Nothing but hair must I use, in fact, if I had hinted fine gut there would have been no more communication this side the grave. Still, I have taken upon myself to try fine gut, the finest I could procure—I have never yet seen hair so fine—and, I suppose, the finer the more difficult for the fish to see it; hence one count in favour of fine gut. Again, how often has a good fish, at the head of a stream, bolted and taken my cast with him, and this, sir, is doubly grievous where the fish run small; not so with fine gut—another count in favour of gut. What more annoying to be broken, especially when one has been fishing all the day with no result, and just when the fish are in, not only wasting time, but working yourself into a temper? Not so with fine gut I have not only saved time by playing my fish less, and consequently disturbing the stream less, but also in breakages These reasons have induced me to support the gut theory. I certainly think grayling may prove a trouble, as trout wind the gut a good deal, but this, with a little care, can soon be straightened. The only objections to gut jacks is that they wind round the cast, I think, more than hair. I have shortened them, but still fear this is a fault—shall be glad of a hint in reference to this. Still, sir, in conclusion, when one knows the trouble and annoyance in procuring good hair, the risk whether it will stand the water, and the many other drawbacks, is it not wiser and fairer to cast away prejudice and go in for the very finest and best gut, no rubbish?

Higher Wharfedale. "Snipe Bloa."

RIVAL ANGLERS.—GUT *v.* HAIR.

Sir,—You, Mr. Editor, call the projected contest between yourself and Mr. Balderston a trial of gut *v.* hair. As an implicit believer in the superiority of the latter, under certain conditions, I should like its honour to be upheld by some one whose excellencies as an angler are known to be something above the average. The gentleman of many aliases infers as plainly as he possibly can, that he stands at the head of fly-fishers. I am afraid this opinion is held only by Mr. Balderstone himself. If I am not mistaken as to that gentleman's identity, he resided in the neighbourhood of, or actually in the town of Kendal for some time. Whilst there, he created no favourable impression as an expert fly trout fisher. In our little district I could lay my hands on a dozen anglers who can give Mr. Balderstone all the odds he offers you, and a beating to boot. Such being my opinion, I protest against the proposed contest being dubbed "gut *v.* hair." Let it merely be a test of skill between the two parties, in any case until we hair fishers select some one we know is qualified to act as champion of our cause.—I am, &c., Sprint (one who has used only hair casts in trout fishing with fly for over twenty years, and killed sea trout up to 3 lb. weight with single hair).

GUT *v.* HAIR.

Sir,—"Herne the Hunter"* has at length thrown off the antlered mask. Who and what the writer of such an epistle could be, I did not take the trouble to enquire or even consider. It is easy to make random assertions which would be often difficult to prove. Now that the mask has fallen, I must say I am surprised to find Mr. Robert Balderston has considered it conducive to his dignity or repute to enact the *role* of the "boisterous buck."

For one to contest and refute the main arguments, or, more correctly speaking, assertions, advanced in favour of the "ancient and traditional hair," would be a task easy enough; but for the tax on my time and your valuable space, sir, I shall upon this occasion content myself by merely touching upon an odd point or two conspicuously (according to my personal experience) at fault. I notice amongst other things that rather free use is made of your name, Mr. Editor, as also that of Mr. F. Francis. All I may here observe on this point is this: Had Mr. Balderston been in Derbyshire at the period indicated in his letter, he, with the aid of his hair, would to a dead certainty have found himself in the rear. The Dove and Wye are known as well by the writer as by the major portion of brother anglers who habitually fish them, and I have no hesitation in disproving such twaddle (forgive the name) as the paragraph here referred to, knowing full well as I do that the use of hair has been practically distanced these two decades and more. The paragraphs, too, in numerical order, endorsed by the signature of Mr. Balderston, are startlingly eloquent. From them the adept southern fly fisher gathers that their author knows absolutely little or nothing of what is needed in the way of skill and proficiency in fishing successfully a well flogged and frequented southern trout stream. I commend paragraph No. 3 particularly to the notice of my brother fly fishers who may be subscribers to the Gazette. No. 2 is not unimportant—*Six inches?* Assuredly this must be a misprint. There is not an angling club or society to my knowledge in existence that places the restriction so low. Restriction, indeed? would most certainly suggest to Mr. Balderston the adoption of no restriction at all. Fingerlings of 6 inches, forsooth! Why the idea is perfectly repulsive to the genuine sportsman. There are other individuals who understand conditions for trouting with "divers kinds of tackle" as well as "Herne the Hunter."—I am, &c. The Splodger.

RE GUT AND HAIR.

Sir,—Judging from the denunciating comments that are being unstintingly bestowed on the string of letters penned by Mr. R. Balderston (under cover of *nom de plume*, "Herne the Hunter," and open), the feeling created has been the extreme reverse to that doubtless intended by their author. But then, as set against this ostentatious display of brag and bluster, it must not be forgotten that we are indebted to Mr. Balderston for a really meritorious article on the theory of artificial flies, in which he has taken exception to the northern freethinking doctrine in the typical trio of flies or spiders, thus unmistakably and beyond all question proving himself a head of the clique, the elysium of whom is the mountain burn and moorland stream.

Every trouting district has its crack rodster, who on his part has contracted a certain method of procedure, a distinct line of tactics, which united with a spice of enthusiasm, and in most cases with a degree of natural aptitude, has placed above his immediate compeers. It is when these best men meet in friendly casual contests that the genuine champion transpires. But to the subject announced on heading, gut was originally introduced as an improvement on hair for angling purposes prior to the advent of the present century, gradually as the demand for this article increased. The Spanish and Madeira silk culturists gave increased attention to their new product, as at first the substance of it was so coarse and rough as to be of small utility for general purposes; competition and a quickened demand, however, soon worked an entire change, and in the next few years the best of the midwater and Cotton-fishers advocated, by their personal employment of it, the new specimen of gut. The opponent of the cat-gut piscators, as they were termed, were, of course, heavily adverse to the change that threatened, and what, we would here ask, sterling improvement was ever permanently made without heavy and persistent (often inconsistent) opposition? Our past and present history, as a nation and a people, affords analogies innumerable. Up to a period of about forty years since gut had been eschewed by the main body of fly fishers as being unnecessary thick and strong. At this time great progress was being effected in the construction of almost every description of the anglers', and especially the fly-fishers' equipage. So great was the desire manifest for advancement, that investigations were in many quarters ardently followed to an extent bordering on the verge of absurdity. Thus we find among the MS. writings of the late author of the "Scientific Angler" that he used none and rejected all but the best hair from an entire race-horse of good blood; and that in the course of time a microscope of powerful lens was employed, and that to such a nicety, that but a few odd strands would be deemed worthy selection. To what further heights could the search for perfection extend? we are led to inquire. Human hair would appear to have been finally resorted to. Strength and length were the essentials here needed. These, however, were either difficult to procure in sufficient quantities or were deficient in utility when obtained. As the next of these investigations chronicled is a series of experiments in refining silkworm gut, the ultimate result being the steel drawing plate, the idea would doubtless be taken from the stone wire-drawing appliances. Subsequently from the date of this invention, the decline in the use of hair in all grades of angling was great and significant, as most angling readers will remember. This gave rise to much contention from the scurrilous attacks and vain boastings of the local hair champion. Mr. Foster was led to publish, in the *Derby Mercury*, August 22, 1849 (a copy of which we have before us), a fly-fishing challenge to fish for a stated sum; offering, at the same time, "to kill three fish to his oppenent's one." This, though not accepted, had the desired effect in toning down local antagonism—not so abroad. Contest after contest, in a perpetuated string, was waged and won; now north, now south, from Scottish beck to Cornwall's streams. Finally, the able advocate of refined gut—to stop the now becoming wearisome advances of what proved in the large majority of cases presumptive aspirants—published a challenge in *Bell's Life*, stating the readiness of the inventor of the gut-refining system to fish any hair champion for a sum of not less than £100. This also remained unaccepted (we have not evidence to the contrary, however); and since this time some thirty years have elapsed, during which period the recognised standard practitioners and writers on angling have declared in favour of gut as against hair, that is, where a comparison has been at all invited. Whilst upon the most noted trout streams of the Midlands and of the South, hair, for trout fishing, is and has for long years been looked upon as a relic of bygone times. We cannot think of enlarging further upon this subject. The wording of the conditions of the intended contest put forth by your correspondent cannot fail to probe a line from more than one ardent piscator, if we mistake not their effect.—I am, &c.,

Ashbourne. David Foster, Jun.

THE THAMES BELOW RICHMOND.

Sir,—The remarks made by L. B. under the heading of Club and Other Jottings in your issue of 26th August, as to the admirable propositions made at the recent conference at the Cannon Street Hotel by the Richmond Piscatorial delegates, must have so commended itself to all anglers desiring to preserve fish for angling purposes in the Thames, that I am sure numbers of piscators, like myself, looked in your issue of September 2nd (but in vain) for the reason which induced Mr. Geen to oppose the resolution in question other than "that the present time was not opportune." Can it possibly be that Mr. Geen has no other explanation than this to offer for opposing a scheme so fraught with benefit to the angling world? If so, the course of action he thought fit to adopt must indeed appear inexplicable to the many hundreds (nay, thousands) of anglers whose interest he not only ignored, but was mainly instrumental in defeating on the occasion in question. Apologising for thus troubling you, I am, &c., A Constant Subscriber.

---

* A letter with this *nom de plume* appeared in Mr. Balderston's paper of last quarter,

---

FISHING AT POOL AND BOROUGHBRIDGE.

Sir,—I noticed a correspondent in your last issue requiring some information as to the fishing at Pool. If he will write to Mr. Lodge, White Hart, Pool, he will make arrangements to comfortably accommodate him for a few days, and, with his usual liberality, allow him to fish in his length of water, which is good for trout, grayling, chub, and dace. He can go five minutes' walk up the river, and fish in a good length for 6d. a day; or he can go down the river to Arthington, about a mile, call at the Wharfedale Hotel, and he will be supplied with a day ticket on payment of 1s.

As to tackle, baits, and kind of flies: for bottom fishing the tackle must be the finest made, the fish are now mostly taking maggots and wasp grub. For flies I recommend your correspondent to write to Smith Suttle, Westgate, Otley, who will supply him with particulars and the taking flies at a reasonable price.

"Rus in Urbis" will find good pike, roach, chub, and dace at Boroughbridge. There is a small inn on the river bank, close to the bridge. The landlord will supply him with any information he may require. The fishing is free on the landlord's side. If the fish are not on the feed the landlord will direct him to the river Swale, a distance of three miles, where he is sure to get a basket of fish.—I am, &c., F. P. Hammond.

Leeds.

FISHING AT POOL, WHARFEDALE.

Sir,—If "Yorkshireman" will write a private letter to me I will then give him all necessary information concerning the above.—I am, &c.,

Pool, Wharfedale. Francis M. Walbran.

THE CONFERENCE AND THE BYE-LAWS.

Sir,—In your issue of August 19, under the above heading, objection was taken to two of the proposed new bye-laws—viz., the close season for jack, and the rule forbidding the use of only two rods. I was greatly surprised at the editorial opinion, and on Wednesday last we discussed the matter at our club. We had a good full meeting, and I asked the chairman to favour me by taking a vote on both subjects; the result was, that without a single dissentient the highest approval was expressed of the proposed alteration of the close season for jack to be from March 1 to July 31; also the rule, which has been a rule of our club for some time, forbidding the use of more than two rods.

I read the comments from the article in the Gazette, and strong doubts were expressed as to the existence of any persons attempting to get a living by rod and line fishing; as to such persons turning worse poachers than they practically are at present, we don't fear poachers of any sort once we get an efficient code of bye-laws.—I am, &c., A. J. Marriott, Waltonian Angling Society, 37, Judd Street, King's Cross.

[We have no objection to private individuals or clubs making what rules they like. What we do object to is carrying legislation for the public generally *too far*. And we are still strongly of opinion that to interfere with the angler's rods and tackle is a grandmotherly interference with the rights of individuals. You might as well legislate to stop the use of more than one gun, because too many birds are shot. Such questions should be left to the unwritten moral laws of sport. Stop netting, stop the pollution of streams, but do not destroy the spirit of sport by so hedging it in with laws and bye-laws, as if it were a dangerous compound like nitro-glycerine. The Waltonian Angling Society has unanimously sat down upon us. We can only hope that they will not refuse to spend 2d. a week in their usual copy of the Gazette, because we venture to express our own opinions, as sometimes happens with regard to the pike. From a pike angler's point of view, the more the fish is fenced the better, but we have to consider the views of thousands of anglers, who care nothing for jack fishing, and hate the fish as a destroyer of their trout, roach, &c. That Mr. Marriott and his friends think we wish to advocate anything against the real interests of sport we do not believe. What we find so irksome is, that with all this legislation to make us virtuous anglers, the true *sport* feeling will be lost. Whatever is not against the law will be lawful whether sportsmanlike or not.—Ed.]

GROUND BAITING.

Sir,—I have found the following by "Ephemera" in my common place book as cut from *Bell's Life* many years ago:—"Groundbaits are essential to extensive success, and should be used freely, thrown in for days and nights previously at the spots wherein you intend to angle. They should be thrown in at all events the night before you begin to fish; they should be of the same sort as the baits you intend to use, but of inferior quality. Elsewhere (he says) you should never ground bait with gentles. The more carefully and constantly you ground bait any locality the greater number of fish you will entice there, as of course they will readily congregate in those places at which they find most food."

Mr. Blaine explains the rationale of ground baiting thus:—"Fishes naturally congregate where they have been led by any singularity of appearance in the water they inhabit, thus they are on the alert, and take every kind of bait eagerly when a flood is coming down. Conscious that food of different kinds is forced along by the sweeping current, they are on the look out to receive it; and thus also when ground bait is thrown in it attracts their attention and draws them together and detains them, and although their naturally roving disposition may carry them away again, fresh supplies render their absence short, and they instinctively return to the scene of former plenty. It is the principle of ground bait to attract fish without glutting them, and thus, although edible matters enter into the composition of ground baits, yet they are, or ought to be, always inferior to the hook baits offered at the same time, by which fish may be tempted to leave the ground bait for the more delicate morsel on the hook. In rivers that are constantly ground baited with heavy substances, the very noise of the splash in the water by its fall attracts fish to the spot. They are used to it, and know the consequences. Large worms, mixed with balls of clay, attract barbel, chub, perch, and trout; bran, pollard, meal, and malt grains, attract roach, chub, and bream; greaves and pieces of cheese attract barbel and chub. Raking with an iron rake the bottom of the stream, or mudding it by going into the water and stirring up the gravel, &c., with your strong soled shoes or boots, will bring fish into the wake of the discoloured water, and they will eagerly take worms before them." Blaine then describes various ground baits which have already been given.

In ground baiting with chopped lobworms it is advisable to have a pan or tub of silver or river sand to throw the pieces into. The sand will cling to these and assist to sink them the quicker. To get ground bait to rest properly where it is desired, the depth of the swim should be considered, and the set of the currents, more particularly if there are more than one. The plan is to throw a little in at first, and if the water is clear enough to watch its career. A pretty accurate guess may be made whether you are to cast the ground bait well above, close to the punt, or to this or that side. An exercise of judgment is necessary here, and I do not know any man who more skilfully comes to the desired conclusion than Mr. William Badley, of Nottingham. It is a compliance with these apparently trifling conditions which materially distinguishes the sport and success of one fisherman from another. This clever angler uses but little ground bait when fishing from the bank in the Trent. I believe a little chewed bread thrown in at intervals suffices him.

It is a question whether the eels do not get more than the lion's share when worms are so prodigally cast in. One thing is certain, if the fish are not plentiful enough to eat these quarts of worms in the course of a few hours they must become distasteful to the fish, and injurious to the water. Those who doubt this have only to place a few lobs in an utensil and cover with water, to witness their slimy and offensive character, after, say, a day's immersion.—I am, &c., Creel

---

DESTRUCTION OF SPAWNING GROUND.

Sir,—In reference to that portion of "Creel's" letter on ground baiting, where he states that the use of large quantities of clay tends to pave the bottom of the river with clay sediment and thus spoil the spawning grounds. If such is the case, should not some regulation be put upon its use by the T.A.P.S. I, however, presume that "Creel's" reference to the bottom of the river between Teddington and Isleworth means really those few favourite swims which are constantly being baited, and if that is what he does mean, we need not fear the spoiling of spawning grounds generally, which his letter seems to infer. I have made a careful calculation, and find that to pave the bottom of the river for a length of one mile and a breadth of 150 feet a thickness of ¼ inch would take five and a half years, supposing that fifteen anglers used each one bushel of clay per day on 200 days per year, and also supposing that none of it was washed away by the tides and stream, which it most certainly would be. I really think that "Creel" has sounded a false note of alarm on this point, for there can be no doubt but that an exceedingly small percentage of the clay thrown into the river for baiting purposes remains on its bed; it is washed away by the stream after being stirred up and disintegrated by the moving action of the shingle, and a far greater amount of sediment is deposited in the quiet eddies from the clay and earthy particles always held in solution by the water. I must apologise for asking so much of your space, Mr. Editor, but I think this is a matter of interest and importance, and ought to be carefully investigated. —I am, &c., R. W. Hobden.

COLOURLESS WAX FOR TYING HOOKS AND FLIES.

Sir,—Can you or any of your readers inform me of a substance that will do instead of gum shellac dissolved in spirits of wine for putting over the whipping of hooks, that is transparent. The shellac, after being dissolved, turns nearly black of dark brown, and discolours the silk. Your correspondent sincerely hopes with "Constant Reader" that "Ariel" will give us his plan of spinning, and which has been anxiously looked out for by M. L. H.

[In November, 1879, we gave one or two recipes for a colourless wax. Here is a good one from "Pennell:" "Burgundy pitch, 120 grains (¼ oz.); white resin, 60 grains; tallow, 20 grains. Having reduced the resin and pitch to a mixed powder, and placed them in some clean receptacle (an egg cup will be found very convenient), put them into an oven, and when quite melted, add the tallow, stirring the whole thoroughly up together for several minutes. The wax, which when cold will be quite hard, will be ready for use in about 12 hours. The above quantities will make a lump of wax as large as a walnut."—Ed.]

SCARCE BRITISH FISH WANTED.

Sir,—Could you, or any of my brother readers, give me any information as to where I could procure some fish for specimens, names of which I give below? I am collecting for a large case of British freshwater fish to be preserved, and should like to have it complete if possible. The names of fish are as follows: The vendace or vindis, the pollan, the powan, the gwiniad, the ide, the graining, the azurine or blue roach.

Any information as to any of the above will be thankfully received by yours &c., Walton, Junior.

Barnsley, Yorks.

[The Vendace (*Coregonus Willoughbii*), according to Couch, "is believed to be peculiar to Lochmaben and the neighbouring pieces of water in Scotland," and is supposed to have been introduced from the Continent at the suggestion of the unfortunate Queen Mary; but by Sir William Jardine, Bart., who first decided that it was a distinct species, this is thought to be unlikely. The fish is to be found in some of the rivers and lakes of Scandinavia, and also, we believe, in some of the Swiss and German lakes. Yarrell states that the vendace is also to be found in Windermere and Bassenthwaite lakes in Cumberland.

The Pollan (*Coregonus Pollan*).—Yarrell mentions this fish as being found in Lough Neagh, Loch Corrib, and Lough Derg, Ireland.

The Powan (*Coregonus Cepedei*), according to Yarrell, is found in Loch Lomond.

The Gwiniad (*Coregonus Pennanti*) is, Yarrell says, very numerous in Ullswater, and other large lakes in Cumberland.

The Ide (*Cyprinus idus*).—Yarrell says, "According to Mr. Stuart, this species was taken at the mouth of the Nith by the late Dr. Walker," but there is some ground for supposing the specimen was only a chub after all. It is common in Scandinavia.

The Graining (*Leuciscus Lancastriensis*) is found in the Mersey and its tributaries, especially the Alt, also in the Leam, near Leamington. Our Liverpool correspondents have often mentioned the capture of this fish.

The Azurine, or Blue Roach (*Leuciscus Cœruleus*) is a rare fish in England. According to Yarrell it is found only "within the township of Knowsley." We have an impression it also exists in some ponds in Kent.—Ed.]

EXTRAORDINARY CAPTURE OF A JACK.

Sir,—In one of your late issues, I read with much interest an account of the take of a pike with a perch as accidental bait, your correspondent querily deeming his capture an unprecedented one. I beg to assure him it is not so, for I have a vivid and to be carried to the grave recollection of a similar occurrence—similar as far as the perch being the bait, but dissimilar as far as the means of capture. In the year 1845 (you will perceive by the date, Mr. Editor, there is "an ancient and fish-like smell" about me), I had permission from Mrs. Lloyd, of Aston Hall, Shropshire, to fish a mill-pool on her estate. One hot afternoon I was seated on the grass (that was not the period of bank baskets and boxes) with my legs dangling over by the waste-gate of the mill and catching perch galore to my boyish delight, when all at once in playing a little kick-some fellow of about 2 oz. I felt a tug which nearly lost me my equilibrium, and entirely my self-command. Inexperienced, I held on like grim death; and it has always been a marvel to me the gut did not give (the gut of that day was of the cart-rope description). However, it held, and I held until I could scramble on my feet; and getting away from the waste-gate some dozen yards, and pulling my captive *nolens volens* along into shallow water, I was enabled to take the kick out of my unknown friend, and eventually bring him to the edge of the pool, exhausted. I then laid my rod down, and putting my boot behind the fish gave him a hoist fairly and safely on to *terra firma*. Thus, Mr. Editor, "the Boy Jones," thirty-seven years ago, caught his first jack. I was afraid at first to handle the beast, but at last summoned up courage to try and extract my hook. After much fear and trembling on my part, I succeeded in finding out that the upright spines of the perch were firmly fixed in the roof of the jack's mouth, and it took some boyish force to disengage the same; and when at last it came with a jerk, the jack snapped his jaws together and scraped a broad bit of skin off my thumb from the knuckle to the nail, and that is the "vivid and to be carried to the grave recollection" mentioned above, for I retain the scar still, and my memory of my first jack in happy childhood is as yesterday.—I am, &c.,

Marlow Buzz.

Holmleigh, Hurley, Berks.

CHICHESTER ANGLING SOCIETY.

At the annual meeting of the above society, held at the Globe Hotel, September 5, the secretary, Mr. G. F. Salter, read the first annual report as follows:—Twelve months since a few energetic knights of the rod met to consider the probability of forming an angling society in Chichester. Portsmouth had its Waltonians, Brighton its Angling Association, whose favourite resort was our canal. Messrs. Young, Summers, and Cook, appointed a meeting, which took place on August 31, when twenty-three members were enrolled and officers elected *pro tem.* At the next meeting a code of rules were submitted and passed, His Grace the Duke of Richmond kindly consenting to be elected as patron, W. W. Baker, Esq, as president, W. Kerwood, Esq., vice-president, A. Purchase, Esq, treasurer, Mr. W. Cook, jun., undertaking the arduous duties of secretary; the committee, as previously elected, being unanimously re-appointed. The first step towards the improvement of the angling was clearing weeds from the canal, for which some few pounds were expended. A meeting of delegates from Portsmouth, Brighton, the Chichester Rowing Club, and the Chichester Angling Society, took place in October, to discuss measures for improvement on a larger scale. This meeting was adjourned until February. In the meantime, by the kind permission of Mr. Baker, of Aldingbourne, about 300 roach were transferred from the mill pond to the canal. A boat was purchased from H. Coombes as a tank for live bait, for the use of the members. A large bait can provided, and a pair of scales and set of weights obtained for club use. In February the delegates again met to consider the weed question. At this period, Captain Purchase informed the society that in consequence of repairs necessary to Birdham Lock the water would be let off between Donnington Bridge and Birdham. Means for the preservation of fish and clearance of weeds were discussed, when it was proposed and carried "That the Committee of the Chichester Angling Society be empowered to take what steps may be necessary for the preservation of fish, watching the canal, and clearing weeds, each society to bear their quota of expenses incurred." Measures were at once taken, large quantities of fine bream, roach, and tench were transferred to the upper reach above the dam. On Good Friday the water between the locks was netted, the Brighton Anglers rendering valuable assistance. Several tanks of fish were transferred to the upper reach in good condition. As the work was progressing favourably the dam at Donnington gave way, necessitating immediate measures. A new hurdle dam was constructed—willing hands lending valuable aid to convey several hundred fine bream to the upper water, some fish being computed at from 3½ to 4 lb. in weight. Roach, tench, and pike were also saved. This unlooked-for event caused a considerably increased outlay. The canal was watched night and day, the fish in the shallow portions of the canal appearing in myriads—an easy prey to the poacher—but, thanks to the vigilance exercised, we have no reason to think any fish were taken illegally. The canal was thoroughly cleared of weeds and obstructions from Donnington Bridge to Birdham Lock, and from Donnington to the basin, on the towpath side only. The expenses incurred owing to unlooked-for difficulties were very heavy, amounting to close upon £40. Towards this amount the Portsmouth Waltonians contributed £11. The Brighton Anglers' Association £5, with use of nets, repairs, &c., leaving us a heavy balance to meet. Thanks to the kindness of our treasurer, the liabilities incurred were at once discharged—leaving us more than pecuniarily his debtor. From the unfortunate weed question we pass to a more pleasing episode, our annual dinner, which took place here on March 21st, when our worthy host gave an excellent repast, to which the forty jolly fishermen paid ample justice, the pleasures of the evening being greatly enhanced by some excellent songs and recitations by members and friends. You will grant us that was a grand success. And now as regards angling prospects. The opening of this season has been highly successful, both in quantity and health of fish, a marked contrast to last season, when hundreds of diseased bream and roach might be seen floating in the canal, and when our olfactory organs were certainly not gratified by the exhalations from decaying animal and vegetable matter. That our expenditure is not all wasted you must admit. We trust ere the close of another year to stock the water with chub, and at no distant period to reckon the black bass among the finny tribe located in our waters, affording sport to the fly fisherman as well as the bottom angler. At present our prize competitions have been meagre in the extreme. We trust another season to give a goodly prize list and rival our more fortunate brethren. One great feature of the season, thanks to the kindness of Mr. J. P. Knight, is the concession to our society in angling excursion tickets by the London, Brighton, and South Coast Railway Company. The return fares to Selham being reduced to 1s. 8d., Petworth or Pulborough, 2s., and to Littlehampton, 1s. 2d, where charming scenery adds zest to the enjoyment of the day. And last, though not least, our financial position is far better than the most sanguine could have anticipated, a few months since, the debt to our treasurer being reduced to shillings in lieu of pounds. We trust when the balance sheet is laid before you it may show a balance in our favour, as subscriptions for the quarter are now due. With the settlement of the debt incurred in the weed clearance we are looking forward to a prosperous close to the present season.

The officers were all re-elected. A vote of thanks to the secretary and past secretary, Mr. G. F. Salter and Mr. W. Cooke, and to the chairman, Mr. S. Young, was unanimously accorded.

Large Fish from the Thames.—On Wednesday last, Mr. F. C. Hatfield, of the Silver Trout Angling Club, St. Martin's Lane, caught, with rod and line, a fine clean Thames trout, of 12 lb. weight, while fishing near Chertsey. At the same time he took barbel and bream to the gross weight of over 1 cwt. The former averaged from 4 lb. to 6 lb., and the latter ran about 4 lb. to 5 lb. These fish were presented by him to the Royal Aquarium, Westminster, where they are now doing well. The large trout is in No. 2 tank, in company with one of nearly 7 lb. weight, taken and presented by Mr. Hatfield, from near Datchet, some few months ago.

ALFRED YOUNG
"The GOLDEN PERCH,"
TRADE GOLDEN PERCH MARK.
402, OXFORD ST.
London, W.
FISHING RODS and TACKLE
of every description.
The Angler's Handbook and Catalogue of Prices, with eighty Illustrations of Rods, Flies, Baits, Tackle, &c., post free,, Three Pence.

PULBOROUGH, SUSSEX

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. RICHMOND, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season —Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for " season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading — THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. SATURDAY, SEPTEMBER 16, 1882.

THE CAMEL.

By THOMAS FORD.

THIS is almost the only stream in Cornwall which may fairly be called a river. It rises in the high moors which form the continuation of the Devonian range, between Camelford and and Boscastle, and enters the Atlantic below Padstow, having a course of about thirty-one miles. In its upper reaches it flows through a locality somewhat resembling Dartmoor—treeless, marshy, and barren, but lower down the surroundings are romantic, sylvan, and beautiful. There is hardly a district in England which in spring time shows so great a profusion of wild-flowers.

The trout are comparatively small, and do not average less than five or six to the pound, while in the early part of the year the angler is very much pestered with salmon fry. The native fishermen generally use two or three flies on the collar, and often secure as many fish at a cast. A trout of 1 lb. is somewhat of a rarity, but in September and October it is no unusual thing to land peel of 3 or 4 lb., whilst the salmon run to 20 lb. or more. The last one that I captured was just a yard in length, and weighed 15 lb. Here I hooked—aye, and lost too—my first salmon. I was fishing with ordinary trout tackle, and had neither landing-net nor gaff. It was early in the season, and I knew not that the fish were in the river. Moreover, I was mounted upon a high bank with a break of only thirty or forty yards in a wood, but I battled manfully with the fish for about half an hour. I think it was about 12 lb. At length, however, through constant friction, the silk which bound the hook become unravelled, and master salmo, with a wag of the tail, which I shall never forget, left me the most miserable of mortals. But, if I lost the fish, I learned a lesson of the first importance. For years previously to this but few salmon had been caught, although during the months of September and October there were always some in the river. The local anglers tried for them with fly alone, but though they would now and then get a rise, the fish almost invariably came short, and were seldom caught. I hooked the fish in question with a well scoured lob-worm. This set me talking a little to myself, which by the way is sometimes as profitable as advertising. The substance of the soliloquy ran pretty much as follows: "Now look here, my man, you have been bothering your brains for several seasons over these precious salmon, and never a one have you caught. Surely the weather and water are too cold at this late period of the year for them to care much about the fly. If they won't come up to your gaudy invitations, go down to them with something more substantial: offer them a couple of nice riggling, well-scoured lob-worms, and mark the result." I did so, and before the end of the season had probably caught more salmon with the rod and line than had been captured in that way during the previous twenty years. But I took the greatest possible care of my worms, and always selected two of medium size, replacing with others when the liveliness was gone. It was a week before I was able to go again, and then I only had an hour or two before dusk, but I was properly prepared. I not merely had regular salmon tackle, but took with me two boys, John and James, the one to carry the landing-net, the other to see the fun. On arrival we found several rods had been at work scaring—not catching—the fishes; so my time being limited, and darkness approaching, I endeavoured to find a comparatively inaccessible pool, which had not been fished. In this I was at length successful. We came to a deep hole surrounded with hazels, with a shelving bank of about two yards in length, covered with driftwood and an embankment at the back. I said to my boys: "If we can only get down here, and with a sharp pocket-knife cut away some of the hazel boughs overhanging the pool, I am almost sure we shall get a fish." It took some time to work out the desirable result, but at length the end was accomplished. I made the best preparations also with rod, line, and worms. I believed instinctively that the first throw would decide the result. So calculating nicely the proper length of line the worms came trottling down to the tail end of the dub, when the electric thrill of a substantial bite gave the earnest of the battle at hand. I always pride myself on being able to manage a big fish, but here the circumstances were of the trying description. I could not move for more than two yards, whilst above and below were thick overhanging woods, which precluded the possibility of giving my antagonist line. It was a splendid fight. Ever and anon the fish would bolt upwards trying to get above two huge boulders at the head of the run, and it required the utmost good management to give the butt at the proper moment to bring it back within the circuit of the pool. But if it was difficult to keep the fish from running upwards, it still more trying to prevent it from shooting downwards. However, by dint of the greatest care, and after about twenty minutes' warfare Master Silversides was safely housed by James in the landing-net, and afterwards laid upon the green sward for our mutual admiration. It weighed only 7½ lb., but being the first I had landed it was looked upon as a veritable monster. It was amusing to hear James tease John all the way home, and during the next few days with the query: "Who landed the salmon? Who landed the salmon?" The sequel supplies another short tale. A few days after I went again. On this occasion I took John alone. But though I fished the whole of the day, up to four o'clock, I had not a single rise. I had just covered one of the finest runs in the river, and feeling quite hungry I said to my boy, "If the fish won't feed, I will." So I sat down under an ash tree, took out my pasty (whoever went fishing in Cornwall without a pasty?) and began operations. My son, who had been nibbling his by the water-side said, "Let me have a try?" so I offered him a piece. "No," said he, "I don't want pasty, let me fish." "Fish!" I said, "why, a big one will pull you in." "Well, never mind, father," said he, "if it does, I will try and swim." "Go it, you rascal," said I, "you will beat your dad some day." I little expected the result which followed. He put in the last pool which I had tried, and the very first throw hooked a splendid fish. "I have him," he shouted. I dropped my pasty in a jiffy, took the rod, and after a magnificent fight of thirty minutes John landed a 10 lb. fish, in the very pink of condition. It was his turn now to tease James, and all the next week my sides were ready to split with laughter to hear the incessant question:—"Who caught the salmon, Jimmy? Who caught the salmon, Jimmy?" The old boy and the young ones have since then had many a delightful day together, and creeled scores of handsome fish, but the reminiscences of that eventful week, will, with perennial freshness from memory's fount.

But to return to the trout. All ordinary flies kill well upon this river, but the natives often use the coarsest tackle, and flies as big as bees. The palmers are great favourites here (with the fishermen), as well as all over the West of England, but for my part I vastly prefer small imitations of the numerous aquatic flies as they severally appear in their proper seasons. During the five consecutive years that I fished this river, I never once met an angler using single hair, though I found it perfectly admissible, and it was no unusual thing for me to bag ten or twelve dozen in a day. The price of a season ticket was 5s., which gave the holder the right to fish from Slaughter Bridge, a mile and a half above Camelford, to Gam Bridge, about four miles below. But, like waters in more populous districts, portions of this stream are now falling into private hands. Sergeant Madden, of Camelford, one of the oldest and best anglers upon the water, will, I have no doubt, supply information to visitors which this article fails to give, and Mr. James Symonds, of the King's Arms, will, I am sure; provide the best of accommodation for tourists. From Slaughter Bridge to Gam Bridge the fishing is comparatively open. Above the first place the stream is very small and the sides marshy, whilst below the latter place it is much encumbered with wood. As a rule, where the fishing is preserved, the owners are very courteous, and will generally give respectable applicants the required permit. One of the most open tributaries of the Camel, is the Jump River. They are all called rivers in Cornwall. This would be simply a Beck in the North. The junction of this stream with the main river is very romantic. The rocks rise precipitately on either side, and on a certain occasion, so runs the legend, his sable majesty of the infernal regions was seen to jump from one side to the other. Hence the place is called the Devil's Jump. The fish here are still smaller than their cousins of the main stream, but they afford capital sport, and the surroundings are specially attractive. This stream is sometimes slightly discoloured with the refuse from china clay works, but I have always found it fishable. If the angler follows the course of the river upwards, he will come to the two sister mountains Roughtor (pronounced Rowter) and Brown Willy, the highest peaks in Cornwall. Here the huge stones lie piled one upon another, whilst logan rocks are by no means uncommon. The advent of the fern fly or fern web, as it is locally called, is, however, the period to which all local anglers look with most interest. When this fly is on, it is for the time being almost the only one used. It generally appears about the beginning of May, and on a bright sunny morning the larvæ hatch in millions, and the insects are so voracious that almost every leaf shows the effects of their depredations. It is always fished naturally. A single Limerick hook (Nos. 4 or 5) is generally used. The point is put in at the head and out at the tail, whilst the fly itself is slipped completely round the bend, and the point of the hook left bare. The blow-fly, green and grey drakes, tab-fly (small black beetle from cow-clap) can also be fished in this way, and with considerable success when the waters are low and artificials at a discount. Another feeder of the Camel is the St. Teath river, which rises near the famous Delabole Slate Quarries—the largest in England. This stream is, however, very hard to get at, as it runs through a succession of marshes and woods. The fish, however, are of finer flavour than those of the main stream. It joins the Camel near to the town of Wadebridge. There is not very far from Camelford, a small Beck, which runs into the sea at Trebarwith, from which I have also caught some nice dishes of fish. They are about the same size as the Camel fish, but of finer condition, and delicious in taste. I have taken as many as forty or fifty in a day.

Apart, however, from piscatorial matters, the neighbourhood is well worth a visit from the tourist. Who has not heard of the solitary grandeur of King Arthur's Castle at Tintagel; of Nectar's Kieve; of Tregenna, and of Sandy Rock? We stand here upon classic ground, the records of which pertain to the very earliest period of British history. As we listen to the shrill cry of the seagull, which scuds before the western breeze, or watch the solitary cormorant perched upon the weather-beaten rock, our minds are carried backward to the time when the sea-kings found a home in the rocky caverns, and we are tempted to finish this article with one of the legends with which the neighbourhood is so rife, but time forbids. But we can assure all visitors who may favour this *ultima thule* with their presence, that they will meet with the most hospitable welcome from a people proverbial for cleanliness and civility.

NOTES ON THE FISHES OF THE LAKE DISTRICT.

No. I.

(By Sprint.)

THE season in the lake district of Cumberland, Westmoreland, and Lancashire, without being exactly ephemeral, is an exceedingly short one. The present year it opened most auspiciously as far as the weather was concerned, and the influx of visitors consequently became immense. This is a capital country for making a practical study of natural history in almost every department, and the writer is frequently astonished that visitors, as a rule, spend their time in mooning and spooning about the less precipitous mountains and on the lakes. Save in the collection of a few parsley and other of our commoner ferns, they neglect the observance of the more striking objects of animal or vegetable creation. Many of the lakes teem with valuable fish of our best varieties, the trout taking pre-eminence on account of its plenty; following him comes the char; in Windermere we have a few salmon, and most of the sheets of water contain pike and perch. The latter form an attraction to our female friends and the children, who, on a calm and quiet day, without risk of drowning, may go out in a boat and at times make quite respectable "bags" of that somewhat neglected fish. It may not be generally known that in the season large quantities of perch are, by a not very peculiar procedure, transformed into potted char and as such disposed of at an exorbitant price to those who may be ignorant of the deception. The chars have been fairly numerous both in Coniston and Windermere during this season. Formerly they afforded capital sport and a remunerative occupation to the rod-fishers; but of late years their capture by rod, fly, and line has been of very rare occurrence. Now they are chiefly taken by small meshed nets, indeed, of a mesh so minute that even the most infantile fish is unable to escape and is ruthlessly destroyed by the fisherman, who has no thought for the morrow. There is no doubt that this destructive mode of fishing sadly interferes with the piscatory prospects of Windermere, and so prevents it being the leading angling resort in England. The Board of Local Fishery Conservators are making an effort to obtain the different fisheries of this lake into their own hands, and for a time at least to altogether stop the netting; but some two or three of the proprietors, for reasons best known to themselves, refuse to let their rights to any one else than the professional fishermen. However, there are some fisheries already leased by the Board, and on them netting is for the present stopped. Another mode of taking char is by the plumb line. This is simply a line carried some distance from the side of a boat, to which line is fastened a somewhat heavy weight. The lead sinks to a varying distance, and above it from the line to which it is attached, are placed at certain distances bright baits, which spin as the boat is propelled and so attract the fish. The weight is of course used to enable the fisherman to spin his baits at various depths in the water, and so catch the char which seldom, nowadays, feed at the surface. A skilful manipulator of these lines can alone manage and work one from each side of his boat, two lines in all. Large trout are sometimes caught on these baits, usually primitive affairs enough—a mere bit of tin painted red on one side, or a small spoon bait. On a favourable day perhaps two, three, or even four dozen char may be taken by one boat, which, as they bring 1s. 3d. per lb. and will average three to the pound, their capture proves a paying occupation. But blank days are very far from the exception. Spring and autumn are the periods when char are caught best by these plumb lines. Trout fishing on the lakes themselves is, as a rule, quite or even more uncertain than the afore-mentioned char fishing. The rod is now brought into play, and with ordinary lake flies, on a likely day in spring, moderate sport may be had. But the angler must not be disappointed or discouraged were he to prove quite unsuccessful, though as a rule he may, if a fairly good performer, expect to catch from three to a dozen trout, reaching up to a pound weight each, but averaging perhaps three or four to the pound. There are much larger trout than these in all the lakes, especially in Windermere, but the big fish care not for such small deer as flies, and are usually beguiled by spinning or trolling with a minnow about and just after sunset. Again, trout are taken by cross-lines which are used between two boats, a procedure which, to the writer, is decidedly illegal and against the spirit of the salmon acts. Lath, otter, or jack fishing is made illegal, but when the cross line is used, as stated, between two boats, one or both boats act as the otter and even prove more destructive and require less skill to work. Notwithstanding what many persons say to the contrary, I consider it very unfair to stop this otter fishing, and legalise that by cross lines. Many and many a day of capital sport have I had with the lath or otter, and, in skilful hands, I never found it nearly so detrimental to the rising fish as an ordinary rod would prove in the hands of a bungler.

LOCHINVER, SUTHERLAND.

WELL, really—but not really well by any means, as regards angling for salmon in this famous spot. I put off leaving home until after July 15, in the belief that that course would indicate such palpable genius that I would not only deserve, but be *sure* of success. Now, as to the desert on my part, I can truly say that "'Tis not in mortal to command success, but I'll do more, Mr. Editor, I'll deserve it." So much for the first personal pronoun, and now for history. The week before my arrival fish were being got rapidly, thirty-two salmon and grilse coming to creel, as well as a good many sea-trout, and of brown-trout as many as were wanted. Since then, however, there was a period of lowness, and after it came a heavy spate and cold-north winds There is now abundant water, but temperature more like the end of April than the beginning of August. Whether or not, fish have been deadened by the influences named is not here asserted, but knowing, as we do, that the pools on both rivers swarm with salmon, and that we have the most approved flies and tackle, as well as excellent gillies, how are we to account for the comparative non-success? The Inver is situated about 3½ to 4 miles north of the Kirkaig, but yesterday, both being in fairly equal angling condition. Not a salmon rose to the fly, although numbers were seen "playing" to their own sweet will on the former, while one gentleman got two fish of 18 and 8 lb. respectively—saw several more; and the other angler lost what he considered a 20 pounder and "more" some others on the Kirkaig. Exactly the reverse of this state of matters held the day before. Mr. Burton, a keen, excellent, and liberal angler, taking one 9 lb. and another 8 lb. fish. Captain Campbell, C.B., R.N., got another on a previous date, and an odd fish or two have come to creel, but the highest water on the Inver has been a complete blank since my arrival here, and it was my lot to try it on for four days. There are very fine pools—pools that almost make a man's teeth water to be at them—and salmon constantly leaping in them, but the hotel water has alone done good this season. It always was the best, so far as my experience goes, and it is impossible to doubt that the baskets of next week will be heavy, on both rivers. Last year my luck was good, as good as that of any one on the coast, but this season, either the fish or myself have been bewitched; Mr. Morrison, Dingwall, Messrs. Snowie, Inverness; Mr. McLeoy, of the same town, and Messrs. Anderson, now of Edinburgh, late of Dunkeld, have furnished me with most killing flies—and better dressed flies could not well be found—but all in vain. *Spero meliora*, however. We will get round the corner into good fortune yet, and your correspondent enjoyed Mr. Wheeldon's most humorous article while lying abed this morning, indulging in hopes of the good time coming, for which we'll wait a little longer.

Mr. Poston, of London, has been at the sea-trout in Loch Roe since his arrival, and as a set-off to his non-success on the Inver, has taken some very fine trout, (I must not say "fish," for fear of the gillies, and so am compelled to repeat "trout!") He repeats seeing numbers and losing some, so that Loch Roe will soon be much sought after. He is personally one of the most popular anglers even seen here. The gillies would go through fire and water for him, and so would the hotel staff, as they all have pleasant recollections of the two months' sojourn he and his lady and family made here last August and September. His brother, who has been here this season and last, shares the popularity. In short, it is both pleasant and curious to note the enthusiasm with which the name of Poston is received here. Their ladies are fully as well liked as the mankind, at least.

Meditative anglers—men who can enjoy really magnificent scenery, in spite of lagging salmon—would like trying Inver and Kirkaig. As has been said already, fish abound, and when the evil spirit of cunning is exercised out of them, then, oh then! my rod and Grant will charm them, and get us out of the "doleful dumps."

Both hotels are well filled, day by day, as the arrivals and departures almost balance each other; but those Waltonians who want river angling must write at once to Mr. Burns Brown, the lessee of the two hotels, asking him to get them river water, if possible, within given dates, otherwise there will be disappointment and discontent, "as sure as guns are made of iron."

To use the first personal pronoun again, I must say that never was a man better served in his hotel than I am in the old Lochinver house; but the swells affect the Culag hotel, which until three years ago was the West Coast residence of the Duke of Sutherland, K.G., &c.

P.S.—To-day on the Inver, Mr. Burton had two salmon and a sea-trout on the Whirlpool. Saw a heavy fish in the Long Pool, and Dr. Mackenzie had a grilse on Mr. Whitebread's water Mr. Almond had some success on the Kirkaig, and so we look forward to good days when the river is lower and the temperature milder.

CAMPBELL ROSS.

TROUT FISHING IN DEVONSHIRE.

THE river now is extremely low and very clear, so clear that it is necessary to cast an extra long line to secure anything in the way of a rise.

This is very requisite when fishing down stream, a mode of angling which appears to be universal on the Exe. Equipped with a stiff fourteen feet rod, a strong line, ditto collar, on which are hung some half dozen of Brobdignagian flies, the Exe angler casts across the first stream—locality known as a stickle—he arrives at, and slowly works his way down it, combing foot after foot of the water till he reaches the bottom of the pool, when he passes onwards to the next likely spot. If he hooks a fish, he treats it very unceremoniously, a jerk of the rod, and Master Troutie is flung on the bank, unhooked, basketed, and the casting goes on again without a moment's loss of time. In this way mile after mile of stream is passed over, and if the fish be "taking" at all, a decent basket is secured before the day is over. Exe trout-fishing may be summed up in a few words. The man who sticks most assiduously to his casting and steadily plods on from morning till night is, if his flies be right, generally rewarded with the best basket. And as to the flies, even there he can't go very wrong; in spring the variety is limited, and a few changes of the cast, or comparing notes with other anglers, will soon shew what imitation the fish are inclined to take. Flies for the Exe in early spring are usually confined to one class—viz., hackled flies, and the hackle invariably used is one from a blue fowl; they vary in construction by having bodies of differently coloured materials, and are distinguished by name accordingly; the hackles also vary in depth of shade, the darker blues being more effectual on cold days, and in early spring generally.

I must confess I am not particularly fond of this mechanical style of Exe fishing, the sport seems to me monotonous when fish all run very much of a size, as they seem to do in the stickles; I prefer a gossamer cast with a midge fly on the smallest hook, and a throw over a rising fish, one of the veterans of the stream, who has taken up his abode in a quiet pool, and regards with just contempt a series of bundles of fur and feather cast across his nose in the vain hope that he will mistake one of them for a fly. Such fish, no longer in their teens, are above these attractions—attractions not enhanced by the spectacle of a biped with the help of a sixteen feet pole dragging something like the towing line of a canal boat over the pool. There are various spots of this sort on the Exe about Tiverton, the resort of big fish, and they caused me many a blank day when I first commenced to fish them. Do what I would I could not raise a fish. All the Exe artificial flies I could obtain had no attractions for the great trout that were calmly sailing about, rising every moment, and sucking down natural flies within easy casting distance, until at last I felt inclined to give them up in despair, when I happened to read an old angling work, containing very useful hints on the fabrication of flies of a class little known on the Exe.

It would, perhaps, be too long a story to tell how I ultimately produced flies, varying somewhat from the patterns given, that gave me rare sport among the big fellows—fish running up to two pounds each. When it is remembered that Exe fish do not as a rule average above six ounces, it will be seen that a two pound fish is one of very unusual size. So far as I remember, I one afternoon, with these flies, killed eight fish, the biggest one pound fourteen ounces, and each one of the others over a pound; besides these, I hooked and lost four or five.

Fishing down stream in the ordinary manner, an orthodox Exe fisherman will, on a good day, probably take double this weight of smaller fish, but for the life of me I cannot see that he meets with the same amount of what I call sport. When you have pitted your skill against the sagacity of a wily old trout that has been long monopolising a pool, and been considered above all temptation, what satisfaction in hauling out any number of troutlings can equal that which you feel when regarding your spotted adversary stretched on the grass at your feet, after ten minutes' fight on a drawn gut cast?

That at all events is my idea, and if there be a big fish about I enjoy attempting its capture a great deal more than any amount of "chance" whipping over the stickles. I fear, however, I am encroaching on your space, and must cut short these remarks which have extended much further than I originally intended them to do, as this subject, being a favourite hobby of mine, I am in the habit, when fairly mounted, of riding it either too fast or too far.

R. A.

R. B. MARSTON *v.* R. BALDERSTON.

MR. MARSTON could not imagine what Mr. Balderston meant by referring to Mr. Marston's fish as "needing apology and not bearing inspection," inasmuch as Mr. Marston never apologised for them, and allowed Mr. Balderston to inspect them whenever he liked. It now appears from a letter which Mr. B. has written to the "Trent Otter," and which the "Trent Otter" sent on to Mr. Marston, that Mr. B. accounts for his being beaten by saying that Mr. Marston "took trout with him and then pretended he had caught them!" Mr. B. says when he examined Mr. M.'s fish at lunch time some of them were dry, while his were moist even at night. When Mr. B. so carefully examined Mr. M.'s trout he said never a word of this, and he knew that fish in an open wicker-work creel, such as Mr. Marston used will get dry in an hour or two on a hot, dry day, whereas his own fish were carried in a waterproof, almost air-tight, leather case. Indeed, Mr. B. had himself previously pointed out the fact that the fish would get dry in a wicker creel and keep moist in an air-tight one. Every trout fisher knows this. Mr. B. also tells the "Trent Otter" that on the first day Mr. Marston threw a stone into the water, pretending that it was a fish he was returning as undersized. He says he saw Mr. M. do this. Now, can any of our readers imagine this eminent scientific man, this curator of the Ripon fossils, this ex-curator of the fell-beck fishes, this son of the most eminent fly fisher of the day.* Can anyone imagine this great man condescending to go on fishing with Mr. Marston for three days after having seen Mr. M. throw a stone in the water after telling Mr. B. it was a fish? Mr. M. only regrets he did not insist on his first suggestion being carried out, viz., that there should be witnesses to the fishing, but Mr. B. objected to this, and it would appear now that he did so with the deliberate intention of saying Mr. Marston cheated, in case he (Mr. B.) got beaten. Why did not Mr. B. accuse Mr. M. on the spot, at once, as any man or gentleman would have done? He knew better than to do that.

SIR THOMAS BARRETT LENNARD'S ANNUAL SALE.

THE annual sale of the Belhus hunters takes place on Thursday next. This event may not inaptly be compared to the annual recurrence of some of our celebrated races. Just as the Doncaster St. Leger brings us to the close of the racing year, so does the Belhus sale announce the advent of the hunting season. This will be the eighth year that Sir Thomas has got together as fine a lot of hunters as one can wish to see. The catalogue comprises forty first-class horses, and amongst them are some remarkably fine specimens of the perfect hunter. I don't propose to go through the list, but rather to call the attention of your readers to this grand opportunity for procuring a splendid mount for the approaching hunting season. Here are to be found all sorts and descriptions of equine beauty, from the ladies' perfect hack, to the grand weight-carrying hunter. The sale is announced for one o'clock, the luncheon at 12, and I may remark that the well known hospitality of Sir Thomas Barrett Lennard is always done full justice to on these occasions by the large and fashionable company which is invariably attracted to the scene.

For the information of those who propose attending the sale, I may state, that Belhus is four miles from Rainham and five miles from Grays Stations on the London, Tilbury, and Southend Railway; and seven miles from Romford, on the Great Eastern Railway. The train leaving Fenchurch-street Station at 10.50 will stop at Rainham on the day of the sale. A special train will start from St. Pancras Station at 10.30, and will return from Rainham Station at 7.0.—R. J. M.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

ANGLING FOR SEA-TROUT ON THE EAST AND SOUTH COASTS.

In all probability good sport might occasionally be enjoyed by angling for sea-trout near and in the estuaries of rivers between Yarmouth and the Isle of Wight. While spinning with one of Hearder's plano-convex minnows, a nice fish of this kind was taken, the other day, off the east point of Ramsgate Harbour. Several large bass have lately been killed there with artificial bait, both early in the morning and late in the evening when no boats were moving, and in the daytime when the sea has been moderately rough. The bass is a shy fish. Fishermen who have taken sea-trout with rod and line within the limits pointed out, should give us the benefit of their experience. A good book on sea-fishing with rod and line is still a desideratum. Such a work, with an appendix containing information as to the best places and times for fishing round the coast, supplied by those who have had practical experience, would meet a want that is increasing every year. The sea is large enough for us all.

The following remarks of the late Mr. Buckland, on sea-trout, in the capital report made by himself and Mr. Walpole, in 1879, *On the Sea Fisheries of England and Wales*, are worth attending to:—

"I do not propose to enter in this appendix into the natural history of the salmon. . . . A curious fact, however, which has not yet been sufficiently recognised, must not be omitted in this report, viz, the occasional presence of sea-trout along the coast of England near rivers which do not contain spawning grounds for migratory salmonidæ. This part of England may be said to begin at Yarmouth and to extend all the way round as far as the Southampton Water and the estuary of the Itchen. The principal places where these fish are found are Yarmouth, the estuary of the Yare at Gorlestone, the mouth of the Thames, and the estuaries of the Canterbury, Stour, the Rother, the Ouse, and the Arun, all situated between the South Foreland and the Isle of Wight.

"On June 14th, 1879, Mrs. French, of Yarmouth, showed me six or seven very handsome silvery fish, the largest weighing about four pounds. They had been caught in a seine net to the south of Golestone Pier, and I was informed by Dr. Norman that considerable quantities of these fish had been caught in 1879; and when at Yarmouth, in the middle of August, I found they were still abundant. These fish were bull-trout, and in my official report on the fisheries of Norfolk.* I stated that I thought these Yarmouth bull-trout were visitors from the Coquet, the Tyne, and Berwick-on-Tweed, in fact, a bull-trout was on one occasion caught at Yarmouth with a Berwick mark upon his tail. These bull-trout, without doubt, come to feed upon the shrimps of both kinds, that are so plentiful along the Norfolk coast. In August 1879, a fish over 13 lbs. was caught seven miles north of Yarmouth.

"They are netted in seines close to the shore. I am strongly of opinion these fish would take a spinning bait. I advise anglers to make a trial of this idea, for if it succeeds it will form quite a new addition to the resources of rod fishermen from London, Norwich, Yarmouth, Lowestoft, and the neighbourhood. Almost every year for many years past I have received migratory trout caught in whitebait nets in the estuary of the Thames and Medway. I had hoped that these were some of the fish I had bred artificially, but I am afraid it is not so.

"Every year considerable numbers of sea-trout are caught in the fixed nets at Pegwell Bay. It is difficult to get hold of them, as they are immediately sold in Ramsgate and Margate. Some of these may have been hatched in the Canterbury Stour. Small sea-trout are also taken in the kettle nets near Romney Marshes."

Mr. Buckland also speaks of migratory trout being caught between Dynchurch and Dungeness, in the estuaries of the four Sussex rivers before mentioned, in Rye Bay and in the Ouse below Lewes. He thinks it possible that the bouge, "budge," or sea-trout, of the Southampton Water, may be the same class of fish.—O. L.

NORFOLK BROADS (WROXHAM.)

THINKING that many of your readers, and probably some who contemplate a week or fortnight's fishing in Norfolk, would like to hear a correct account of the personal experience of a fisherman, who is a lover of the gentle art, and one also who wishes to state truthfully his experience upon any water he may have fished. To commence, I should advise any fishermen starting with a desire to fish the Broads, to do away with the notion that he is to have the enormous takes reported in some of the books recently published, descriptive of fishing in Suffolk and Norfolk, or he will be doomed to as much disappointment as I have been, I arrived at Wroxham Station at 12 a.m., on the 28th August, and secured a bed at the King's Head. I immediately inquired for a fisherman, and secured the services of one of the two in the village. He was quietly smoking his pipe at the bar of the house. I inquired of him if he had any well scoured worms, gentles, and ground bait ready, and to my surprise he had no bait of any kind ready. Worms he had to dig for among some rubbish in the yard of the house, and anyone can imagine the success likely to be gained by such a bait. I am not quite sure if he had any live bait to dispose of, although it is reported that baits at 1s. per score are easily procurable at any of the fishing stations. Here, I may remark, this was the invariable rule at Wroxham, to the disappointment of many anglers, who, like myself, thought it would pay the local fishermen to provide the necessaries in the shape of bait that visitors require, than loafing at a public bar, smoking and drinking, waiting for something to turn up, but too lazy to provide the bait, &c., for that unlucky turn up on his arrival. I and a young gentleman, who I accidentally met at the house I have named, fished steadily and carefully from Monday until Friday night, with no better result than any number of very small roach and bream, which we, of course, returned to the river or broad, the former averaging about 1½ oz. to 2½ oz., and the latter between 2 oz. and 4 oz. each.

---

* We wondered this remarkable fly-fisher had never been heard of except through his son. It appears he carried on the business of an ironmonger at Hawes, until recently, it was doubtless in this business that Mr. B. junior, acquired his immense stock of "brass."—Ed.

* H. of C. Paper. No. 428, Sess., 1875.

During the whole week the only fish I caught worth taking was on the Tuesday after my arrival, and that a pike of about 5 lb.

My experience was also the experience of every fisherman I met with, and I am sure I enquired the result of the catches of at least thirty or forty men, the reply in each case being one of profound disgust—"Only a lot of little things not worth taking."

I did not, during my stay at Wroxham, see a dozen bream worth taking away.

I fished with the finest Nottingham tackle, in the most approved way, and I have therefore the satisfaction of feeling there was nothing wrong in my lines, gut, &c.

Before concluding, I must however remark, I am convinced excellent sport can at times be had, particularly for pike, from November to the end of February, and a most killing bait is the old spoon; but I think a gudgeon, spun in the Thames style, would be the most deadly of all. The usual method for Norfolk fishermen appears to be to trail the bait from a boat, which is certainly not sportsmanlike, although very killing. I think it also well to inform my brethren of the angle that the accommodation at Wroxham station, the King's Head, proprietor, Mr. Simpson, is excellent. To start with, the beds are scrupulously clean and comfortable, the living good, wholesome, plentiful, and very nicely cooked by Mrs. Simpson, who looks after the visitors more like a mother than a landlady; the landlord is easy going and will always take a nip with a friend, as a landlord should. But do not forget to write to him a week beforehand for apartments, as he is generally full; and again, if you want good fishing in Norfolk, do not forget to take your own baits, tackle, &c.—W. THOMAS.

[Very large takes of heavy fish are made by Norwich anglers in Wroxham Broad, but we should, and always have, advise anglers to try the river Yare for big roach and rudd, bream, perch, &c.—ED.]

NOTES FROM THE WITHAM.

THIS river, one of the most noted in England for coarse fish, is having a new face put upon it which promises well for both fish and anglers. Numerous gangs of navvies have been at work with spade and dredger for several months past widening and deepening its bed, and this work I understand is to be carried on as far as Bardney, a distance of twenty-two miles; the lock-pit at the Grand Sluice is to be doubled in width and have its sill lowered 3 feet. "The Auld Brig" —that great obstructionist—is to be replaced by "The New," and corresponding improvements are being rapidly pushed forward on the outfall or seaward side. The docks are progressing famously, and we Bostonians hope to see the day when the capital of the Fens shall regain its ancient prestige as a port. Your readers will better understand the magnitude and importance of these works when they learn that £230,000 is to be spent; when completed, they must prove advantageous not only to the landed proprietor and tradesmen of the town, but to the angler and his quarry. The Boston Angling Association preserves 156 miles of splendid waters, which teem with fish; besides the Witham there are ten or a dozen large drains radiating from Boston as a centre, and all can be fished for the trifling sum of 1s. per annum. With such an extensive area of water to look after our keeper cannot do half justice to his charge, there is work enough for three. But how can help be given him whilst such scant support is accorded to the association. Their funds I know are in anything but a flourishing condition, and it is on the cards whether they will be able to continue their labours without more hearty and liberal patronage. I can assure you poaching is far more rife than many imagine, and is it to be wondered at? No longer ago than last Thursday morning, about "The wee sma' hours ayout the twal," a gang were detected close to town, and there was a whisper that "it was'nt t'fust time ayther they'd been at it." I rejoice to say the net was captured, and it is to be hoped they will get their deserts. Their leader, who owns the net, is a member of the aforesaid association. Arraign him before the fishes I say! Now Sheffield, which boasts its 10,000 anglers, sends a special train load weekly to fish these waters, and I don't speak without my book when I tell you that since the 15th of last June no fewer than 9900 Sheffield and Nottingham rodsters have wetted their lines in our preserves. And would you credit it, Mr. Editor, their subscriptions for this season to date amount to the magnificent sum of £3 10s. 10d.? Not half a farthing apiece! Really, Mr. Tyke, we expected better things of Mundella's supporters. One almost feels inclined to grudge you those fine baskets of tench, pike, and roach you sneak away with every week!

Boston, being only five miles from the sea, is exceptionally healthy, and when visitors get tired of fishing, and the tide serves, a four hours' trip to sea can be had for 6d.; or, if preferred, a berth on one of the well-appointed smacks can be secured for a shilling or so, which includes a blow out of shrimps on the catch-'em-alive-and-cook-'em-as-you-want-'em principle. And, oh, the flavour of Boston shrimps, cooked on board and eaten all hot. You peg away without stint, and, when tired, the lively little crabs and other curiosities will find you amusement whilst you rest your masticating machinery, when at it you'll go again. Pardon this digression, the Bittern doesn't often croak.

In my rambles lately I saw two trout fry, 1 inch in length, which had been caught in the Witham, near Boston; this goes to prove that they left larger behind. Water during past week very low and clear; fish biting shy, and little doing worthy of note. Yesterday's rain should make them find their appetites by Saturday.

THE BOSTON BITTERN.

THE PISCATORIAL SOCIETY AND OTHER ATTRACTIONS OF GREAT YARMOUTH.

THE capital of Bloaterland this year has presented an additional attraction to many of the chiefs of our metropolitan piscators by the establishment of a Great Yarmouth Piscatorial Society, and together with the very important facilities of transit now afforded by the liberal policy of the Great Eastern Railway, the fish farms of Norfolk and Suffolk are, and will become even now attractive to the London anglers. I have never known a season when so many well-known anglers have been in the neighbourhood of Yarmouth, and one grand specialite with them has been to encourage the growth and popularity of the local piscatorial society by their presence at the Monday weekly meetings. I may mention amongst others that do not at present occur to me the names of Messrs. Alfred Nuthall, Thomas Crumplen, G. Bates, L. Bonvoisin, Bennett, and W. H. Brougham. Before referring at more length to the progress and value of the Great Yarmouth Piscatorial Society, I would mention that the comparatively short season which usually characterises Yarmouth has been a most successful one in the number of visitors. The great difficulty, notwithstanding the increased and constantly increasing accommodation, has been that of getting apartments. Every year I have noticed new streets have been made and unfinished streets completed, and yet there are more houses required to meet the demand. When the angler wants a change from fishing few places possess greater attraction than Yarmouth. The aquarium, though denuded of that which gives the name, has this season, under the enterprising management of Mr. C. Greenhead, been immensely popular, and the new feature of an open air comic concert on the flat roof of the building, where the public are admitted for the small charge of two pence, has each evening drawn together crowds of people, whilst the entertainments below by the talented Cremona Musical Union and a great variety entertainment have rendered the entire building a very popular lounge and resort. Messrs. Pullen (formerly manager of the Westminster Aquarium refreshment department) and Nightingale have proved themselves admirable caterers in the restaurant and dining rooms, and made both of these eminently successful and satisfactory. Mr. Dunn has been as popular as ever with his comic company at the end of the Britannia Pier, where, through the kind courtesy of Mr. Doolan, I had frequent opportunities to lounge and witness the throngs of piscators plying their business on the lower stage of the pier amongst the whiting, dog-fish, and eels. At the extreme of this popular pier a first-rate refreshment department is now carried on, and at the extreme ends "oysters fished up from the beds below," and "tea and coffee is provided." The beach possesses its usual amusements, and no beach in England has more—gipsy fortune-tellers, photographic artists, cheap jacks, fruit and flower girls, new milk and buns, fresh shrimps, minstrelsy of all kinds, a camera obscura, popular concerts, acrobats, sailing and row boats, vendors of rock, and plenty of flirtation. In the town there is a good theatre and always a first-rate company, of which Mr. Terry Hurst is the successful lessee; lecture halls, concert rooms, and all kinds of indoor entertainments, with frequent visits of horsemanship and other exhibitions. To those who enjoy seeing life in all these varieties—to those who require invigorating and healthy air, to those who can appreciate good railway facilities and punctual arrival of trains, and last, but not least, to those who rank in the immense army of anglers who love good sport and plenty of it, my advice is, and I give it with all sincerity, go to Yarmouth! Yarmouth is an improving place and none the less appreciable to the anglers, amongst whom I am most interested is that to which I am now anxious to refer, the establishment of a piscatorial society in the very centre of the town, which if conducted properly, and I believe it will, must become the rendezvous of the London anglers. Mr. J. Lark, the excellent proprietor of St. George's Tavern, in King Street, where the club meets every Monday evening at nine o'clock, prompt, has done much to make the society a substantial fact. Under all sorts of discouragements he has maintained his own, and he has been well supported by the president, Dr. Mitcheli, whose heart and soul are also in the work. The time will soon exist when the London angler, at present unacquainted with the Broads, can go to Yarmouth and call upon Mr. Lark and he will only be too pleased to give every possible information; and as the society grows, perhaps by another year it will possess waters of its own, which will be available in some way or other to our London piscators. As a proof of the progress of the society it commenced with six members—it has now thirty-four—it is so far well established that a larger entrance fee is required to make it select; it seeks to encourage fair fishing and to denounce those evils which at present exist in the Norfolk and Suffolk waters; it aims at all that is good for sport, and all it is hoped will soon combine with the society in its effects in that direction, and without any selfishness or jealousy become members and supporters of it. All the important Broads are within easy reach of Yarmouth; and, where concessions of railway fares are desirable, there is no other company of directors, or a general manager that will be more ready to grant them if shown to be necessary than the Great Eastern, who in London were the first to support a movement of that kind in connection with the Central Association, and led to the great results which have followed with other companies. I am certain we depend much on the railway facilities for the success of our London angling clubs. It is to the concessions that have been obtained from the railway companies that numbers of clubs have sprung up, and so long as these concessions are not abused they will doubtless be continued. If privileges granted by the railways to individuals or clubs are unfairly and improperly used, it is only right and just to expect their discontinuance.

RIVER REPORTS

MID-THAMES.

"Amongst the views of many—mine."
—SHAKESPEARE.

The Thames is now in grand trim for all-round fishing, and anything in the way of fins may be gathered from the river. I have received some twenty reports of excellent all-round angling, amid which are reports of 20 lb., 30 lb., 25 lb., and 17 lb. of roach from Maidenhead, Cookham, Bourne End, and Marlow respectively. Water in grand trim for roach and chub. Weeds gradually decaying, and jack coming out. Weather everything to be desired for fishing. Wind, W.—MARLOW BUZZ.

Ancholme District.

The advent of finer weather has proved of much service to the angler, and some fine baskets of bream have again been taken. The pike are still very cautious, and but few have been caught. I am continuing my holiday on the Great Ouse, and have caught some large dishes of dace, roach, and chub—all with the fly. I wonder this art is not more cultivated on our coarse-fishing streams. Other anglers that I met (bottom-fishers), unless they previously bait the swims, have simply *nil*; whereas my sport is both continuous and invigorating. Personally, I enjoy it very much better than pike-fishing, which is so uncertain. THOMAS FORD.

Ballynahinch.

Since last report we have had a good deal of rain. There has only been two anglers on the fishing the whole week. The following are their takes:—On the 6th, Mr. Bury, 12 trout. On the 7th, Mr. Grissel, 16 trout; same date Mr. Bury, 7 trout. On the 8th, Mr. Grissel, 11 trout; Mr. Bury, 6 trout. On the 9th, Mr. Grissel, 26 trout; same date Mr. Bury, 1 salmon 9 lb. and 13 trout. On the 11th, Mr Grissel, 20 trout; Mr. Bury, 3 salmon 10, 8, and 6 lb., and 10 trout. On the 12th, Mr. Grissel, 20 trout.—WALTER BLACKADDER.

Chichester.

The weather here has been fairly favourable for piscatorial pursuits, but mornings and evenings have been much too cold to be pleasant, in fact, King Frost has given us timely notice that summer is waning fast. Fair sport has been had among the small roach and bream. The nocturnal anglers playing havoc among the heavier fish. Messrs. Young and Summers on Saturday night basketed some good bream. Mr. Downing Wallace, of Stamford Hill, while angling with me on Tuesday, hooked and played a handsome carp, which was successfully brought to bank, weighing 6 lb. 3 oz, a fish of 2¾ lb. also falling to his share. Light legering with fine gut, with paste as bait, proving successful. At Selham, our anglers have not been fortunate, the water being continually netted.—GEORGE F. SALTER.

Derwent (Chatsworth).

River in nice condition. The sport since last week very fair. Some nice baskets of both trout and grayling have been killed, the baskets averaging from four to seven brace. The flies killing are the bumble and little blue dun. The bottom fishers have been doing remarkably well, killing chiefly with wasp grub.—J. EADES.

Dove.

This river is in splendid order for all kinds of fishing and the weather during the week has been all that the most exacting of the piscatorial fraternity could desire. The takes of trout and grayling have been large, of the latter particularly. The best killing flies have proved to be the grey palmer, the needle, and the willow. An Ashburn gentleman, Mr. W. Cooper, was highly successful the other day on the Dove's lower waters, and in the Ghurnet. He killed a capital dish of 13½ brace of grayling. Trout keep rising fairly well on the Dove's upper reaches, but grayling are now showing the finest sport, being in grand, gamey order, and coming up well to the fly on the top, and to the worm and wasp-grub on the bottom. Roach fishers have been catching large samples with the cockspur worm, maggot, and wasp-grub—while scratching on the lower waters has proved the most "fetching" bait for chub.—THE SPLODGER

Eden (Armathwaite).

The river is very low, and the days have been so bright that little or no fishing has been had this week. There is a great deal of salmon in the waters about Carlisle; all that is required is a flood to bring them up. It is raining heavily here to-day, so we hope to have good fishing next week.—SKIDDAW.

Exe and Barle (Dulverton).

The trout fishing is now virtually over, notwithstanding that the owners have no stated closing time. Salmon are plentiful, and the water has been and still is in good condition for the fly. Several have been taken during the past week. the heaviest being 16 lb., taken by Mr. Jellicoe.—C. W. NELDER.

Exe (Exeter).

The weather during the past week up to Wednesday has been splendid, when about midday we had a very heavy hailstorm, finishing up with a steady downpour of rain, the whole only lasting about twenty minutes. It had a great effect upon the river, which rose several inches in a very short time, but which as quickly subsided, and, despite the coloured state of the water, some heavy creels have been made by those who prefer angling to racing. This being the Exeter race week, has consequently kept numerous rodsters from the river side. The only sport in the salmon way that has come to my knowledge have been two fish to Mr. Cowan, weighing together 24 lb. In some private waters here some excellent baskets of roach, dace, and tench have been landed, and, I am pleased to say, with King's Natural bait, of which, by the way, I have promised to send a *resume*, but owing, as stated above, to its being race week news has not reached me as I anticipated, and all that I can say at present is that those who have and are trying it are recommending it to others. Up to the present I have not seen a salmon with any traces of "saprolegnia ferax." This time last season there were many.—FRANK GOSDEN.

Gade (Boxmoor).

River very clear and many weeds; very bad fishing, only a very few fish taken. I took three pound roach, two perch, and one jack, 3 lb.; baited with small roach for the jack, red worms for perch, and gentles for roach. The river is very full of weeds.—R. COMBEY.

Ilfracombe.

The weather has been more favourable this week for sea fishing, boats out with their fishing parties every day, and some nice baskets of whiting pout, pollock, tamlin cod, and bream have been brought in by them, but no large quantities; the most brought in by one boat has been about 20 lb. The trawlers from Barnstaple Bay brought up each time about 40 lb. of soles, some plaice, hake, whiting and thornback. At Morthoe a small seine was set, they hauled quite a variety of fish, salmon peel, turbot, brill, bass, plaice, thornback, &c., weighing altogether about 50 lb. Some very good fishing has been had this week from the Capstone Rocks and the jetty. Weather at present mild.—E. COMER.

Irt, Esk, Bling, Mite (Holmook).

To-day all nets are stopped in the above rivers. The weather to-day is dark and raining. Every prospect of good fishing to-morrow and the next three or four days. These rivers being low, not much sport has been had for the last few days. Should the rivers keep in good order till the end of the month, will be the best salmon fishing. The spoon is a very deadly bait in these rivers. The fly most taking is dark red cock hackle body, with black head, silver tinsel under wing, dark drakes, top wing dark, turkey feathers. Every prospect of a good day's fishing to-morrow.—A. BROCKLEBANK.

Lea (Ware).

Frequent rains during the week have prevented any great influx of anglers here, but those that have been out have had very fair sport. A fine trout, weighing 12½ lb., was taken on Saturday last at Stanstead; this fish I should think is by far the heaviest trout caught in the Lea, or at any rate this part of the river, during the season; the fortunate angler, whose name I believe is Webb, belonged to one of the London clubs, the name of which I was unable to ascertain. On Sunday several jack were taken, the best of which, weighing about 7 lb., was caught in the bend of the river off the brickfield here by a townsman, who has been fairly successful among these fish since the commencement of the season. I had the misfortune to lose a fine jack on Wednesday, after playing him for quite twenty minutes, I estimated his weight at 10 or 12 lb.; rather galling this, as I believe I hooked the same fish about ten days ago with a similar result. Water in good condition and roach fairly on the feed.—LION AND WHEATSHEAF.

Leicester.

Anglers generally seemed to have fared better lately, as with the waters in good condition some capital fish of all descriptions have been taken. The latter part of last week being a general holiday at Leicester, caused a great many anglers to visit the various resorts, and they were fairly well rewarded. The most noticeable was a good basket by Mr. Marwood, which included a pike weighing 6 lb. 8 oz., and a capital lot of roach, the two largest weighing 1 lb. 4 oz. and 1 lb. 2 oz. respectively. The day following this angler landed a splendid pike weighing 10 lb. 8 oz. The majority of the fish were taken from the Soar. Mr. Francis and Mr. Noon also had good takes of both roach and perch. During the earlier portion of this week a fair number of anglers met with good success, both roach and dace biting freely. At Aylestone matters are represented as being rather quiet, and, with the exception of a few takes of roach, the catches have been but small, the chub being entirely off the feed. Nothing has been done at Barrow. The annual match, which was fished there last Saturday week undecided, was again fished by twenty-eight members, and again the affair ended unfortunately, as for the second time not enough fish were caught to take the prizes that were offered, therefore the match will have to be contested for a third time.—ALERT.

Medway (Tonbridge).

The water is still in splendid condition, though no very large bags have been registered during the week. On Saturday, Mr R. A. Dallas, Beeching, caught some very good bream near Tonbridge Castle, while the Messrs. Bartram, opposite, were successful with roach and bream and roach. Below the town, Mr. Swinnard caught a fine brace of pike, while Mr. J. A. Snelling was equally successful above. A very fine tench was captured near the Powder Mill Lock. Those who are fond of spinning should get some good jack above the town, as there are plenty. The local society are making efforts to put their newly-acquired water, the Ballast Pit, in order for winter fishing.—YE MEDWAY WATER RAT.

Norfolk.

Our most successful season is now well nigh drawing to a close. There has been no lack of sport either from the Yare or Bure. Some extremely fine catches of roach have been taken from the Yare, Cantley, Buckenham, and Brundall, each yielding an average quantity. The Bure likewise has not been behind in affording bream fishers good sport, as I have at various times witnessed. Anglers using the Yare have not been a little disconcerted at the intrusion of two monsters in the shape of steam-tugs conveying pleasure parties to and from Yarmouth, and their depredations have become so serious, and the question taken up so warmly, that I should presume this will be their first and last season. The silting up of the channel, the washing away of the banks, and the danger to life are questions of too serious a nature to be lightly passed over. The various piscatorial clubs in the city have each contested in their annual matches, and two societies have had to forfeit their challenge cups to the successful members who have, according to their cup rules, won them twice in succession; that of the Norwich Piscatorial, a most beautiful cup, value 15 guineas, falling to the lot of Mr G. Corbyn, who has been the head weight three consecutive times, and carrying off the cup before it had been in the society twelve months. The annual dinner of the "East Anglian Piscatorial" was held on Wednesday evening last, a report of which will be found elsewhere. I understand that "Hewitt," the respected water bailiff to the "Yare Preservation Society," has resigned office, and is about to enter in the "public" line, having secured that well-known anglers' house, the Anchor, at Coltishall, and admirably situated on the Bure, affording plenty of good fishing and shooting. Well, with his great knowledge of fishing and boating and the great circle of friends which he has made during the six years he has been bailiff, I think he will be well supported, more especially when sportsmen recollect what service he has rendered by the capture and conviction of many notorious river poachers. The distance to the house is only about seven miles from Norwich, and can be reached by railway, the fare being about 8d. return journey. Gentlemen from a distance will find plenty of comfortable beds, good boats, and, I am certain the greatest civility; although many will regret missing his jovial face from the Yare. I have just heard of an extremely fine catch of bream from the Bure, at Acle Bridge, taken by Mr. Tom Randall (the courteous manager of Messrs. Boswell and Baxters). No fewer than thirty-two fine bream were landed, varying in weight from 2 to 3 lb. per fish. Of course, we always knew that Mr. Tom was a dead slayer when he got amongst them; but this, I think, crowns all his exploits. This also speaks well for Acle, and, no doubt, so soon as the rail reaches there many anglers will pay it a visit.—ANGLER.

Ribble and Hodder.

Both the rivers are getting too low for fishing but it is raining now, and a night's rain would make it nice fishing at the end of the week. Last Saturday was a good day—one gentleman caught a fine mort opposite the house, near the bridge, 2½ lb., and, after tea, another mort and six trout; another gentleman caught a mort 3 lb.—E. DUGDALE.

Taw (N. Devon).

The Taw and Mole are in good order, and many salmon and peel are being taken. I hear Captain Palisser got six peel and a 2 lb. trout one day; the stationmaster at Cappleton got four, and all along the Taw and many of its tributaries peel are being caught. At Southmolton Road Mr. Bradshaw has done extraordinarily well, many salmon and peal having fallen his lot. The best place I know of on the Taw is at the Portsmouth Arms; the Farmer has no one staying there now, and the lucky person who next takes the lodgings will get first-class sport. The Lower Taw is well fished, and many gents who have the permits take a few good peel. The majority are going with the real Barnstaple Devon minnow, and few fishermen in these parts use anything else; the size adapted to the state of the river.—RUSTY GAME.

Thames (Eynsham).

After the recent rains, the water is in very good condition. Perch and jack have been biting freely, and there have been some good takes of each. Roach do not feed well. Mr. Hoole and Mr. Geen were here last week, and had a good take of barbel and chub. The fishing prospects for next week look very promising.—W. HOWE.

Thames (Goring).

Water very low and clear; not much doing in fishing, and gudgeon are the only fish now well on. I have been out to day with Frederick Marsh, of 324, Oxford Street, London; 10 dozen of gudgeon, 4 jack, 8 perch, and some very good roach.—JOHN RUDD.

Thames (Richmond)

The river is now in very fair order and the fish are running much better in size than last week. All the punts have been out each day and all their patrons have had very fair takes of roach and dace. Sport this day (Thursday), Kit Brown, 12 roach, 8 lb.; H. Wheeler, E. Brown, H. Howard, John Morrice, from 4 to 6 doz. roach and dace; John Brain, fishing with gentlemen at Twickenham for a club prize, 7 lb. roach and dace; John Bushnell, with Mr. Anderson, of London, 20 lb. of dace.—JOHN BUSHNELL.

Thames (Twickenham).

Wind, N.E.; river in splendid condition (except being a little too bright) Since last Thursday I have had thirty punts out, but I cannot say they have all had good takes, simply because some of my customers have never fished from a punt before, and, of course, like colts they have to be broken in, but when the day is over I am pleased to say (while the little account is being made up) the pleasant remarks are: "Well, I have enjoyed myself if I have not got many fish," and as P.'s usually hope for better luck next time, this is very satisfactory to hear. Among some of our best takes was Spong one day with Colonel Adcock, who took 13 dozen of roach and dace; one day with Mr. Rogers, Covent Garden, 12 dozen; one day with Captain Turner, 8 dozen; "Our Joe," with Mr. Jacobs and friend, Covent Garden, 6 dozen roach and dace, some roach weighing 1 lb. each; this is the best roach taken this season; one day with Mr. Cole, 10 doz. and 2 barbel 3 and 4 lb.; one day with Mr. Dawson, 10 dozen; Dick Moffat, one day 7 dozen, one day 6 dozen, one day 10 dozen; Farmer, with Colonel Gardener's son, 6 dozen and 2 barbel; one day Mr. Hawkins, 6 dozen, one day 5 dozen 1 barbel.—A. PERRIN.

Thames (Windsor).

The water is very low and clear, but for all that patience and perseverance has been rewarded. Mr. Hirkley, Esq., out with Richard Gray, took about 30 lb. of barbel on the 8th; Gray, with two other patrons, on the 10th got a barble 8½ lb., and a few small ones. Mr. Taylor, out with James Gray on the 9th, a fine jack of 12 lb., another of 3 lb., and several small ones, which were all returned in a sportsmanlike manner. The same gentleman, on the 11th, caught a jack turning the scale at 8 lb., and hooked another large one, but his time had not yet expired. Again, on the 12th, Mr. Taylor got well among the barbel, catching twenty, a few dace, and one roach. I was out on the 11th with a patron; caught 4 dozen roach, and 7 dozen gudgeon. Messrs. Wright, with two friends, on the 13th, 22 dozen gudgeon. I hear of a 7 lb. carp being caught at Datchet. A poor jack came to grief under the screw of a steam launch up water—Oakley Reach. It was picked up by Mr. Lock, of High Street, Eton, and weighed 15¼ lb.; if it had been in condition it would have weighed over 20 lb.—GEORGE LUMSDEN.

Torridge (Torrington).

River in good order for fishing; I have heard of two salmon, twenty-four peel, and many trout being taken this past week. Peel have sported of an evening to a very light fly tied large, and many fine fish have been taken. One gentleman took eight peel and three trout in the river Yeo, a tributary of the Torridge, with the minnow. Weather fine.—PRACTICAL ANGLER.

Trent (Newark).

The water is very low and clear, and in capital condition for general angling. Heavy bags of fish, principally roach, have been taken by various anglers during the week, the gentle being the most successful lure, although creed wheat malt, bread paste and tail end of lobworm have had a share in the general destruction. Several members of the Newark and Muskham Fishery Association have been particularly fortunate in securing heavy bags of fish. Messrs. R. and J. Chatterton, H. Weaver, R. Dale, T. Sunman, A. Broughton, W. Bulman, and Mr. Hammond being among the number who have made bags of from 2 stone down to 8 or 9 lb. each.; Mr. Dale, I believe, having the biggest roach, scaling 1 lb. 7½ oz.; Mr. Weaver getting one weighing 1 lb. 4½ oz. A few chub have also been taken with wasp grub, and I noticed a few bream that had fallen victims to the seductive lob. Barbel are conspicuous by their absence, Mr. R. Chatterton, I believe, being the only angler who got on terms with them, and his bag only contained eight fish; I have not heard of anyone else having a single barbel, in this locality, at least. Thursday night, water in nice trim, weather still nicer, and angling prospects of the very nicest. I had a day on Monday, but only got 6 lb. of roach.—THE TRENT OTTER.

Trent (Nottingham).

The river is very low and fine, and on Thursday at Colwick a number of barbel were killed from a punt above the Weir. But the best take, in respect of barbel, comes from Twyford, where on Wednesday John Heaker, attending upon Mr. S. Sills, of Nottingham, succeeded in taking twenty-five fish besides a magnificent lot of dace, weighing upwards of 36 lb. A grander sample has not been seen at the clubs for weeks past. Mr. Brutnall, whilst angling for barbel last Saturday caught a very fine carp of 8¼ lb. It is very rarely indeed that carp are killed in the Trent, and the fish in question have been sent to Mr. Stanley, of Trent Street, for preservation. Some very nice lots of roach have been brought in from Weston, creed-wheat proving the most destructive bait.—THE MAN AT THE CLUBS.

Tweed and Teviot.

The past week has been more favourable for the prosecution of the gentle art, and on nearly all the "casts" a few of the silvery salmon have been banked. Trout angling, too has been prosecuted with some amount of success, many very good baskets having been killed on the Floors Castle waters. His Grace the Duke of Roxburghe has killed several salmon, the heaviest turning the beam at 17 lb., while a few of the fish ranged from 7 lb. to 10 lb. On the Makerstown waters, also, some half dozen fish have been killed, and on the Sprouston waters Mr. Charles Kerss killed one grilse of 7 lb. on Monday, and he also was successful in killing a very beautiful salmon of 21 lb. on the same water. Very little has been done on the Edenmouth and Hendersyde waters, and the Ednam House fishings has been *nil*. On the upper waters the report to hand states that the takes are poor, owing to the smallness of the rivers and the bright weather. On the netting stations the produce is reported to be very small, and it is only those on the sea coast that are getting any fish, The netting places in the river are absolutely doing nothing, and as the netting season closes to-day (Thursday), it will wind up one of the worst ending seasons for lessees that has occurred for some years back. One reason given for the scarcity of salmon in and near the mouth of the Tweed is that the herring fishermen, having had to go so far out to sea for the herring shoals, has been the cause of frightening the salmon from their usual haunts, and driving them further down, and nearer to the English river Tyne where it is reported that enormous takes of salmon have lately been got. Now that rain has set in, however, and the nets off, it is hoped that the fish will once more return to the rivers and give a good back-end rod angling to the disciples of old Izaak.—MAXWHEEL, Kelso.

Wharfe (Yorkshire).

There has been no sport worthy of record during the past week, as grayling have been rising at the little black midge and would look at no other fly. Our worthy editor and I had a day on the Otley Club water last Friday, but owing to the above cause met with very poor sport, what fish I did kill took a fly made from a water hen's feather and lead coloured silk for body, while Mr. Marston found the honey dun bumble most seductive. Weather cold, dull, and inclined for rain—FRANCIS M. WALBRAN.

Wye (Bakewell).

The water is in good order for fishing; fair sport, chiefly with the apple-green and orange duns, red palmers and furnace. On bright days the red ant are taking a few fish. Evening fishing, red spinner and sand fly.—R. H.

Wye and Derwent.

Both the Wye and Derwent have had great quantities of anglers out on them during the past week, and most of them have had fair catches, especially those that have fished the Chatsworth fishery waters. The best basket that have come to my knowledge was 12½ brace of both trout and grayling, killed on the Derwent, between Cromford and Ambergate, last Saturday, with honey dun bumble furnace, and dotteril flies; and several other baskets have been made, ranging from 3½ brace per angler upwards. Grayling are beginning to rise freely on these waters, especially in the deep slow runs and in the flats. Very few fish have yet got into the strong streams. The bottom fishers on the Derwent have killed some fair quantities of grayling and coarse fish off the Darey Dale waters during the past week, chiefly with gentles and brandling worms. I also heard of a trout of 2 lb., and a large eel being killed on F. Cartwright Esq.'s water below Cromford with wasp grubs, also several small pike have been landed about Cromford during the past ten days by spinning with artificial baits. Both the Wye and Derwent are in first-class order for fly-fishing.—G. J. EATON.

Yare.

J. Cole, Esq., London, helped by J. Burroughs of Lowestoft, landed 8 stone of bream and roach the largest take of the season. Some of the bream turned the scale at 3 lb and 4 lb. each; the roach were good size. Mr. John Morris Broad, of Hornsey Rise, London, with J. Burroughs of Lowestoff, caught on September 5, 1882, over 4 stone of roach, one weighing 2½ lb.—A. J. GOLDSPINK.

[Was not this 2½ lb. "roach" a rudd?—ED.]

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA.—ADAM SMITH'S NEURALGINE is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. EDWARDS, 157, Queen Victoria Street.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

The result of the pegged-down match at Cheshunt was not very great, the takes being very small. Four out of the five prizes were won by Mr. J. Hunt, first; Mr. G. Howlett, second; Mr. W. Lake, third; Mr. M. Sinclair, fourth. The members will fish at Burnt Mill next Sunday. Mr. Shury had roach, bream, perch and dace from Amberley, one roach, 1 lb. $9\frac{1}{2}$ oz., Mr. Partrick roach. A return visit will take place in the above club room on Monday, Sept. 25, when members of clubs are respectfully invited.—J. Worledge.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 10s. donation from the Original Alexandra Angling Society.

BERMONDSEY BROTHERS' ANGLING SOCIETY.

The members of this club showed some good fish this week; viz., Mr. Conn roach from Pangbourne; Mr. Gafney, bream and gudgeon from Weybridge; Messrs. Frost and T. Mitchell, bream from Yalding. At a committee meeting it was decided that Messrs. Ayton, Gafney and Frost were entitled to the prizes fished for on September 3, in the above order. The next outing for daily prizes is on Sunday, October 1.—A. G. Croker, sec.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

Two of our members, viz., Messrs. Powell and Harrison, were out on Saturday last, and succeeded in bringing home some splendid roach, Mr. Powell having one weighing 1 lb. 6 oz., and Mr. Harrison one weighing 1 lb. 1 oz., most of the other fish weighed half-pound each.—Lewis Wride, sec.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 3rd:—Messrs. Chambers, Warden, Osman, and Martin bream and roach from Amberley; Mr. Nitz bream from the Welsh Harp; and Mr. Macdonald roach and gudgeon from the Lea. On the 10th, Messrs. Chambers, Hobbs, Pratt, Clark, and Warden had perch, roach, and bream from Amberley, Mr. Castell roach, dace, and chub from the Roding; and Messrs. Nitz and Mortimer bream from the Harp.—Cas.

CROWN PISCATORIAL SOCIETY.

The members of the above society fish a pegged down match in the Forty Guinea Water, Rye House, on Sunday, September 25th, for a silver watch given by Mr. Miller. Members are requested that the Thursday following is quarterly night, when it will be necessary to attend to arrange club matters, and to fix the date for the supper.—W. H. Burwash, sec.

September 13, 1882.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

On Sunday last Messrs. Sellwood, Mole, and Holdsworth a good display of jack; Messrs. G. Stephens and Button, a large show of bream; Mr. A. Robinson, on Wednesday last, some very good roach. Also that on Sunday, October 1, the members of the above club will fish for a series of prizes.—W. G. Gardner, hon. sec.

GOOD INTENT SOCIETY.

There were not many fish shown in the club on Sunday last, Mr. Maybury having the best take, G. Robinson next, with some good roach from Ware. The other takes were small. Our distribution of prizes took place on Tuesday evening last, and was a great success, there being £75i worth of prizes to be given up. No member is allowed to take money, he must buy something equivalent to the amount of the prize won. The most successful prizetakers were Messrs. Bell, Maybury, H. Baker, Richard Agambar, Charles Bates, Ormes, Philpott, G. Robinson, Guntrip, J. Smart. Several others took a smaller number. After the distribution of prizes, subscriptions were taken for the coming year, and the amount collected was over £50, with many more to give.—R. Murphy.

HEARTS OF OAK ANGLING SOCIETY.

The above society had their annual dinner last Sunday at the Black Swan, at Hertford, and enjoyed themselves exceedingly well, thanks to the hostess, Mrs. Price, who put on the table an excellent spread. The chair was taken by Mr. A. Williams, faced by Mr. Millie.—C. J. Millie, sec.

September 13, 1882.

HIGHBURY ANGLING SOCIETY.

On Sunday last, the 10th instant, the members of the above society sallied forth in great force to Pulborough to compete for prizes for the three heaviest weights of all fish, and although the trays were not as well furnished as we had anticipated, at the same time we had a fair show of bream, roach, and carp, contributed by Messrs. Anthony, Howell, Charles, Rose, Ballard, and others, the three former securing the honours of the day.—James Edward Wheatley, sec.

Sept. 11.

HOXTON BROTHERS ANGLING SOCIETY.

The annual distribution of prizes will take place in the club room, the Cherry Tree, Kingsland Road, Shoreditch, on Monday evening next. The room will be open for visitors and friends at six o'clock.—R. Ghurney.

IZAAK WALTON ANGLING SOCIETY.

Several members were out on Sunday last, the 10th inst. Mr. E. W. Turner had five nice bream, which weighed nearly 8 lb., the heaviest one 2 lb. $10\frac{1}{2}$ oz. Mr. T. Ward had bream and roach. Mr. B. Crook had some good roach. Mr. H. Butt had roach. On Wednesday, the 13th inst., Mr. G. Rolt had a tray of nice roach. Mr. G. P. Rolt had a show of beautiful dace. Four special prizes are promised, to be fished for on any Sunday the members choose to name. The secretary would feel obliged if all members that can make it convenient will attend on Wednesday next to name conditions for the above.

PATRIOTIC ANGLING SOCIETY.

Several members of the above were out last Sunday. Messrs. Mackay Empson and Fuller had a nice show of bream and roach from Weybridge,, the largest being a bream weighing 1 lb. 7 oz., caught by Mr. Mackay. Messrs. Poole and Atkins also weighed in roach and gudgeon from Greenford Bridge.—H. A. Fuller, sec.

QUEEN'S ANGLING SOCIETY.

Our members have met with less sport this week. Mr. Pearce had 9 lb. 13 oz. of bream; Mr. Walford, 8 lb. $\frac{1}{2}$ oz. of bream; Mr. Barrett, 2 lb. 8 oz. bream; Mr. Morgan, 1 lb. 13 oz. roach.—L. Walford, sec.

RODNEY PISCATORIALS.

The members of this society will have their first open competition from the bank on the 24th for three prizes, all fish to weigh, bar jack and eels; size of fish to be Thames rules, with the addenda that they measure from the eye to the fork of the tail, instead of tip to tip.—Pixie.

ROYAL GEORGE ANGLING TOCIETY.

Several members of the Royal George Angling Society were out last Sunday. Mr. Palmer was to the fore with 10 lb. 9 oz. from Amberley, followed by Mr. Wood with 9 lb. 12 oz. from Henley. Messrs. Hughes, Parsons, Holden, and Bernhardt also had good takes.—I am, &c., C. W. W. Bernhardt, sec.

Sept. 12.

SOUTH LONDON UNITED.

In order to encourage a spirit of fraternity amongst its members the delegates of the South London United District Visiting List have decided to have a competition for a series of prizes, to be fished for by the member of clubs on the above list, only it will a pegged-down match and take place at Amberley on October 15th, entrance fee 1s. All entries to close on the 7th October. Tickets to be had of the secretaries of the clubs.—Wm. Allen, hon. sec.

STOKE NEWINGTON ANGLING SOCIETY.

The open competition and excursion organised by the above took place on the 10th inst., about thirty members and friends proceeding by road to Dagenham Lake. Eight prizes were fished for, with the following result:—1st, Mr. El'am; 2nd, E. Read; 3rd, G. Whitmore; 4th, C. F. Robinson; 5th, A. Parrott; 6th, Mr. Meacham; 7th, Mr. Huggett; 8th, E. Machin. Not being exclusively club prizes, they will be presented to the winners on Wednesday, September 20th. Mr. W. Robinson will give a prize value 10s. for the best specimen roach takenn during September and October.—T. Gretton.

P.S.—In answer to numerous inquiries, secretaries of clubs and others are informed that this club is now located at the Middleton Arms, Mansfield Street, Kingsland Road, and the meeting nights the first and third Wednesday in the month.

SURREY PISCATORIALS.

The members of this society competed for three prizes on the 13th, the result of which is as follows: Mr. Murray, first, with dace; Mr. Becket, second, with dace; Mr. Humphries, third, with dace from Rickmansworth, some of the dace turning the scale at 10 oz. Messrs. J. Howard, jun., Bansback, jun., and Linstead also exhibited fish. The last-named gentleman had a splendid tench that weighed 2 lb. 6 oz.—Pixie.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Our show of fish this week was not so large as there has been for some time past, as there were only a few of our members that went out. The most noticeable, therefore, was a nice lot of roach taken by Mr. T. Scott, also some nice jack, rudd, and roach taken by Messrs. Keene, Snich, and F. Hurwood.—H. Moore, secretary.

THE PISCATORIAL SOCIETY.

Although there are at least one half of the members of this society away in the country, the returns of fish taken last week and the present one are very satisfactory, At the meeting on Monday evening last at Ashley's Hotel, Henrietta Street, Covent Garden, Mr. James Lander, the honorary secretary, reported during the evening the following takes:—Mr. Marsden, one carp of 5 lb. 4 oz., taken in barbel fishing at Datchet; Mr. H. B. Brown, two chub weighing 3 lb. 13 oz., caught with the fly at Abingdon; Mr. Harrisson, three chub, weighing 4 lb. 10 oz., also taken with the fly at Abingdon; Mr. R. S. Fennings, 32 lb. 15 oz. of roach, the largest fish, 1 lb. 12 oz., caught in the Hampshire Avon; Dr. Brunton, six trout, weighing 6 lb. 10 oz., taken with the fly in private waters. This gentleman also showed another take of ten trout and one jack from private waters.—B.

THE WALTON ANGLING SOCIETY.

The above club, which has only been in existence about twelve months, and now numbers 80 members, held an open contest on Saturday last for six money prizes, given by the landlord of the Swan Inn, at whose house the club is held. No less than 168 anglers competed in the contest, which proved a success in every respect, the whole of the fish that were taken being considered excellent specimens considering the water they were taken from, viz., the Peak Forest canal, which is let off a great many times during the year, and is netted regularly in the most open manner. It is, however, the intention of this sotiety to acquire, if possible, the right of fishing a certain length of this canal, when, if acquired, there is no doubt it will be properly watched. We have several fair specimens of fish weighed in for the yearly prizes, particularly a perch of 2 lb. by the worthy host, Mr. James Fogg, from Bardney, Lincolnshire. Several of the members have been fortunate with trout, having landed fish scaling upwards of 2 lb.; but as they came from a private water near they are not allowed to be weighed in for prizes.—Robt. G. Borwick, sec.

TRAFALGAR ANGLING SOCIETY.

Sir,—The trays of the above society were filled on Sunday the 10th inst., Mr. Humphries showing some fine roach from Amberley, the heaviest going 1 lb. $7\frac{1}{2}$ oz., and three more, 2 lb. 14 oz.; H. Wilson, roach and dace from the Thames; J. Gaze, roach and jack from Pulborough; Messrs. Richardson, R. Gaze, Cooper, Goldstine, Lord, Turner, and Potter, roach and perch from the Wey.—J. Gaze, sec.

WESTBOURNE PARK PISCATORIAL SOCIETY.

On Monday the 11th, Mr. Huber succeeded in landing a handsome pike above Teddington Lock, scaling nearly 7 lb. To-day (Tuesday) Mr. H. Hulbert knocked it out of heaviest weight with a pike of 8 lb. from the Avon, Chippenham; Mr. Buttery also weighed-in bream from the Ouse, largest scaling 3 lb. 6 oz.—W. Adeane, sec.

WALTONIANS.

The trays were well filled on the 10th, although with two or three exceptions the individual takes were very small. Mr. Philips had bream 25 lb. 14 oz. from the Ouse; Mr. Good, jun., had 9 lb. of roach and bream from Pulborough; Mr. Malcolm had a small show of roach; among them, however, he had one fish

1[illegible]lb. 14 ox., Mr. Graee had 5 lb. 9½ oz. from Goring; and Mr. Watson had roach 2 lb. 7 oz. Various other smaller takes were weighed in.—A, J. Marriott.

WALWORTH WALTONIANS.

On the 10th the members competed for nine prizes at Paddock Wood. The following is the result:—1st, Mr. Delehaye, sen., won a £5 5s. diamond ring, given by Mr. Renault; 2nd, Mr. J. Bedford, £3 3s., by Mr. Bansback; 3rd, Mr. Delehaye, jun., side of bacon, by Mr. F. Grigg; 4th, Mr. Cain, £1 1s., by Mr. Parrett; 5th, Mr. Fox, £1 1s., by Mr. Field; 6th, Mr. Collins, 1 gallon of whisky; 7th, Mr. Beale, 10s. 6d.; 8th, Mr. Piolaine, 10s. 6d. The ninth prize was not taken. The next competition will take place on the 21st, between Egham Lock and Victoria Bridge, towing path. "Fish how and for what you like," all fish subject to society's rules.—Pixie.

CLUB AND OTHER JOTTINGS

By L. B.

The best bit of news with which to commence my jottings this week most certainly is that of the renting of another excellent stretch of water by the United London Angling Association Fisheries Society (oh, that name!) for the use of its members. The water in question, Springwell Fishery, is about a mile and a half from Rickmansworth Station, on the London and North Western Railway; third class return fare from Euston to holders of privilege tickets and comprises about a mile and a quarter to a mile and a half of the canalized Colne, and about half a mile of the back river. I know from personal experience that it contains some very handsome and heavy roach and dace, some good chub, and I am informed, on very good authority, some very decent jack and an occasional trout or two.

I have known and fished the water for some years, and am of opinion it is principally a winter water. During the summer the back river is in many parts almost choked up with dense masses of aquatic vegetation, among which the fish find abundance of food and a safe harbour of refuge from their two-footed and other foes; the weeds in the canalized portion, a swift running, fairly deep, gravelly-bottomed stretch are also very troublesome, though they are here and there occasionally cut some depth below the surface; but when the sharp frosts of late autumn and early winter have killed the fast browning weeds, and they have silently but surely been swirled away by the sharp running waters, then, indeed, can the bottom fisher, who is up to his work and doesn't expect a huge take, but is satisfied with a moderate basket of really good fish, have his innings.

The water is very low at the Welsh Harp, Hendon, and the finny ones which here feed so well during the early part of the season, are now suffering from a considerable loss of appetite.

Those tench haven't come on at Elstree, as they were expected to, though a few have here and there been picked up; some fair jack, however, have bitten gimp for the last time.

The anglers, and indeed the whole of the Thames loving public are to be congratulated on the recent victory at Maidenhead, and considering the valuable advice and assistance Mr. Granville Layard received and gratefully acknowledges from Mr. Crump, solicitor to the Thames Rights Defence Association, it will be a standing disgrace to the London and other anglers if so valuable an association is allowed to break up or become crippled for want of pecuniary support.

The Thames trout long fence season commenced on the 10th of this month, so brother rodsters who should accidentally hook and land an aquatic leopard, remember and beware.

In answer to an application made by Mr. T. Hoole, as secretary of the United London Association Fisheries Society, that angling might be permitted in the London parks from the opening of the gates till 10 a. m., a reply has been received from the Commissioners regretting their inability to grant such request, as contrary to the parks' regulations.

While all true anglers will rejoice at the upholding of time-honoured and undoubted public rights, they will with equal warmth repudiate the very suspicion of sympathy with foul-mouthed rowdies, who, masquerading as anglers, only too often on the Sabbath morning, when glad sunshine, birds singing merrily, church bells chiming melodiously, and a host of other sweet sounds and sights vie with each other in proclaiming Nature in her brightest and happiest mood, stand out like dark foul blots on a pure, wholly peaceful and almost holy page. I should not indulge in this bit of sentiment and moralizing if I were not prepared to point to something practical. Unfortunately, I have recently had convincing evidence that there are still among our London anglers (or passing as such) persons of the class above referred to, and I could instance two good stretches of water which have been closed against the many on account of the gross misbehaviour of a few; it is not, however, enough to merely deprecate the existence of such an evil, it behoves every right thinking man to use his best endeavours to sternly put it down whenever it comes under his notice.

Now the winter season is fast approaching, the annual wail is heard from those London tackle dealers who provide live baits for pike fishing. The anglers, they say, are the first to cry, hear, hear! when an unfortunate netsman is caught red handed, and Preservation Societies, and the Associations, by offering and readily paying rewards for the conviction of offenders, have made it so hot that nearly all their men have given up the job; or the few that do keep at it ask almost prohibition prices, yet the anglers clamour loudly for baits, and will often altogether remove their custom to the establishment where they are procurable—truly that bait question is a knotty problem.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

GUT. *v.* HAIR.

Sir,—I, as a great lover of, though very humble performer at, angling, and a regular reader of your paper, thought a more conceited challenge was never issued by one gentleman to another than that by "The Croaker"—I beg his pardon, "The Raven—to Mr. Marston. What with his bad feet, running after and watching Mr. M. and his business, I am not so much surprised at his being knocked off his perch.

With regard to the gossamer gut, the only possible objection to it is that about two hours' fishing is as much as it will stand; but, muffin as I am, I can kill fish with it when far and away better fishermen can't move a single trout with the ordinary gut.

Mr. Farlow, of London, makes some splendidly fine casts also.—I am, &c.,

M. L. H.

[We have found the "gossamer" casts will stand two or three days' hard fishing and be none the worse for it. Some drawn gut gets very white after a day's fishing, but we have not found the "gossamer" do this until after two or three days' fishing.—Ed]

GUT *v.* HAIR.—IN FAVOUR OF HAIR.

Sir,—I suppose the traducers of hair will be in ecstacies at the result of the match between Mr. Balderston and Mr. Marston. However, as I said the other day, and as one of your correspondents wrote, that contest was a test of skill and not one of gut *v.* hair. The euphonious "Splodger" is very grim about the six-inch trout, or "fingerlings" as he delights to call them. I take a "fingerling" to be something the length of a finger—and who ever saw a finger six inches long? So! so! have a care, Mr. Splodger! Our association here, which I venture to say includes as many crack fly fishermen as any other association, numbering about 150 members, has a rule prohibiting the capture of trout under six inches in length. This is the Kent Angling Association. From it I dare venture to take some half-dozen fly fishers who use hair and pit them against any half dozen using gut from any other fishing association or club in the United Kingdom. But the contest would have to be on equal terms, and should, if possible, take place on some river which had never previously been fished by by any of the competitors. This would be a *sine qua non.* Mr. Cooper magnanimously issues a challenge and selects a river, one perhaps, as it is in his district, in which every eddy and boulder and favourite corner is known to him. He could or should be able to go to the best place on the streams, and know exactly where to fish at various heights of the water. Then the flies too—he knows the favourites, and what variety will be on at a certain time of day. A stranger would have to learn all this, and more of it; he would have to learn the more difficult the stream or more cunning the trout. Such challenges, of which the one I refer to is an example, are mere empty boast or at least not fair ones for the reasons I name, and which must be palpable to the unbiassed. Mr. Foster, jun., alludes to challenges issued more than thirty years ago, but what such have to do with the present question I am at a loss to know. Notwithstanding his statement that "the recognised standard practitioners and writers on angling have declared in favour of "Gut *v.* Hair," I hold an exactly contrary opinion, and perhaps another season some fair means of proving the superiority of the one over the other may be arranged. Do I understand Mr. Foster, jun., to mean that single strands of human hair were used for the tail line or cast? What about the colours and length, likewise the power to hold for half a dozen throws, even a No. 1 hook!

As I have before written I claim for hair that it can be obtained, if not quite so fine as the finest drawn gut, sufficiently fine for all angling purposes; that it fishes straighter and better, does not entangle and get twisted up by a leaping trout so much as gut; that the jacks or droppers stick out from the cast better, that it does not glisten and shine in the sun so much as gut; moreover, it sails or floats on the water, thereby keeping the flies nearer or actually on the surface better than any gut can; and, lastly, being of less strength than gut, hair requires a greater amount of skill to use with proficiency. Hence fly fishing with single hair is the higher branch of piscatorial art, and as such, more worthy of the support of all true anglers than it appears to be fitting by a majority of your correspondents.

A word or two in answer to "Snipe Bloa." His first argument as to extra fineness of gut. This is something, but can only be applicable so far as the end fly of the cast is concerned. At the droppers fine drawn gut is so soft that the "jacks" stick to the cast, refuse to stand out, and the fish have the two thicknesses to see, and, in addition, are likely to be deterred from taking either of the dropper flies because they are clinging to the main cast. This is so to a very great extent. As to getting broken, there is no fear of this occurring, so long as your reel runs freely, and in striking your fish you keep your finger from the line and let the reel revolve with the stroke—what you, Mr. Editor, call striking from the reel; but strike with your rod, and let the reel revolve and line be taken out until you can stop your fish. After having so hooked your trout, with ordinary care and skill very moderate hair will kill big fish, and at the end of an ordinary 14-feet trout rod (and of course lesser ones) you can put as much pressure on your fish with hair as you care to do with gut, taking into consideration that with extra roughness the hold you have on your fish has extra chance of giving way. As to hair standing water, I find it does this very much better than gut, either drawn or otherwise. Hair never gets frayed, and never becomes soft as pulp, as does all the drawn gut I have ever used. One thing the user of hair must not forget. It becomes "necked" or broken at the knots and droppers much sooner than gut does, and I always re-knot my hair casts after they have had a day's fishing. I had almost forgotten to name another advantage hair has over gut, viz., a greater elasticity. This latter quality is advantageous, as it enables one to play and land a more lightly hooked fish than gut will do under similar circumstances. Such are some of the arguments in favour of hair. They are all practical ones, and cannot be gainsaid with any degree of fairness. Some fishermen find they crack off their end fly when fishing hair; this they can remedy by having a few inches of fine drawn gut, upon which the tail fly is tied. Then, again, I have used hair droppers on gut. They stand out very much better than gut does, and can be recommended under certain circumstances. But of course such casts require manipulating almost as carefully as hair itself.—"Sprint," Kendal, September 13.

P.S.—Opponents to my cause must not forget that the advantage I claim for single hair I do only under ordinary circumstances, where trout do not average say more than from 8 oz. to 10 oz. each, one with another. Of course where the trout lives in sluggish waters, and he becomes from his surroundings more like a "logger-headed chub" than the lively and active creature he is in a swift running stream; in such places as these a life of idleness and peace and lack of exercise, such as stemming the current, make him wax fat, and he overgrows himself. His deadweight of two or three pounds or more as he slowly makes tracks for a bed of weed would be too much for hair. Such fish require gut, and to use hair under such surroundings would lead but to disappointment. Perhaps most who are antagonistic to single hair know trout fishing only under such circumstances. —Yours, &c., SPRINT.

[As we have always said during this controversy, we only give our own opinion—not doggedly or obstinately—and we are still of opinion that fine drawn gut is better than hair. "Sprint" admits it is better in the case of fish over a certain size. We cannot see much sport in catching trout under eight inches in length with any line, hair or gut. We should much like to see a fair trial of hair *versus* gut on the river Eden, between Armathwaite and Langwathby, next spring.—ED.]

GUT GOT IT!

SIR,—Yes; Gut Got It, and got something that it hadn't expected! Gut got it, and won! But if there is anything that is calculated more than another to create or develop a brotherly feeling all the world over, it is the "freemasonry of sport" and the inherent love of sportsmanlike conduct among all true sportsmen for sport's sake, in testing the merits of different modes of fishing, or flies, or in any particular tackle whatsoever.

When any sportsman-angler had read the plain and unvarnished statement in last week's FISHING GAZETTE, detailing the friendly-agreed fly fishing trial or test of "Gut *v.* Hair," between R. Balderston and R. B. Marston, everything appeared to have gone on fair and honest principles up to a certain point; for, after "a long and pleasant chat" of the previous evening, the mutually or tacitly-agreed-upon angling test commenced, and the river Laver was whipped—'Gut *v.* Hair."

In aggregate weight of fish caught, as well as numbers, Gut, as represented by the editor of the FISHING GAZETTE, got it so far; and the angler-sportsman had agreed to fish elsewhere next day. Now, if Mr. Balderston had had any objection whatever to make as to any stated or implied conditions he wished to be observed as to the size of the fish to be retained, or other details, in fairly testing the respective merits of "Gut *v.* Hair," why had he not suggested them at the onset, or as soon after as practicable, in order that both might begin *de novo?*

Mr. Balderston went on fly fishing without comment of any kind, so far as we know, until lunch, and further on in the afternoon, when he, it appears, said to Mr. Marston, he was feeling cold; and, therefore, the day's contest, or supposed friendly trial, was so far over, to the disadvantage of—Hair!

I cannot trust myself to touch upon the episode that followed. I can hardly believe that the same R. Balderston penned that note to his fellow fly fisher friend of the previous day, unless he (the writer of it) must have been ill or not in such a condition of mental clearness that he must ordinarily possess, to have given us those erstwhile lengthy tables, showing lucidly worked out averages, and decimals, and notes upon flies, &c., almost to tiresome iteration.

If I have read Mr. Balderston's writings aright, he seems to me to be a gentleman who tries to impress upon others, and that too from a rather lofty standpoint, or self-assertiveness, as to minute details, founded on great experience in the art of fly-fishing, while dealing with the results recorded by him in his exhaustive analyses, and in the gravity of his own inferences or induction.

Under all the circumstances of this most unhappy affair, I think that, in the interest of sport, in justice to his opponent and to himself also, above all, as interesting also to thousands of readers of the FISHING GAZETTE, that Mr. Balderston will surely not delay in giving (if he does not this week) an explanation of the feelings under which he wrote that irritating letter, together with an *amende honorable*, if time, and perhaps better health and reflection, would require it of him.—I am, &c., THE PILGRIM FRY-ER.

CARP FISHING AT WANSTEAD.

SIR,—Would you kindly inform me, through the medium of your valuable paper, whether there is any truth in the rumour that some fine carp fishing has been thrown open to the public at Wanstead, in the shape of several ponds? Also, if so, is Sunday fishing allowed?—I am, &c., G. T. PAGE.

[We have heard nothing about this matter, perhaps some of our readers can give the information wanted.—ED.]

THE FOOD OF SALMON IN FRESH WATER.

SIR,—In a recent number of your excellent paper, I observed an editorial statement which rather surprised me. It was to the effect that salmon whilst abiding in fresh water eat nothing. I confess I had looked upon this assumption as one of those popular fallacies, commonly credited, but absolutely unsupported by proof.

Whether the salmon "rises" at the so called "fly," for "food or play," I am not prepared to say, but when, as in Loch Tay, the only successful lure is a real fish, or its representative—a "phantom minnow"—when the par-tail is everywhere a deadly bait, and a "dollop" of worms, under certain circumstances, an irresistible one, I can hardly doubt the object of the fish in taking either into his mouth.—I am, &c., SALMO SALAR.

["The proof of the pudding is in the eating." We can only repeat that both in this country, in Germany, and in America we have made inquiries on this question, and have never been able to find any one who had ever found any food in the stomach of a salmon. At the American canning establishments many hundreds of thousands of salmon are opened almost, if not quite, alive from the nets, and yet it is only when the fish is just fresh from the sea that any food is ever found, and that food consists of salt-water animals, shrimps, &c. Our theory is that whilst in the sea the salmon is always feeding and growing fat, always dashing at some small fish or picking up sea-worms. It comes into fresh water with a store of fat on its pyloric appendages, enough to last it while in fresh water, unless it is detained by lowness of the river. This store of fat and its undoubted use was discovered by Frank Buckland, who told us he did not believe salmon fed on fresh water fish, though an old kelt might possibly, when detained in a pool for weeks beyond the usual time, kill a few trout. . . . . As to why salmon takes the fly, worm, &c, we some years ago said our idea was it was simply done from force of habit, and not with a view to making a meal. If salmon had to subsist on worms they would come off very badly indeed. The eels get what few worms do get into the river. The theory that the salmon's digestion is so rapid that bones and all go "at once," or that it ejects the contents of its stomach, will not do, because when caught in estuaries the fish has food in it, and undigested food.—ED.]

DESTRUCTION OF SPAWNING GROUNDS IN THE TIDAL THAMES.

SIR,—I am extremely obliged to Mr. R. W. Hobden for his letter in your issue of the 9th inst., and am free to acknowledge that it will certainly do much to allay the "false alarm" I may have raised on this point. At the same time I would desire to be understood to include more than the "favourite swims" in which this paving of the bottom of the river with clay is going on from season to season; for the same process, takes place at every available angling spot on the banks, while, moreover, the swims, whether favourite or otherwise, are much more numerous than Mr. Hobden would imply. There are eight professional fishermen, besides their apprentices and assistants, at Teddington, and several watermen who let out boats for angling. At Twickenham there are at least twenty fishermen—professional and outsiders; and at Richmond some eight or ten professionals and a host of outsiders, with a perfect flotilla of boats, reaching westward far beyond the landing stage on the parade, and eastward nearly down to the White Cross Tavern, all ready and willing to take in a cargo of clay-made ground bait to add to "the paving of the bottom of the river."

I am inclined to the belief that Mr. Hobden underrates the character of clay. A coherent, weighty, compact, and hard earthy product when dry, but stiff, viscid, and ductile when moist, not readily diffusible in water, and when anchored not readily moved, by even strong currents. Indeed, if clay did disintegrate with the facility which Mr. Hobden would appear to assume, so heavy a material would scarcely be washed away by a receding tide any more than it would be carried upwards by the flood; and if it did break up into small particles, the destiny of those particles would be the interstices between the pebbles, and tend to the formation of a concrete base or pavement in strict accordance with one of the suggestions of McAdams—that modern Colossus of Rhodes.

But the fact is unanswerable that the bottom of the river between Teddington and Richmond is no longer the clean, gravelly scour that it formerly was, within the recollection of even middle-aged men. Indeed, this has been a ground of complaint during recent years, and it is but logical to include the vast quantity of clay thrown in during the last twenty years amongst those causes, if it be not the primary one. There was a period, not far distant, when the bottom was thought clean enough to dispense with the use of the rake, which was only then resorted to for gudgeon fishing; now it is applied as an attraction for dace and roach.—I am, &c., CREEL.

"SHAMEFULLY SERVED."—CAUTION TO EXHIBITORS, BY ONE WHO IS SUFFERING.

SIR,—Some time since I informed you that my exhibits from the Edinburgh Exhibition, after having remained there during the whole time the building was open—and where, as usual, greatly admired—they were the same eight cases that brought me a Diploma of Honour and Certificate of Merit from the Norwich Fisheries Exhibition—arrived with the four principal cases smashed to atoms. It is a most remarkable thing that only one case was sent from Edinburgh, containing four cases, and it was not until I had written; eight days after, the other case containing four more cases arrived, the case that arrived first remaining at the station until the second package came, which after eight days arrived and was duly forwarded on. Upon arrival at the house, I and my son were away, I in the country fishing, he in the city, the cases were placed in the hall and a bill tendered to my good lady for signature, as she was told it was to vouch for the delivery of them. The carman's attention was called to a portion of the top of case being absent, of which he took no note; it was as he received the same. My son, on arrival, noticed the same, and upon lifting the case heard the things, viz. glass, &c., rattling. He came to meet me at the station, and without seeing them myself we informed the principal of the goods department, who came up and saw the damage done and reported the same. Well, to make my account short, the Edinburgh people would have nothing to do with it, and the railway people say that in passing over so many lines they cannot find out upon whose line it happened, and that nothing was noticed during the transit anywhere. And when I asked for damages they, after two months' waiting, tell me the sheet should not have been signed before the contents were seen, at the same time knowing that the carman will not wait for such, and there was no one in the house to do so had it been requisite. Had I been a person of means, I could better have afforded to put up with the loss, but being quite the reverse, I am doomed to loose that which has taken me years to accumulate, and cost me considerably over the claim I sent in of £10 by another £10—it is very hard. The case that arrived a week before the second was safe and sound, although it remained a week at the station previous to the second's arrival. Had the Edinburgh folks sent the exhibits home by the same route they desired them to be sent by, it might not have happened.—I am, &c., FRANK GOSDEN.

DAVENTRY PERCH.

SIR,—On August 20, 1881, I sent an account to the FISHING GAZETTE of a large perch taken in a lake near the old town of Daventry.

On August 21 of this year I received from a friend another perch in a box (caught by a rev. gentleman in the same water), without a note for directions; but, supposing they would follow, I waited a few days, and then wrote to the effect that the fish had arrived, and I thought it a beautiful one, and asking if my rev. friend, if not too much trouble, could catch another one, somewhat inferring that the one previously sent had been eaten. To my surprise, in a few days, came another, so that I have had three perch of the weights, $3\frac{3}{4}$ lb., 4 lb., and 4 lb. 2 oz., three such fish hardly to be matched.—I am, &c.,
WICKHAM.

RECIPE FOR COLOURLESS WAX.

SIR,—M. L. H. inquires for a recipe to make colourless wax for fly-dressing. I picked up the following about two years ago, and have found it answer well: Two ounces best yellow resin (in powder), one drachm white beeswax (sliced in small pieces). Melt the above together, and add two and a half drachms lard (without salt), and let the whole remain there ten minutes, stirring all the time; then pour into cold water, and, while warm, pull and knead to make it tough. The above will keep for years in a cool place. I enclose a small piece which I have kept in water since July, 1880.—I am, &c., RICHARD ALISON.

Stockton-on-Tees, September 9th, 1882.

[Many thanks for your recipe. The sample sent seems first-rate.—ED.]

BARBEL FISHING AT KINGSTON.

Mr. Alfred Nuthall fishing with John Johnson, senr., and using only one rod, succeeded in taking in three hours twenty six barbel, weighing from 2 lb. to 5 lb. each. They were all caught in early hours, for as soon as the boats begin to get about, it is all over with fishing, and especially in the present bright condition of the water. Mr Nuthall is to be congratulated on his successful capture, and considering the great interest he takes in the protection and preservation of the Thames Fishery, and the personal assistance he gives to it, all anglers will rejoice at the result. On the following morning, with the same fisherman, Mr. T. Hardy of the Griffin Hotel, went out for one hour and got four good fish.

B.

THE SUPERIORITY OF ANGLING.

Let others over hill and dale pursue,
In mad delight, the little, red, rank fox,
And break their necks in fashion orthodox:
We anglers have another end in view.
Or, let who will, at Midas's battue
Shoot tame villatic fowl, till,—like haycocks
Are heaped his hecatombs, which dwarf the stocks
Of half the poultry-shops in Town; but you
And I amuse ourselves *how differently!*
Down where the silver river winds its way—
While contemplation doth with sport combine,
And holy quiet woos sweet reverie—
We follow, to the fading of the day,
Our pensive pastime of the rod and line.

London, September, 1882. A.R.I.E.L.

POLLUTION OF THE THAMES.

Alderman Sir Andrew Lusk, who is usually accurate in his remarks, made last week, in his magisterial capacity, a statement reflecting on the Corporation and Commissioners of Sewers which appears to have no foundation whatever in fact. A man named Francis Flood was brought up at the Mansion House charged with polluting the Thames by throwing into it some rubbish from the barge "Faith." The Alderman remarked, that he could impose a fine of £20 for the offence, but that he felt considerable difficulty in dealing with the case, as the same thing was being repeatedly done by the Corporation and the Commissioners of Sewers, a quantity of filth being swept down the gullies, and so conveyed to the Thames. This statement is entirely wrong. The Corporation have nothing whatever to do with the matter, and it is clear that the Commissioners of Sewers would not be permitted to commit so flagrant a breach of the law. As a matter of fact, underneath each grating a large box is placed to receive any substance which may have accidentally passed through, and this box is periodically taken up by the scavengers and emptied into their carts. Nothing but water passes through the gullies to the Thames. The worthy Alderman's remark is the more to be regretted, as it has been reproduced in numerous provincial and metropolitan papers, and has been either ignorantly or maliciously used as a lever for another attack upon the Corporation. We are sure no one will regret this more than the Alderman himself, who will doubtless give an official contradiction to what may otherwise, coming from such a source, continue to mislead the public.—*City Press*

A Snake Rise at a Fly.—"Opposite to the lower end of the southern gravel bed near the Bishop's corn mill, a course of stepping stones crossed the river, and on these I frequently stood and cast my flies, for many a fish fed near. One summer evening while thus engaged I had an extraordinary rise accompanied by a severe pull, but there the matter ended. Looking down steadily I saw that a snake about fifteen inches long, while crossing the river, had snapped at my fly. The creature pursued its onward course, and found shelter in a hole on the opposite bank. This is the only case of the kind that I have ever witnessed."—From "My Life as an Angler," by Wm. Henderson.

SCARCITY OF FISH.

Amongst the questions that have arisen of late in the angling world; and especially as regards the Thames, is the cause of the scarcity of fish in the river. Several reasons have been assigned for this declension, and perhaps the most important of all in the lower Thames is the one which has reference to the migration of the fish as young fry through the grating into the reservoirs of the various water works, all of which are said to be teeming with fish; and these fish could not possibly have got there but from the river, inasmuch as no attempts have been made on the part of the Water Works Companies to stock them themselves with the finny tribe. Several applications have been made for reduced openings in the gratings and willing responses from the directors have generally been received. With all this reduction of space, the great evil has not been remedied, nor indeed can it be, so long as the water is taken out of the river, for the fish get through as young fry, and it does not require a very large opening for that. There is only one way to compensate the great loss to the river, and that is the view which the committee of the Thames Angling Preservation Society has wisely taken, to obtain permission from the Water Works Directors to visit the reservoirs occasionally with the net, and restore some of the fish back to their native stream. This has been done to very great advantage, The only object of these companies is to get water out of the river—I mean the pure and simple object—and in obtaining the water, I cannot imagine they have any desire to deprive the anglers of the stock of fish, which as from a *free* river belongs to them. It can be shown unmistakably, that in their removal of the water, for which they have obtained a legal right to do, they are at the same time removing from the river every year thousands upon thousands—I might even go further than this—of fish life, which is of no use to them, in the one object those Companies have been established to promote. This in a common sense view must be granted, but there is a greater point than that. It is the benefits they confer upon the tens of thousands of honest working men, whose enjoyment is the sport of angling in the river. On behalf of these men, I feel that I cannot too strongly thank the Directors who have already allowed the netting. Not only is angling a healthful recreation to pursue, not only does it bring the anglers into the pure and healthy air of the country, but the fish they take back with them is good and wholesome food. The river Thames is their own river, because as far as the "City Waters" are concerned, it is free. They are content to abide by all laws as regards the sizes and seasons of fish; but they must not, they ought not, to be deprived of any portion of the fish by other means than honest angling. The young fry getting into these reservoirs is a necessary evil; they go of their own accord and free will through the gratings, and if water is to be got out of the river, the youngsters will go with it, and so would the big ones if they had a chance. There is no Act of Parliament that would fairly give possession of the fish to the Water Companies, nor do I believe there is a body of directors that would desire to claim them, when they become impressed with the value of them to the river and to the humble rodsters. The feeling is every day growing stronger in favour of the propagation of coarse-fish, and the sooner a start is made in it the better. The tidal waters of the Thames have been this last few seasons yielding large takes of roach and dace, and only last season it was recorded in The Fishing Gazette, that a member of the Richmond Piscatorial Society had taken in four successive days 80 lb. 4 oz. of dace! This report needs no comment. It is more in the river between Teddington Lock and the City Stone at Staines where an increased supply of fish is necessary, and from what I have now stated, there is a fair reason to hope that in an early future that much desired result will be accomplished.

B.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. Established nearly a century. Boats 2s, and full bait 1s. per day; men provided. Terms for stopping visitors on application. Gravel and sandy soil.

River Lea at Ware:

Anglers visiting this favourite Fishing Ground will find excellent accommodation at HOST FEARN'S, Lion and Wheatsheaf, High Street.

Live Baits provided, and any information given to visitors.

DAVID WELLS,

11, and 15 LEITH STREET, EDINBURGH.

The Fishing Gazette.

SATURDAY, SEPTEMBER 23, 1882.

THE "ANGLER'S CURSE."

By R. B. MARSTON.

IN September the trout and grayling angler is often utterly beaten, in consequence of the appearance on the water of the wee black fly known as the "Angler's Curse." In shape this fly is like a bee—that is to say, the wings and body are similar in shape, but it is a very small fly, about half the size of the common house fly and it is perfectly black, glistening black in the body. It comes floating down on the surface in countless numbers all day long for days together, and while it is on the water it is a most difficult matter to pick up a few fish, even when they are rising freely in all directions; especially is this the case with grayling. I have thrown many dozens of times over a lot of rising grayling, and no rise could I get. I need hardly say I tried everything I could think of, the finest small black midges (smaller it would be impossible to use), small black-flies of all kinds. I floated them in dry-fly fashion over the fish, I let them sink a little. I tried them on the finest drawn gut and the finest hair. I tried flies made by makers in London, Edinburgh, Cheltenham, Winchester, Alnwick, Berwick, Bishop Auckland, Birmingham, Ashbourne, Matlock, and half-a-dozen other places. I waded up stream and threw a long line, and in fact I did everything which my experience could suggest; it was only now and then that a grayling would look at the artificial. I knew I had not disturbed the fish, because they went on rising. My friend Mr. Francis M. Walbran and I had a fine experience of this kind recently on the Wharfe (by the way a clearer or purer stream than the Wharfe I do not wish to fish; it was clear as unsweetened gin, and full of big grayling, trout, chub, dace, barbel, &c.). We fished carefully, but our best art was useless against this black little "deevil's" attractions, and we found that some of the best anglers in the Otley Club had been served in exactly the same way. Ambrose, the keeper, tried in vain, so did other local anglers. If any other fly had been "on," we could have filled our baskets, but for some reason, "which no fellow can understand," the grayling, when rising at the "curse," can rarely be induced to take the most dainty imitation on the most delicate tackle. I have proved this over and over again on various rivers, it also affects the trout in the same way, but not quite to the same extent, the reason, in my opinion, being that the vision of the grayling is much keener than that of trout for short distances. The trout can see an object much further off and is more easily frightened by the appearance of the angler, but for seeing any object floating above it, the grayling has a much keener eye than the trout, I am sure. The trout, when feeding on the fly, hovers near the surface or goes into shallow water. The grayling rises from the bottom of his swim every time, and perhaps his swim is two or three feet deep, or more. Has any angler who reads this succeeded in killing grayling when the "curse" was on? I mean not solitary fish, but a fair basket, such as one expects when the fish are rising well. I should be glad to hear how it is done, so would many other anglers, including Mr. Walbran.

DEATH OF CARL LINDENBERG.

WE much regret to learn from our German contemporary the *Deutsche Fischerei Zeitung*, that the celebrated Berlin fish merchant, Mr. Carl Lindenberg, died almost suddenly on the 12th, at Lübeck. Lindenberg was in his 39th year, and his death will be greatly deplored in Germany. It was chiefly through his untiring exertions that the inland parts of Germany have been supplied with good sea fish at a cheap rate. In this way the whole nation has benefitted to an incalculable extent. He took up the matter in the press, he agitated for the removal of restrictions, and provided railway facilities. He always kept his own interests subservient to the public welfare. All visitors to the Berlin Exhibition will remember his magnificent live and dead fish exhibits, which obtained for him the second prize of honour given by the Emperor.

A GREAT YORKSHIRE TROUT.

THE following account of the life and death of a great Yorkshire trout may interest readers of the FISHING GAZETTE.

It is given in prose and verse—the prose by a friend of the happy angler who killed the fish, the verse by the angler himself. The writers (clergymen) often fish together in Yorkshire waters, and, meeting from time to time, compare notes as to fish taken in two rivers near which they live.

In the month of July of the current year, two anglers made their way to some preserved waters in the river and commenced sport. To the experienced eye of one of them there appeared in a small space of calm water formed by the shoring up of a portion of a weir, a likely habitat for either pike or large trout. So wide was the river and so great the volume of water falling, that minnow was discarded for spinning with dead bait of the size usual in pike fishing. A first cast near the hollow formed by the shoring was followed by a sudden check, and immediate evidence that a large and strong fish had accepted the angler's offer. Away with a rush to his home under the apron of the weir, two furious endeavours to reach a sunken oak stump, a leap out of the water, a skimming hurry along the surface of the water, offering to the delighted angler a view of a great trout, a repeated effort to rid himself of his steel enemies, a pause, a lesser rush, a turn over, and, with the help of a skilled hand with the net, there lay before the excited fishermen a magnificent river trout, exquisitely spotted, and in perfect form and condition, his length 20 inches, girth 13 inches, and weight 4 lb. 5 oz. J. L. B., Ripon, Sept. 1882.

In tiny rill, where on the moors
The grouse the sportsman slaughters,
Emerged a troutlet from his egg
Into the world of waters.

A mother's love he never knew;
His sisters and his brothers
Were many; but he could not tell
Them from a thousand others.

And when the summer sun waxed hot,
And rills began to fail,
Upon his earliest home he turned
His saucy little tail.

And downward, where his native rill
Ran to the rapid brook;—
Though awkward for a fish to say—
He lived on his own hook!

He learnt that worms come down in floods,
And flies the surface skim;
And selfishly he thought them sent
For nobody but him.

He saw the smelt to "blue backs" turn,
The "blue backs" go to sea;
And yet, a little speckled trout
Seemed all that he could be.

They laughed at him in stream and dub,
And said he was a fool;
And only fit to go and teach
A minnow infant school!

His ignorance he hid beneath
A lofty scorn of knowledge;
He said he'd rather "pass" a weir
Than any fishy college!

He boasted of aquatic sports,
Nor to the truth did keep;
Said, he could do the "ladder" trick,
And take the salmon leap.

While gifted with a sense acute,
And keen observant eye;
He learned to never look at food
When fishermen were by.

He knew the worm upon a line,
The fly with steely tail;
The daring minnow, much too tame,
The live-bait's deadly mail.

Full many a fellow fish he saw
Go strangely up on high!
And rise, as fishes never do
That take a proper fly.

He kept himself select below,
Nor ill companions sought;
The pike, with his voracious jaws,
Ne'er long was out of thought.

He would not trust the chumming chub,
Nor let large perch make free;
He did not even cultivate
His cousins from the sea!

So in a long and active life
Of cautious enterprise,
He grew a plump and handsome trout
Of most surpassing size.

A deep and rocky home had he,
Befitting his high sphere;
Remote from angler's wily cast,
Or poacher's net and spear.

Where over him the foaming floods
Thundered in cataract;
He called "his place" Niagara!
(A rather fishy fact).

High lived he there, till one dark day—
At least black day for him—
He saw a fine, disabled dace
Roll blindly down his swim.

He little recked an angler bold,
Leaving the beaten track,
Had flung a bait in the boiling foam
That others use for jack.

And as he felt the hooks strike deep,
Thus thought the captive trout—
"Why! bless my fin! I'm taken in—
And also taken out!"

So now, in the calm of a large glass case,
He lies o'er a pebbly bed;—
A piece of his rocky haunt upreared
A tombstone at his head.

F. D. H.

ARTIFICIAL FLY-FISHING.

Lightly clad and lightly laden,
Rod and flies in hand, the maiden
Sallies forth to fish.
Softly springs the turf beneath her,
Blue above her shines the ether,
More could maiden wish?

Still perchance that lassie's wishes
Sometimes do transcend the fishes,
Speckled though they be.
Ah! A thing in garments dual!
(Doubtful seems it if we knew all.
Too confiding we!)

This explains the maiden's actions.
Fishes are not the attractions
That her fancy catch.
See the laddie hurries faster,
He would be her lord and master,
And it is a match.

Paul Taylor.

BARBEL FISHING AT KINGSTON.

Mr. Alfred Nuthall has had another successful capture of barbel in the Kingston waters. In company with Mr. Thomas Hardy, and fishing with John Johnson, sen., they took nineteen good barbel in one day, and another day in four hours eighteen more. Mr. Nuthall by himself got eighteen more, one chub, two trout, and one eel. Unfortunately, one trout of 2 lb., he had to kill, owing to the hook being right in the gullet; it was carefully nursed for upwards of half an hour, but died. The other trout was a nice fish of 6 lb., and was returned to the water again. The water was intensely bright, and the finest tackle was used. Mr. Nuthall returned most of the barbel, and only retained the very best fish. B.

SALICYLIC ACID AS A CURE FOR FUNGUS ON FISH IN AQUARIA.

Our valuable contemporary, the *German Fishing Gazette*, some time ago referred to salicylic acid as being a cure for the fungus disease on roach, perch, carp, etc., in the aquarium. We mentioned the fact at the time, and now we see that the *Fischerei Zeitung* again refers to the matter as follows:—

"Herr Karl Marustik says that when young carp, goldfish, &c., are taken from ponds and rivers and placed in an aquarium, it very often happens that a fungus appears on them in the course of a week or so, and this fungus spreads, turns gradually black and still continues to spread. An infallible means of relieving the fish from this pest, is to rub the affected part gently with the above acid. In a few days the fungus begins to decline, and at the end of a week not a sign of it is left. The operation does not hurt the fish, which are more lively than before."

We recommend this to Mr. Carrington's attention, and hope he will inform us how it succeeds when applied to his fresh water fish, which are suffering from the pest.

CATCHING A TOM CAT.

"I collected a batch of minnows, baited my night lines and hung them upon a nail outside the house at some distance from the ground. As we were seated snugly at tea that evening, the maid rushed into the room shrieking, 'O, ma'am, Tom's gone mad.' Out we rushed into the garden and beheld a sight worthy of Cruikshank's pencil. The fat cook, loudly calling for help, was holding on by one end of a night line, while the Tom cat, who had swallowed down a minnow with its sharp enclosure, was promenading along the ridge of the house roof, with his tail and every hair of his back as erect as a maypole. 'Pussy! poor Pussy!' said my mother. 'Wow!' said Tom, and took another turn on the pantiles. Off I ran to find my friend John, who was always near when wanted. This proved, however, a serious affair, for as John clambered along the ridge and approached the cat, Tom treated him as an enemy, spit at him, and indeed clawed him shamefully. Still John, as a gallant squire, had his spurs to win, and maids fair and fat were looking on, so despite all struggles the capture was effected. On the surgical operation which followed I need not enlarge, suffice to say that Tom walked about for some time with a bandage round his neck, and warned by the disaster I gave up all use of night lines, increasing years allowing me soon to aspire to the capture of the most game fish that swims, the angler's best sport, the trout."—From "My Life as an Angler," by Wm. Henderson.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

GUT *v.* HAIR.—MARSTON *v.* BALDERSTON.—TENCH AS A MUD FISH.—MUD FISHES OF THE GAMBIA.—VORACITY OF THE BULL-HEAD, ETC.

WHY so fierce a battle should be raged over the comparative virtues of hair and gut I really can't understand. Both are capital material for bottom lines or casts. Your roach fisher of the professed sort will tell you that with his tight line and stiff rod—stiff that it may strike instantaneously—the hair bottom is preferable to gut, because it is elastic. If also the water be that of the average kind—neither excessively clear nor discoloured, he will assert the invisibility of hair, and this for a very good reason—hair has little gloss in water, and is not transparent, be it ever so white, but approximate to the colour of the aforesaid water. Were he to use unstained drawn gut, it would show light on a darker ground, and so the hair gains the day. Again, the strength of hair varies very considerably. I send you herewith, Mr. Editor, a few strands of hair from the tail of a white thoroughbred stallion, famed some years since for his size and beauty throughout Hampshire, and you will, I think, agree that it is strong enough for anything up to a six pound Thames trout. Such hair is a capital substitute anywhere for gut, but by no means its equal for drawn gut half its thickness is as strong.

* * * * *

For roach tight line fishing, or for fishing on streams where the wretched trout, from lack of food or the bad quality of it, continued through countless generations, are diminutive, the hair cast is useful. Moreover, it is cheap, which is in itself a very great recommendation. For such streams, however, as that on which I am living, the Hampshire Itchen, I have during the last few months proved its inefficiency by experiment, as compared with fine gut. The Itchen, let it be borne in mind, is a river always as clear as gin, and the length of four miles, of which I have control, is but sparsely supplied with wood or undergrowth whereby one may hide oneself. The trout, moreover, are glorious, thick-backed, golden and carmine-sided fellows, ranging up to three and four pounds, and it is our rule to return all below half-a-pound. And they are as quick sighted as greyhounds. I stood thirty-five yards, by measurement, above a rising three-pounder yesterday, and on waving my light-coloured straw hat, he immediately ceased rising and dived. Well, with these fellows the finest hair I could get was not strong enough, and the strongest I could procure was not fine enough. Hair simply did not answer at all. I threw over a fish thirty times one night with a fine hair cast, which he would infallibly have broken, and he wouldn't look at the fly. With the same fly changed to a fine gut cast, I caught him the next throw. *De gustibus non est disputandum.*

* * * * *

As for the ridiculous aspersions cast upon the fair sporting fame of our editor, Mr. Marston, by Mr. R. Balderston, (Lecturer in the Natural Sciences, Curator of fossils, &c.), they are hardly worth notice, were it not that some of the FISHING GAZETTE readers at a distance may perchance give heed. Anyone who knows Mr. M., knows him to be utterly incapable, not only of foul play, but of bad feeling. The "Raven" was "licked," that's the word, and it serves him right, if only on account of the "damnable iteration" and bombastic literary insolence of most of his contributions to this paper.

* * * * *

A very peculiar and interesting, though not entirely unprecedented discovery was made by a friend of mine the other day. Some two years since he had a small pond on his estate drained, and the fish—gold carp and tench—taken out. A little water has since been trickling down the centre and much mud of a comparatively solid consistency has remained. No fish, however, were dreamed of. Seeing, however, a slight movement of the mud while passing recently, he sent for a rake and unearthed a tench of three pounds two ounces, in good condition, and perfectly lively when introduced to its native element. A sort of nest seemed to have been formed, for the cavity showed the contour of the fish, and the latter was in a curved attitude.

* * * * *

Daniel, in "Rural Sports," speaks of a much more remarkable case than this, of what cannot but be termed true hibernation. "After the pond was thought to be quite free," he says, "under some roots there seemed to be an animal which was conjectured to be an otter. The place was surrounded, and on opening an entrance among the roots, a tench was found of most singular form, having literally assumed the shape of the hole." This extraordinary tench weighed eleven pounds nine ounces, and its belly was of a vermilion or char colour.

This power of the tench, and similarly the eel, depends, according to Professor Owen, on the peculiar formation of the vagal lobes of the brain. I confess I am really far from certain what is meant by this, but it is clear that an increased vitality resides in these fish as compared with many others. A sufficiency of moisture to keep the gills from drying seems chiefly necessary. In the mud fish of the Gambia Nature has provided for lack of moisture, by supplying true air-breathing lungs as well as gills, and in the hot weather it is thus enabled to live comfortably, as it does, in the mud, some eighteen inches or so beneath the surface. After making a nest they coil themselves round and so reside till the wet season sets them free. The specific named *Lepidosiren annectans*, has been given to these fish by Professor Owen. The mud fishes of Ceylon have not the air-breathing apparatus of the Lepidosiren, though they nevertheless live and hibernate in the mud.

* * * * *

An instance of the voracity of the millers-thumb (*Cottus gobio*), came before me last week. In order to effectually cut the weeds in the stream flowing past my house, we let down the water—it being a mill stream—and as a result many of the stones and boulders in its bed were left dry. Wishing to get a small eel or two, cray fish and millers-thumbs for my aquarium, I proceeded to turn over some of these stones, and presently came across a bull-head of very large size; length $5\frac{1}{2}$ inches, breadth across head when extended $1\frac{1}{4}$ inches; it was, however, dead. This being the case, I opened it, and found a small cray-fish about an inch long, two bull-heads of nearly the same length, and the remains of a horse-leech. My supposition is that this very predacious gentleman took advantage of the disturbance amongst the lesser inhabitants of the water, caused by its lowering, to lay in a store of food. He unfortunately hadn't time to digest it. Bye-the-bye, how very evident it is that the name of the fish is derived from the shape a miller's thumb assumes after many years milling. At the mill aforesaid, there is an old miller who has followed his trade for forty years, and the appearance of his right thumb indicates tbe outline of a *Cottus gobio* in a remarkable degree. The explanation given by Yarrell, derived from John Constable, Esq., R.A., is precisely true, therefore, in every particular.

CHUB CHAVENDER.

THE MEDWAY NEAR PADDOCK WOODS.

HAVING taken an interest in the haunts of "Ye Medway Water Rat," I decided that I would visit Paddock Woods on the 10th with the Walworth Waltonians. We started, some forty strong, a little after eight a.m., all bent to do our best in the slaughter of the finny tribe. We reach Paddock Woods about 10.30. Here we were met by Messrs. Bedford and Cain, who, fortunately for some of the elderly and tender-footed members, had hired a large carrier's waggon for the purpose of conveying those members and the luggage, consisting of rods, boxes, baskets, bags, and last, though not least, ground bait for the enemy, to the Rose and Crown, a distance of about two and a half miles. After starting our luggage and ambulance waggon, several of us followed on foot. We had not gone far before we soon became aware that we were not the only Londoners in that part of the world by some hundreds, nearly all of whom arrived the previous evening for the purpose of picking hops, which business this year in this part of Kent is, I am sorry to say, very bad indeed, the crop in some places hardly paying for the time of putting in the poles. Reaching the Rose and Crown, we sifted the luggage, washed the dust down, and drew for swims, thirty of which were marked off in about one mile of water, which would have been greatly improved if another mile of water had been pushing it further down the stream, for it was as stagnant as a ditch. The bell having been sounded, the bombarding commenced with ground bait, and each one got his rod and line together as soon as possible for the first fish, which fell to Mr. Bedford in the shape of a bream. Having seen them "all hard on the job," I strolled along and found a quiet shop for myself, with about 16 feet of water. In the course of an hour or so I managed to get four gudgeon and one bream, when I was interrupted by an enquiry from one of the members, "Are you ready for a thumbpiece of boiled beef and carrots? The bread and ale have arrived, thanks to Mr. Sutcliffe." Preferring to have some when I had done fishing, I declined the beef and carrots and continued my fishing for another hour or two. In the meantime, I had only taken four more gudgeon, when an elderly gentleman came along and said to me, "Ah, that is where I caught some nice large bream last night, and I baited it again this morning, so as to get it ready for this evening. You will not get anything out of there unless you fish it in the same way as I do. As you are from London, I will show you how I get them." Putting his hand into his coat pocket, he drew out a small bag of boiled corn, with which he baited the swim; he next produced a reel, from which he unwound a stout eight-plait cord, to which was attached some large eel hooks, which he baited with brandlings and small red worms. Thinking that he was going to use this as a bank runner, I said "That is not a fair way of angling, you have no rod." "Wait a minute; I will show you." He then laid down the line and proceeded into the hop field, and selected the longest and straightest hop-pole, which he brought to the waterside and fastened on his line; he then cast his line into the water, and sticks the pole into the hedge, and then sits down as unconcerned as possible. "I shall get one presently, and if I get any before you go you shall have them, as it is a great pity to come all this way with all that fine tackle, to say nothing of hiring a waggon into the bargain, and then get no fish to take home." I do not know if the elderly gentleman meant taking compassion on, or if he was "getting" at me, but at that moment the bell rang to pack up, which I commenced to do. The packing of the day's sport did not take long, twelve gudgeon and two small bream being the total were consigned to the water in a very short time. The rest of the tackle was soon disposed of, with the exception of a couple of gimp hooks, which I gave to the elderly gentleman. I left him enjoying his pipe and admiring the gimp hooks, to find some of that beef and carrots, as my digestive organs required something to amuse themselves with. Arriving at the Rose and Crown, I discovered that all the beef had disappeared, the country air had had an effect on other peoples' internal arrangements as well as my own. But I soon made myself comfortable (thanks to Mr. F. G.) with the top and bottom crusts of a loaf decorated with rump steak. Having "stopped a hole," I proceeded to enquire about the amount of fish taken, and who had won prizes. I found that eight of the competitors had won prizes; the gross weight I cannot give, as chemical balances and scruples were at a great premium. The baggage and ambulance waggon was now got ready, and, as the weight of the luggage to be taken to the station did not correspond with the amount brought down in the morning, we threw in several of the "tired and weary" who could not walk the distance, and started home delighted with the country and the people, but not with the fish, as we could not get acquainted with enough of them. Much praise is due to Messrs. Boalch, Bedford, and Cain for the railway and other arrangements, and also Mr. Sutcliffe for his beef and carrots, which were enjoyed by all parties, with the exception of

PIXIE.

A GRUMBLE ABOUT WINDERMERE.

I HAVE often heard it said that every man ought, at least once in his life, make the attempt to pen down his adventures when from home, and to fall in with this rule, I now make the "attempt." Some few days ago I decided to go to Windermere for a day or two's fishing. Having handled the rod for over thirty years' and killed in my time a fair number of fishes of most descriptions, both on lake and river, with "fur, feather and flesh." I had some hope of doing something on this famous water. I started from home by train with my tackle, as I had no thought of wielding the timber supplied by the boatmen, and was timed to arrive at Bowness at 7 p.m., and expected having about an hour or so before turning in, but in this I was disappointed, as the train was three hours late, and nothing could be done this day except secure a bed and turn in; but this I found no easy matter, for it was Saturday night and the Monday following was Bank Holiday, and every one knows what this means. It seemed as if all the world nearly had got "fishing on the brain," and had turned their steps towards Bowness; however, a bed was found at last, and to roost I went, with a determination to sleep early and sound. Sleep did come at last and bound me fast enough till about seven o'clock Sunday morning. I determined not to fish on this day, but to take a quiet look round the place and so in a measure prepare myself as to which way to steer when morning should again dawn upon us. My host was a boat owner and he kindly placed at my disposal a boat for the day free of charge (kind, was it not?) I little understood this kindness till the little bill was presented, when I found that other items made up for the loan of the boat. I inquired from seveaal gentlemen, whom I thought to be "natives," and found I must procure a licence, costing 5s., or I should be under a penalty if I cast a fly for trout or dropped a plumb line for char; but as I had fully prepared all my fly-tackle and carried also my "otter" so far, I determined I should pay for the licence, when again I was dropped on. Otter fishing was not allowed, and still they allowed netting—what a farce. Another thing also provoked me, the Post Office, where licences were granted, would not open till eight o'clock, so they said, and I intended being on the water by 4.30 at the latest, for I knew it would be no use whipping the stream in a blazing sun and the water clear as crystal, so in my desperation I determined to forget my flies for a time and try trolling for pike or any other finny friend that might like to taste of my bait. On the morning of Monday (Bank Holiday, remember) I went to the boats and secured one and tried my luck with a phantom, rowing in that sleepy, slow time, that is so requisite in this style of fishing—up the lake, down the lake, across the lake and back again, but never a bite. Fish were rising on either side of me, and with an otter-fly line I felt confident I could have landed a few fine trout; but flies were out of the question. Then I tried some fine brandling worms, then gentles, then live minnows, but to no purpose; and at about 9 a.m. I determined to leave off till evening. I may just remark here that my non-success was not a singular thing; there were hundreds on the water fishing, but none seemed to have anything, unless it was a small perch or two about four inches long. About six in the evening I felt ready again, and spoke to a young man with the boats, and got him to accompany me and bring with him the otter trolling line for pike. Away we went, on to what we thought good ground, and put out our line with four traces, two baited with small perch, one a phantom, and one a spoon. We had not been long on the move when one of the lines gave the ominous shake, which told plainly enough that something had caught a Tartar. We hauled in the line, and found a pike with his ugly jaws closed on one of the perch. We quickly laid him low in the boat, and cast the line again; ere long another trace showed an attack, this being the phantom. I suppose his lordship, Mr. Jack, not liking the morsel, decided to leave go again, which he did, and thus failed to make our acquaintance. We had after this many shakes at the line, but all failed to hook, and we left the water, bringing away one dead prisoner. Again the adage, "Early to bed, &c.," was acted upon, and morning found us on the water betimes, with otter line, &c., as on the evening before. We crossed the same waters again, and were at last gratified by seeing the danger signal again waved in a very excited manner, which plainly told of something being in difficulties, and ultimately proved to be a pike that might have been twin brother or sister to the one of the evening before; this was the only bite we got that morning. As the sun got up, we discarded the trolling, and tried with live bait for perch; but though we got in the midst of shoals of perch, none would bite, and the water was so clear we could see the fish playing round our bait, but never a one of them taking a fancy to it. Now, what shall we say about Windermere? First, I think netting should be forbidden, and then, though it be about the hardest fished place in existence, I fancy the rod and line fishing would be worth while trying; and till this is done, no doubt orthodox fishing will meet with poorer success year by year, and one of the main attractions to the place will have passed away.

GREY DRAKE.

THE UNITED LONDON ANGLING ASSOCIATIONS FISHERY SOCIETY.

September 14th, 1882.

SIR,—I am instructed to inform you we have been successful in gaining the right of fishing, for members only, in the following waters, viz:—

Weybridge Bridge to Pyrford Lock on the old river Wey, a distance of 4¼ miles. Nearest railway station, Weybridge.

Pike and Anchor Fishery, Ponder's End. Nearest railway station, Ponder's End.

Springwell Fishery, Harefield. Nearest railway station, Rickmansworth.

The society trust, with your assistance, to have many more miles of good fishing before the end of the present season.

Should any of your members know of water to let for angling purposes, the society will be indebted for the information.

It is to be distinctly understood the ticket of membership does not entitle members' friends to fish.—I am, &c., T. HOOLE, hon. sec.

7, King's Road, Mortlake, S.W.

[A copy of the above has been forwarded to the club house of every society upon my list.]

CLUB AND OTHER JOTTINGS

By L. B.

ON Friday evening, September 15, the usual monthly meeting of the West Central Association of London and Provincial Angling Societies, was held at the Portman Arms, Great Quebec Street, Baker Street, Mr. L. Bonvoisin in the chair, faced in the vice by Mr. Beckett. Mr. T. Hoole (who looked all the better for his holiday) being in his accustomed place as secretary.

After the confirming of the minutes of the previous meeting and ratifying the election of the Wellington Angling Society by the committee, a very kind letter from Mr. Thomas Spreckley was read, acknowledging receipt of £5 5s., contributed by the Association towards defraying the expenses of the recent meeting at the Cannon Street Hotel. The resignation—owing to pressure of business—of Mr. Baylis, as committeeman, was accepted with a unanimous expression of regret, Mr. W. Page, of the Peckham Brothers' Angling Society, being elected in his place.

A letter was also read from Mr. Butler, the secretary of the Reading and District Preservation Society, acknowledging receipt of rewards to Messrs. Ashley and Ludgrove, of Pangbourne, for convictions recently obtained, inclosing balance sheet of the society, and hoping for a renewed grant from the West Central. After a few remarks from Messrs. Hoole, Bonvoisin, Murphy, and others, a donation of £5 5s. was unanimously voted to the funds of the Reading and District Thames Angling Preservation Society.

A reward of £1 1s. was also voted to Police Constable Myers, of Norbiton, for a conviction recently obtained for "snatching" at Kingston. The claim to a reward made by David Hackett, of Shepperton, was not considered sufficiently explicit, and has been referred back so as to enable the secretary to obtain fuller particulars.

Mr. R. Ghurney also mentioned several convictions obtained by him for taking undersized fish from the river Lee.

A vote of thanks to the chair, vice-chair, and secretary, bringing the meeting to a close. During the evening Mr. Hoole claimed Mr. Ghurney's assistance in discovering two persons of the class I referred to in my notes last week, who went fishing on a recent Sunday in a strictly private portion of the Mole, (Castle Mills, Dorking, I understood) and who, when remonstrated with by the proprietor, threatened to throw him into the adjective water and otherwise made themselves so objectionable that a constable had ultimately to be fetched to them.

A return visit is announced to the Amicable Brothers' Angling Society, Bald-Faced Stag, Worship Square, Finsbury, for Monday evening, September 25.

There is some talk of a new angling society being started at the Prince Arthur, Stamford Street, Blackfriars; transpontine London is running a close race with the bigger half of the metropolis in the matter of establishing new societies, as the capital and complete list, issued from time to time by Mr. T. Hoole, clearly proves.

Mr. W. J. Gee, the well known fishing-rod and tackle maker, of 19, Great St. Andrew Street, St. Martin's Lane, tells me a customer of his, Captain J. B. Brander, took, on 15th inst., from the Essex Stour, a handsome specimen roach, weighing 2 lbs. 1 oz., which has been duly forwarded to Mr. J. Lancaster for preservation.

On Sunday last I walked along the Grand Junction Canal Banks, from Grove Mill, Watford, past Lady Capel's Wharf, and through Hunton Bridge to King's Langley, but I did not see more than half-a-dozen anglers the whole way, in this once favourite reach; and though some of them had been fishing since daylight, they had in every case failed to secure any sizeable fish except minnows and sticklebacks; all seemed to agree that the bleach or soda used in the manufacture of paper from Esparto grass, and let off by the various mills into the canal at frequent intervals, is fast finishing the work of extermination hitherto freely carried on by wirers, netting, bargemen, and the fish-destroyers who carry off the scaly ones by pailsful when the water is drawn off for the repairs of lock, &c.

A London angling society is in treaty for a stretch of the river Ouse for use of its members, and another club is negotiating for a long reach of the river Kennet.

Friday evening, 22nd, at the New Forester's Hall, Clerkenwell Road, will be held the fortnightly meeting of the committee of the

Anglers' Benevolent Society, when committeemen will greatly oblige by their attendance.

I was sorry to read of the resignation of Hewitt, the hardworking and popular river keeper, of the Yare Preservation Society. I shall not readily forget the genial manner in which he extended to my friend, Mr. Hawkins, and myself, the hospitable shelter of his home, when on a recent occasion, at the close of a long day's fishing at Buckenham, we unexpectedly found ourselves bedless.

A circular has been issued to all London and provincial angling societies, enrolled on any of the three associations, and will no doubt prove of much needed assistance in guiding anglers to the waters already rented; if the number of letters asking for information received by Mr. Hoole are any criterion, too much stress cannot be laid on the paragraph requesting anglers to assist the society by forwarding particulars of any likely water they may know of, which will be immediately enquired into, and if found suitable, secured.

From Haslett of Chertsey, the following comes to hand: One day with Mr. L. Bonvoisin, 5 barbel and 1 perch, heaviest barbel $4\frac{1}{2}$ lbs; two other days, 10 barbel and 2 bream; three other days, 13 barbel, 2 chub, and 4 perch.

THE WATFORD ANGLERS.

I AM requested by the members of the Watford piscators to answer the weak attack made on our club by G. V., in a recent issue, ours being the so-called society referred to, which rent the Colne from the Five Railway Arches to the footbridge leading to the Leather Sellers' Arms, as a fishery, and have thrown it open to the public for fair rod and line angling. The matter of the sizes of fish, so much complained of by G. V., was most carefully gone into by the members, as we know the water is very much frequented by a great many juvenile anglers. The committee thought that, if anything, the sizes were too small, but refrained from putting them at a higher standard for the sake of the boys. I enclose one of our posters, which will give all information as to the sizes, restrictions, &c., which I fail to see are so unfair. Since the nets and night lines have been stopped, we have had many trout of 1, 2, 3, 4, and even over 5 lb. weighed-in out of this small piece of water, which I think everyone will own is highly satisfactory. The society that G. V. so upholds, we have a slight knowledge of, which up to now has been rather unfavourable. The club is held at a beerhouse, next door to the Leather Sellers' Arms, and its members have or had a cast net, which they used in our water, regardless of the bills posted along the banks, an action which, if sportsmanlike, was most ungentlemanly. Our solicitor has been obliged to write them on the subject, but until now his letter has been ignored. I received complaints from Rickmansworth, some weeks back, that the Watford Club had used a cast net in the canal, and had taken out a jack of nearly 2 lb., which was not returned; so, by this, I presume our friends go further afield for their bait. It is with great reluctance I write this letter, as, when I hear that such old anglers as Messrs. Ginger and Johnson belong to the club, I feel sure that such proceedings are entirely contrary to their views. If the society had any grievance, and it had been placed before our society in a proper manner, I feel sure we should have done everything in our power to make things pleasant. There can be no necessity in a small town like this for any wrangling between the jolly anglers. As for the night-liners and netters that G. V. speaks so well of, the anglers may thank them, and them alone, for so many good waters being closed against rod and line in this neighbourhood.

HERBERT A. VINCENT,
Hon. Sec. Watford Piscators.

WILKINSON ANGLING ASSOCIATION, HULL.

ON Thursday last the members of the Wilkinson Angling Association held their annual angling match, the proceeds of which is handed over to some charitable institution, and the benefit match on this occasion was in aid of the popular and deserving institution, the Sailors' and General Orphan Home. For some weeks prior to the date of the match an active committee had been soliciting prizes and donations in aid of the cause, and the results of their efforts was a list containing many useful prizes, and all that remained to make the affair a thorough success was a fine day for the excursion. The place chosen was the Ancholme, at Fernby Sluice. The steamer, *Lady Elizabeth* had been engaged for the occasion by the committee, who hoped to take a number of excursionists in addition to those who proposed to take part in the competition.

Unfortunately, the morning at the time of starting presented a prospect anything but inviting, and rained heavily, and was somewhat stormy. Under these circumstances, as a natural consequence, only a moderate number availed themselves of the excursion. By the time the steamer arrived at Fernby Sluice, however, a change for the better had taken place in the state of the weather, and the day turned out tolerably pleasant. During the trip up the river, Mr. F. J. Hamlyn, on behalf of the Wilkinson Angling Association, presented the captain of the steamer *Lady Elizabeth* with a handsome meerschaum pipe, as a small token of their respect for the kindness and courtesy with which he had always treated them. The captain in a few kindly remarks returned thanks for the gift.

Upwards of sixty competitors entered their names for the match. The ground was pegged out, and the competitors were soon at their allotted places. The day turned out very poor indeed, so far as the taking of any great weight of fish was concerned; even the don hands could not make a catch worth mentioning, and most of the competitors were glad when "time" was called; and on weighing in, the first prize was taken with something a little under 5 lb.

There were about twenty prizes, and the last prize was taken with 8 oz. of fish. The poor sport experienced can only be accounted for by the very unfavourable state of the weather, coupled with the fact that they were running off the water at the sluice gates pretty freely.

Under the circumstances already mentioned, the committee's efforts have not been crowned with the success which the cause deserves, but those having the affair in hand hope to hand over about £10 10s. to the funds of the institution, for which the match was arranged.

F. J. HAMLYN, Hull.

NORWICH CHAMPION ANGLING CLUB

ON Monday evening a special meeting of the members of this club was held at the club-house, the Champion, Chapel Field Road, Mr. G. Daniels, the president, and Mr. Howitt, the vice-president, officiating, for the presentation of the prizes won at the annual angling contest as follows:—1, challenge cup, value 20 guineas, and a small cup and 21s., Mr. G. G. Whincop; 2, a prize to the value of 50s., Mr. J. Parker; 3, tea service, value 45s., Mr. R. A. Stannard; 4, teapot, salts and spoons, and sugar-bows, value 42s., Mr. W. Wright; 5, four silver spoons, value 40s., Mr. F. Fitt; 6, earrings and brooch, value 35s., Mr. S. F. Howitt; 7, locket and chain, value 30s., Mr. R. Moll; 8, coat value 25s., Mr. C. Goreham; 9, teapot, value 20s., Mr. G. Brown; 10, breakfast cruet, value 15s., Mr. W. Varvel; 11, lady's "Acme" (by Mr. Allured), Mr. G. Daniels; 12, card basket, Mr. S. J. Hook; 13, fishing rod, Mr. S. Cubitt; 14, silver mounted walking-stick, Mr. J. J. Restieaux; 15, prize, value 10s, Mr. W. Chettleburgh. Mr. Whincop, in responding to the toast of "The Champion," spoke on the exceptional advantages enjoyed by Norwich anglers. In the neighbourhood of Norwich fishing was excellent, more particularly for roach, which abound in great quantities. It was the capture of this fish on which they usually depended in matches of this kind. Amongst anglers generally roach may be said to be a popular fish, because of his extreme wariness and timidity, his game qualities in the struggle, and his abundance. For anglers combination was not only necessary but absolutely imperative if they wanted their rights respected. Had not fishermen many common foes? Wherrymen were not always their friends. Time was when the craft on the river would not take half the trouble they now did to get out of their way. The Yare Preservation Society had done much to remedy this evil. It was through important combination of the angling fraternity that netting in our waters had been "scotched, if not killed." He hoped the day would come when a clause in the Act of Parliament would absolutely prohibit netting, as in the Thames, except for purposes of bait. This summer and autumn they had had another great drawback in the shape of two Yarmouth steamtugs daily coming up the river. As anglers they could not wish to stop commerce, but the size and speed of vessels of this description should be zealously watched by the Haven and Pier Commissioners, and any damage done to the river banks or danger of life to frequenters of the river be strictly guarded against. Mr. Whincop turned the champion into a "loving cup" by filling it with champagne for circulation among the members of the club. The topic to which Mr. Whincop had alluded, the tugs on the river, was then discussed, but it was agreed to adjourn the further consideration of the question with a view to framing some resolution to present to the Haven and Pier Commissioners to a future meeting.—*Eastern Daily Express.*

'The Coquet for ever! The Coquet for Aye!
The Coquet, the king o' the stream an' the brae!
Frae his high mountain thrones to his bed in the sea,
Oh where shall we find such a river as he?'—R. ROXBY.

CAPTURE OF AN EXTRAORDINARY LARGE BREAM.—Mr. Richard Yarsley, a member of the United Brothers' Angling Society, Kidderminster, fishing with the red worm in the River Severn, facing Red Stone Rock, near Lincomb Weir, one mile from Stourport, hooked a very fine silver bream, which showed excellent sport, it being ten minutes before he could be brought to the water's edge, when, after much difficulty, he was safely landed by Mr. John Evans, without net or gaff. He was taken to Lincomb House and weighed, when he turned the scales at $8\frac{1}{4}$ lb., and measured $21\frac{1}{2}$ inches in length, and 20 inches in girth. It was in first-class condition; the rod used was a Japanese one, without reel, and the line was of fine gut. It was exhibited at the Club House, Swan Hotel, Vicar Street, Kidderminster, and was greatly admired by a number of people. Mr. A. G. Titley, the proprietor of the hotel, purchased the fish, and it is now in hand for preservation; when completed, it will be placed along with some other good specimens caught by the proprietor of the hotel. Anglers visiting this part of the district will do well to call and inspect his collection of fish. Every information will be given to anglers visiting here, by members of the society.—EDWIN LAWRENCE, sec.

[This is no *silver* bream, as this species rarely exceeds one pound in weight. It is doubtless the common carp bream, and a very fine one, too.—ED.]

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best bait; invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"Amongst the views of many, mine."
—Shakespeare.

It is my pleasant duty to report that something having been attempted, something has been done in the angling line on the Upper Thames during the past week. The weather has been wet and windy of late, but nevertheless ardent piscators have been at work, and if not successful with roach or chub, perch or barbel, have gone in for gudgeon, at any rate to fill up the midday work, for roach and chub only seem to have been inclined for breakfast and supper. Roach, in the present clearness of the water, are feeding on gentles or paste, with bran bread and boiled rice as ground attraction. Chub are on the fly, and doing the cheese in selected watering places—"Tidi fol-lol!" Jack are coming out of the weeds, and will now reward the live-baiter. At Bray some bank men have been rewarded with some decent hauls of roach and perch, and at Maidenhead, amid a multitude of small catches, may be recorded one of 17 dozen fine gudgeon. by Mr. Jackson, (son of General Jackson), and Mr. W. Stanley, with L Wilder, as professional attendant. At Hurley, Messrs. A. Thompson and Mr. Brooksbank have had good sport in the evenings with roach, and Mr. Fred. Nott, out with the above gentlemen yesterday, did well, and his mistake was not to give the exact measure thereof—so refrain. Henley waters are particularly quiet lately—possibly the new association has somewhat sat upon them.

Thursday Evening.—Weather stormy and threatening rain. River very bright, and successful angling most difficult.—Marlow Buzz.

Ballynahinch.

For this last four or five days weather has been rather changeable. The following are the takes for the week .—On the 13th Mr. Bury 1 salmon, 9 lb., and 9 trout; on the 14th Mr. Bury 10 trout, Mr. Wigan 10 trout, and Mr. Gerrard 8 trout; on the 15th Mr. Bury 13 trout, Mr. Wigan 10 trout, and Mr. Gerrard 20 trout, Mr. Sutherland 12 trout, and Mr. C. Sutherland 5 trout; on the 16th Mr. Bury 27 trout, Mr. Wigan 16 trout, Mr. Gerrard 5 trout, Mr. Sutherland 12 trout, and Mr. C. Sutherland on Attery Lake 12 trout; on the 18th Mr. Bury 1 salmon, 10 lb., and 15 trout; Mr. Wigan, 2 trout; Mr. Gerrard, 5 trout; Mr. Sutherland, 12 trout; and Mr. C. Sutherland, on Orrid lakes, 16 trout. On the 19th, Mr. Bury, 1 salmon, 12 lb., and 10 trout; Mr. Sutherland, 22 trout; and Mr. C. Sutherland, on Attery lake, 4 trout.—Walter Blackadder.

Camel and Inney (Cornwall).

The first-named river flows by Camelford and the latter within an easy distance of three miles. There are many smaller streams in the neighbourhood good for trout, particularly the Devil's Jump burn which has romantic scenery along its banks and is worthy of attention. The Inney is a splendid river for trout only, the fish are very plentiful and of tolerable size, good baskets being generally the rule, particularly of late. Many peel have been captured since my last report, and several good dishes of trout have been taken likewise in the Camel. Good, soft weather, with wind from the south or south-west are desirable for good sport on the above rivers. Waters are very moderate at the present time. Flies: the willow, cinnamon, whirling blue dun, and palmer, are the best flies at present. These flies dressed large are good for peel; salmon will sometimes rise to them. Minnows: Devon bait and brass minnows two large worms on a salmon hook are bait for salmon.—H. O. P.

Chichester.

Sport the past week has been fairly good among the juvenile members of the finny tribe, but larger fish seem off the feed, the record being much below last week's. Mr. Downing Wallace secured a carp of 3 lb. near Birdham, losing a much heavier fish after an exciting fifteen minutes' contest, his attendant being scarcely *au fait* with the landing net. The weather after the downpour of Tuesday is much warmer; fish should be on feed. As I am writing—8·20 p.m.—the "Nocturnals" are at the canal side with their bull's-eye lanterns, but up to this time have met with but little success. I am using a fresh form of paste, which proves most seductive for carp, bream, and roach, where all else fails. I forgot to mention the 6 lb. carp of last week was taken with one of Williams' No. 9 crystal hooks, on fine gut. I believe they would hold a 10 lb. fish.—George F. Salter.

Dove.

This river since I last wrote has undergone a considerable change. Rain began to fall on Wednesday and the weather to-day (Thursday) continues very much unsettled. The water has risen considerably during the last few hours and there is more colour in it than has been apparent for the last three weeks. Should the weather clear up now, therefore, I fancy angling prospects by Saturday will have come very rosy. During this week fish have not been particularly well on the feed. They, no doubt, wanted a fresh, and now that they have got it I think sport is certain to improve. Grayling are the only fish that have been biting with any degree of freedom, and this has been principally in the middle of the day. The needle, the whistler, and the grey palmer have proved the best killing lures. Trout have been in a very lethargic humour and I don't think much more will be done with them this season, as they are now showing decided evidence of being ready to go into spawn. The coarse fishers have used the maggot and cockspur worm with the best effect. Wasp-grub, somehow or other, has been very scarce this season, and I know some rodsters who tried to procure a cake last Tuesday and they quite failed, the tackle-dealers saying that the season for the grub had been closed. This is much ealier than usual. Last season I got some right up to the second week in October.—The Splodger.

Derwent (Chatsworth).

During the past week there has been no great influx of anglers, the water being rather quiet, but there has been some very fair baskets taken with the bumble and little blue dun. To-day (Thursday) the river is rather swollen owing to the heavy rain yesterday. If it continues fine now the water will be in good condition by Friday or Saturday.—Wheatsheaf Hotel.

Eden (Carlisle).

We had a good fresh in the river on September 15th, the first since the nets came off on September 1st, and salmon fishers' spirits rose considerably, as there seemed a prospect of a run of fish up the river. The water is now in fine order for angling, but so far I have heard of no fish coming to the gaff about Carlisle, and, from all accounts, and also from personal observation, I fear there are not as yet many fish up. It is too soon to croak about the prospects of sport in October, our best salmon month; but it is a fact that there were quite twice as many fish to be seen this time last year. We had a moderate run of sea trout in the summer, but not above half a crop of grilse, which augurs badly for salmon-fishing next spring. As for the whitings or herlings, those merry little fish which are at once the delight of the novice and veteran, we have not had so bad a season for many years. I am much afraid that we are now beginning to feel the effects of four years of the salmon disease, and yet, forsooth, we have been treated to a reduction of the weekly close-time by six hours; in other words, the nets are allowed to carry on their slaughter for an additional 180 hours each year. If we have a couple of years of scarcity, we will have a radical change in the bye-laws of this district, or my name is not—Silver Grey.

[Can "Silver Grey" tell us if the Penrith Club still protects the Eden, also what the heaviest baskets of trout this year have been?—Ed.]

Exe (Exeter).

The salmon season, as far as the net fishermen are concerned, will soon close, when I hope the rodsters will be as successful as of yore. Speaking of the salmon fishing, it would be as well to state that in the salmon fishery district of the Exe the sum of £100 has been offered by Mr. T. C. Daniel, of Stoodleigh, near Tiverton, towards the construction of salmon passes at Salmon Pool, Cowley Bridge and Pyne's weir, on condition that the remainder of the cost of the same be subscribed this year. It is estimated that about £400 will be required for the purpose. Mr. Daniel has also intimated his willingness to give £50 towards the expenses of putting on watchers for the upper waters, if a like sum be subscribed. It is considered that between Thorverton and Symonsbath on the Barle, and Exford on the Exe, there should be four watchers at least. The Conservators accordingly invite subscriptions in order to enable them to avail themselves of Mr. Daniel's liberal offer. I quite agree with the engagement of watchers, providing they are employed constantly and not for two or three months, as in the lower waters. With regard to the construction of salmon passes at Salmon Pool and Cowley Bridge, also Pyne's Weir, it is to be hoped that no elaborate passes will be made, which will be more of a block than none at all. The wretched affair of a salmon ladder has disappeared from Salmon Pool, and a good job too; who ever saw a salmon pass through it? There are more salmon in the upper waters than ever, evidently it is not through using the ladder, at any rate, they are there. You cannot educate fish to go which way you please. Over a good weir, such as Salmon Pool, Tews Weir, (whoever saw a Salmon passing up the ladder?) Blackwaller Weir, Head Weir, or Cowley Bridge Weir, the latter of which is spoken of in the blue book as being the best weir on the "Exe," the fish even despise these pools in a great measure. Zigzags, diagonal baulks, and watchers are all that is required to keep the river full of fish, (pollutions excepted). Such weirs as Totnes on the Dart, or Pyne's Weir on the Exe, are exceptions; but when carried out as proposed, the fish will be bound to go the desired rout; although as far as Pyne's Weir goes at present, numbers of fish pass up, otherwise, how is it they have reached so many miles further upwards than they have done before, to the detriment of trout fishing? I shall be very glad to see any improvement that can possibly be made with regard to rendering the fish any assistance in reaching the upper waters, but I shall not forget the excellent remarks made by S. Walpole, Esq., Her Majesty's late Inspector of Salmon Fisheries, on his last visit here, and upon several other occasions the remarks of the late F Buckland. Coarse fishing good, I hope next week to give you some account of what is being done with Mr. King's Natural Bait. I have introduced it to a few friends, who intend giving it a fair trial this week. Up to the present I have found it A 1., but would rather send up friends' reports.

Fishing during the past week has put me in mind of the wounded snake drawing its sluggish length along. Very little has been done indeed, the weather being very unpropitious. Cold, windy, and wet; to-day it is very heavy and close, although the wind is due north. I have not heard of a salmon being taken for the week from the Exe. A few daisies with the dorsal fin have been grassed. Some very good roach and dace have been taken, and I am pleased to say with King's Natural Bait. If the season was not so far advanced, I believe the anglers here would soon swear by it. A few tench and some good eels have been creeled, and a few small pike. What have become of the larger ones we can scarcely tell, but I expect as the days get colder they will show up again. Whitebait plentiful, but large.—Frank Gosden, Exeter.

Exe (Tiverton).

The water is still very low, the little rain we had has not been enough to improve the fishing. Two salmon only have been taken during the past week. To-day (Thursday) several fish have been risen, but none have been killed.—Wm. Mudford.

Ilfracombe.

Sea-fishing, Friday, there were some good strings of whiting pout and pollack, one boat brought in 60 lb. of conger eel, and on Saturday, 70 lb. eel, besides whiting. Monday and Tuesday, several boats, with their fishing parties, out, their average catches of whiting pout and pollack were 30 lb. each boat. Only one boat has been out to try for herrings; they, with four nets, caught eleven herrings and one mackerel. Wednesday, boats again made a start for their fishing ground; wind blowing strong from the north-west, they had a difficulty to get back to harbour. From Sunday to Thursday, twenty-five lobsters and three crabs were taken from four pots at Morthoe, and a lot of prawns from the ponds between Woolacombe and Morthoe. The sport continues very good with rod and hand lines for small fish from the pier and jetty. Weather at present moderate.—E. COMER.

Leicester.

During the week we have been treated with some very cold winds and several very heavy storms which have interfered with angling operations in this district. Considering the large number of anglers that have patronised the waters the takes on the average were but small; and several of the best rodsters who usually show some good baskets, have returned home with but a scanty lot of fish. Bottom fishermen have been trying for roach and perch, but the best basket that I could hear of was one of 4 lb., all roach, by Mr. Mason. Few perch have been had, but pike-fishing has been quiet, although a good many have been trying for the big ones. The success which pike fishermen met with last week, no doubt induced many to try their luck, but with the exception of a brace weighing 8¼ lb., but little was done. At Barrow-on-Soar matters remain rather quiet, but should the weather remain favourable no doubt some good pike will be had from these waters. Fishermen who generally patronise the Wreake, have not met with much success, as with the exception of some small baskets of roach and perch, nothing noteworthy has occurred. At the time of writing, late on Thursday evening, the weather is very cold and clear, and prospects are looking decidedly better.—ALERT.

Nen (Northampton).

There has been no sport worthy of record during the past week. On Sunday last Sam Garrett had a nice bag of dace and chub, one chub weighed 3¼ lb.; but business was disturbed by the appearance of a very fine otter, which stopped all sport by taking a dive in his swim. J. Macmagre was out on Monday, and had a nice bag of roach of 10 lb. The water is getting into good condition.—T. F.

Test (Hampshire).

Having taken up my rod only once during the last last six or seven weeks, I had my final throw for trout, for this season, on Tuesday last. I had seen them rise fairly on Monday, which induced me to venture out. Getting on the water about 11 o'clock, I found them taking every fly that came down, and a fair amount there was. Medium sized olive dun seemed about the mark. I could, see at a glance, it would be easy work to fill a basket, and I was not disappointed. The second throw I was on to one about 1½ lb., which soon came to the net. A little further on I saw several fish lazily taking the fly. They rose at the artificial generally the first time it was put near them. In about one hundred yards I had three brace of very nice fish, all in about twenty minutes. As I did not want them I returned two brace to the water; those I kept were in fine condition. Had I gone on I think one might have filled a hamper. Trout at this time of the year do not play nearly so well or strong as a month or two back, but no doubt September is the month to make a bag; but I think once the gun is taken up it is time to put away the rod. Looking back at the past year, as far as the Test is concerned, I don't think there ever was a worse season. The spring fishing was poor; the Grannom time was wet and windy, which is fatal to a fly that only come out in the sun shine; then the May fly was most disappointing at times, there were plenty of flies and the fish would not look at them; then we had a continuous adverse wind and nothing could be done, and the evenings were so cold, there was no spent fly, with which the big fish are generally killed. I tremble to think how the May fly will be for the next year or two, I say two, because it is not known for certain how long they take to arrive at maturity. My idea is they hatch out in one year. I know that last June I put a boy on to catch me several thousands; I took them a mile and half up the river, and deposited them in the grass and hedges. This year there was a sprinkling of flies and some fish killed with them. I had never seen the fly there before. It is, of course, very easy to localise it. Many ignorant people won't have it; they say it spoils the small fly fishing, and that the fish become so glutted with it they won't rise for a fortnight after. I always find that people who talk like that have generally derived their information from some old keeper who, perhaps, has never seen a May fly in his life. I well remember, this very season, having a day lower down the Test, where the fly comes on about ten days earlier than it does here. In the afternoon the May fly came down thick, and the fish rose all over the river. I could not touch one. I was in company with two regular nailers (with the May fly), not a rise could we get, float the fly ever so well. At last I crawled on all-fours, close to where a large fish was feeding, I watched minutely, and soon found my friend was sucking in a small blue dun, and not touching the May flies. As the wind was blowing slightly down stream it was no use trying to drive a small fly against it; in fact, after using the May fly it is difficult to revert to the small fly all at once, for the simple reason one generally uses a stiff and longer rod for the former. July and August we generally look upon as the best months for evening fishing. This year there was hardly one on which I saw the fish well on the feed, or any fly to speak of. You might get a brace about 9 o'clock by fishing down stream with two bank flies, but it was quite a chance. In former years it used to be a most deadly way to wind up a day's fishing, but now they won't have it. In fact, I don't know what trout fishing will come to in a few years—they are becoming so cunning and difficult to catch. My rod is now put aside till the end of October or beginning of November, when I generally have a day or two at the grayling, lower down the river. If a bright day, after a frost, it is very good fun, especially when the fish run up to 3½ and 4 lb.

P.S.—On the Test there is no regular date as to when you are to stop fishing. Some shut up on the 1st September, others the 15th, and a few go on till the end of the month. Lord Portsmouth closes his on the 15th August, but that I think is too soon. The 15th September would be a very fair time.—HAMPSHIRE.

Thames (Chertsey).

Water low, but a little coloured. Now is the time for barbel; we have plenty of barbel and bream; a good rodman cannot fail in taking fish. My three days' fishing were:—13 barbel, 4 perch, 2 chub on Wednesday; 3 barbel and 1 chub—not the fishes' fault—there were no more. It all depends on the rod. I hope to send you a longer list next week.—JAMES HASLETT.

Thames (Hall ford).

The river is now in good order for all seasonable fishing. Different gentlemen fishing with me since my last report, their takes have been as follows, viz., Mr. George Palmer, one beautiful specimen of a silver bream, weighing 4½ lb., four perch and three carp, bream, altogether weighing 14 lb. Second day, eight nice barbel, three bream, and two chub, largest chub weighing 4 lb. 8 oz., the thirteen fish weighing 38 lb. Third day, Mr. Smith, four barbel, a bream of 4½ lb., and three eels, altogether weighing 14 lb. Fourth day, Mr. Withers, two barbel, three nice roach, one chub, and some roach and dace. Fifth day, Mr. Young, four nice bream, three largest weighing 11½ lb., one chub, and a perch, altogether weighing 15 lb. All the above fish were taken ledgering.—GEORGE ROSEWELL.

Thames (Twickenham).

Wind, N.E., showery, which will improve the water. Twenty-two punts out during the week, and average fair takes; but some days better than others. Spong, "Our Joe," Dick Moffat, and Farmer have been freely employed.—ALFRED PERRIN.

Thames (Walton).

On September 17 a gentleman out with R Watson took 8½ dozen roach, dace, and gudgeon, and four perch, ½ lb. each. Another gentleman out with G. Rogerson succeeded in taking 170 lb. of bream in three days, several weighing between 4 lb. and 5 lb. (the largest 5¾ lb.), and a barbel, 4 lb. On the 19th Mr. Keyl, out with H. Searle, took 10 bream—largest 2 lb. On the same date Mr. Mackrise with G. Hone, 11 bream and 2 barbel—total weight 25 lb.—largest bream, 4 lb.; one barbel, 3 lb.; and the other 1½ lb. On the 20th Mr. Wingrove out with G. Rogerson, 11 bream; average, 3½ lb.; largest, 4½ lb. September 21: Wind changed; fish won't bite. Plenty of fish of all descriptions, only waiting to be hooked.—H. WOOD.

Thames (Windsor).

The river still keeps very low and clear. I hear of very little being done, but should the recent change in the weather continue, some good sport may be expected, as there seems to be plenty of fish.—GEORGE LUMSDEN.

Trent (Newark).

For two or three days after sending off my last report the weather was all that could be desired, the water in capital condition, and some fairish bags of fish made by various anglers. But on Tuesday a change came o'er the spirit of the anglers dream, for the weather turned wet and uncomfortable, and to make a bad thing worse, a heavy wind set in, which has continued more or less up to the present. During the early part of the week some very good bags of fish have been had. A. Broughton, in three days had something like four stone. T. Sunman, in one day, had about 20 lb., principally roach and bream; W. Bulman and I out together one day had 23 lb. between us of the same class of fish, nothing very big, bream 2 lb., and roach 1 lb. 1 oz., being the biggest we had; various other bags came under my notice, but too numerous to generalise; tail end of maiden lob worm being the most successful bait in the three instances referred to above. Mr. Thompson got three or four barbel with scratching in an hour or two's fishing, and a few more odd ones have come under my notice, but nothing worth mentioning. At the time of writing the water is still low and clear, but the weather is still uncomfortable. I think that unless a lot more rain falls, we shall not have much rise in the river. I think, also, that tail end of lob worms and cockspurs will be the best baits just now, only anglers should operate on the deepest swims they can find. Several anglers have been out after chub with wasp-grub, but without much success.—THE TRENT OTTER.

Wharfe (Yorkshire).

After I had sent my report last week the weather changed wonderfully for the better, and as the "black midge" disappeared simultaneously from off the water, anglers had rather a better time of it than they have experienced of late. On Saturday the cinnamon fly was very strong upon the water. I killed a grayling weighing a pound with the imitation, and also hooked and lost other two nice fish. Our Yankee friends predicted a storm this week, and to-day it has come upon us with a vengeance, putting an end to fly-fishing for the present.—F. M. WALBRAN.

Wye and Derwent.

Rain has been hanging about the whole of the week, which has quite taken the fish off the feed again till Thursday, when some good baskets of fish have been killed, chiefly by the bottom fishers, using maggots and brandling worms. We have a most beautiful woodland water on the Derwent to-day from the heavy rain which fell on Wednesday. Sport with the artificial fly, both on last Friday and Saturday, was first class. The killing flies were honey dun bumble, furnace, and dun flies. Both the Wye and Derwent ought to be in first class condition for fly fishing by Monday, and good sport ought to be had.—GEORGE JAMES EATON.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

The members fished Burnt Mill, but the show of fish was very limited. Mr. Squire first, Mr. Farebrother second; Mr. Medcalf, roach; Mr. Moir, from Dagenham, roach and bream; Mr. Binks, one jack. Mr. Partrick, I regret to state, will not be able to fish for some time, having met with an accident to his hand from the bursting of a bottle. The return visit will take place on Monday, September 25, when brother anglers are respectfully invited to attend. —J. WORLEDGE.

BURDETT ANGLING SOCIETY.

We had an excellent show of fish at this club on Sunday last, although only four members weighed-in. Mr. Creffield, rudd; Mr. Coughlan, rudd; Mr. Lamb, roach; and Mr. Herring, roach; the first two named gentlemen scaling over 21 lb. of rudd between them.—T. G. WALKER.

Sept. 21.

CITY OF LONDON ANGLING SOCIETY.

The following weighed-in on the 17th:—Mr. J. Chambers, roach from Amberley, largest fish 1 lb. 2¾ oz.; Mr. Castell, roach from the Medway; Messrs. Mortimer and Nitz, bream from the Welsh Harp, and Mr. Macdonald roach from the Lea.

CLAPHAM JUNCTION ANGLING SOCIETY.

The annual dinner will take place at the club-house on Thursday, the 28th, and presentation of prizes. Dinner will be on the table at 8 30 sharp. The only members who weighed-in were: Mr. Maslin, chub and roach; Mr. Bouisseau, roach; Mr. E. Wilson, bream.—E. WILSON, sec.

CRESCENT ANGLERS.

A meeting was held at Mr. J. Collins's, The Giraffe, Crescent Place, Walworth, on the 20th, and 14 gentlemen residing in the neighbourhood decided to form an Angling Society, under the above name. The meetings are to be held, on Sunday and Wednesday evenings. For further information, anglers residing in the neighbourhood are requested to apply to Mr. Peirson, the secretary, at the above house.—Pixie.

CRITCHFIELD ANGLING SOCIETY.

The president of the above society had another good take of roach on the 12th inst., consisting of thirty-three fish, weighing 22½ lb., twelve of which weighed 12 lb. 2 oz.—the heaviest scaled 1¼ lb. At the general meeting held on Thursday, the 14th inst., it was arranged that a competition for several prizes should take place at Goring. The following gentlemen have signified their intention of giving the following prizes:—Mr. A. C. Critchfield, a cane trolling rod; Mr. C. Hayward, a reel and line; Mr. J. H. Ellis, a Stilton cheese. A general meeting will be held on Thursday, the 28th inst., at 8.30 p m., to arrange final particulars for the above competition. Members wishing to take part in the same are requested to attend and register their names. Mr. A. Jardine visited the above society on the 14th inst., and kindly showed two cases of his renowned pike, which were much admired—one fish of 27½ lb., another case containing two fish, weighing 17 lb. and 22 lb. respectively.—J. E.

September 20.

DUKE OF CORNWALL.

The members turned out in full strength on Sunday to fish for a number of prizes. The takes were small, but ultimately four prizes were taken. Mr. New first, Mr. England second, Mr. Mann third, and the Host, Mr. McCluer, fourth. The members fish another match on Sunday, Oct. 1, at Ponder's End. —J. Heckford, sec.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This society held its weekly meeting on Monday the 11th, under the presidency of H. Mitchell, Esq., M.D. There was a good attendance of members, several gentlemen being placed on the roll of the society; and one especially who, during his stay in Yarmouth, has given great encouragement to the Yarmouth society, the gentleman in question being Mr. Brougham, of the Thames Angling Preservation Society, and the society feel proud of having his name on their books as an honorary member. The minutes of the previous meeting were read and confirmed, making it now a standing rule that the entrance fee shall be 7s. 6d. instead of 2s. 6d., and it is now to be hoped that next year our London friends will find better assistance at our club for a good day's angling than at the present, but we cannot do everything at once. Considering we have not been in existence three months, it will be of great satisfaction for our friends to know our numbers are increasing each meeting. We shall not do much more until jack fishing can be prosecuted with success, and then it is proposed to have a few weeks' fishing in all the rivers and broads which are in easy distance of the society, and to finish up with a dinner as the end of the first season, when we hope to see many London friends again amongst us. On Tuesday next a party of seventeen will leave the club for a day's angling, this last Tuesday being so very wet that angling was out of the question. We have had no heavy catches during the week, no doubt owing to the unsettled state of the weather, and salt-water fishing has not been very encouraging either here or at Gorleston, which is noted for being first in salt water fishing; the water by the beach seems to be overrun with small dog fish, and as long as they abound we cannot expect good fishing.—James Lark, sec.

At the weekly meeting of the society on Monday a fair report was made of the state of the water around Yarmouth, and several new members were enrolled. The article relating to the attractions of Yarmouth was freely discussed, and especially the great take of J. Cole, Esq., as reported under the heading of the Yare, which fully justifies the reports of the resources around Yarmouth.—J. Lark, sec.

September 20.

GRESHAM ANGLING SOCIETY.

The members of this Society have been very active of late, and some good bags have been weighed in. Last week Mr. G. W. Hunt had a splendid take of perch, 36 fish in all, going 32 lb. 5 oz; the 6 largest weighing 8 lb. 1 oz. Mr. J. F. Clarke weighed in 4 chub 7 lb. 14½ oz. in all, the largest 2 lb. 14 oz., and the smallest 1 lb. 5 oz., taken from the Thames. By a happy thought, 25 perch and 2 chub were sent to the London Hospital for the use of the patients, and for which the House Committee of that institution have expressed their very warm thanks. Mr. Young, of Greenwich, has since weighed in 2 barbel, weighing 5 lb., and other members not weighing in have had good takes. Mr. Young also weighed in 2 bream from the Thames weighing 7½ lb., the largest turning the scale at 4 lb. Dr. Brunton showed 8 jack taken in three-quarters of an hour on fine gut with a peacock fly in private water. At the special meeting held on Thursday, the 21st, S. C. Harding, Esq., in the chair, the question of removal to Masons' Hall Tavern, Basinghall Street, E.C., was very fully discussed, and it was almost unanimously resolved that after the present month the meetings of the society should be held at that welll known tavern. After the resolution had been carried it was unanimously resolved that a suitable present be made to Mr. Thompson, who had earned the respect of every member of the Society, and great regret was expressed, in a personal sense, that the great and growing character of the society, demanded a change of quarters. In reply to sundry questions, the secretary stated that more than 250 members were on the books, and two new candidates stood for election. The Rev. John Walker, Fritz Behrend, and John Groom, Esq.'s were elected at the last meeting. A circular will shortly be addressed to every member, advising them of the society's removal, and the final assembly of the society will be held at its present rooms on Thursday next. The meeting night will afterwards be Tuesday instead of Thursday, and a general feeling was expressed that the society had now entered on a still more extended sphere of success. The proceedings closed with a very hearty vote of thanks to Mr. Harding for his able occupancy of the chair.

IZAAK WALTON ANGLING SOCIETY.

A few members were out on Sunday last and had fish, but only two weighed in, they were Mr. G. Bliss, who had bream, and Mr. H. Butt, who had roach. The members will compete for four special prizes on Sunday, October 1, in the Stort, between Harlow and Spellbrook. All fish weigh according to the rules of the society. No competitor to leave London before the morning of the competition.

LEEDS ROCKINGHAM ANGLING SOCIETY.

The annual match of the above society took place on Thursday, the 7th inst., at Brafferton on Swale. The contest was restricted to members, the prizes being numerous and costly, and with the exception of a marble timepiece, purchased from the society's funds, were the gifts of the members and friends interested in piscatorial matters. The day was exceedingly bright, the water low, and the fishing consequently poor. The first prize was won by Mr. T. Brittain with 4 lb. 7 oz., and the second by Mr. C. H. Bradford with 4 lb. 6¾ oz Luncheon was served at the Fox, Mr. Bannister and his niece catering, if possible, with more than their usual ability. After luncheon a series of groups were taken by Mr. J. B. Law, of the well-known firm of Messrs. A. and G. Taylor, photographers, and each member will thus be able to possess a memento of the pleasantest trip enjoyed by the society. On returning to Leeds the evening was spent at the Rockingham in music, singing, and relation of fishing adventures, and on separating each one expressed great gratification at the successful carrying out of the day's programme.—E. F. Atkinson, president.

LITTLE INDEPENDENT ANGLING SOCIETY.

Most of our members were out last Sunday, and our trays were very well filled. Mr. Hurwood had a very pretty show of roach; Mr. Keene, jack; Mr. Humphreys, jack; Mr. Petrie, roach and dace; Mr. Scott, perch; Mr. Suich, roach; Mr. Raine, chub.—W. H. Evans, sec.

LONDON AND SOUTH WESTERN RAILWAY ANGLING CLUB.

The match took place as arranged for the two silver cups given by R. Toomer, Esq., but with bad luck attending same. The winners (under the conditions of match) were desirous, owing to small trays of fish displayed, the heaviest being 8 ounces, of leaving it still an open match among those members who fished at Weybridge yesterday. The postponed match to take place on that day four weeks, October 15, which I must add shows a very friendly spirit prevailing among the members.—J. Woodcock, sec.

ORIGINAL ALEXANDRA ANGLERS.

We fished a pegged-down match at Cheshunt last Sunday, Mr. Brockett taking the prize; most of our members were unfortunate, and returned with blanks.—E. Dymonds.

PRINCESS OF WALES ANGLING SOCIETY.

The next return visit of No. 1 District of the West Central Association will be paid to this society, at their club house, the Prince of Wales, Great Barlow Street, High Street, Marylebone, W., on Monday next, the 25th inst., when it is hoped that as many as can possibly attend will do so, as this is the first return visit to be paid this society. Mr. F. Walker will give a selection on the dulcimer, and several other gentlemen have promised their services.—H. Robson, chairman.

RODNEY PISCATORIALS.

On the 17th Messrs. Marsh and Grant, out with Cole, of Twickenham, managed to get some nice dace and roach. On the 20th, Mr. Grant in the chair, Messrs. Fenwick, Chantry, and G. Jones were elected as members, and entitled to compete for the four prizes given for competition on the 24th.—Pixie.

ROYAL GEORGE ANGLING SOCIETY.

At Sunday's meeting of the Royal George Angling Society, the following members amongst others weighed in:—Mr. Chart. 4 lb.; Mr. Parsons, 6 lb.; Mr. Palmer, 3 lb. 7 oz.; and Mr. Guynau, 4 lb. The gross weight prizes last fished for were awarded as follows:—(1) Mr. Trotter; (2) Mr. Guynau; (3) Mr. Palmer.—C. W. W. Bernhardt, sec.

SOCIAL BROTHERS.

I have not sent a report lately, as our takes have been so small they have not been worth reporting, although all members have been trying hard, the best take up to the present, falling to our treasurer, Mr. Monk, on the 13th, out with Johnson at Kingston, eleven barbel and one roach weighing 19lb Six of us visited Amberley on the 17th, and did not capture a fish. I might add that a month back I was fortunate enough to take a roach there 1 lb. 8½ oz.—J. Goubot.

SPORTSMAN ANGLING CLUB.

Mr. Komlosy, one of our members, has presented us with a striped bass, caught by him in New Jersey, U.S.A. Is now preserved; should be glad for you to see it.—B. Denny, hon. sec.

[Many thanks, but we have seen the fish before.—Ed.]

STANLEY ANGLERS' SOCIETY.

The following weights of fish taken during the last fortnight were read out at the ordinary meeting of this society last night:—Mr. D. M. Humby, perch, 1 lb. 7½ oz.; Mr. W. R. Humby, roach, dace, and bream, 10 lb. 11 oz.: Mr. N. Pistrucci, roach and dace, 2 lb. 7 oz.; Mr. W. Ellis, jack, 3 lb. ½ oz., bream and rudd, 12 lb. 2½ oz., carp, 2 lb. 5½ oz., dace, 2 lb. 2 oz.; Mr. W. N. Hunter, carp, 2 lb. 5½ oz. Mr. C. Scull, who has been fishing in the neighbourhood of Yarmouth, sent up some heavy bags of roach, of which the following are some of the weights:—71 fish, 25 lb. 10½ oz.; 44, 15 lb. 6 oz.; 21, 9 lb. 3½ oz.; 25, 8 lb. 15 oz.; 25, 10 lb. 7½ oz.; 62, 24 lb. 3 oz.; 32, 11 lb. 10 oz.; bream, 2 lb. 3 oz.; and a very fine roach, 1 lb. 8 oz. Our president, Mr. C. P. Wheatstone, and secretary, Mr. Walker, have enjoyed a week's fishing in Wiltshire, and met with very fair sport. Appended are some of the weights sent to the club-room:—Mr. Wheatstone, 8 perch, 5 lb. 7 oz.; 21 roach, 7 lb. 5 oz.; chub, 5 lb. 12½ oz.; perch, chub, and barbel, 12 lb. 14 oz.; 12 perch, 8 lb. 11 oz.; one, 1 lb. 9 oz., 1 lb. 7 oz., 1 lb. 3½ oz.; 4 perch, 1 lb. 14 oz.; 5 roach, 2 lb. 5½ oz.; 1 tench, 4 lb. 8 oz.; 1 jack, 2 lb. 1½ oz.; 11 perch, 8 lb. 6½ oz.; 3 roach, 1 lb. 13½ oz.; 1 tench, 3 lb. 5½ oz.; and roach, perch, and chub, 5 lb. 15 oz. Mr. Walker's fish, 2 jack, 7 lb. 2 oz.; 2 roach, 1 lb. 11 oz.; 9 perch, 6 lb. 9 oz.; 1 tench, 2 lb. 3 oz.; 13 perch, 6 lb. 3½ oz.; 4 roach, 1 lb. 14½ oz.; 3 jack, 12 lb. 1½ oz., largest 6½ lb.; 10 perch, 7 lb. 2 oz., largest 2 lb.; 6 roach, 2 lb. 11 oz.; 16 roach, 5 lb. 10 oz.; and, last, but not least, a brace of tench scaling just under 9 lb., the heaviest fish of the two weighing barely 5 lb. This brace has of course been sent to Saunders for preservation. I may mention that during the week these two gentlemen took no less than forty-seven jack a little under 2 lb., which were duly returned, all taken on the worm. Mr. Walker returned fourteen of these fish in one day. They had only one break away during the whole time, which was by Mr. Walker with a 2 lb. perch, which he, however, secured at his next throw in, with the gut and hook in his mouth. The way in which these little monsters devoured worms at 4s. per thousand was a caution to the pocket. The average of the perch also was very fine, 69 fish scaling 47 lb. I would remind all members that next Wednesday is our half-yearly general meeting, when all members are earnestly requested to be there.

THE PISCATORIAL SOCIETY.

At the weekly meeting on Monday evening last at Ashley's Hotel, Covent Garden, Mr. Robinson registered 66 lb. 3 oz. of roach, the largest 1 lb. 11 oz., from the Avon. Mr. Shipway, a chub of 4 lb. 3 oz., from the Thames. Mr. James Lander, two barbel weighing 4½ lb., from Shepperton. Mr. Blamey, four chub, weighing 6 lb. 15 oz., from Shepperton; and Mr. Thomas Hugget, a jack of 3 lb. 2 oz, and a dace of 8 oz.—B.

THE RICHMOND PISCATORIAL SOCIETY.

The weekly general meetings of this society now greatly increase in the numbers of members present as the holidays draw to a close, but much important business has of late been transacted, and good results are hoped for. The sum of five guineas was voted towards the preliminary expenses of the conference at the Cannon Street Hotel, and duly forwarded to W. H. Brougham, Esq. Takes of fish until lately have not been very large, owing to the brightness of the water in the river, but two excellent trays of roach and dace were shown on Wednesday, taken in Thames at Richmond by Messrs. Wm. Abbott and A. H. Wilson. Messrs. Powell and Dwelly, also members of the R.P.S., have been having good sport amongst the jack. From certificates received I find in one day their take of jack alone was 63 lb. 12 oz. Four gentlemen were proposed as members of this society. A competition will take place in the Thames on Wednesday next for a series of prizes, after which the members will sup at Mr. Bond's (a member of this society), Sun Hotel, Kingston. There were present on Wednesday, Mr. F. C. Clench (chairman), Mr. Dickinson, V.C.; Mr. Gaynor (curator), Messrs. J. Plant, F. A. Crew, A. Harwood, J. Munro, J. B. Johnson, W. Johnson, A. Percival, A. H. Wilson, H. Taman, H. B. Terrill, J. Heasler, J. Dunn, A. Giles, W. Penhey, A. J. Little, W. Abbott, &c.—J. H. Gaunt, secretary.

WALTONIANS.

On the 7th the following gentlemen weighed in:—Messrs. Malcom, Watson, Brady, Togwell, Rushbrook, and Grace; the take of the latter gentleman was the only one worthy of special mention, consisting of a little over 9 lb. of roach and dace.—A. J. Marriott.

September 19th.

WALWORTH WALTONIANS.

The result of the competition that took place this day at Egham among the members of the above society, is as follows:—Mr. Quodling 1st; Mr. Gilbert 2nd; Mr. Bayley 3rd; Mr. Weatherhead 4th; and Mr. Teuillade 5th. Messrs. J. Collins, Cain, Delehaye, sen., Delehaye, jun., Fox, and Mawby also had fish. The next contest will be for any four week-days' show during October, for the undermentioned prizes:—£3 3s. 0d., given by Mr. J. Collins, a guinea hat by Mr. Bayley, and 10s. 6d. given by Mr. Ross.—Pixie.

WEST CENTRAL ASSOCIATION.

A visit was paid to the Peckham Brothers' Angling Society on Tuesday, the 12th inst., Mr. A. Brodie in the chair, Mr. Matthews in the vice. The following gentlemen contributed to the enjoyment of the evening by singing capital songs:—Messrs. Gendle, Smith, Middleditch, Banks, Tappenden, Parkins, Davis, Camelford, Matthews, Palmer, Allen, Bignal, Watts, Stiddolph, Brodie and Page. This society, which is but young, is progressing wonderfully under the management of Mr. Page, as the hon. sec. The West Central Association have recognised his endeavours to do his duty by appointing him upon their committee of management, and, from what I have seen of Mr. P. I think he will be a regular attendant, which is absolutely necessary. You'll seldom meet a more business-like lot of gentlemen than the committee of the W. C. A. S. and P. A. S., and it's owing to that fact the association is so successful. Messrs. Hoole, Bonvoisin and Geen were to have been present at this visit; unfortunately Mr. Geen is so unwell that his doctor had ordered him to the seaside for a few weeks. Mr. Hoole was away in the country, holiday keeping, and Mr. Bonvoisin was engaged with another visit in his own district. The following clubs were well represented—Anglers' Pride, Peckham Perseverance, South London, United Brothers, Anchor and Hope, Crown Piscators, City of London and Bermondsey Brothers; total number of visitors, 76. The next visit goes to the Penge.—Tinney.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

FISH CULTURE.

Sir,—The recent Fishery Exhibitions at Norwich and Edinburgh have undoubtedly awakened in the mind of the public an interest in the important subject of our food producing fishes, and the measures by which they can best be increased. This interest will no doubt be considerably enhanced by the forthcoming Great International Fishery Exhibition to be held in London next year.

Attention is particularly directed to the noble works of foreign nations in the advancement they are making in the science of pisciculture as a source of national wealth, and when we contemplate how little the cultivation of our food fishes is understood in England, and how little we contribute to keeping up the supply of our portion of the world's vast fish farm, we are compelled with humiliation to note the weakness of our knowledge of this important subject.

The time has arrived when we must contemplate our position in order to contribute to the amelioration of mankind by meeting the demands of our rapidly increasing cities and populous manufacturing towns.

The question of food supply arrests the attention not only of our practical scientists, but also of the thoughtful public at large, to make provision for a cheap and adequate aliment, and perhaps it would be difficult to determine a more wholesome and substantial nutriment than fish, as it contains all the elements calculated to sustain the body as well as the brain.

I would suggest that measures be adopted to establish in this country a national fish culture association. Several noblemen and gentlemen have given great practical attention to the science, and would, no doubt, render valuable advice and material assistance in the organisation of such an enterprise.

I need hardly dilate on the many objects to be attained and the advantages to be derived from a society of this nature.

We have in this country several thousand acres of water and miles of rivers entirely neglected and almost depleted of fish-life, that would, under scientific cultivation, produce a food supply for our nation rich and productive in the extreme. It must not be forgotten that this life, in addition to giving sport to the angler, presents food to the people.

It might fairly be the duty of the executive of the society to advise as to remedial measures for such depletion, and the best means to be adopted for the restocking of the waters in question, either with anadromous fish or the varied species of our so-called national coarse fish.

Encouragement should be given to the agricultural community in the utilisation of the vast areas of land partially covered with water, that for agricultural purposes in their present condition are valueless. Therefore, to bring these waste districts into aquacultural use for our food fishes, must in itself be an act of the greatest possible service.

Farmers should be induced to follow the practice of their German and American confrères, and lay down these neglected districts for carp farming, particularly the *Cyprinus carpio specularis*. It is a proven fact that any given area of water, by the assistance of fish culture, can be made far more productive than the same area of land.

The farming interest has, unfortunately, in the last few years been most depressed through the continuous bad seasons; but here we should have presented a harvest entirely independent of cold springs and rainy summers.

I would venture the suggestion that the objects of the society might also be extended to the cultivation of our commercial deep-sea fishes.

It has been computed that every acre of sea could produce as much as six acres of land, and considering the enormous revenue that might thus be attained, it is our duty to assist in the cultivation of the broad acres of this vast fish farm.

It may safely be assumed the success that has rewarded the endeavours to restock with salmon and trout the rivers of this and other countries would also crown the exertions of deep sea fish culture.

From experiments and investigations I have made in this direction during the last few months, I am confident there is no practical difficulty in artificially hatching our sea food fishes, and I have established the fact, not devoid of value, that the fecundated ova of the cod may easily be transported from say, the East Coast to other parts of England; and, further, that the milt may likewise be transmitted in jars without fear of injury, for the purpose of impregnating the ova of the female fish taken on a distant coast, provided the milt does not come into contact with water before impregnation.

Excellent nurseries can be furnished for the fry thus artificially hatched by utilising the waste tracts of land partially covered with water to be found at the entrances of our large estuaries and rivers.

When it is remembered that every full-sized female codfish sheds no less than nine millions of eggs during one season, which represents about the number of codfish annually brought to our markets, who is there that would estimate the influence on our future fisheries in the light of national wealth by carrying out experiments of this nature? I take it we might reasonably anticipate the improvement of existing stations and the introduction of fresh industries.

Without entering into details, such as embryological studies, the nature of the spawning beds of fishes of economic value, of their food, of the temperature of the waters in which they periodically resort, their mysterious migrations, &c., I think I have said sufficient to point out a grand work for a national association devoted to the study of fish culture, which I hope may soon be established in England, tending to benefit our fellow creatures.—I am, &c., W. Oldham Chambers.

Lowestoft, July 26.

FISHING NEAR MANCHESTER.

Sir,—Will you kindly inform me through your valuable paper, whether you know of any good fishing waters for roach, chub, dace, bream, carp, &c., near Manchester, within a handy distance for a day's sport now and again?—I am, &c., J. Brooks.

[Will some Manchester angler kindly answer this?—Ed.]

BREAM FROM THE MEDWAY.

Sir,—Having taken 50 lb. of bream from the Medway, Paddock Woods, Kent, last Sunday, I should like, if not taking a liberty, the report put in your Gazette.—I am, &c., P. Owen.

Marylebone, September 16th, 1882.

SALMON FISHING.

Sir,—I read with much interest Mr. J. P. Wheeldon's gossip on salmon fishing in your issue of 5th August, and entirely agree with him except perhaps on one point when he says "The easier a winch goes the better." Now I have frequently known an easy running salmon reel overrun the line when a heavy fish has made a great rush, and then of course it is good-bye to your fish and part of your tackle. But to my mind your correspondent's chief fault is that he does not finish his work so well begun. He has selected his rod, reel, and line with the greatest care. He has worked his fly in the most enticing manner, but he has not got his salmon on to the bank, or even hooked him. And here comes my chief point, which I hope all young salmon fishers will carefully note as coming from "an old hand." I will take up the subject just where your correspondent left it. The fly is well sunk, and judiciously worked a little, not too much, when there comes over you that delightful, unrivalled sensation occasioned by the steady pull or "dror" of a good fish. Do you strike? Ah! you have missed him, and will miss two out of three. Let him have it; give him time to turn downwards, then tighten up your line firmly, and you have him, bar accidents, well hooked.

The after part, the playing of your fish will soon be learnt with a little practice, the great secret being to keep as much strain on him as your casting line will stand, and not an ounce more. But the question of striking or not striking a salmon is one on which I am quite convinced from long experience, having repeatedly seen old salmon fishers lose fish after fish simply through striking, whilst it is a very rare thing to lose a fish if you only give him time to hook himself. Of course I do not lay claim to any secret in this matter. No doubt most anglers of experience adopt the non-striking system, but it is almost a universal fault with novices, and one to be very much guarded against. I have just handed over your issue of August 5th to a friend who is just about to buy rod, reel, line, &c., and begin fishing for salmon, that he may read for himself Mr. Wheeldon's very good advice, and if you favour me with the insertion of these lines he shall have the issue in which they appear, and then if he cannot entice, hook, and land a salmon he must be a duffer. Silver Grey.

Carlisle.

DO SALMON FEED IN FRESH WATER?

Sir,—In reply to your query about finding anything in the shape of food in any salmon I have caught, I answer, No; though I have cut up many fish to see. I do not myself believe that salmon ever do feed much in freshwater. The trout and salmon will lie close together in one river (I have often seen them) quite contentedly. Salmon at times will take a lob worm or any worm if offered to them, and also shrimps and prawns, but except as kelts they hardly ever touch other fish. As kelts, confined in a small pool as they often are here in winter, they will eat the trout, and small blame to them either!

Fishing has been very good this year—river full of salmon. I have had capital sport—killed up to this date thirty-six, and hope to kill thirty more; but water is very low, and I never care to kill anything except with fly.—I am, &c., G. S. J.

Somerset, Sept. 21.

[The writer is a clergyman of our acquaintance, and his practical testimony is all in favour of our view of this question. We shall have a letter from Mr. Gosden on this point next week.—Ed]

BREAD FISHING.

Sir,—Can you or any of your readers inform me if they ever fished with the inside of a French roll without attempting to make it into paste, or otherwise altering its consistency, before putting it on the hook, and, if so, whether they found it more successful than paste?

The reason I ask is, the other day I saw a gentleman fishing with the above in a well-known stream, and pulling the fish out when no one else could. "If you are clever at striking," said the gentleman, "the slightest approach to a nibble is quite sufficient to enable you to secure them." I saw his statement verified over and over again. It seemed to me the ragged and unsuspicious appearance of the bait took the fish off their guard, and the roll being so delicate and giving there is little or no resistance to the hook as in paste-fishing. The reason some anglers do not succeed in fishing with paste is this: They make the paste so sad and hard the force of the strike is deadened before it has any chance of entering the fish, especially where too large pellets are used, and thus bite after bite is lost mnch to the surprise of the angler.

N.B.—There is one terrible drawback to the above style of fishing, and that is the necessity of putting on a fresh bait almost every swim, but this he said "he got used to." It would scarcely suit yours truly, Mark Antony.

FISH CASE.

Sir,—Could you or any of your readers inform me where I could best obtain a piece of bent glass for the front of a fish case, also where I could get the woodwork made.—I am, &c., Amateur.

[If "Amateur" buys the glass and gets the woodwork made, he might as well buy a case ready made from one of the fish preserving firms; see our advertising columns.—Ed.]

THE ALEXANDRA.

Sir,—The fly called at the present time "Alexandra" has many times been spoken of in the Fishing Gazette as representing a minnow. Many like myself hold a different opinion, and say that it is taken by trout as a large gaudy fly.

Perhaps you will be surprised when I tell you that this day, while after trout, I put on an Alexandra for a few minutes, just as I was leaving off fishing, and in the second or third cast I caught a swallow; it swooped down upon the fly and was hooked, caught, carefully released, and let go, the little bird flying off in apparent joy. Many of these birds were about, feeding freely on small cocktails, which were out in great abundance. This was no chance take, but a fair capture in the attempt to seize my Alexandra. I do not think the little swallow would take a minnow, but it certainly attempted to take the large fly of yours, &c., John Brunton, M.D.

[The swallow took it for a dragon fly, we should say—eh, Doctor?—Ed.]

MR. WARNER OF BIRMINGHAM'S ADDRESS.

Sir,—Some weeks ago I was fishing the Dove at Willington, and the Trent near Tamworth, and wanting some tackle I went to Birmingham to get some at A. W. Warner's, 121, Broad Street, which is one and a quarter miles from the station. After walking there I found they had removed to Cannon Street, New Street, not two minutes' walk from the station, much to my annoyance. In your Saturday's issue I find the address uncorrected; hoping you will correct this in your list of agents for the sake of others visiting Birmingham for Warner's tackle —I am, &c., Lindum.

Lincoln.

A CURIOUS FLY.

Sir,—I enclose you a fly which I caught here the other day, near a manure heap. I should like, if you could tell me, the name of it, as I have never seen one like it before, and rather fancy it is an uncommon specimen.—I am, &c.,

Skutterskalfe, via Yarm. Peter Alison.

[This fly certainly does not come under the name of "angle fly," as some of the old writers call the flies used in angling. It is the nearest natural likeness to the "Alexandra" that we have ever seen! More than an inch long, with long wings like a wasp, a steel-blue conical body, terminating in a long point. We have asked a scientific friend to name the fly, and will let our correspondent know what it is.—Ed.]

UP STREAM FISHING WITH WORM.

Sir,—Would you be kind enough to explain the proper way to fish up-stream with worm, and much oblige?—I am, &c. Countryman.

Scarborough.

[Use a thirteen or fourteen feet fly rod, with running line same as for fly-fishing for trout; attach a fine gut line, six or seven feet long to the running line and then put on one fairly large hook, or else use the 3-hook Stewart tackle; use no float or shot. The best plan is to wade up stream and throw the worm by a gentle throw right up in front of you into all the likely places; let the worm come down as naturally as possible with the current, keeping only just sufficient control over it to prevent your line bagging, and keep as little of your gut line in the water as possible. You must keep on throwing as you wade up stream; the great thing is to keep out of sight. Some anglers use an underhand cast, but we prefer a bold overhand throw; of course, all jerks must be avoided, or the worm will come off. Well scoured marsh worms will stand a lot of throwing, as they are tough. This style of fishing is employed when the water is low and bright with great success. In the pools, when the surface is ruffled by a breeze, the fish will often take a worm cast near the edge in this way. You should watch for a rising fish and then throw where he rose last. Big bags are made on the Eden pools in this way fishing from a boat. It is by no means easy work to kill trout in this way, and those who are most successful, are those who have long practised it. A small artificial or natural minnow is often used in the same way by north-country anglers.—Ed.]

HAIR *v.* GUT.

Sir,—Whatever may be the merits of gut against hair in trouting, there can be no doubt but that in fly-fishing for dace hair has a decided advantage, and is infinitely the best to use. Very few trout fishers care much, perhaps, for dace fishing; but, if quickness of hand and eye is essential to trouting, it is far more so in dace fishing. A Waltonian who thoroughly masters these plucky little fish, can write himself a master of the art in any stream in the universe. The floating qualities of hair give it the advantage over gut in dace fishing, for dace will not, as a rule, take a fly under water. Again, in roaching, where the fish do not run very large, hair is preferable to gut in my humble opinion, but I should be inclined to claim relationship with "Herne the Hunter" if I went fishing for sea trout with a hair stretcher.—I am, &c., Renrut.

["Renrut" surely does not mean to say that it requires more skill to catch dace than trout? Our experience is that in trout streams, where dace abound the dace is often a nuisance because he will take your fly, you cannot keep him off.—Ed.]

FIRST RATE TROUT FISHING.

Sir,—I think some of your readers may like to know of a place where trout are to be caught. Here is a summary of what I caught in the region of Lairg in Sutherlandshire, only twenty-three hours from London. I stayed at the Sutherland Arms Hotel, right on Loch Shin, but this big loch I only fished once, for I preferred a good four or five miles' tramp over the moors to some more remote loch. Here is the result of each day, all taken fly fishing between August 4 and September 9:—Loch Beannoch, 4 trout weighing 3 lb.; 11, 7½ lb.; 14, 7 lb.; 18, 7 lb.; 12, 8 lb.; 13, 11½ lb.; total 72, weighing 44 lb. Loch Fourloch, 1 trout, weighing 2 lb.; 3, 4½ lb.; 57, 17 lb.; 34, 14 lb.; 13, 5 lb.; total 108, weighing 42½ lb. Cragail, 27 trout, weighing 13 lb.; 20, 10 lb.; 24, 10 lb.; 16, 8½ lb.; 26, 14 lb.; 42, 23 lb.; 26, 13 lb.; 14, 6½ lb.; total 195, weighing 98 lb. A private loch, 20, weighing 18 lb. Loch Clare, 28, 14 lb.; 24, 12 lb.; total 52, weighing 26 lb. River Tirry, 1 grilse, 4½ lb.; 18 trout, 5½ lb.; 23 days' fishing. The best flies are the black palmer with red tip and the "heckem-peckem," and I got some splendid flies from David Wells, of 11, Leith Street, Edinboro'.—I am, &c., Clarence E. Fry.

[This is trout fishing worthy the name; the fish are trout—not troutlets.—Ed.]

CARP FISHING AT WANSTEAD.

Sir.—In reply to your correspondent respecting the carp fishing at Wanstead, I may inform you that Wanstead Park, recently acquired by the Corporation of London, has been thrown open to the public, and in it are three ponds, the first and second contain carp and tench; and the third, tench, roach, rudd, and perch; but there is a great difficulty in fishing the two first ponds, as they are full of weeds, and ronnd the edges it is very shallow, not more than two feet of water at most. A fortnight since I fished the third pond, and in two hours' fishing had fifteen roach, but none over a quarter of a pound. I used an eighteen-feet rod, and then did not find more than three feet of water. There are jack in all the ponds, but fishing for them is strictly prohibited. I believe Sunday fishing is allowed at present but the Corporation think of stopping it.—I am, &c.,

A. George.

CARP (AND OTHER) FISHING AT WANSTEAD.

Sir,—For the information of your correspondent in last week's Gazette (Mr. G. T. Page), I beg to say that their are several ponds in Wanstead Park, which park has recently heen thrown open to the public by the Corporation of the City of London. I believe that fish abound in these ponds, but the ponds are so covered with lilies and candock weeds (two of them in particular) that they are next to unfishable. One of the ponds, much the larger of the three, contains some deep water in the middle, which could be reached only by a boat or punt, which vessel, however, is not to be obtained. If the Corporation could be induced to have these weeds removed and the bottom of these ponds cleansed, it would be a great boon to the Metropolitan anglers. Till these changes and improvements have been made, it would be worth no angler's while to go there with the idea of getting a basket of fish. If, however, Mr. Page would like to see the place himself and form his own opinion, the nearest station is Leytonstone. Fishing has, up to the present, been carried on on Sundays, but I fear with small results only.—I am, &c., J. F.

Sept. 20.

CARP FISHING AT WANSTEAD.

Sir,—In answer to Mr. G. T. Page, it is quite true that some fine carp fishing has been thrown open to the angling public at Wanstead, the ponds being situated in a park just formed from part of Epping Forest bordering upon Wanstead Flats, the entrance to which is near the residence of Alderman Finnis at Leytonstone.

There are three or four ponds, but, so far as I can see, but one is fishable, the others being completely grown up with weeds.

This one is of very considerable extent, covering an area of several acres, and containing, I should say, some capital fish, though the takes of roach and rudd up to the present have been but small, owing to the water not yet having been in condition.

When this is so, I opine there will be no cause for all the grumbling we hear about there being no fish in the water, for to my eye, which is somewhat that of an angler, it is a most fishy-looking spot.

There is no restriction as to fishing on Sunday, the only reservation made by the Corporation of London, who are the conservators, being the prohibition of the use of live bait.—I am, &c., Chemicus.

PIKE FROM THE WITHAM.

Sir,—Mr. R. Lovell, of Boston, secured a splendid jack on Saturday last (at Langrick) in the Witham; it measured 32 inches and weighed 15 lb. 10 oz.—I am, &c., F. G.

Boston Sept. 20.

FISHING CREELS.

SIR,—As regards creels, I never had a wicker one in my life. They are not good by any means, not only keeping your fish too dry and almost frizzled up, especially when the day is hot; but when the weather is wet, the water falls into your creel and then oozes out down your back. Even when the weather is fine and you have a basket full of fish, the wet and dirt therefrom come through the open wicker work and spoil your clothes. Here we use either creels made all of wood, or wood bottoms and tops and thin tin sides; or in some cases our creels are all of thin tin. Although not so light as the wicker ones, they keep the fish in nicer condition, the water or dirt cannot run out of them on to your back, and moreover, they are sufficiently strong to be used, when occasion requires, to sit upon. I have a very handy creel, mahogany bottom and top, tin sides, holds about 8½ or 9 lb. of trout; this, with heavy leather strap, weighs 1 lb. 13 oz.; another, all tin, holds 12 lb., weighs 1 lb. 14 oz., also including heavy strap. I have another, all tin, which holds 18 lb. or more, it is badly contrived, and will be nearly 2½ lb., but they could be made lighter. I should very much like to meet you in an angling expedition, and I have no doubt we could do so without quarrelling. We can scarcely do so this year; but renew the subject in the spring.—I am, &c.,

SPRINT.

Kendal.

DO TROUT EAT FROGS?

SIR,—The above was asked in your paper a few weeks ago. I have not had time to reply to it till now. "Yes." It is a most deadly bait when properly managed, but it must be used on certain nights and parts of the river. I should be sorry to inform your readers how to use so poaching a bait. I was shown the dodge some years ago by a native not a hundred miles away from the Curragh Camp. I don't know how many trout he did not take out with it in one night.—I am, &c.,

W. G. TURLE.

NORFOLK BROADS (WROXHAM).

SIR,—In reading your most valuable paper, I am sorry to see an unfortunate angler writes a very bad account of this splendid piece of water.

I am staying at Wroxham for a few days, and on Friday and Saturday had a turn at the bream. On Friday I caught with one rod and line 52 lb., and on Saturday 27 lb. of good bream. I kept no fish under 10 inches and weighed no fish under ¾ lb.; my largest was 2¾ lb., and the average was 1½ lb. The bream now want a lot of getting, as the nights are very cold. Were I to say how many I have caught in a day, a few years back, in July, I am sure many would doubt my word. The fish I took last week were seen by Mr. A. J. N. Chamberlin and several other gentlemen, who, I have no doubt, will endorse what I say. If Mr. W. Thomas got hold of a lazy fisherman, I am sorry he went out with him a second time. There are plenty of worms in Wroxham, which can be had for asking. If Mr. T. had gone to Norwich, he could have got no end at the tackle shops; but I hardly think it would pay a man to keep worms in Wroxham, as most anglers never leave home without their bait. The great secret of this water is ground bait. If I can at any time give a brother angler a tip about this broad, I shall be only too happy to do so. Any one who thinks of having a little fishing here, and is a stranger to the water, if he drops me a line to our club house, I will tell him all I know about the water and draw him a rough map of the best swims; at the same time, I have not had a great deal of fishing here, so the Norwich anglers could give better information than myself. Hoping next time Mr. Thomas comes to Wroxham he will find the fish on, I am, &c.,

W. A. VINCENT,
Hon. Sec. Watford Piscators.

Wroxham, Sept. 18.

Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

THE GRAND HOTEL.

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

River Lea at Ware.

Anglers visiting this favourite Fishing Ground will find excellent accommodation at HOST FEARN'S, Lion and Wheatsheaf, High Street.

Live Baits provided, and any information given to visitors.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, Furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, No. 57 and 58, Chancery Lane, E.C.

JOHN STONE, Secretary.

VINUM VITÆ, or Wine of Life, the Great Health Restorer. Prepared from the Prescription of a celebrated London Physician. Is invaluable for giving Tone to the Stomach, Strength to the Nerves, Activity to the Liver, Purity and Richness to the Blood, and Relief in the most Stubborn Cases of Indigestion, being equally beneficial to both Sexes. Children take it most readily. Price, 2s. 9d and 4s. 6d.

ANTI-ALCOHOLIC PILLS!!

These Pills (just patented) are expressly put forward as being Unrivalled in the World of Medicine for Renovating the System and giving Buoyancy of Spirits, by removing all the ill effects of over indulgence at the table, or from the evil consequences of too free a use of Alcohol. One of our most eminent medical authorities says, "These Pills are the

GREATEST BOON OF THE AGE

to the afflicted and suffering, destroying all outward traces of

INTOXICATION,

producing a healthy complexion and a smooth skin."

PRICE 1s. 1½d. and 2s. 9d. per Box.

Only of Leading Chemists, or from the Proprietors, 6, Pilgrim Street, London, E.C.

No skilled labour is required in the application of the Stain.

STEPHENS'

STAINS FOR WOOD

PREPARATIONS FOR DYEING WOOD IN IMITATION OF OAK, MAHOGANY, ROSEWOOD, SATIN WOOD, WALNUT AND EBONY.

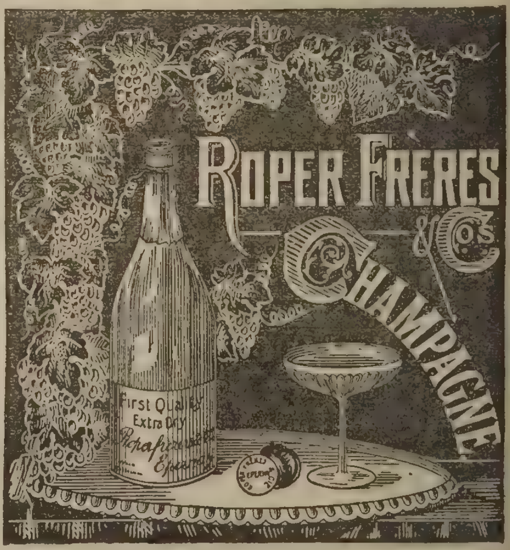
Economical, extremely durable; the Process Cheap, Expeditious and without Smell, Have received the highest awards wherever exhibited—Paris, Havre, Lyons, Amsterdam, Vienna, Philadelphia and Sydney. Gold Medal, Adelaide, 1881.

Prospectuses and Specimens of Stained Deal, free by post, on application to

HENRY C. STEPHENS,
91, ALDERSGATE STREET, LONDON.

Cannon's Glue Powder

Sold in Penny packets. Equal in strength and quality to the best glues made. Useful in every house. Dissolves immediately in boiling water. Sold by Chemists, Grocers, Oilmen, and Stationers. Can be obtained wholesale from W. B. FORDHAM and SONS, York Road, St. Pancras, London; or from B. CANNON and CO., Manufacturers, Witham Leather, Glue and Parchment Works, Lincoln, England.



OF ALL WINE MERCHANTS.

SATURDAY, SEPTEMBER 30, 1882.

TOUCHING PIKE: THEIR TRICKS AND THEIR MANNERS.

By J. P. Wheeldon.

I am often asked which is the best, most reliable, and certain, and at the same time the most sportsmanlike, method of killing pike. My answer is at all times ready and to hand, with regard to the latter portion of the query, but by no means so decided as to the former. Spinning and paternostering are unquestionably the most sportsmanlike styles, because, as a rule, the tackle used is lighter and more delicate in its construction, while at the same time the practice in its successful evolvement calls for infinitely harder work than others, together with the exercise of considerable judgment and accuracy of both hand and eye into the bargain.

Take paternostering with gut tackle and a single hook, as an example, and also by way of argument. To my mind, this is the very essence of angling science as applied to piking. I showed a bit of my paternoster tackle but the other day to the ancient custodian of a rare bit of pike water, to which, by-the-bye, I am shortly bound. It will, I am assured, be a pleasant trip, and the issue thereof I may possibly be enabled, with our good friend the editor's concurrence, to lay before the readers of the FISHING GAZETTE.

What was his comment (I mean the keeper's, of course)? Well, I'll even tell you, slightly uncomplimentary as it was personally.

He was a blunt and particularly plain spoken Yorkshireman. A person of crabbed and cranky looking exterior, while as honest as the sun. I should say, certainly, that his mental faculties were not quite so bright as the face of old Sol. Be that as it may, he took the yard or so of not over stout gut in his hand, and, feeling it all over with his broad thumb and finger, looking also carefully at the knots, for be it known I utterly eschew silk binding, where there is any probability of meeting with foemen worthy of my steel, he next unrolled the foot of fine gimp, and looked knowingly at the single hook, trying its point thoughtfully on the hardened ball of his thumb. Finally, he deliberately screwed one eye up in a singularly depreciatory manner, as though he valued both myself and my tackle at the lowest possible market price, and at last delivered himself of judgment in this wise,

"And thoo means too say mun as you can kill a twenty poond fish a' thatten?"

"Yes," said I stoutly, "and very likely if I had a bit of luck with it a thirty pounder to boot. What do you think of that?"

"Well, 'arm a plain mun, mind, and not to beat about t' bush like with ee, ar thinks its a dom'd lee."

Thus the keeper, an utter stranger to me, and a man who had probably never seen any really scientific fisherman operate in his life. Not that I desire, however, to lay the slighest claim to the title personally, but I think a similar verdict would have been that of a hundred others of similar kidney. Now what are the real facts of the case. A man goes salmon fishing, say, where he may possibly get hold of a magnificently vigorous fish, twenty or thirty pounds weight. This fellow will fight to its very last gasp, plunging, leaping, rushing off at express speed, and suddenly doubling back, like a hare on its tracks, playing, in fact, every known game in the category of piscine artfulness in the throat of a heavy run of water. He is content, is your angler, to tackle this kind of customer with a single gut and single hook, and frequently, very frequently, gets the best of the transaction. Another goes after what must certainly be dubbed a lubberly, cowardly foe, judged comparatively with a salmon, and it is supposedly necessary to use a coarse wire bound trace, in an attempt at its capture, aided by a perfect little armoury of hooks. Why?

There is in reality no good answer to the query; but I suppose it is principally based upon the fact that our angling forefathers used such tackle, and their sons therefore consider that what was right and proper then is the same now. "Besides," I have heard a pike angler say, "your jack is such a greedy, gormandising fool that he'll run at and bolt anything." True, at certain times and in certain waters, where he sees a selection of tackle perhaps five or six times in the course of the year; but to the pike, say, inhabiting the weedy lay-byes of the Thames or the Lea, and who see the stock in trade of all the tackle shops in London pretty well every day of their lives, it is, I fancy, another hymn, and it takes them some time to learn the tune.

One of the best practical fishermen that I ever met on the Thames in my life, Ned Andrews, of Maidenhead, to wit, many years ago now learnt me a telling lesson. I was out with him some time about October I fancy, and just when the last of the red, yellow, and amber brown leaves were swirling off the trees. We started one bright, frosty morning to fish down from Cookham Lock for pike, and all round the margin of that capital deep water under Cliefden Woods. I fancy this occasion was an early one in my acquaintance with Ned. I certainly saw him watching me narrowly as I fitted up the orthodox stout gimp spinning trace, with its attendant line of triple hooks. Then he took up the flight when all was ready, and quietly, and in the manner of the renowned Sim Tappertit, "eyed it over." He said nothing, but put up a little dace in his own capital style. Then I commenced, and in spite of bright water got run after run. But that was all. The fish ran at the lure, it is true, but they didn't hang on. At last came what I believe was Ned's wished-for opportunity. I hooked a 7 or 8 lb. fish, and when he saw me quickly drop the butt of the rod into the hollow of my thigh and play him decently off the reel, he produced a certain flat, square tin box. Out from this he took a simple Thames trouting trace of medium-sized gut, with a neat flight of hooks mounted on a short bit of fine white gimp. This being soaked a bit, he next stretched it well, trying the swivels separately and, by the bye, dropping a drip of oil from a phial bottle into each of them. Then he put up a fair sized bleak, touching it gingerly with well-wetted fingers as he popped the triangles in and gave it to me. I found it spin through the water like a flash of lightning.

"If you don't mind, sir," said Ned, half apologetically, "I think as I see you can kill a fish, I'd try this, sir. Waters very bright, sir, for the time of year, sir, and I fancy this bit of tackling of mine, sir, more than that of yourn, sir. Very good in its way, sir; but our waters gets fished so much, sir, and then there's the steam-launches and the swans, sir, a scaring the fish, sir, every day, sir." Excellent Ned, he dubs everybody "sir" five hundred times a day; but to show the quality of his judgment I need simply add that on the "fine tackle and little bait plan," every fish subsequently came at it with a deadly dash that meant murder, and I never missed or broke with one.

In paternostering for pike with single hook, I am convinced that half the fish that are missed are so lost through the operator neither giving them sufficient time, nor thinking about what he is doing. On certain occasions fish are ravenously hungry and come at the bait with a rush like a tiger's, stretching their jaws wide open, and taking it far into the capacious mouth at a snap. Then they turn it at once, and of course the thing is easy, while the difficulty is to miss them. If it should happen to be shallow water and the fish is a large one, one may see the swirl he makes as he dashes out from cover and then turns again for home. In such a case I should simply tighten up at once, and if I felt him pull, let him have it hot and sweet, if not strong. At the instant I hit him and I felt him go with another dash, I should pull at him a bit harder with a smart, yet gentle upward jerk, just sufficient to drive the hooks well home.

It must, however, be admitted that this happy state of things does not frequently obtain, particularly in waters that are fished to death, like the Thames and Lea. There your pike sails quietly and sagaciously up to the bait, you feel a gentle "snock" on the line, and away he goes again, equally as quietly and reflectively, often for some distance. If he feels the least pressure or strain he generally winds up the account and declines further business. I have over and over again seen anglers hit them the very instant they felt the joggle on the line, or just at the very moment they were moving away. Such men lose a lot of fish, and then they try to find comfort in such a phrase as this: "What infernal luck! I'd ha' bet a thousand pound to tuppence that was a twenty pounder." More likely, old fellow, to have been a five pounder, and at the time [illegible] you "hit" him he had the bait held just by the outside edge of the front teeth, while the hook itself was an inch at least clear of his jaws.

It is, of course, impossible to lay down a hard and fast law in anything concerning angling, so much has to be governed by place and circumstance. Admitted, yet equally as much should be governed by the simple process of reflective thought. For instance, suppose I were fishing down the side of a deep river where wooded banks jutted down to the water's edge, the trunks and branches of partially submerged trees, stretching far out, shaping themselves into little lay-byes and quiet sombre eddies. That sounds slightly like pike, what do you think? You do? Very good; and now say that the paternoster is dropped quietly down close to the edge of a mass of accumulated weeds, branches, rushes, and intermingled froth. "Just the very place for a big fish," says a bad judge even. And now say one gets an unmistakable pull. A very little time suffices here, and, moreover, it is dangerous to wait long, from the great probability that the fish, feeling something foreign to his general sense of the fitness of things in the matter of swallowing, and amalgamating a fat little roach or a lusty dace, instantly takes to edging farther back, among sunken roots, and such like horrors. Fancy a fifteen or a twenty-pounder quietly threading the intricacies of a place like the Maze at Hampton Court, with your tackle trailing behind. It won't bear fancying. Thus, if I did not feel some immediate "sign," such as a determined pull, or an outward move from cover, I should be inclined to tighten up at once, very gently, and feeling the fish, palpably strike at once. If the "feel of the rod" did not seem like business, and there was any suggestion that the gentleman was merely playing with the bait, then would I joggle at him with the point of the rod, a process which has the effect of perhaps making him think, if think he does at all, that his latest appropriation is trying its level best to escape, and instantly exciting his hungry conscience. Very probably he will turn it at once then, and if he does and pulls afresh, do you do likewise. If he is hooked, try at once to get him out from the hidden danger and keep him there. But above all, do not pull at him from above. Rather push the rod deep down into the water, and getting it opposite to his place of retreat, keep up a continuous heavy, even strain on his jaws, which possibly inducing toothache, may lead him to arrive at the conclusion that after all he has not got such a desirable family mansion as he had been induced to believe before later events had set in.

There is one drawback to paternostering, and that in my experience is demonstrated by the fact that when pike are in a "playful mood" there is nothing with which they take a greater series of liberties than a simple lip hooked bait. I have had a pike strike my bait over and over again, perhaps irretrievably mauling and smashing three or four good dace, and although the run has been all right so far as touch and appearance went, the only result of a strike was the spoliation or ruin of the bait. In such a case, and if you have no other tackle at hand, never waste time over such a cuss. But supposing that you have a paternoster snap hook, *i.e.*, a couple of good sharp double hooks with a small rider in lieu of the third of similar size, and thus forming the triangle, change the single at once, and put this little contrivance in its place. The lower rider hook should be slipped through the root of the rays of the dorsal fin, the upper into the lip. All being ready, drop the bait gently and quickly into the same place. If you get a run, as doubtless you will do from the gentleman emboldened by previous successes, give him a second or two, just to let him say his prayers and get the bait firmly in his teeth, and then, if possible, hit him smartly in an exactly reverse way to that in which he is going. Nine times out of ten the result will be in accordance with your inward wishes, and a few minutes afterwards you may revile him and his family in set and chosen phrase just as much as you like, as he lies on the grass at your feet, glaring up at you with his bright eye flashing malice as bitter as the sting of a rattlesnake, or the tongue of a perfect lady on a Sunday morning, whose newest dress has got puckers and creases all down the back.

Some of the ways and manners of your pike are very odd. One day he will not look at a paternoster bait, comparatively speaking, nor yet at one attached to snap tackle and float. Threadle a bait, however, with the needle, and he takes it at once. I hate the practice, for the same reason that I hate gorge fishing, namely, the great likelihood there is in its adoption of killing a lot of little fish, unworthy even of a schoolboy's bag. I only mention it, therefore, as an illustration of their peculiarities. So with spinning. I recollect once being out with a capital fisherman and friend, and having tried live baiting with snap, paternostering, and ledgering—a sometimes deadly practice in a deep hole—with an entire want of success, we made up our minds to finish the day with spinning. To it we went, with fresh hope burning in our bosoms. Splendid thing is hope, and fishermen want a large stock of it, always bottled up, and carried with the tobacco pouch and whiskey flask.

My friend commenced in the Thames style, casting from a coil, and throwing close up to the reeds on one side of the water. At the second cast or so, and although the fish had entirely declined our bait before, he shouted exultingly, "Got him," and the keeper stopped rowing the boat. He had another ten minutes afterwards, and a third, fourth, and fifth fish. I was throwing from the reel, "joggling" the point of the rod well in the act of spinning home, and not a touch could I get. Thought I, can it be that they like the sweep through the water—the sudden stop made by the action of spinning with the hand? I did not know, of course, but I tried it, and at the very first cast got a fish. Continuing, I killed as many as my friend, perhaps more, but the odd part of the thing was the events of the next day. We commenced spinning, and not one fish did we run in the Thames style. Then I wound up tight, and tried the Nottingham. I was with him in a second, and my friend following suit, we killed a splendid lot of fish. Who is there among the pikists of the FISHING GAZETTE that can give a really good and tangible reason for this queer variation of taste from one day to another on the part of the fish?

[We have in this paper often advised pike anglers to use salmon gut traces, with merely enough gimp to keep the pike's teeth away from the gut; and are delighted to find such a "pikist" as Mr. Wheeldon advocating the same thing. As we suggested last year, it would pay our tackle-makers to make up strong, stained gut traces three or four feet long, with three *brass* swivels (they do not rust) and six inches of gimp to loop the hooks on to.—Ed.]

SOME NOTES ON FISHING IN YORKSHIRE.

Information for Anglers.

By R. B. Marston.

The river Yore, at Ripon, is a fine stream, and although trout are said to be rather scarce, other fish are plentiful. The fishing is nearly all preserved by a club, but as there is only one keeper, who has also to look after some three miles of the Laver, it can hardly be very efficiently protected. Grayling are found in fair quantity and of good size. Mr. Collinson, proprietor of the Unicorn Hotel, a most comfortable house, can give leave to fish on the club water to any visitor staying at his hotel. There are great numbers of coarse fish, pike, barbel, chub, roach, dace, perch, &c., in the Yore, and a Thames or Trent adept would make some heavy bags amongst these fish. I was informed by Mr. Gell (one of the members of the club, whose courtesy during my short visit to Ripon I must cordially acknowledge) that a friend of his, the other day took fourteen pike in a short time and with a new spinning bait of his own devising. As this angler got fourteen fish out of fifteen runs, I trust he will not elect to keep his new bait to himself. The novelty consists, Mr. Gell tells me, in some peculiar arrangement of the hooks. There is a lot of heavy, dead water below Ripon, between the streams, which has every appearance of holding good pike. A rank poaching method of taking barbel is practised on the Yorkshire Yore and Wharfe. The natives assemble at night at such places as are known to hold barbel, and by the light of torches spear the fish in the simplest way. The men go into the water, and the fish are "stuck" as they lie motionless, on the bottom, apparently quite dazed by the light. As I said before, if one or two of our Thames or Trent barbel anglers were to pay a visit to Ripon and bait one or two of the strong streams two or three miles below, they would get some enormous takes.

No one fishes for these barbel, and "blazing" takes place but rarely now. I expect it is done when the fish are on the spawning beds, and the Freshwater Fisheries Act has made this a dangerous game. I saw some local anglers spinning for pike from the reel in the Nottingham style, but with heavy lines and coarse tackle. Perch, roach, dace, chub, &c., abound in the Yore below Ripon. The bottom fisher will also find good tench and jack fishing in some ponds, about three miles from Ripon. The best trout and grayling fishing on the Yore, near Ripon, is about five miles up-stream, at Tanfield, one of the most prettily situated villages in England. Mr. Walbran had strongly recommended me to have a day or two at Tanfield, and take up my abode at the Bruce Arms. This very capital inn is close to the railway station, and is much frequented by rod and gun sportsmen. I found one or two local anglers in the bar, and one of them, Mr.——, very kindly mended my landing net for me. He told me the trout were "dead off the feed," and would look at nothing, but that I might get a grayling or two and a few dace. After writing some letters in answer to Gazette correspondents—how those letters will follow one all over the country—I put on macintosh cap, coat, and wading boots, for it was raining hard, and walked down to the bridge, only a minute's walk from the inn. The fishing is free below the bridge, as far as the weir, perhaps half a mile, and above the bridge for some two or three miles, and permission to fish in the preserved waters above and below is rarely refused. It was at the mill below Tanfield that Jackson lived and wrote his capital work on "Fly-fishing for Grayling or Umber."

The view from Tanfield Bridge is an extremely pretty one; close above you on the right bank is the village, with a picturesque row of houses lining the ridge above the river, their gardens sloping down to its edge, some of them most tastefully laid out; then comes the old church, "restored" by Sir John Gilbert, then the massive ruins of a Marmion stronghold. Tanfield was the home of the Marmion family. The keep was built by the first Lord Marmion; the last time I had seen anything connected with this celebrated family was when fishing near Flodden Field, where the last of them fell, and where, according to Scott, those well known martial lines—

"Charge Chester, charge!
On, Stanley on!"
Were the last words of Marmion.

Beyond the village and church and tower, the wooded ridge rises and makes a bold curve, forming a barrier to the river's course and causing it to make a complete half circle; the left bank is flat and the land spreading out from the river is dotted with plantations and mapped out into meadows, corn-fields, and homesteads. Below the bridge the view is less varied, but still beautiful, as indeed is almost every mile of the Yore between Askrigg and Tanfield or Ripon. But to the angler, the most attractive feature in the landscape is the fine river. It would be difficult to imagine a more fishful-looking stream than the Yore presents from Tanfield Bridge. Plenty of rushing water for trout, long quieter flats for grayling, and deep, still pools in which the dace literally swarm. But to return to my fishing. Being a stranger to this part of the water, I was at first at a loss to know which way to go; finally I decided to cross the bridge and fish up the left side, and for this reason, the river, though of a nice fly-colour was full, and I knew the fish would be found in the shallows out of the main stream. I had not made many casts before I got a rise and hooked a good fish, which fought well, and proved to be a trout a trifle over a pound in weight, then I caught some half-dozen samlets, then another trout, also just over a pound and lost another similar fish. I should mention that a trout of a pound is considered rather an exceptional fish. My next takes were a grayling and a good dace. It was now lunch time, and I returned to the inn, having only been about half a mile up the river. Finding lunch was not ready, I went down to the bridge again, having seen some good fish rising just below, and in half-an-hour got another half-pound grayling and three brace of very fine dace. Miss Kemball weighed the fish, and remarked that she wished all anglers who came there had such sport, then they would not go away saying there were no fish in the river. After lunch I got another brace of half-pound grayling and two dace. The flies I found killed best were the red-quill gnat, the honey-dun bumble, and Eaton's "little red." I had another day and a half at Tanfield and got some good grayling and dace. The samlets ("blue-backs" the locals call them) are a terrible nuisance in the Yore, you cannot keep them off your line; the dace are equally plentiful, but considerately confine themselves chiefly to the long, deep pools. The best fishing I am told is at Hackfall, about four miles up-stream, but it is preserved by Lord Ripon, and my time was too limited to get a permit from the steward, H. Morton, Esq., of Ripon. I fished up nearly to

Mickley, and was delighted with the splendid streams which one finds all the way between the "Rocky streams" and Mickley. I hope it may not be long before I find myself again at Tanfield, and in company with Mr. Walbran. At the Bruce Arms, both Mrs. and Miss Kemball do everything to make their visitors comfortable; the cooking is first-rate, and the charges very moderate. What more can an angler want? I only regretted I had wasted so much time fishing the Laver, a pretty enough brook, but containing only small and poorly-fed fish.

The Wharfe.

Mr. Walbran happened to be staying at Pool, on the Wharfe, when I was at Ripon, and he very kindly invited me to spend a a day or two with him, in order that I might judge for myself regarding that river about which there has been so much discussion in the Gazette. Pool is a large village, and when, after a very dark walk from the station, I got to the White Hart, late at night, I found Mr. W. had gone to bed, as he had not received my letter saying I was coming; however, he sent word that he would be down immediately, and we had a long pleasant chat and smoke together. Mr. W. suggested I should take the train to Ilkley in the morning, to fish the Ilkley Club water, and he would be able to have a day with me on the Otley Club water afterwards. The free fishing at Pool is limited to two fields (one above and one below the bridge) belonging to the landlord of the White Hart, who imposes no restrictions on angling from his ground; this is a great boon to local anglers, and indeed, from Leeds and other places anglers come to fish this water, and the short length below the paper-mill, a quarter of a mile above the bridge, which is free to residents in Pool, strangers being charged sixpence a day. The White Hart being full, I shared a large bed-room with two sons of our host. I had a long talk with one of them, who is fond of bottom fishing; he informed me that the hole below the paper-mill was a noted spot for bottom fishing; the paper-mill stream here joins the river again, and after a fresh good takes were often had with wasp-grub, gentles and egg-paste. Having a suspicion that egg-paste meant prepared salmon eggs, I asked him how it was made, and as it appears to be a very favourite and killing bait for trout, roach, chub, dace, with Wharfe anglers, I will describe how it is made.

Egg-paste—A New Bait.

Take two or three new laid eggs, break the shells and carefully separate the yolks from the whites, without breaking the yolks; then put the yolks into a clean basin near the fire, and while they get gently warm keep stirring until a thick paste is formed; the bait is then ready for use. The whites are boiled hard, cut up into small pieces, and used as ground bait. To bait the hooks the fingers must be wet, or the paste sticks to them, and then a piece of the paste is worked on to the hook, making an almond-shaped yellow bait. The secret is to get the yolks into a proper paste, as if too thin it sticks to the fingers. A properly made paste sticks on the hook well, not dissolving in the water. My informant told me that Mr. Hammill of Leeds had had some splendid baskets of trout and dace with this bait at the paper-mill swim; but it is only late in the evening or when the water is coloured that bottom fishing is of much use, as ordinarily the river is as clear as glass. I must, however, do "Creel" the justice to say that I was at first at a loss to understand this undoubted purity after fishing up past Otley, where I saw many small outfalls of small sewers, some of which were pouring their horrid contents into the river, and Wharfe anglers would do well to get this nuisance abated if possible. I am certain no member of the Otley club will deny that these sewers exist, or that they must do some harm. That the injury is very small indeed at present, is clearly proved by the brightness of the water and the large quantities of fine fish which it contains. Even the American brook trout (*salmo fontinalis*) which were introduced by the Otley Club a few years ago, have not only lived but thriven well. I account for this general purity of the river in this way: there is always a strong body of water coming down; the mills at Pool, Otley, and elsewhere, dam back the water when not at work, when it is let on again it comes with a rush which soon clears away the sewage. Floods, which clear all refuse before them, are not infrequent on the Wharfe. These agents, *at present*, are more than sufficient, I think, to keep the river pure, and, as I have before said, I would not wish to fish in clearer waters than those preserved by the Ilkley and Otley Clubs, and it can hardly be doubted they will do all in their power to keep them so.

Mr. Walbran informed me I could get a day ticket for the Ilkley Club water, which extends from Ilkley to Ben-Rhydding. I went to Ilkley by rail, got a ticket, (price half-a-crown) at the Rose and Crown Inn, and then fished down to Ben Rhydding. I found some capital streams and pools, but the fish would not rise, except in one stream, and that was fairly alive with rising grayling feeding on the small black midge—the "angler's curse." I spent an hour over those fish only once pricking one. I tried the finest gut and the smallest midge flies, then I tried the finest hair. I tried a single fly floating, in fact, I tried everything and had to confess myself again utterly beaten by this black midge. I have had similar experiences on the grayling streams of Derbyshire and elsewhere. On the Dove, for instance, I fished for some hours amongst grayling rising all round me at the black midge, and only got a trout or two. A few days later, at the same spot, I got seven brace of grayling, but the midge was not present, a small dun taking its place. Finding it was useless to go on fishing, I had some lunch at an hotel at Ben Rhydding, and left by an early train for Pool. There is a good stock of fine fish in the Ilkley water, I saw them in the clear, deep pools. The next day, Mr. Walbran having procured tickets from the courteous secretary of the club, Mr. Pratt, of Otley, we both fished the Otley Club water, and fully anticipated making a dish between us. We fished some splendid streams most carefully, but without getting a rise or seeing one. At last, on a flat a little above where the Washburn stream comes in, we saw some grayling rising. I said, "Now, Mr. Walbran, I will have a pipe while you see what you can do against the black midge, for that is what they are rising at." "Holy Moses!" said Mr. W., "just look at them rising, the place is alive with them, I ought to get one or two of those fellows." Mr. W. throws a splendid fly, and had armed himself with a killing trio of wee Wharfe flies; like snow flakes his flies fell over the rising fish; he, too, tried all he knew, but in vain, not a touch could he get. We held a consultation and smoked a pipe over it; in the course of the day we held many consultations and smoked many pipes over it, for it was the same all through. In the majority of the streams not a fish was moving, while here and there they were feeding madly at the "curse," but there was too much method in their madness by far! It was some consolation to meet some of the best anglers in the Otley Club and find they could "do nothing;" one of them had three fish. When we got home and turned out our baskets, we could only muster between us five trout and a grayling! No wonder Mrs. Walbran was gently sarcastic over our dish, and threatened to send an account to the Gazette. However, she had had a capital dinner prepared for us, and after doing full justice to that, we had another long consultation and smoke over angling matters in general, and the "black midge" in particular, wisely coming to the conclusion that if there were no blank days, success would become rather monotonous.

BARBEL IN THE THAMES.

The present season has far eclipsed many previous ones in the successful capture of barbel, and completely disposes of the assumptions that have been made as to the scarcity of those fish in the Thames. From Kingston to Staines the reports of barbel fishing have far exceeded anything I have previously received. The last two numbers of the Fishing Gazette have recorded extraordinary captures of barbel from the rod of Mr. Alfred Nuthall at Kingston, and on Monday morning this week he took sixteen more and one trout. Although Mr. Nuthall has been singularly fortunate in his takes of barbel, other anglers have been getting some average sport. The report of John Johnson, senior, of Kingston, this week says, "I have been getting a nice lot of barbel, from ten to twenty in the day, and my son John has also been well in amongst them." The intermediate places between Kingston and Staines have produced some capital results, notably at Hampton Court and Shepperton, where Mr. M. H. Blamey has been so successful amongst both barbel and bream. At Staines Mr. Currie Banfield has made some monster captures of barbel, commencing on "the opening day" of the season with 90 lb. weight of fish, and he has been keeping the game alive ever since. I have just received the following report from William Milbourne at Hampton Court. He says, "John Smith one day got thirteen barbel, the next day eight, and the following day seventeen." It will thus be seen that barbel fishing in the Thames is a substantial reality, and that the present season is likely to be the best we have had for many years. It is not confined to one special portion of the river; and the reason why some places have been better than others is that they have been better fished, and more preparation made for the fishing. I should be glad to hear of some good doings at Sunbury, as there is some good barbel ground in that neighbourhood, and Messrs. T. and A. Stroud I know always keep a good stock of lob-worms for their customers.

B.

A SMALL FISHING POND WANTED.

The Editor of this paper will be much obliged if some of his readers will kindly inform him if they happen to know of any small pond (fed either by a stream or springs, within ten or twenty miles of London), which it would be possible to rent for a number of years. Address—The Editor of the Fishing Gazette, 12 and 13, Fetter Lane, London, E.C.

THAMES ANGLING BY ROYALTY.

SOME Thames anglers in the tidal waters may like to know that their portion of the river has been patronized by members of the royal family. Two of Mr. Perrin's punts were taken out on Monday last, under the charge of J. Dobbin and J. Spong. One of these punts, occupied by H.S.H. Prince Adolphus of Teck and Mr. Freeborn, made a take of three and a half dozen of roach and dace, and the other by H.S.H. Prince Francis Joseph of Teck and the Rev. J. H. Walthew, who took five dozen of roach and dace. At the conclusion of the day, the youthful princes said they had spent a very pleasant day, and returned home quite satisfied with the sport they had. The father of these youthful princes is H.S.H. the Duke of Teck, the Patron of the Richmond Piscatorial Society. B.

QUALITY OF LONDON WATER SUPPLY.

FROM the report on the composition and quality of daily samples of the water supplied to London, for the month ending August 31, 1882, by Messrs, Crookes, Odling, and Tidy, we learn that of the 182 samples from the mains of the seven London Water Companies, one was recorded at slightly turbid, and one as very slightly turbid; these were from the West Middlesex Company. The remaining 180 samples were found to be bright, clear, and efficiently filtered.

"With regard to the general state of the water in respect of its freedom from turbidity, we would draw special attention to the circumstance, that out of the 1074 samples of water examined by us during the six months ending August 31, and despite the frequent storms of July and August, twenty samples only, or less than 2 per cent. were recorded as 'very slightly turbid,' and seven samples only, or less than ¾ of a cent., as 'slightly turbid.'

In respect of colour, aeration, and freedom from excess of organic matter, the excellent condition of the water, as noted in our previous reports, has been fully maintained."

FAMILIAR WILD BIRDS.

UNDER this captivating title Messrs. Cassell and Co. have just issued Part I. of a new work by W. Swaysland. It will be published in sixpenny monthly parts, each part to contain two plates of birds in colours. The wild bird and the wild flower are things which add immensely to the charms of angling; it is only necessary to try and picture for a moment what angling would be *without* them, to get an idea of their value. Messrs. Cassell have already given us a standard work on wild flowers, and this on birds bids fair to be a worthy companion volume. We hope to see the kingfisher and the water ousel in an early part, and can promise Messrs. Cassell great success with their new venture amongst all lovers of nature. The angler who has no love of nature in him is only fit to be a companion for Shakespeare's "man that hath no music in himself."

NOTICES OF BOOKS &c.

Messrs. Cassell and Co. have just issued the first part of a serial edition of "The Arabian Night's Entertainments," to be completed in sixteen monthly numbers. The work will be fully illustrated by about 400 wood engravings, after drawings by Gustave Doré and other artists. Part I. is nicely printed in clear characters, and is all that could be desired.

"The Sea; Its Stirring Story of Adventure, Peril, and Heroism," is another of Messrs. Cassell's reprints, and is beautifully printed and choicely illustrated. With Part I. a presentation plate is given, entitled "Saved," from the painting by J. D. Watson. It measures 28½ by 21 inches. A coloured plate, inserted as frontispiece, gives "The Naval Flags of the World."

A FINE ROACH LINE.—Mr. A. W. Warner, of 35, Cannon Street, Birmingham, sends us one of his "new hand-made roach lines, warranted not to kink." It is a really beautiful line, extremely fine and yet of, for its fineness, extraordinary strength. It is composed entirely of silk of extra long fibre, and made entirely by hand. Sixty yards cost only two shillings. It appears to us to be just the line for the Nottingham style of fishing from the reel.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —ADAM SMITH'S NEURALGINE is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. EDWARDS, 157, Queen Victoria Street.

EXTRACTS FROM THE ANNUAL REPORT OF THE ANGLERS' BENEVOLENT SOCIETY.

WE have much pleasure in drawing the attention of donors, annual subscribers, and members of the Anglers' Benevolent Society to the satisfactory financial position of that institution as shown in the statement of accounts, but at the same time desire to impress upon all members of the now numerous angling societies the necessity of giving a more extended and warm support to the society, in order that in course of time its continued existence may be firmly secured by the formation of an invested fund. Could this happily be accomplished, the day would not be distant when some provision might be made for permanently disabled members. This, of course, is a work of time and perseverance; but is also a task which may be cheerfully faced, seeing how the society has steadily won its way in the esteem of the angling community.

We once more earnestly entreat the secretaries of angling societies to lose no opportunity of commending to the notice of their members the Anglers' Benevolent Society, and the desirability of every club angler according it his hearty support.

In conclusion, we desire to tender our thanks to the Gresham Angling Society, to the Richmond Piscatorial Society, and to Mr. Marston for their conspicuously strenuous and successful efforts to increase the funds of our steadily prospering institution.

We Remain, Gentlemen,
Your Obedient Servants,
THE COMMITTEE.

N B.—Collection boxes for the receipt of small donations will be supplied to angling societies desirous of placing such in their club rooms, and may be had on application to the secretary of the Anglers' Benevolent Society.

AUDITORS' REPORT ON ACCOUNTS, 1881-2.

Comparing the income of this year to April 1882 with that of the previous year 1881 it will be found that there is an increase in donations this year of		12 10 3
There has also been a slight increase in the annual subscriptions of	0 14 0	
And in the members subscriptions of	7 17 1	
And interest	0 11 4	
	9 2 5	9 2 5
		21 12 8
But nothing having been received this year for Piscatorial Exhibition Benefit Tickets causes a falling-off of	2 5 0	
And members' subscription unpaid ..	0 6 6	
	2 11 6	2 11 6
Thus there is a net increase in receipts for the year 1881-2 of		19 1 2
As to expenditure I have to report that the grants to members are less than the previous year, by ..	15 10 0	
But the expenses have increased by	4 18 3	
Showing a net decrease in outlay of	10 11 9	10 11 9
This year a saving has been made of	32 19 7	
Whereas the saving in previous year was only ..	3 6 8	
Increased saving this year over last	29 12 11	29 12 11

PROGRESS

TROUT IN THE WAVENEY.

GREAT interest will be felt in an experiment which is being tried by the Norfolk and Suffolk Fish Acclimatization Society in introducing trout into the upper waters of the Waveney. The species of trout adopted for the experiment is the Loch Leven trout, which it is believed is well adapted for the Norfolk and Suffolk waters, and in the rearing of which the society has been very successful this year; the ova having been hatched at the society's establishment at Lowestoft, and the fry subsequently "nursed" by permission of Lord Suffield, in a stream at Gunton Park. Having more than was required for private customers, the society determined to distribute some of their surplus stock in the open waters in the two counties, and, as we have said, a commencement was made with the Waveney. Mr. Harry Bullard, of Norwich, most kindly placed his steam launch at the services of the committee—"well-found" in every respect—and those who have experienced Mr. Bullard's hospitality will know what that means; and the young trout were taken on board at Whitlingham, whither they were brought from Gunton by railway, under the care of Mr. Oldham Chambers, the honorary secretary of the society, in cans adapted for the purpose. After a delightful trip on a lovely autumnal morning, Beccles was reached soon after noon, where the Mayor of Beccles (Mr. W. M. Crowfoot), Mr. J. E. Crisp (one of the Haven and Pier Commissioners), and Mr. W. Everett, as representatives of the Waveney and Oulton Fisheries Protection Society, joined the party, which consisted of Mr. C. Louis Buxton, Mr. J. Stanley, Mr. J. B. Pearce, Mr. W. O. Chambers, and Mr. H. W. Stafford—Mr. E. Birkbeck, M.P., Sir Reginald Beauchamp, Bart., Colonel Custance, and other members of the committee, being unavoidably prevented by other engagements from being present. The progress from Beccles upwards was somewhat slow, owing to the prevalence of weeds and the winding character of the river, but Ellingham Mills was safely reached, and here, in a pretty little off-shoot of the Waveney, with a nice gravelly bottom, the first deposit of the young trout was made, a number were also placed in a side stream near the mills, which seems equally fitted for the purpose. Some of the young trout were from five to six inches long, and well capable, it is to be hoped, to take care of themselves against the perch and pike. There was a remarkable variation in size in the lot, some diminutive ones not measuring more than from two to three inches, although they were all hatched at the same time and reared under precisely similar circumstances. From Ellingham the launch proceeded to Wainford Mills, Bungay, where the party were most hospitably received by Mr. Mann, jun., in the absence of Mr. R. C. Mann, and here another batch of the trout were placed in the pretty back stream that runs past Mr. Mann's lawn. From the mills to Bungay staithe was but a short trip, and a horse and cart, lent by Mr. Mann, was in readiness to convey the cans of fish to the residence of Mr. Norton, abutting on the Waveney, where the rest of the trout were committed to the river, and the work of the day accomplished. The fish were all in admirable condition, thanks to the care bestowed upon them during the voyage, and it is to be hoped they will thrive and breed, so that in time we may see the Waveney well stocked with these fine fish. To further this object, we trust that all anglers will take care to put any that may be caught this year and next back into the river uninjured; the poachers must be the care of the Waveney and Oulton Fisheries Protection Society. It is intended to distribute some more of the trout in the upper waters and tributaries of the Norfolk rivers.—*Norfolk Chronicle*.

[We trust that this experiment will be successful. Mr. W. O. Chambers very kindly sent us a specimen of the trout introduced; it was a beautifully grown little fish, and a wonderful size, considering it was in the egg state last February, it was five inches in length.—Ed.]

ANNUAL MEETING OF THE NOTTINGHAM AND NOTTS ANGLERS' PRESERVATION ASSOCIATION.

On Wednesday evening, September 20, the second annual meeting of this association was held at Mr. Packer's, the Minstrel Tavern, at Mark Street, when there was a crowded meeting of delegates from various clubs connected with the society. Mr. Caurah was elected chairman, and Mr. Clarke, the secretary, read his report of the past year, in which he showed the president, Mr. Coxon, and the whole of the committee had worked very hard to preserve the angler's rights, and also to prevent those dastardly practices of blowing up fish by dynamite, they had prosecuted some, while others had been cautioned. He also, in the name of the executive, thanked the Waltonian Society for the grant of £5, which had been given to one of the members, for information which led to a conviction of two men, near Ratcliffe, together with £5 granted from the association. He urged the necessity of combination, which was the only way in which to gain those rights and privileges that had been gradually stolen from them.

He also submitted the balance sheet, which showed that the cash left in treasurer's hands last year was £31 2s. 5d., the contributions from August to December, 1881, being £19 9s. 6d., and those from January to June, 1882, £20 9s. 6d., the total receipts amounting to £71 11s. 5d., as against that the expenditure was £34 4s. 5½d., so that the balance remaining in the treasurer's hands was £37 6s. 11½d. The report was unanimously received, and the secretary was subsequently re-elected. Mr. Henry Coxon was unanimously re-elected president, Mr. Cottrell, vice-president, and Mr. Henry Benson, treasurer.

Mr. Wilkinson spoke of the advantages and kindness of the Midland and Great Northern Railway Companies, and said he had no doubt the president would do his best to encourage the companies to extend the privileges for travelling to the members of the Association. Votes of thanks were accorded to the retiring officers, when the meeting was brought to a close, feeling satisfied that the association was on the right side of improvement.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

CLUB AND OTHER JOTTINGS

By L. B.

"Where to fish Round London"—David Bogue—is, as its title conveys, a guide intended principally for the metropolitan angler, and is likely to prove a useful little volume. It, however, contains a number of inaccuracies—perhaps not altogether avoidable in the first edition of a work of this kind. For instance, we are told that at and below Richmond the usual charge for a man and punt is five shillings per day, above Richmond seven shillings and the puntsman's dinner. Again, mention is made of the Rickmansworth Preservation Society, whereas there is no such society in existence; also that the Huntingdon Angling Association preserve the water (Ouse) for the benefit of anglers generally. This was so some two or three years ago, but the water has since been taken up by the Huntingdon Angling Society for the use of its members, the terms of membership being 10s. 6d. per annum, which, I believe, confers the privilege of introducing a friend.

It is also a pity that the matter contained in the interesting chapter —"What the Anglers are Doing," treating principally of London associations, clubs, and the reduced railway fares—is two or three years old. Our friend, Mr. P. Geen, who is referred to several times, is persistently dubbed Mr. Green. Though the two principal associations are duly referred to, the existence of the third or Central Association is totally ignored in the list of fares and stations to which concessions are issued. There have been made a number of reductions and additions respectively within the last two or three years, notably upon the London and North Western, Great Western, and Great Eastern Railways. The list of angling clubs has also within the same period been swelled from 92 to 159, as per list issued in spring of present year, which, moreover, show there have been numerous alterations in the locale, meetings, secretaries, &c., in the list of 92 societies published in "Where to Fish Round London." Finally, the matter contained in this little book might advantageously have been extended to double its quantity, and had some ampler particulars been given as to the nature of the fishing of such important rivers as the Wey, Mole, &c., they would have been gladly welcomed by metropolitan seekers after piscatory knowledge.

A No. 2 West Central Association District visit was paid the St. John's Angling Society, Three Compasses, Cow Cross Street, Farringdon Street, on Wednesday evening, the 20th. The chair was ably filled by our good friend, Mr. Thorling; Mr. Hall proving an efficient *vis à vis* in the vice. There was a capital room-full; six clubs in the district, viz., Amicable Brothers, City of London, Globe, St. John's, Sir Hugh Myddleton, and the Trafalgar, and four other societies, viz., North Western, Golden Barbel, Piscatorial, and the Buckland being numerously represented. The singing was throughout excellent. The following, among others, contributed to the harmony of the evening: Messrs. Thorling, Hall, Joy, Matthews, Gooch, Stevens, Bonvoisin, Franklin, Bell, Murray (chairman Central Association), Fowler, Lewis, Stevens, &c. The success of the evening was further enhanced by the kind services of Messrs. Hill, Newton, and Drew, who accompanied the various singers on the harmonium, violin, and flute, respectively. The meeting was brought to a close with a hearty vote of thanks to the chair and vice-chair. The St. John's Angling Society since its removal to its present address, has increased from under a score of members to considerably over forty, and its progress in other particulars has been equally marked. I am told much of this prosperity is owing to its having a jolly and popular landlord, and I readily believe it. The next visit goes to the Sir Hugh Myddleton Angling Society, Empress of Russia, St. John Street Road, not later than 7th October.

A visit was paid the Amicable Brothers' Angling Society at the Bald Faced Stag, Worship Square, Finsbury, on Monday evening last, which was very well attended. I dropped in very late, and only for a little while, but not so late but I heard Mr. Imey Da Costa's feelingly rendered version of that beautiful song "The Ploughboy."

The Alliance Anglers have removed from the Old Red Lion, Great Warner Street, Clerkenwell, to the Clerkenwell Tavern, Farringdon Road. Their meetings will, as usual, be held on Friday evenings, when brother anglers who have an hour to spare and will drop in will be made heartily welcome.

The usual monthly meeting of the United London Anglers' Central Committee will take place at the Bald Faced Stag, Worship Square, Finsbury, on Monday evening next.

There was a rare lot of anglers at Rickmansworth on Saturday and Sunday last, including Mr. T. Hoole, but there were very few fish indeed taken.

The delegates annual dinner at the Rye House on Sunday last was a perfect success, though the attendance was not so large as it has been on some previous occasions.

Haslett, of Chertsey, writes he has had, during three days' fishing, 9 barbel, 3 chub, and 1 perch; and on Wednesday, which would have been a grand bream day but for a very heavy hailstorm, 11 bream, heaviest fish 5 lb.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS

MID-THAMES.

> "Amongst the views of many, mine."
> —SHAKESPEARE.

The weeds are rotting fast and good sport may now be depended upon amid the jack, and also by wormists among roach and chub. The river is slightly coloured from the heavy rain of last week, so roach should be well on for the Thames "Piscatorial" contest, which takes place on Monday next. Thursday evening: River in fine all-round trim; roach, perch, chub and jack should now be had, all of which, in consequence of an interview I had with them yesterday, are in the pink of fighting condition, and in accordance with the traditions of Her Majesty's angling army, will not be backward in coming forward in the course of a day or so.—MARLOW BUZZ.

Ancholme District.

I went out on Tuesday for a few final throws at the trout, and caught three fine fish, also one *Salmo fontinalis*, which was one of the batch turned out by me in April last. As an evidence of the way in which they thrive in the chalk streams in Lincolnshire, I may say that this pretty little fish, though only hatched in March, was just 6 inches long. It was injured too severely to throw back again, so I took it home, as a sample, to show some piscatorial friends. The stream in which these fish are placed would soon be beautifully stocked were it not for some local breweries which make sad havoc with my *protégés*. A perch of 2 lb. was caught about a week ago in the Ancholme, and the pike have begun to feed, some fair specimens having fallen to the rods of both locals and visitors. The best fishing places continue to be between Brigg and Brandy Wash. Roach have taken paste during the past week, but gentles are a still better bait.—THOMAS FORD.

Camel and Inney (Cornwall).

The weather of late in this district has been cold, with northerly winds and showers, and this has prevented anything like fishing with success or comfort. During the last few days the weather has changed, the river has been flooded, and sport amongst the large fish is eagerly anticipated. The river is subsiding now, and I may say I never saw it in better condition. Flies: Cinnamon, willow, whirling blue dun, and Palmer. These, dressed large, particularly the latter with a yellow tail, will kill peel and salmon. Two large worms are the best bait for the larger fish. Minnows: Devon bait and brass minnows, with stout gut attached.—H. O. PENGELLY.

Chichester.

The weather during the past week has been favourable for rodsters, but the water is getting woefully low, nearly two feet less than its ordinary depth. Fish may be seen in myriads; some good ones among them, yet takes worth mention are few. Some years since the basin was noted for its carp, grand fish being taken daily. Then a few seasons later bream were well on in all parts of the canal, from twenty to thirty pounds before breakfast being an ordinary occurrence. Roach, too, gave good sport, heavy bags being realised. The great influx of anglers the past few seasons has materially altered the prospects, heavy takes being the exception rather than the rule. Yet, withal, this season at present has been an improvement on the last. Fish there are, but feed they won't. With colder mornings they should bite more freely, but at present I hear of nothing worth chronicling in the large way.—GEORGE F. SALTER.

Derwent (Chatsworth).

There has been a great change in the weather, which has greatly improved the river. Somehow or other fish had not been biting so well, owing, no doubt, to the water being rather low, and that the fish, being sickly, were off the feed in consequence. Since the heavy rains rodsters have been doing remarkably well, killing chiefly with the bumble, honey dun, and little blue dun, and have caught baskets averaging about ten brace. There has been a quantity of anglers on the river this last day or so.—WHEATSHEAF HOTEL.

Dove.

Grayling sport at this river since I last wrote has been excellent, many large dishes having been killed—in fact, doings have been more remunerative than I ever remember in the past. The most destructive flies have been the October dun (small), the grey palmer, and the bumble. Coarse fish of all descriptions are taking the worm and maggot freely, and though rain is falling this (Wednesday) evening I don't fancy it will make much difference in the volume of water in the river. Prospects for next week seem, in fact, to be about all that can be desired.—THE SPLODGER.

Eden (Carlisle).

The river rose a full foot last night and is rather muddy to day, but will be in fine order for the fly to morrow. It is generally reported that a good many more whiting are to be seen jumping in the lower reaches of the river, but as yet I have not heard of any good takes. Very few salmon showing, but we expect the heavy tides of this week will improve matters. A nice grilse of 7 lb. was killed with the rod below Carlisle on Tuesday evening. With regard to your enquiry about the Penrith Club, it is still in existence, and is known as the Eden and Eamont Angling Association, the hon. sec. being Francis Parker, Esq., of Acorn Bank Penrith. Since the lamented death of Sir Richard Musgrave, of Edenhall, the president of the Association, and a fine specimen of an English country gentleman. They have lost a long stretch of their best water, viz., from Armathwaite up to Lagonby on the best side, but they have still some fine trout water higher up. I have not heard any particulars of the takes of trout in that district this season but have no doubt that 10 to 14 lb. was a common thing in April and May.—SILVER GREY.

Exe (Tiverton).

The river is slightly coloured with the rain, but risen only a little. Three salmon were killed on Saturday last in the lower portion of the water; nothing has been done this week. With a falling barometer there is a prospect of more rain. Should we get enough to raise the river to enable fresh fish to run up, some fair sport may be expected.—WM. MUDFORD.

Gade (Boxmoor).

The water very clear and full of weeds. Mr. Davay, of Boxmoor, two trout 4 lb.; Mr. Franklen, 3 jack, one 3 lb., one $3\frac{1}{2}$ lb., and one 2 lb.; myself, 3 perch, $1\frac{1}{2}$ lb. each. The bait for trout and jack was minnow, and red worm for the perch.—R. COMBER.

[Will Mr. Comber please inform us in his next report how much free fishing can be had near Boxmoor?—ED.)

Ilfracombe.

Sea fishing has been going on this week with little variation. Boats with their fishing parties are out every day. There are no large quantities of fish to report; their average catches are from 10 lb. to 20 lb. per boat per tide, mostly whiting pout and pollack; occasionally a few conger eel and wraff are caught. The weather is so changeable that parties are afraid to venture down farther than fresh water, and now the strong spring tides make it difficult to pull against. I have seen several strings of fish pass along this week, which have been caught with rod and line from the pierr Weather at present stormy.—E. COMER.

Irt (Holmrook).

The river Irt has been low, bright, and clear this week, which has partly put a stop to angling, but notwithstanding this low state of the river, several salmon have been killed with the worm after dark in the evening, and to-day (Wednesday) W. B. Addington, Esq., Portland Place, W., who is now having his annual stay in this neighbourhood, hooked a splendid salmon, which gave him half-an hour's splendid sport, and only lost him at the moment of landing in a most difficult place. Should we have more rains, which is not unlikely just now when the high tides are on, we shall have good salmon fishing. Yesterday we had a splendid otter hunt in this river, and after a most exciting run made a splendid kill. This is the second killed this week in the neighbourhood, which I fancy will be a winding up for the season.—A. BROCKLEBANK.

Lea (Ware).

Since my last report sport here has only been of a moderate description, although the water is in capital condition. The roach fed, but very shy. Jack fed more freely, several being taken on Sunday last; but the number of undersized fish (jack) taken here at times is simply disgraceful. While walking on the tow-path on Sunday last I met a boy with no less than three such. Someone should see to this, I think.—LION AND WHEATSHEAF.

Leicester.

Anglers during this week have been more fortunate in regard to the weather, and, with the waters in good condition, a large number of rodsters for the time of year have patronised the various resorts. Taken upon the whole, the sport has been fairly successful, perch and roach especially biting very freely. Mr. Bent on Friday had a good basket of roach, and followed up well on Saturday with another capital take; the pick of his basket was a very nice fish weighing 1 lb. 4 oz. Mr. Gladstone, pike fishing this day week, secured two or three brace of fair sized fish. Monday and Tuesday a number of anglers out. Mr. H. James and Mr. Mason each had good takes of roach, and several good perch were also caught; and a gentleman fishing with a minnow landed a handsome fish weighing 1 lb. 7 oz. At Aylestone better sport has been had during the week, and fairly good baskets of roach and chub have been the rewards of anglers. At Barrow the Soar has received its share of attention, although nothing worthy of notice has been done. A few pike were taken trolling, whilst roach and perch fishing is reported quiet. A few pike have been caught by anglers at Wreake, below Rearsby. I would recommend anglers hereabouts to spin in preference to using the live bait. Weather bright and clear, water not very high but in good condition.—ALERT.

Nen (Northampton).

The river is still too clear by half for angling of any sort. On Thursday the members of the Nen Angling Club turned out in great force to compete for the first and second class prizes given by local gentlemen; but the water being in too clear a state, they were compelled to return without taking the prizes offered, the limit being too heavy for them to draw the scale. The third class compete on Saturday next, I hope with better luck.—T. F.

Taw (N. Devon).

The showers that have lately fallen caused the peal and large salmon to rise up and run at the baits sets for their destruction, and no doubt as the net men have now finished up, better sport will be had in the higher part of the Taw and Mole, and the tributaries of the Taw. The net men, when finishing up, caught some large salmon 25 lb., 30 lb, and over, and the speculation with them have paid, especially the hutch belonging to Mr. Rolle. A gentleman fishing at the higher Taw and Mole caught 10 peal one day, and some few salmon since last week. Mr. Bradshaw got two 15 lb. salmon and a host of peal, all spinning with the minnow. Major Gleg fishing the lower Taw got 8 peal one day, averaging $1\frac{1}{2}$ lb. each Captain Venor has got a satisfactory catch since staying here, and Mr. Kerr is well pleased with the sport during the last few days. A gentleman staying at the Portsmouth Arms told 3 peal, and there is no doubt the next six weeks will be the best fishing had for many years. Trout fishing is over; they are full of spawn, and near their breeding time.—RUSTY GAME.

Thames (Chertsey).

My three days' fishing last week, 9 barbel, 3 chub, 1 perch. We had a sudden rise of water last week sent the fish abroad. Though the water rose quick, still there was no colour in it, but the river is settled down again and the water bright. I was out yesterday with two gentlemen. Bream were on, but we had a heavy hailstorm, or we would have had a good bag. As it was we got 11 bream, best fish 5 lb. Mr. T. Taylor, of Chertsey, been taking some barbel and bream. We have plenty of fish, but want more customers. There will be some good takes of fish here if the weather keeps fine.—JAMES HASLETT.

Thames (Goring).

Water in good order for roach fishing, roach biting very well; jack coming on better. Fishing with E. R. Stanham, of 3, Edwardes Terrace, Kensington, best day 4 jack and 3 dozen of good roach. Mr. Hue, of 231, Camden Road, Holloway, two days, 5 jack, 2 dozen roach, and a few good perch. Prospects at present look well for this week.—John Rush.

Thames (Hall'ford).

Owing to the river being so very low and bright, the fishing is very bad. Different gentlemen fishing with me since I last reported to you. Their takes have been as follows:—Mr. Innis, on Sunday last, had a fair basket of barbel, bream, roach, and chub; Monday, Mr. Matthews 3½ dozen roach and dace; Tuesday, Mr. Geo. Palmer 16 lb. of roach and barbel; Wednesday, Mr. Geo. Palmer a miscellaneous basket, consisting of perch, roach, barbel, and bream, altogether weighing 25 lb.—weighed at Mr. Robert Stone's, Ship Hotel, Halliford.—George Rosewell.

Thames (Twickenham).

Wind, S.W. River in good condition. I have had 25 punts during the week, and most of them have had good takes of fish. Last Monday we were honoured with a visit of H.S.H. Prince Joseph of Teck and H.S.H. Prince Adolphus of Teck, accompanied by the Rev. J. H Walthew and Mr. Freeborn, The weather being fine they had a thorough enjoyable day on the river, with fair sport, fishing with Jack Spong and " Our Joe," who managed to capture them a barble during the day; but I am sorry to say it was not landed into the punt. On Tuesday Jack Spong, fishing with Mr. Wiggans, of Hounslow, took 17½ lb. good sized fish. "Our Joe," fishing with Mr. Walker, one day, 8 dozen roach and dace and 1 barbel; one day, with Mr. Boulton, Chiswick, 6 dozen, and 1 barbel. Dick Moffatt and Farmer have also had some good takes. Tides will suit for the whole days' fishing next week, and my customers may now depend on getting some good sport.—Alfred Perrin.

N.B.—I have this day sent a fine bleak to be set up, measuring 8 inches from eye to tail, caught here.

Thames (Walton).

On September 22, Mr. Abbott out with J. Stone, took 1 bream, 5 lb., 2 bream, 2½ lb., and 2 good roach. Water very high and full of drift; no fishing. On September 24, Mr. Laver, fishing from bank, took 1 jack weighing 3 lb. The same day, Mr. Lindly, from boat, succeeded in capturing one jack, 3 lb., also hooked a trout (fishing for jack) weighing 4½ lb., which was returned. On the 25th, Mr. Mackriell, out with G. Hone, 3 bream, largest 4 lb., 1 barbel 3 lb., and 6 roach averaging ½ lb. each. On the 26th, a gentleman with G. Hone, 4 bream, largest 2 lb., 1 perch, 1 lb., and 3 roach. Mr. Keeble, out with G. Rogerson, 11 bream. On the 27th, Mr. Alexander, out with G. Hone, 1 jack, undersized, which was returned, and 4 roach, ½ lb. each. On the 28th, Mr. Abbott, out with G. Hone, 5 bream, 12 lb., largest 2½ lb., taken in two hours. Wind S.W.; water clear; prospects if weather continues good.—H. Wood.

Torridge (Woodford Bridge).

River in poor condition for fishing. However, on Tuesday a gentleman from Exeter took some fine fish in splendid condition, and who says the flavour of the Upper Torriage trout is unrivalled in its excellence. There has also been some good catches during the week with the worm —John Blake.

Torridge (Torrington).

I have heard of 18 peel taken this past week. S. Jackson took on Monday with the improved Devon minnow 12 peel and 12 splendid trout, some of them as large as the peel, certainly the largest and best basket made for the season. The River is now in heavy flood, which will bring up lots of fresh fish. Many salmon have been seen sporting; good fishing after this.—Practical Angler.

Trent (Newark).

The water has been very low and clear most of the week, but good catches of fish have not been general. All sorts of fish have bit very gingerly, and only old anglers have succeeded in making a decent bag. Last week I thought the barbel had woke up a bit, for a few have been taken in this locality by various anglers, worms being the bait. A very good catch of those fish is reported from Sir H. Bromley's fishery at Stoke. During the latter part of last week tail end of maiden lobworms and cockspurs have been the most successful lure. A friend of mine, out one day this week, got, among other fish, a nice chub of nearly 4 lb., and a roach of 1¼ lb. He reported the fish very shy and difficult to take. We had several hours very heavy rain yesterday, which has caused a slight rise in the water, but no colour as yet with it. I don't think it will interfere with angling operations this week. For bait I still recommend tail end of lobworms and cockspurs. Water still clear, but a few inches higher than last week. Prospects very favourable, all things considered.—The Trent Otter.

P.S.—If the gentleman from Doncaster, who sent the post card to Messrs. Sampson Low and Co., will send a letter to me at No. 4, Northern Buildings, Lovers' Lane, Newark, I will answer him by post.

Trent (Nottingham).

The river here is very low and clear, and the barbel swims have for the most part yielded good sport. Mr. S. Sills has, in this respect, killed a vast quantity of fish in one of the lower waters, and only in the previous week he took the credit of a basket of 26. There has been more doing at Shardlow, and in the Weston fishery roach have taken kindly to creed wheat and maggots. A few pike have also been killed. Below Nottingham some capital barbel were landed at Colwick on Tuesday, and an enormous catch of bream is reported from the neighbourhood of Clifton Hill by two well-known Nottingham rodsters.—The Man at the Clubs.

Tweed and Teviot.

The past week has been a very fair one so far as regards weather; but the state of the rivers has hardly been so satisfactory, and salmon angling, therefore, has not been so successful as could have been wished. The smallness of the rivers, combined with the want of rain and wind, has in a great measure contributed to the want of success on the part of the disciples of old Izaak. On Thursday last both Tweed and Teviot rose a few inches, but this was only productive of taking the lying fish to a "cast" or two further up the river, but was large enough to allow of a free run of fish up the river from the tidal waters. On the Mertoun waters on Friday a couple of salmon were, we understand, got, one of which turned the scale at 10 lb., the other being a couple of pound less weight. On the Makerstown waters some half-dozen fish were killed, and on the Spronston "casts," fished by Mr. Brunlees, E C., London, and Mr. Bidder, Q.C., London, only one salmon has been killed during the week. On the Hendersgate water very little has been done, but on the Edenmouth waters Mr. Kerss killed one bull-trout. On the Floods Castle waters, belonging to His Grace the Duke of Roxburghe, no fishing is at present taking place, but we are informed that large numbers of salmon are in all the "casts" and streams. His grace is at present from home. On the Pavilion waters very little has been done, but on the Gala water fishing, Mr. Scott, the proprietor, has killed two very nice fish, one weighing 12 lb. and the other 8 lbs. Our reports from the Ednam House Waters, Mertoun, Rutherford, and Birgham, are to the effect that takes are exceedingly small, and that a flood of some six feet is greatly wanted so as to allow a fresh run of fish from the bay at the mouth of the river. On the Teviot nothing has as yet been got, with the exception of a bull trout or two. On the Dumfriesshire river very fair sport has been got, and on the Kale, Ale, Ettrick, Leader, Blackadder, and Whitadder, the takes of sea-trout and common trout have been such as must have satisfied the most of anglers. On the North Esk river heavy rains on Sunday last had the effect of raising the river nearly a couple of feet, and fair good angling has been got since. On Saturday, Mr. Porteous, Lauriston, killed a fine salmon of 23½ lb. weight, at the bridge stream, and on Monday, Mr. Brigstock, London, was successful in killing a brace of salmon, weights, 24 lb. and 22 lb. respectively. Mr. George Robertson, keeper to Lord Kintore, had rare sport, landing four fish on the Morphie water, the salmon then killed turning the scales at 19 lb, 21 lb., 23 lb., and 24 lb. respectively. On the Tweed, on Friday, Mr. R Hendry had a capital basket of trout.—Max Wheeler.

Waveney (Norwich).

Mr. W. Balls, of Beeches, while trolling in this stream last week, had the good fortune to hook and land a fine pike weighing 19 lbs. 10 oz.; the fish was caught in the neighbourhood of the North Cove.

Wharfe (Yorkshire).

Grayling are beginning to rise more freely, but are not yet fully on the feed during the daytime. The cinnamon fly and small willow I have found the best killers so far this week. I would call the attention of fly-fishers to a new line brought out by Mr. Cummins, of Bishop Auckland; it is composed entirely of pure China silk, waterproofed five times; it falls very lightly upon the water, and is in every respect an excellent line for fly-fishing, stone fly, or stream worm fishing—the only fear I have about it is that, from its excessive lightness, it will not throw well against the wind, but cannot yet speak from experience. I may add that the price is very moderate.—F. M. Walbran.

Wye and Derwent.

We had a very heavy thunderstorm in Derbyshire on Wednesday afternoon, which discoloured both the Wye and Derwent a little. To-day (Thursday) the Derwent has a most beautiful woodland water on it, and some large baskets of both trout and grayling have been killed both by fly-fishing and ground baits. Sport last Monday was first-class on the Derwent, one angler killing twelve and a half brace of large fish with honey dun, bumble, and red flies. Sport on the Wye has been but moderate during the week. Many fishermen out on the Wye.—G. J. Eab[illegible]n.

Yare.

The water in this river is now becoming clearer, and if the weather does not become unsettled, good sport should be had the next few days. During the past week some capital catches of roach have been had at Brundall, and one friend of mine caught some good bream and roach there last Saturday. On Monday last Mr. Mackie, who occasionally contributes to your paper, caught at this station 13 roach, which weighed 12 lb. On the 21st inst., Mr. Youngs, of Norwich, was angling at Buckenham, and took 50 lb. of very fine roach in six hours; the fishing here has been generally good. I am informed that a Mr. Skull, from London, who stays here annually, has had a very good time of it this year, catching as many as 56 lb. of fine roach in the day. For this success he must thank the Yare Preservation Society. Mr. Geo. Hart, of Thorpe, had a capital catch of jack the other day, landing 6 fish which weighed 32 lb., the largest scaling 8½ lb. A large number of jack are now being taken just below Norwich with spoon bait, but the size of the jack is small, and it is to be hoped most of them will be returned to the water.—Robert Moll.

THE THAMES RIGHTS DEFENCE ASSOCIATION.

At the quarterly meeting of the Waltonian Angling Society, held at the club house, Redhill Street, Regent's Park, on September 27th, a discussion arose as to the advisability of anglers generally making the utmost efforts to give the above association all the pecuniary support in their power. It was resolved, after some discussion, to vote the sum of two guineas out of the funds of the society as a special donation at the present time; it was also resolved that an annual subscription should be sent to the above association. A suggestion was also mooted and favourably received that in addition to such sum or sums—as might be voted from the club funds. That, should it become necessary, that collections among our members should be made from time to time, in support of the objects of the above association. Hopes were expressed that other clubs would act in an equally vigorous and determined manner. The only opposition to the above proposals arose from an assertion being made that our club had not been individually appealed to; the lesson to be learned from this is that printed appeals, which we have received in common with others, however good in themselves, are not as effectual as personal appeals. If some of our leading men could find time to go round to the different clubs and make a personal appeal, this matter would be liberally supported.

I will sing of the Coquet, the dearest of themes,
The haunt of the fisher, the first of a' streams!
There's nane like the Coquet in a' the king's land
From the white cliffs of Dover to North Britain's strand,
The Coquet for ever! the Coquet for aye!
The Woodhall and Weldon, and Felton so gay;
And Brinkburn and Linden, wi' a' their sweet pride
For they add to the beauties of dear Coquetside.
Then blessings be on him, and lang may he glide,
The fisherman's home and the fisherman's pride,
From Harden's green hill to old Warkworth sa gray,
The Coquet for ever! the Coquet for aye! R. Roxby.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

The second annual dinner of the above society took place at the George and Dragon Hotel on September 20th, when about 40 members and friends partook of a capital spread provided by our host, J. Brooks. Mr. A. C. Bocking occupied the chair, Mr. A. Eydman, the Vice. The usual loyal toasts having been drunk, the toast of the evening, "Success to the Acton and Ealing Angling Society," coupled with the name of Mr. Simpson, secretary, was proposed by one of our honorary members, the Rev. A. H. Dunn. Before replying, the secretary read letters from the following gentlemen (who were invited, but could not attend):—Our President, Dr. Lingham, Mr. Marsden, T. P. Green, L. Bonvoisin, and W. Brougham. Mr. Simpson, in responding, stated that the society was in a flourishing condition, its members and funds being on the increase; also he could announce some good prizes had been given for the remainder of the season, some having been already competed for. The West Central Association was then given from the chair, coupled with the name of Mr. T. Hoole, who replied in his usual happy and business-like style, giving us a lot of information as well as a prize. The health of the officers of the Acton and Ealing Angling Society was next drunk, coupled with the names of Mr. Bocking, Chairman; Mr. W. Eydman, Vice. Mr. Eydman's name being coupled with the committee, each gentleman named responded in a feeling manner, promising to work as hard for us in the future as they have in the past. The honorary members and visitors were next proposed and responded to by the Rev. A. H. Dunn and Mr. Atthaws. The prize-givers was then drunk, coupled with the name of Mr. H. Taplin, an old Reading angler, who, after responding, gave a handsome gold pin for future competition. The prize-winners followed, coupled with the names of Mr. W. Howell, Mr. Townsend, and Mr. A. Eydman, those gentlemen finishing in the order named in the last competition. Success to the Fishing Gazette was drunk with the toast of the Press. The host and hostess were highly spoken of by the chairman (when proposing their healths), as most of us know they deserve to be. A number of valuable prizes were presented by members and friends, and some capital songs were given between the toasts during the evening. The last hour of a very pleasant evening was devoted to harmony. The following members have weighed in since my last report:—Mr. A. Eydman, barbel; Mr. Cook, bream; Mr. Taplin, roach and perch; Mr. W. Howell, barbel, roach, and dace; Mr. Townsend, roach and dace; Mr. A. Eydman, roach, dace, pope, bleak, all from the Thames. —Black Bag.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Shury, roach, dace, and bream, 5 lb. 4 oz.; Mr. Arnold, roach and dace, 3 lb. 6 oz.; Mr. Howlett, roach and dace, $13\frac{1}{2}$ oz.; Mr. Medcalf, one jack, 2 lb. $2\frac{1}{2}$ oz. Mr. Medcalf came off champion in the fishing match at the delegates dinner at the Rye House. Mr. Say's prize for the heaviest weight of jack will be fished for during October. Mr. Harding's prize (10s. 6d.) will be fished for in place of the late Mr. Henwood's prize. The return visit on Monday was represented by the following clubs:—Alliance, Hoxton Brothers, Great Northern, North Eastern, Izaak Walton, Good Intent, Alexandra, Hearts of Oak, Eustonian, Little Independent, City of London, Stoke Newington, Burdett, Original Clerkenwell Piscatorials, Original Alexandra, St. John's, Buckland, North Western, and the Never Frets. Mr. Grey in the chair, Mr. J. Robinson, sen., in the vice; Mr. De Costa in the centre, and he was the centre of attraction. The following brothers contributed to the harmony of the evening:—Messrs. Maybury, Sewell, Grettan, Field, De Costa, Say, Thorley, Matthews, J. Robinson, sen., Smith, Murphy, Bonvoisin, and Carter. —J. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday last, but the takes were rather poor. A roving match will take place at Datchet, on Sunday, October 8, for three prizes.—W. Davis, sec.

Sept. 27.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge with thanks the receipt of 10s. 6d. donation from the Silver Trout Angling Society, and 5s. from T. Poole, member of the Silver Trout Angling Society.—R. Ghurney, sec.

Sept. 27.

BURDETT ANGLING SOCIETY.

The members of the above went to Amberley on Sunday last to fish for a series of six prizes, with an extra prize for top weight, but they met with no sport, only the first prize with the extra prize being taken, and that with a small dace, Mr. Hastings being the winner. Mr. Hadkiss was also at Amberley, but not prize fishing. He took a very nice roach, weight 1 lb. $6\frac{1}{2}$ oz.—T. H. Walker.

Sept 28th.

CAMBRIDGE FRIENDLY ANGLING SOCIETY.

Yesterday (Wednesday), Messrs. Warsop and Edwards had a capital show of fish from private waters, the combined take being 51 lb. $7\frac{3}{4}$ oz., consisting of pike, tench, perch, chub, rudd, and roach. Mr. Edwards' gross weight, 33 lb. $3\frac{1}{4}$ oz.—one pike, 10 lb. $8\frac{1}{2}$ oz.; largest tench, 3 lb. $1\frac{1}{2}$ oz.; and largest perch, 1 lb. $8\frac{3}{4}$ oz. Mr. Warsop s weight, 18 lb. 4 oz. All the fish were in splendid condition.—W. Sutton, sec.

Sept. 28.

CITY OF LONDON ANGLING SOCIETY.

On the 17th, Mr. P. Parkins had nineteen good roach from a pond on Hampstead Heath. On the 24th, Messrs. Chambers, Hobbs, and Warden, weighed bream and roach from Amberley, and Mr. Castell, roach, dace and chub from the Roding. On Sunday next we fish at Amberley for five prizes, pegged down.—Cas.

GOOD INTENT SOCIETY.

There was a good show of fish at our club on Sunday last, Mr. Maybury having a tray of fine dace and a tray of good roach; Mr. Gadbury, some capital perch; Donovan, roach; Haines, carp; and many others, small takes. Our members are going to fish for some valuable prizes, at Boxmoor, on October 8. We had a large number at our club on Tuesday night, and some important business was done. There was one application to our Club Benevolent Fund—the members voted to the case £1 10s.—R. Murphy.

Sept. 27.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held as usual on Thursday the 29th inst., C. S. Bentley, Esq. in the chair. After the usual correspondence had been read, including a letter from Mr. Ghurney, relative to netting on the Lea, the chairman announcing that no special business was before the meeting, called on members present for any remark they might have to offer. The question of whitebait incidentally occurred, which after a very pleasant discussion led to an affirmation from Mr. Jardine that they were the fry of the shad; Mr. Crumplen being of a different opinion volunteered to discuss the question, but Mr. Jardine was unable to fix any specific date, and the matter therefore stands over to a future evening, Mr. Jardine to affirm that they are the fry of the shad, Mr. Crumplen taking the opposite view. It may be desirable to state that the society has now removed to the Masons' Hall, Tavern, Masons Avenue, Basinghall Street, E.C., where it will have accommodation suitable to its members and importance, and it is hoped make its influence useful for the general benefit of the angling community. The next meeting will be on Tuesday, October 3rd, when Captain Alfred will read a paper on "Barbel Fishing." Chair to be taken at 7 p.m. by J. P. Wheeldon, Esq., one of the most respected honorary members of the society, and so well known to the piscatorial world. All members of angling societies are welcome to attend.

HAMMERSMITH UNITED.

On September 17 a match took place for a prize kindly presented by Mr. Pitts. Several members took part in it, but it eventually fell to the lot of Mr. Peachey, who showed 12 lb. 3 oz. of chub and jack from Henley. On the 24th Messrs. G. Lewis and E. Reynolds got fairly among the dace, roving in tidal waters. Mr. Bacchus weighed in $33\frac{1}{4}$ lb. of fish from Christchurch, among them being some fine roach, several exceeding 1 lb. each, and one going 1 lb. $9\frac{1}{2}$ oz., which has been forwarded to Cooper for preservation. On Monday, the 25th, Mr. Seeley had a good take of roach and barbel from Marlow. Members are requested to attend on Thursday evening to arrange other prizes. —Vortex.

IZAAK WALTON ANGLING SOCIETY.

Through the kindness of our host, Mr. A. Rogers, who gave a spread to the members at his private residence, near Epping, on Sunday last, there were no fish shown. Mr. G. Bliss had seven nice roach on Wednesday, which weighed 4 lb. 8 oz., the heaviest one scaled just 1 lb. There are five special prizes to be fished for on Sunday next, in the Stort (between Harlow and Spellbrook) instead of four announced last week.

LITTLE INDEPENDENT ANGLING SOCIETY.

On Sunday last, we had a most splendid show of fish, our trays being filled so that there was no more room, having to place them on the tables. Mr. Hurwood headed the list with a most splendid show of roach and rudd; Mr. Raine came next, with another very fine show of roach; Mr. Letch had jack; Mr. Scott, jack. roach, and dace; Mr. Thompson, a very good show of roach and dace; Mr. Hopton, jack; Mr. Barr, jack—thus making a splendid show. —W. H. Evans, sec.

Sept. 28.

NORTH-WESTERN ANGLING CLUB.

On the 24th inst., Messrs. Billing and Aldis weighed in jack; Messrs. Lancaster and Bonvoisin, roach, the latter from Springwell; and Mr. Marshall, chub, also from Springwell.—H.

Sept. 25.

ORIGINAL ALEXANDRA ANGLERS.

We fished a match last Sunday at the Rye House, Mr. Morton taking the first prize, with a very fine jack; Mr. Dymond, sen. the second prize, with jack; Mr. Huskisson had roach; Mr. Blackedge, dace; Mr. Christer, roach and dace; and Mr. Towndrow, roach and perch.—E. Dymond, sec.

Sept. 27.

PISCATORIAL SOCIETY.

The members of this society continue to evidence their position as practical anglers, and with results of no ordinary character. At the weekly meeting at Ashley's Hotel, Covent Garden, on Monday evening last, Mr. G. Robinson weighed-in 66 lb. 3 oz. of perch, the seven largest fish turning the scale at 10 lb. Mr. Thomas Huggett equally distinguishes himself with 33 lb. 10 oz. of roach, 13 lb. 14 oz. of jack, and 3 lb. 7 oz. of perch from the Avon, the largest perch weighing 1 lb. 15 oz. Mr. Huggett is a most persevering angler, not only amongst jack, perch, and roach, but with the lordly salmon, and both he and Mr. Robinson are to be congratulated on their good sport during the present season. Mr. F. H. Lemann also weighed in two chub scaling 5 lb. 12 oz., the largest 3 lb. 5 oz. from the Thames. Dr. Brunton who has been great in the capture of trout and grayling with the fly, registered three trout weighing 3 lb. 5 oz., and three grayling weighing 3 lb. from Winchester. There is to be a roach competition in the Thames on Monday next and all fish are to be weighed in on that day in the club room at Ashley's Hotel.—B.

PRINCESS OF WALES ANGLING SOCIETY.

The return visit of No. 1 district of the West Central Association was paid this society on Monday last, the 25th inst., when the chair was occupied by Mr. F. Robson, and the vice by Mr. Percy. Some capital songs and recitations were renderedby Messrs. Dixie, Gibson, Poll, Osman, F. Robson, H. Robson, Percy, Chambers, Roberts, W. Wyeth, Hodges, Munslow, Speeks, Constable, Paris, Dobell, Jennings, Harrison, Fellowes, and Newton; and Mr. F. Walker gained great applause tor his performance on the dulcimer. Only six clubs were represented, and had it not been for the number from each of them, it would have been a very poor Visit, so that great praise is due to the Bostonians, Cambridge Friendly, Duke of Cornwall, Golden Barbel, Hammersmith United, and the Prince of Wales. Mr. F. Robson read a circular, that he stated had been sent to all societies enrolled in the West Central Association, respecting a very handsome black and gold scroll marble 14-day clock, that had been purchased by this society for the purpose of being competed for by the members of societies belonging to the West Central Association, at an entrance fee of 1s. each. The clock is on view at the club house, the Prince of Wales, Great Barlow Street, High Street, Marylebone, and it is hoped that a good competition will be the result. A vote of thanks to the chairman brought a very pleasant evening to a close.—H. Robson.

RICHMOND PISCATORIAL SOCIETY.

Wednesday last was set apart for a gross weight competition in the Thames, and an evening visit to the Sun Hotel, Kingston, the proprietors of that well-known hostelry being members of the society. Fifteen members gave in their names as competitors, it being arranged that each of those who weighed in any fish should have a prize of some kind or other, in proportion to their respective weights of the finny tribe, but only seven of these were successful in contributing a show of fish. At eight o'clock about thirty sat down to a tripe supper at the Sun Hotel, Kingston, the tripe and its usual accompaniment, rump steaks, being well served up and thoroughly enjoyed. There were no pretensions to set toasts; Mr. W. H. Brougham being first called upon to make some remarks, referred to the visit of royalty to a day's fishing at Twickenham, in the atmosphere of the Richmond Piscatorial Society, and after noticing several topics connected with the Thames, informed those present that Mr. F. C. Clench, and Mr. A. J. Little, having offered to the T. A. P. S. their services as honorary river keepers, were now in possession of the necessary warrants to act in that capacity. Mr. F. C. Clench, who acted as chairman of the evening, in his usual energetic spirit, announced the result of the competition, the first prize was awarded to Mr. John Bond, for 35 lb. 12 oz. of barbel, perch, and dace; the second prize to Mr. Terrill, with 13 lb. 9 oz. of roach and dace; the other prizes were won in the following order: Mr. Houghton, Mr. Dickenson, Mr. Wilson, Mr. Smith, and Mr. Griffiths. Mr. Alfred Nuthall, in responding to the Richmond Piscatorial Society, offered to give a prize for specimen fish only, and strongly deprecated the system of gross weight competitions, which was warmly applauded. Mr. F. C. Clench replied to the toast of the chairman, and Messrs. H. Dickenson and W. Abbott to that of the vice-chairman. Mr. J. H. Gaunt performed his secretarial duties with his accustomed courtesy. Messrs. W. Abbott, Crew, and others sang some excellent songs, and the evening was one of a very pleasent character.—B.

STANLEY ANGLERS' SOCIETY.

Owing to various causes I am unable to send you any good account of our members' doings this week. Mr. D. M. Humby has had roach and dace; Mr. W. R. Humby, roach; Mr. C. Scull, roach; and Mr. Wheatstone, roach, and a nice tench of 2 lb. 14 oz. The last-named gentleman was very unfortunate at Ringwood last week, his punt having no well, and being without a keep net, he hung a hamper over the side of his punt for want of anything better, and the lid having by some means become unfastened, all the fish got out, among them being, he tells me, some 2 lb. roach. Yesterday evening we held our quarterly general meeting. There was a good attendance, and the balance sheet, which was of a highly satisfactory character, being read out by the secretary, was received with general approval.—G.

STOKE NEWINGTON ANGLING SOCIETY.

The usual fortnightly meeting of the above society took place on Wednesday the 20th inst. The successful competitors at the recent open competition at Dagenham Lake receiving their prizes at the hands of Mr. Thos. Harris, the president, who addressed each recipient in suitable terms, some excellent singing bringing a pleasant termination to the evening's proceedings. Although trying very hard small takes of fish rewarded the efforts of the members on the 24th instant, only Mr. W. Robinson weighing in a bream of 2 lb. On October 1 four prizes are given for the four heaviest weights of roach taken on that date. Open to members only. Mr. C. F. Robinson will give a prize value 10s 6d. for the heaviest gross weight of any kind of fish taken up to and including October 29. A few friends are invited to compete for this prize.—T. GRETTON.

THE PISCATORIAL SOCIETY, COVENT GARDEN.

The following are the fixtures for the above society:—Monday, October 2nd, roach competition, Thames only; 16th, pike competition, Thames only; 23rd, annual supper, Ashley's Hotel; November 6, perch competition, Thames only; 20th, pike competition, any public waters; December 4th, chub competition, any public waters. For further particulars, see the list of prizes and circular.—JAMES LANDER, hon. sec.

WALTONIANS.

On the 24th a great many of our members were out. Mr. Waltham weighed in 12 lb. roach from Pangbourne—two days' fishing; Messrs. Starr and Good, jun., had each a little over 6 lb. from the same place; Mr. Skeats had 4 lb. 10¾ oz. chub and dace; Messrs R. Dodge, Rushbrook, Watson, Bowring, Greenfield, and Togwell, also weighed in fish.—A. J. MARRIOTT.

ANGLING ON LOCHLEVEN IN 1882.

THE season has been one of disappointment to the angler. It has also given rise to some foreboding for the future, inasmuch as it seems to show that the fishings are now undergoing one of those periodical declines to which they are subject, and which are so difficult to account for. The ebb and flow of the trout supply—as well as the variations in the same months of each year—are shown in the following tabular statement. We may mention that the number of trout caught in 1877 was 4,852, after which the results were as follow:—

	1878.	1879.	1880.	1881.	1882.
April	300	813	1,756	1,954	1,020
May	4,283	5,248	8,141	3,554	3,062
June	5,063	4,134	4,825	5,638	2,619
July	618	4,707	1,206	2,019	936
August	2,261	5,482	3,322	3,593	1,331
Total trout ..	12,525	20,384	19,363	16,398	8,968
Lb. weight ..	8,238	15,503	18,384	17,124	8,888

It will be seen from the above statement that compared with the previous year the number of trout caught during the past season have fallen off by about one-half. The competitions have been unprecedentedly numerous this year, numbering no fewer than fifty-seven, though the total number of competitors are less than in 1881. The general average to each rod in the competition was 2 lb. 9½ oz. The first kill for the season was achieved by Mr. Thomson, Cowdenbeath, on 19th January. The heaviest basket landed from any boat was got on 6th May by Messrs. Ridley, Northumberland—thirty-five trout, 30 lb. 8 oz. The heaviest single trout was caught by Mr. J. B. Mills at the competition of the Dundee Club on 21st August, the weight being 3 lb. 14 oz. The heaviest basket at a competition was got by Mr. P. D. Malloch, Perth, winning the Patron's Prize in the Kinross-shire Club on 1st September—twenty trout, weighing 19 lb. 14 oz.

ANSWERS TO CORRESPONDENTS.

C. W. (Union Street, Worcester).—We think the fish you send is a samlet, and that you are mistaken about its being in spawn, but it is impossible to judge from the dried up remains of the head and tail. If you send us a good specimen we will endeavour to decide for you.—ED.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

DE MULTIS REBUS.

SIR,—I fear Mr. Marston's experience with the "angler's curse" is only too common. He has described most exactly what I have seen over and over again. But, to complicate matters still more, there is more than one "curse." The little black beast described by Mr. Marston is not so common, as far as my experience goes, as a tiny fly, smaller, if anything, of similar shape, and with a dirty body of mottled brown hue. I never yet heard of anyone making a bag when these tiny flies are on, but I don't think the artificial is entirely useless. During a furious rise of these midges, I once killed, on a strange water, in the middle of a hot August day, three trout weighing 1 lb. 5 oz., 1 lb. 6 oz., 2 lb. 4 oz.—all in less than half an hour. Quite recently I bagged a brace of good grayling, over 1 lb. each, and lost others (through the smallness of the hook, I fancy) within a few yards of each other. One of these I dissected there and then, and found him full of the "brown curse" and a few larvæ of the olive dun; no other flies were discernible. When all is said and done, I fear we shall always be at a discount when such microscopical insects are the chief attraction to rising fish. Only a fortnight ago I was standing on a bridge with Mr. Francis Francis, dipping up and examining the myriads of flies which were circling round the eddies about the old wooden piles. Besides duns and spinners of various sorts, delicate in the extreme, but still recognisable, we found insects which it would be hopeless to try and imitate, and which it would puzzle an entomologist to name. Still, grayling will go for these tit-bits sometimes, worse luck—even to the extent of gorging themselves on the green aphis, so I was told by two friends in Derbyshire last year. There is one point connected with this which I think is sometimes lost sight of. When any fly (no matter what) comes down very thick and a rising fish has half a dozen natural flies to choose from every time he comes up, it stands to reason he is very unlikely to pick out deliberately the one which has the curly blue tail; and every angler knows that an unusually heavy rise of May flies, March browns, or olive duns is generally productive of more bad temper than sport. The fact that the "curse" comes out in such numbers is in itself very much against the angler. Under these circumstances, I find that a fly which floats well, slightly larger, and perhaps adorned with a bit of tinsel, or nicely ribbed with gold wire, will often arrest the attention of the fish, and induce him to rise when the closest copy of the natural fly would be unnoticed. Again, something totally different, which does not challenge comparison with the natural fly, may frequently be used with advantage. For this purpose a very small "Wickham" on a 00 hook, used dry, will be found very useful, and for grayling it is out and out the best fancy fly I know of in the early part of the season. Though my imitation of the "curse" is by no means infallible, it is certainly very useful at times, and has rewarded me with several good fish this year. I find I have none left, but a specimen or two shall be forwarded to Mr. Marston in a few days if I can find time (and I should add, patience) to tie them. To tie a dozen of these flies is quite a liberal education in fly-making. The best of us is very ignorant about flies, and the man who professes a complete knowledge and undertakes to answer off hand any query about the theory and practice of fly-fishing is generally not worth talking to, while those who profess least will often be found the most thoughtful and well informed. It is to be hoped, therefore, that anglers who can throw any light, however scanty, on the "midging" proclivities of trout and grayling will be good enough to record their experience. It may lead to something interesting. At present, all I have ever discussed the question with are unanimous on one point, namely that sport is always indifferent (as it deserves to be) when "curses" fill the air.

The recent "Gut *v.* Hair" episode—in spite of the unhappy termination of the "friendly contest"—has not been without interest to the readers of the FISHING GAZETTE. It has elicited much valuable information from anglers of differing opinions, but it has not settled the question of most suitable tackle, and I don't see how any sensible person could ever have expected it to do so. In fishing, quite as much as in other things, the truth of *tot homines quot sententiæ* is constantly seen, and when I entered into dispute with "Herne the Hunter," I was most careful to state that no amount of discussion would make us agree upon the point at issue. We were at cross purposes (though the then confident and jubilant Hunter would not see it), he advocating one thing as best under all circumstances without any reservation, while I ventured to hint that on some waters where the fish run to 3 and 4 lb., hair was absolutely useless, and fine drawn gut answered admirably. "Chub Chavender's" remarks on September 23rd bear me out entirely. In fact, I (the "Logger-headed Chub" of the late controversy) can endorse from long experience every word that my brother chub says about the Itchen. I repudiate with scorn the bare idea that a half pound trout from one of the northern streams is more knowing about gut and hair, and more difficult to deceive than one of the Hampshire "Sockdollagers." For wiliness and cunning give me an old three-pound Test fish, one who for seasons has risen day after day in the same place, knowing to a fraction of an inch where each natural fly will come down, skirting the bank, into his very jaws. Throw ever so deftly your most delicate fly on hair, and you can't rise him; send him the same invitation on drawn gut, and he dies the death. What more can any reasonable angler want in the way of arguments?

Recent correspondence reminds me how thin is the disguise afforded by an alias. No one could mistake the authorship of that long and wearisome repetition about "Monstrosityists" and "Harelugists" (*sic*), and the equally uninteresting and utterly unintelligible maundering on the subject of hooks. Hooks and flies are my pet hobby, and I eagerly devour all the information I can get from my brother anglers. But in these papers I learnt nothing practical.

That style was all one with the bombastic Balderdash of the avowed champion of hair *v.* gut. There are other writers, valued contributors to the FISHING GAZETTE, quite unknown to me except by names whom I have spotted in spite of the *nom de plume*. I am resolved, therefore no longer to adopt an alias myself.

What does "Sprint" mean when he talks of a trout's "deadweight of two or three pounds or more as he slowly makes tracks for a bed of weeds?" If this is his notion of an Itchen or Test fish he is vastly mistaken. One good day between Alresford and Bishopstoke, or between Stockbridge and Romsey is quite enough to dispel the allusion about the gameness of a chalk stream trout once and for ever. When "Sprint" talks of persons "who know trout fishing only under these circumstances," is he himself fully aware what the circumstances are which make the killing of a big fish weight for weight, so much more difficult in a southern chalk stream than it is in the northern rapid moorland waters? I am speaking from experience. I have killed large fish on fine tackle in rapid Scotch streams and in "sluggish waters," as "Sprint" calls them; and I have no hesitation in saying that a fish from 2 to 3 lb. is infinitely harder to basket on a weedy, chalk stream than he is in the clear rapid streams of the North. I feel confident that any one, who is fairly qualified to judge of both kinds of fishing, will bear me out in this. I think "Chub Chavender," with his "wretched trout, diminutive from lack of food, continued through countless generations," is much nearer the mark as a description suitable to the denizens of many a northern stream. This may not apply literally to the waters "Sprint" frequents, but surely the lives of the trout must be wretched, indeed, if the 150 members of an angling association, including "as many crack fly fishermen as any other association" are only restrained from a murder of the six-inch innocents by a formulated rule of the club. Wretched, indeed, must be the prospect to a troutling doomed to die so young, with 150 anglers all thirsting for his blood so soon as he shall pass the six-inch limit.—I am, &c., H. S. H.

[We fully expected "Sprint's" libel on our southern trout would bring forward some champion. If "Sprint" had seen the way a 2 lb. trout we got recently near London fought for fully five minutes, leaping half-a-dozen times out of the water, he would not think them sluggish! H. S. H. and "Sprint" are two good anglers, and we sincercly trust they will agree to differ amicably. There is much to be said in favour of north country fishing, even if the fish do run small, and we must admit that we enjoy catching a 10 or 12 lb. basket of, say Eden trout, averaging three to the pound, with a sprinkling of bigger fish up to 2 lb. perhaps; we enjoy a day's fishing of this kind in a rapid river in a lovely country, better than a take of larger fish in the quiet Hampshire streams. But such matters as these are questions of individual taste, and ought never to send our correspondence thermometer up to "blood-heat."—Ed]

P.S.—Since writing the above, Mr. Hall's midge flies have come to hand. They are superbly made, and we intend to get a stock made from these patterns, and on Mr. Hall's capital eyed hooks. Although the midges we used were as small as these they were not so neatly made. We may say that we did try other flies of all kinds and sizes, up to the large red caterpillar. We will send "Sprint" some of these midges of Mr. Hall's as soon as we can get any made. The hooks are made by Messrs. Hutchinson, of Kendal.—Ed]

SILKWORM *VERSUS* HORSE.

Sir,—Probably there are many of your readers like your correspondent of last week, "Chub Chavender," who "can't understand why so fierce a battle should be waged over the comparative virtues of hair and gut!"

I have often thought when I have been reading with the greatest interest the articles and letters which have appeared in the Gazette upon the subject that it must have been very uninteresting to a large majority of the fraternity. It is well, however, to remember that "the brotherhood" embraces many distinct branches, and that each branch engages in the angling business in its own particular line. Modes of weighing in, baiting swims, paste for roach, &c., have only a very general interest for us northerners, who have to confine our attention almost exclusively to trout and grayling. But those subjects very preperly have their turn, and so our brethren, the bait fishers, must not begrudge us the space if we run out the lines a bit (and really we have done it of late as though the lines were all on Nottingham reels, they have come off so freely). To us the subject can hardly be termed a a second rate one. It's one of the first importance. Why, I know some natives upon the streams in this district whose professional credit hangs by a good hair. They have always used hair, done great feats with hair, always will use hair as long as they can wield the wand at all.

One of them bought a horse for his tail, and kept him well to grow hair. Poor fellow! When he was no more, deeply regretted, might, with a lot more consistency, have been inscribed over his grave than where we sometimes see it.

Previous to this matter being exalted into the columns of the Gazette, some of those old hands could not speak of the relative virtues of hair and gut with anything like patience. "Gut was not to be mentioned in the same day as hair for fly fishing." Now, however, the subject is actually seriously discussed in the small coteries of anglers that draw together for their evening pipe. Could you, 'sir, only have your ear to the telephone of a wire connecting you with one of those council chambers, you would be able to give your readers some lively comments and sage criticisms. "Ah, well! gut is all right for fiddlestrings, but it's about nought for fly fishing; it's as heavy as a tar band and makes such a splash." And so on go these philosophical remarks to the end of the programme, and then it's repeated next time the assembly meets, which, of course, vanquishes all the arguments in favour of gut, which after all are only as the smoke from their pipes.

I cannot be considered a member of these parliaments, but I do now and again enjoy a seat in the chimney corner, though I am afraid that there's a suspicion that I am not a "true blue" on this hair question; they are doubtful that I've been perverted, for only the other day when I went out with the president for a throw and was putting on my cast, he spied gut. "What, are you bound to fish with gut?" said he. I kept from blushing as well as I could, while I stammered out, "That I was going to give it a try; there has been so much said about it lately." "Ugh," and he passed on to wet his own cast. We soon had the river between us, and I got a couple before he had one, but he was not long before he cantered past me, and at the day's end he had almost four to my one. He had glorious satisfaction; he'd given the young 'un another lesson. "What had you on?" said he when we were walking slowly homeward. "Oh! I'd brown watchett and red palmer and musk and the dun, what did you find them take?" "Well, I could get 'em with nowt at first but the light blue, and then when the watter cam' out they wadn't look at it, but took needle like shot." "Well," I said, "I saw the needle on by scores, but I never thought they would take on in such a big water, and so I never put one on." "Only in the quiet corners," he said, and he knew well enough he had touched me in one. But I've wandered. I meant to say that I have come to the conclusion that on this burning question my good friends in the dales have too much prejudice and too little knowledge. When they think of gut their idea is that it is the sort of stuff that they use with lobworms in a big water. Bulmer's "Gossamer" drawn gut is an excellency of very recent times, and it has not reached the dales yet, except when a stranger makes an excursion to their stream. He does not do so well, for he is not acquainted with the stream and does not know the best flies, but his non-success is gut, of course, when the native comes across him. There many things to consider in this question. Your correspondent "Sprint" wrote well, pretty nearly all that could be said for hair—a very sensible letter I thought, but other matters, such as length of your cast, number and distance of your flies upon it, weight of your casting and reel line, all require consideration and adjustment if gut is to be got well out, lightly, straight, and without tangle—the latter too often caused by the end fly rebounding upon the line when the cast is made. One point I like gut in preference to hair is one upon which I find myself in disagreement with "Sprint," it can be cast straight. Hair too often—even good hair—will keep, hour after hour, a nasty curl in the end length, whereas gut when softened always goes out in a straight line. I won't repeat the arguments already put with so much force both by yourself and correspondents. No doubt this correspondence will have induced many anglers to try both gut and hair for themselves, in circumstances where they can be tested with something like accuracy. We shall probably have lots of "experience meetings" after this thorough ventilation of the subject.—I am, &c. Ingleborough.

September 25.

[If any hair-fisher who has not seen really fine drawn gut will write to us we shall be most happy to send him a sample gratis.—Ed.]

THE FOOD OF SALMON IN FRESH WATER.

Sir,—A few facts relative to the food of salmon may prove interesting to "Salmo Salar" as well as to many of your numerous readers; and as you justly observe, Mr. Editor, "The proof of the pudding is in the eating," I hope my remarks will have the same effect. For many years past I have had largely to do with salmon from all parts of the United Kingdom, as well as Norway and Sweden, but during the past ten years have had principally to do with the rivers Exe and Dart, to which rivers I intend to confine myself on the above subject, and to the year 1874, being the season I devoted considerable time in searching for the parasites, both inwardly and outwardly of the salmonidæ, from these rivers, upon which I may send you a résumé, with your kind permission, shortly. The year 1874 yielded a very good supply from both of these rivers, the Exe more especially. During this season I opened 490 fish, namely 290 from the Exe, and 150 from the Dart; also 50 peel from the latter river. The majority of these fish are taken almost in the salt water, but the Exe fish have a chance of reaching a few miles up into the fresh water previous to being netted, consequently have had time to satiate their appetites with a fresh water meal. It is not very frequent to find any substance whatever in the stomachs excepting mucus; but I have taken from those fish just from sea, such fish as pilchards, sand eels, shrimps, prawns, and the remains of other crustacæ; and upon several occasions the half-digested portions of grey mullet, and once only about six inches of the tail end of a redband fish. From those taken in fresh water I have taken quantities of minnows and small eels, and on one occasion an eel over one foot in length. Stones are by no means an unfrequent find, but I believe them to be taken accidentally, because when most frequently found is, during the very heavy freshets, when the land soil is washed down in abundance. I have known several salmon taken with a large shrimp (not a prawn), in the upper waters, and I verily believe that the artificial fly is taken in a great measure for the shrimp, with which they meet in considerable quantities in the Exe, within a mile or so of the city. Of sea trout we do not get an abundance; but what few I have examined were either full of shrimps (pink ones) or britt (whitebait). Mr. E. Parfitt in his "Fauna of Devon" says the sea trout frequent the south coast, and three specimens were captured in the salmon pool below Exeter, April 28th, 1864. The largest measured 19½ inches long; girth, 11¼; weight, 3 lb 9 oz. Some time since I communicated the contents of numerous seafish stomachs to the late F. Buckland, of which I could inform you.—I am, &c.,

Frank Gosden, Exeter.

[Is Mr. Gosden certain about the minnows? Are they found so near the sea?—Ed.].

MARKET DEEPING ANGLING, &c.

Sir,—In my report to you of 23rd inst. I think I used the word "Central" Association. If I did, will you please correct to United London Angling, &c., as I find by my card of membership that is the present title to which I intended to refer.—I am, &c., Thos. Poole.

FISHING AT MARKET DEEPING.

Sir,—I should be much obliged it you or any of your readers can inform me of any jack or perch fishing in the neighbourhood of Market Deeping, Lincolnshire, and, if so, how I can obtain permission.—I am, &c., G. H.

[The "Angler's Diary" says there is good coarse fishing free in the Welland at Market Deeping.—Ed.]

FISHING AT MARKET DEEPING.

THE RIVER WELLAND—INFORMATION FOR ANGLERS.

For information of London anglers, &c., by kind permission of S. B. Sharpe, Esq., honorary secretary, tickets for fishing can now be obtained of Mr. Charles Thorold, the Ship Inn, St. James Deeping. The tickets are 1s. for the day; 2s. 6d. for three days, or 5s. for the season. A very able and descriptive account of this fishery recently appeared in *Bell's Life*. The Ship (only a beerhouse), a clean, comfortable house; the host and hostess are obliging. It is within 15 minutes' walk of St. James Deeping Station, G.N.R., and can be reached before 8 a.m. by the 5.15 newspaper train from King's Cross (change at Peterborough). Breakfast can be had there, the ticket obtained, and the river reached by nine. There is a train up at 5.45, due at King's Cross at 8. Splendid travelling; so that eight hours can now be had by the river side. It holds among other fish splendid roach (very few bream). This is a place the Central Association of London Anglers would do well to get concession granted to—St. James Deeping. Beds can be had at the Ship, but it would be well to write first; their charges are very moderate.—I am, &c., Thomas Poole.

Covent Garden Market, W.C.,
22nd Sept., 1882.

[Anglers ought to be much obliged to Mr. Poole for this information.—Ed.].

TROUT FISHING IN DEVONSHIRE.

Sir,—The readers of the *Fishing Gazette* must think that the Exe is a most wonderful river, from the account given by R. A. in your last week's issue. I do not mean to say that it is not true, and I should not like to say it was. It seems strange that the account of this wonderful catch has only now come to the front. You, Mr. Editor, have fished the Exe, and knows well enough that this is most extraordinary sport for our river. It is passing strange that this was not advertised in our local paper at the time, as all fresh flies that have risen or caught a fish are, but how disappointing to those who have tried them. They say that there is nothing like the old patterns and colors after all. For R. A. to say that probably twice the amount in weight of his dish (presuming his weight 10 lb) might be taken on a good day, I never remember seeing any dish of 20 lb caught with the fly. The best I ever saw was caught about seven years since by a young gentleman, a native of Tiverton, weighing 18½ lb, 71 in number, and not one of them under ¼ lb. They were caught with Brobdignagian flies, and fishing up stream. Several others saw the same dish, and pronounced it to be the best dish they had ever seen taken with one rod. R. A. would not like to do anything like this because it is so monotonous. I have fished the Exe from childhood, and have never seen anyone using such tackle as he speaks of—viz., 16 feet poles, towing lines, bundles of fur and feather, &c. R. A. would have you to believe that no one knew how to kill fish until he came to reside at Tiverton some few years ago and since that time he knows (?) more about the Exe than those who have lived on its banks, and fished it for more than 40 years. R. A. seems to have mounted his hobby a little too high, and ridden too fast and too far as he acknowledges he is prone to do.—I am, &c ,

TIVERTONIAN.

[We must say this much for R. A. : his article was sent early this year, and referred *not* to this season's fishing. We fully expected that his catch of eight trout from the Exe with fly all over one pound would bring Exe anglers to the front wanting "particulars." We confess to wondering what part of the Exe holds fish of such an average weight. Even with minnow, which takes the heaviest fish, it is rare that one gets more than one or two fish above a pound or so much. The Rev. Mr. Anderson, of Winsford, is a first-rate hand with the minnow, and fishes some of the best water on the Upper Exe, water which we know holds good fish, but we question if even he, living on the spot, ever made anything like such a bag as R. A. refers to.—ED].

TROUT FISHING AT TIVERTON.

SIR,—Most of the piscatorial gentlemen of this neighbourhood were surprised at the letter and its contents in your last issue written by R. A. describing one of his recollections of an extraordinary dish of trout taken by him this season eight in number, all over a pound each. I do not doubt the statement, but at the same time one would imagine seeing some account ere this in one of our local papers. R. A., I am aware, is generally in the habit of displaying his catch, if he has a fair fish, in his net through the street, the object of which is patent to everyone. With regard to the poles, towing lines, Brobdignagian flies, &c. R. A. informs us that no trout out of his teens would look at such ; how does he account for the five pound trout taken by Mr. F. Folland on the 28th March last, a description of which appeared in the *Fishing Gazette* of April 1st? R. A. must be under a delusion when he states that those who fish hardest catch most. I have taken more in a few hours than those who have been whipping the stream all day ; for the simple reason, I had the right colour. R. A. condemns the usual way of fishing, simply because he meets with little or no success. In conclusion, I should be glad if R. A. would mention an orthodox fisherman who would catch twice the amount in weight which he speaks of in one day with the artificial fly.—I am, &c., A BROBDIGNAGIAN.

FISHING AT WANSTEAD.

SIR.—There are three ponds in the newly-acquired Wanstead Park, all containing fish. Permission to fish only extends to one of them. The "long pond," which is about a mile in extent, reaching up to the Tumbling Lock on the Roding, is strictly preserved, I believe, for the purpose of supplying the immense number of herons thereon. I have not seen carp taken—or indeed many fish of any kind—chiefly roach and bream, and I also believe fishing on Sundays is tolerated, as I saw a dozen or two fishing on Sunday last, with very small success. Workmen are busy making paths and clearing rubbish from the ponds which has been accumulating for years, so we may soon expect it to be one of the finest resorts to be found near London. For years the park has been strictly preserved. At present the grounds are in a very wild state. It was opened to the public on the first August last. The first trace of the park is during the reign of Edward VI., who granted it to Robert Lord Rich, who sold it to Robert Dudley, Earl of Leicester, and who in May, 1578, entertained Queen Elizabeth. It is well worth a visit by all lovers of wild scenery, whether rodster or otherwise.—I am, &c. P. F DAVIS.

DEATH OF MR. H. CHALON.

SIR,—Will you kindly give this note space in the FISHING GAZETTE. As we have lost our kind and much respected friend, Mr. H. Chalon, I and many friends would like to see a subscription opened among anglers for the erection of a tomb, or something of the sort, to the memory of Mr. Chalon, the Angler's Friend, as many hundreds knew. I am sure all anglers would give their mite. —Yours, &c., TENCH.

Lincoln Inn Fields, 25th Sept , 1882.

A CURIOUS FLY.

SIR,—Mr. Carrington has requested me to say that the fly sent you by Mr. Peter Alison is a firwood borer in the larval stage. It is one of the saw-flies, and its name is *Sirex juvencus*.—I am, &c. J. MATTHEWS.

PARTICULARS OF A RECENT CAPTURE OF SALMON WANTED.

SIR,—Will you kindly inform me, if you can, who are the lady and gentleman (husband and wife) whose name appeared lately as having killed a remarkable number of grilse or salmon, to their two rods alone, in Ireland? I am nearly certain it was in your journal that this account appeared. The gentleman is son of Lord somebody or other, and is an officer who served in the Zulu war.—I am, &c. REV. J. V. FOOT.

[We do not remember any such account recently. Perhaps some of our readers may have noticed it either in this paper or *Field* or *Land and Water*. The most remarkable take of trout we ever heard of was described to us by the captor, Sir Rose Price, Bart. Sir Rose was fishing last year with his wife on the Island of Antacosta in the mouth of the St. Lawrence. In one day Lady Price took some 80 lb. of trout with fly, and Sir Rose took over five hundred pounds weight of trout also with fly in one day. The fish were wanted for salting down as food, and Sir Rose told us that they were so numerous and voracious it was exceedingly monotonous work pulling them out. They would take the fly when torn to pieces, and little but bare hook left, as greedily as ever. If he wanted a salmon he was obliged first to fish out the trout from a pool in order to give the salmon a chance.—ED.]

A BIG TAKE OF PERCH.

SIR,—I think you will like to hear of a day's perch fishing which Mr. Clark and myself have just had. Mr. Clark fished with a float and two hooks ; I with a fine gut paternoster and three hooks. We commenced at 11 a.m. and finished at 5.30 p.m. At the end of the day our total catch was 145 perch and six pike, weighing 5 stone ; the perch averaged three to the pound. We returned about thirty small ones. I had the good luck to catch one, a perch, which weighed exactly 3 lb. (about five hours after it left the water). It was a grand fish. The pike ranged from 1½ lb to 4 lb. We caught them all with worms—with the exception of the pike and large perch, which took small roach —in a large gravel pit. The depth of water was between three and four feet. I think this is the grandest piece of fishing I have ever had. Several times we landed, or rather boated, two ½ pounders at once.—I am, &c.,

Wisbech, Sept. 25. CHAS. STANHOPE SMELT.

[This is the best day's perch fishing we have heard of for a long time — ED.]

ACCLIMATIZATION OF FISH. — Anglers frequenting the river Waveney may be congratulated upon a valuable addition of young trout to these waters, through the liberality of the Norfolk and Suffolk Fish Acclimatization Society, which met on Wednesday week at Whittingham, and proceeded as far as Bungay in one of Mr. Harry Bullard's (of Norwich) steam yachts, kindly lent by that gentleman for the occasion (and not with empty tables). The party were joined at Beccles by the mayor (W. M. Crowfoot, Esq), and other gentlemen. The trout selected for distribution came from the rearing-ponds at Gunton Park, in charge of the hon. sec., Mr. W. Oldham Chambers, and were hatched at Lowestoft, a few months ago. In passing up the river, the committee selected a few of the tributaries, where the fish were carefully turned into the waters. In the course of a few weeks other distributions will be made in the Bure, the Yare, and elsewhere. The society is to be congratulated upon their success, and all anglers will wish them good speed in their noble work.

ENTIRELY NEW WORK, WITH FACSIMILE COLOURED ILLUSTRATIONS.

In SIXPENNY Monthly Parts,

FAMILIAR WILD BIRDS.

BY W. SWAYSLAND.

With EXQUISITE ILLUSTRATIONS in COLOUR, from Original Designs specially drawn from Nature for the Work, and with ORIGINAL WOOD ENGRAVINGS,

PART 1 Now Ready.

"The Work which is now placed within reach of every family is written by one who is learned in all that pertains to the subject. FAMILIAR WILD BIRDS will give every information that the inquirer can desire, in a style so popular and attractive as to render it easy of comprehension by all ; the correct classification and scientific nomenclature will also be given in the most concise and intelligible form."

Cassell, Petter, Galpin and Co., Ludgate Hill, London.

HOTELS, INNS.
ANGLING QUARTERS & WATERS.

ROACH & BREAM FISHERS

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY.

CAPITAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

"Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. Established nearly a century. Boats 2s, and full bait 1s. per day; men provided. Terms for stopping visitors on application. Gravel and sandy soil.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

River Lea at Ware.

Anglers visiting this favourite Fishing Ground will find excellent accommodation at HOST FEARN'S, Lion and Wheatsheaf, High Street.

Live Baits provided, and any information given to visitors.

SATURDAY, OCTOBER 7, 1882.

"RED SPINNER" AND "BELL'S LIFE."

WHEN Mr. J. P. Wheeldon retired from the angling editorship of *Bell's Life*, his place was taken by our good friend Mr. Wm. Senior, whose angling writings are so well known all over the world, in connection with the *nom-de-plume* of "Red Spinner." We always look out for the angling columns in *Bell* with great interest, there is such a spicy breath of fresh country air about Mr. Senior's writings; and though he by no means monopolises the space devoted to angling, we can easily "spot" his articles, sign them how he will. Our readers should look up the famous old "Bell," under Fitzgibbon and Wheeldon, its angling notes were always sound ones, and Mr. Senior has easily proved his right to play a "Bob major" on it for the benefit of the angling community.

A PIKE FISHER'S EXPERIENCES.

WHY pike? Because I was born where there were no trout or salmon, and because the first large fish ever caught was a pike of 10½ lb. weight, with a bank runner, during my apprenticeship. But the real initial impulse to this sport was due to Cholmondley Pennell. His shilling book on "Pike Fishing," was purchased at a bookstall, read and re-read till *Esox lucius* on the brain was in full swing, a week's holiday being anxiously looked to, and all preparations made for putting his style into operation. Oh, those days! Eager hope and disappointed results; how the effort to spin *à la Thames* resulted in terrible entanglements of lines and loss of them and bait; how the buttons caught the line, and how thistle heads and St. John's wort, with other plants, would grow on the shores of likely spots. How the reel would spin round and round if plenty of line was not uncoiled; and how, when more was lying at one's feet than needed, the hooks would get fast in weeds floating and weeds stationary, ere the line could be drawn in. How many bait and their paraphernlia lie at the bottom of that swift-flowing stream I cannot tell, but near £1 worth, I imagine. How the line would kink, and how in despair I sat down and voted fishing a snare, and Pennell's practice a delusion. No fish was the result. I might put it down to a variety of causes, but at home, after another blank day, the dreaded chaff could not be silenced. "No fish again, this is the third day; you have only two more and then—" "What was it Lord Byron said about anglers?" Still they could not chaff it out of me. Mentally and physically I felt it was doing me good, and I kept on hoping someday to master the style and be able make a forty or fifty yards cast and catch a fourteen-pounder into the bargain. I owe C. P. many thanks, even if I have given up his style and theories and adopted others. After a varied experience, a happy deliverance came. While tired out one evening, and resting on a bridge, an angler came up—that he was a pike fisherman his rod told of itself. We fell to talking. I told my troubles. He pooh-poohed the Thames style, all right for "a Cockney in a punt." "What style did he use?" "The Nottingham." After a while he offered to instruct me for his usual terms, "a guinea a day and grub"! "Oh, I always get that when fishing with gentlemen in Scotland and Ireland. I go with parties every year." I did not quite see it, so we parted. As I walked away, my companion thought he saw a pike and threw to the very spot, winding up as usual. It flashed through me in a moment. "Is that the Nottingham style" I asked? "Yes." That was quite sufficient. Next day saw me spinning till I was tired out, with only one small fish as my prize—it was a prize. Since then, pike fishing has been a pleasure, no kinking nor worry with line. Seven pounds is the weight of the heaviest pike I ever caught spinning, and didn't he give me some play; and twenty pounds the heaviest day's take, all fish over four pounds. The only drawback has been the swelling and warping of my wooden-reel, a great annoyance. This is a point on which I should like a wrinkle or two. Can it be prevented? Are ebonite or metal superior, and which of them is the best? I also ask if your readers have ever tried a small pulley wheel at the topmost ring, for the line to pass out more freely?

I lost a perch and the best spoon bait I ever had (a real beauty, silvered on both sides, and which spun like a top) by the line cutting against the worn brass ring at the rod top. While spinning for pike a week or two ago, a perch about 1 lb. weight followed it up to the side. I had read of them taking a spoon-bait, but never experienced it, so I let him have it again. As it neared a bed of sunken weed, he rushed out at it, getting well hooked; just then my line parted, and I lost the spoon and fish together. The only satisfaction was watching his efforts to get rid of his enemy; he went to a bare place a yard away and tried to rub it out, he stood on his head and rolled over, but it was no go, he could not free himself. While thus battling with adversity, a worse fate befell him, a 4 lb. pike appeared on the scene and watched his antics, like a policeman watching a drunken man, then suddenly rushed and seized the perch, shaking him like a rat and bore him out of sight.

While on the matter of spoons, I ask how is it that some will spin while others will not, I find it one of the best baits? When streams are low and the water clear and bright, it is beautiful to watch the pike take it, the young ones especially. They rush past it, turn, exposing for a moment part of the white belly, for a moment the spoon is hid, there is a check, and your captive is at your mercy. He rushes about like mad, then tired out, submits to be lifted out. Five fell to my lot, about a pound weight, but were returned to grow wiser and better for future holidays. Another good bait for using with dead gudgeon or small roach is Gregory's Archimedean spinner; it is ingeniously constructed and well made, it causes the bait to revolve beautifully, and many good fish have fallen to its use by self and friend. I once, while using it, had a memorable struggle with a pike, which I judged to be about 12 or 14 lb. weight. I hooked him twice, the first time I could not get a glimpse of him, he swam so deep, it being just after a fresh and the water cloudy. I had left my net behind me; I shouted to a labourer and his daughter, asking them to fetch it, but Agricola only grinned and went on with his work. I offered him a shilling, but got only a stupid stare, though it was only 400 yards off, so *à la book*. I tried to land him as soon as I could. I got him to a nice shelving spot, but no sooner did he touch the bottom than he fought hard and got off. I readjusted the bait, which was untorn, and at the second spin, at the same place, he or his mate seized it again. I gave him more play this time, and shouting for help, uselessly, again tried to land him, as before, with the same result. Mad with myself for not tiring him out before attempting to land him, I put on a fresh bait and gave another throw and was into either the same or another fish his size. I determined not to loose this one, so I struck several times, till I felt I could turn him as I liked, and accordingly ran him up and down the bank till I was tired, if he wasn't. Then thinking him done for, I wound up and drew him to the same place; he came very quietly this time. I got his head out on the side, and just as I was stooping to seize him, he opened his mouth and fiercely snapped his jaws, cutting the gimp (or breaking it) which held the triangles, and away he went. I tried a spoon and ordinary set of triangles over the place, but he had got enough, indicating that experience make fish wise as well as fools.

THE IDLE ESOX.

[All the best pike rods are now fitted with the revolving steel ring at the top, it is a great advantage, as nothing takes the waterproofing off a line more quickly than a brass ring, which has been worn into a saw by the friction of the line. Ebonite is the best material for a Nottingham winch, metal is too heavy. One great reason why some spoons will not spin, is that the swivels do not run evenly. We can, from practical experience, most strongly recommend "The Idle Esox" to try a medium "American Spoon" and also Gregory's "Clipper" for spinning for pike. —ED.]

LIST OF THAMES LOCK-KEEPERS.

As two or more works of late have appeared professing to give the names of the various lock-keepers on the Thames, the correctness of which is of some little consequence for obvious reasons, I here present you with a revised list, all of whom hold deputations, which entitle to the full privileges, of water-bailiffs, and to who many information of a suspicious or positive nature in regard to poaching or other illegal aquatic practices may be communicated, as well as the reckless speed of steam launches, &c.

Henry Tame, Teddington.

CREEL.

ADDRESSES OF BRITISH AND IRISH PISCICULTURISTS WANTED.

THE Editor of the FISHING GAZETTE, 12, Fetter Lane, London, will be glad to receive the addresses of any gentlemen in any way coming under the above title, in order to make a communication of much importance to them, with a view to the establishment of a National Piscicultural Association.

A SMALL FISHING POND WANTED.

THE Editor of this paper will be much obliged if some of his readers will kindly inform him if they happen to know of any small pond (fed either by a stream or springs, within ten or twenty miles of London), which it would be possible to rent for a number of years. Address—The Editor of the FISHING GAZETTE, 12 and 13, Fetter Lane, London, E.C.

THE INVITATION.

(To a Bottom-Fisher)

COME ye who love to fish
  And stray by water's brink;
Come ye, with keen relish,
  And see the float down sink.

Let them refuse the sport
  Who never knew its charm;
But, brother of the rod, resort
  To waters clear and calm.

The perch await us there—
  Perchance a pike, or two.
Shall dart from out their lair
  And give us pleasure true.

There will we bait our hook
  With brandling, clear and bright,
And read from Nature's book
  While waiting for a bite.

And when the tell-tale float
  Shall nervous warning give
That some gill-guarded throat
  Is striving to receive

The well-adjusted bait,
  We'll "strike" with wary zeal—
Ere yet it be too late—
  And bring the fish to creel.

Ah! angling, dear my friend,
  Hath many a joy full sweet,
And unto our life's end
  Its pleasures we will greet!

Then come on Tuesday next,
  Prepared for a campaign,
And leave all questions vext
  Of daily care, or gain.

And find what erst dear Walton found—
  No angler can deny it!—
A joy too deep for tongue to sound,
  And "Study to be quiet!"

O. W. R. in *Forest and Stream*.

SALMON FISHING IN THE WEST OF ENGLAND.

AN angling friend writes to us as follows:—"Many thanks for the flies, which came to hand all right; they are first rate and better made than those of ——. Last Wednesday was my first attempt at fly-fishing for salmon. T. arrived about nine, and we soon started; took the road the other side, and went down as far as the wood below 'Three Waters.' We put on the butcher, and fished a large pool there well, then tried it with a minnow; no good, did not see a rise; fished every likely place up to the Hammer; crossed and fished up this side until we came to a black pool with a tree at the top of it—a favourite pool of yours for trout—before you come to Dashway Dam, where the cottages are. T. had three or four throws and rose a fish but did not hook it, he went on but did not rise him again, then I took the rod from him and chaffed him that he did not understand it; the third or fourth throw a ten-pounder followed the fly across the pool and made a dash at it close to my feet, almost took away my breath; away he went, but did not go out of the pool. This lasted for about a quarter of an hour, and T. wanted to gaff him, but I thought I should like some more fun out of him. He then went into the next pool below, very rough water, and showed more play, then he went to the bottom and rubbed the fly out. Though I lost the fish yet I was very pleased with the half hour's sport. After that, we rose two in Oldman's meadows, and one in Blackpool, but did not hook them. Yesterday we had another turn at them, went up the other side. When we got to Blackpool I saw a large fish jump out of the water, we tried him with fly and minnow, but no good, he would not look at it; after that we tried Vine's Pool, rose a small one, then on again past the beech tree, through the hunting gate, and so on to that long ham before you come to the lane that leads to Brackley Hammer. At the top end there is a very fine pool, which you know well, having had many fish out of it. T. and I fished it alternately; at last he got into one in the deepest part of the pool, between two bushes; luckily for us the fish did not go out of the pool. I took the rod at first, then gave it to T., the place was so awkward that we could not get near him to gaff him, though I was in the water as far as possible; however, after many tries T. got him out, a very poor fish; my opinion is they are all in bad condition, we are so far from the sea. Just as I was leaving off I rose a very large fish to the Jock Scott, three times. It seems to me that they very often come short, for we saw him rise distinctly; they are nothing like so active as trout.

"Last Friday we had the harvest festival service at three, after that refreshments in the school-room, then dancing. I went into it strong, dancing with all the girls. Post is waiting, so I must stop. I don't think I shall stay much longer, this salmon fishing is nothing after the trout, and that is all over.

"THE ARTFUL DODGER."

P.S.—Took two more salmon yesterday with the "Infallible" fly you sent me, and lost two others. Water high and good colour. Mr. L. has been getting fish every day.

FLY-FISHING FOR LEA DACE.

"HAVE you seen the dace round the island near the bridge at the Ferry Boat, Tottenham?" was the question put to me by a brother of the rod some fortnight ago. On my answering him in the negative, he replied, "Then you ought to, and get among 'em; with that whip of yours you would find plenty of sport." Passing that way a few days after, I took advantage of the opportunity to judge for myself the prospects of sport, and found that my informant had not exaggerated in the least, for the dace were there in shoals, not only round the island, but also right away down to the lower pool. I determined at once to adopt my friend's advice and "get among 'em with my whip,"

The following morning, having first tied a half dozen of my favourite flies, I start by my usual conveyance, viz., "Shanks' pony." It is a glorious morning, with every prospect of a fine day and also of sport. This, I suppose, puts me in such a good humour that I find myself humming the favourite lines of a boon companion, who, when we are trudging along to some favourite reach of the river where dace and chub most do congregate, will insist on dinning into my ears—

"That an angler's life is a jovial life,
No jollier fellow than he,
As, with pipe in his mouth and the wind blowing south,
He goes legging it down to the Lea."

And, on my remarking "Nothing new yet then, old fellow," will launch out into the praises of—

"Fishing for trout,"

until stopped by my cry of "Sour grapes," when he will immediately rush to the other extreme, and go on to say—

"Then we'll be jolly old souls and sit down by the holes
Which we've baited o'er night with fresh grains,
In the tail of the stream laying out for big bream."

But here I burst in with an emphatic *never*, so long as there is a dace or a chub left in the river to rise at a fly,

But this is digressing. Arrived at my destination I take my stand just inside the gate leading to the meadow, and opposite the island. My rod is soon put together, and having selected one of my finest drawn gut collars, and attached thereto a couple of flies, I am ready; but never having cast a fly on this particular part of the river before, I take a good survey of my surroundings, and find that it is not the most desirable spot for a fly-fisher, the trees, &c., forming the boundary of the garden are much too close to be pleasant; in fact, it is quite impossible to make a bold throw from over the shoulder. However, I discover an opening which, by keeping the point of the rod nearly on a level with the shoulder, allowed the flies to go back sufficiently far to make a cast nearly to the opposite bank, where the dace are lying. The first cast is made, and as the flies go sailing down there is a rise at the "stretcher," but I miss him. The flies are nicely dried, and again cast—another rise and another miss; and, as this is again repeated, I exclaim, "Halloa, old boy, the eye and the hand are not working together so well as usual; how is this?" And, having made another cast, and again missed the fish, I think it high time to examine the fly; and, on doing so, find the hook broken at the barb. Another fly is substituted for the disabled one, and it is no sooner on the water than there is a rise and I am fast in my fish—this is repeated again and again. I stick to this one spot the whole of the time. I am fishing, occasionally taking a rest for the enjoyment of a "quiet pipe," or to allow the disturbance of the water, caused by passing boats, to subside, and find that when yet early in the evening I consign my rod to its bag and count the spoils of the day, that I have close on seven dozen of the plucky silvery fellows, all good sizeable fish. I then take a stroll along the banks of the river, to see what the roach anglers are doing; and to my inquiries the answer is, "They are 'not on' to-day." So I adjourn to the house to replenish with a drop of "nut-brown" for the return journey. This done, I wend my way home, thoroughly satisfied with my day's sport, and fully determined to "get among 'em" again before the arrival of Jack Frost to notice them off to the deeps below. HACKLES RED.

THE "FOREST AND STREAM" ANGLERS' TOURNAMENT.—The proposed tournament, which is popularly called the fly-casting tournament, will, in consideration of the attention which will be paid to bait-casting for striped bass, be known in future as the Forest and Stream Anglers' Tournament. The committee of arrangements consists of many gentlemen who are prominent in the angling clubs of the country and in game protective societies. A feature of the tournament will be a contest for prizes to be cast with single-handed fly rods which weigh less than five and a half ounces, which will be given by the house of William Mills and Son, New York. In a few days a circular asking for prizes will be issued, and no doubt a fine list will be the result, as it is intended to make this contest the largest and best ever held in America. It is expected that it will come off about October 16, but the place is not yet decided upon.—*Forest and Stream.*

BARRISTERS FINED FOR ALLEGED ILLEGAL FISHING.

THE Hon. Claude Vivian, Mr. Stonehouse Vigor, and Mr. W. C. Bovill were summoned, on adjournment, at Liskeard Petty Sessions recently, for fishing without a licence. The Hon. Claude Vivian is the son of Lord Vivian, and is a barrister of the Western Circuit; Mr. Vigor is also a barrister of the same circuit and is Recorder of Penzance; and Mr. Bovill is the Clerk of Assize. The charge specific against the three gentlemen was, "That they, on the 28th July last, were fishing for trout in Glynn pond, in Lord Vivian's demesne, without licence," Glynn Pond being a body of water communicating, by means of a connecting stream, with the river Fowey, which forms the centre and gives title to a fishery district. The defendants did not appear in person, but were legally represented, Mr. Vigor by Mr. Borlase Childs, solicitor, Liskeard; the Hon. Claude Vivian by Mr. J. B. Collins, solicitor, Bodmin; and Mr. Bovill by Mr. P. Wallis, solicitor, Bodmin. The prosecution was at the instance of the Fowey District Fishery Conservators, who were represented by their solicitor, Mr. Pease. It was decided to take the three cases together, as the charge was identical in each. Mr. Pease, in stating the case for the prosecution, stated the cause of complaint, and produced the order of the Secretary of State as to the formation of the Fowey fishery district, as proof of the formation of the district; also, the certificate of the Secretary of State approving of the scale of licence for trout fishing, as a further proof that all the necessary formalities had been taken in respect to the Fowey district. He also produced the newspaper publication of the scale of licence, as a proof that due notice had been given that it was illegal to fish in such district without a licence. He then produced evidence in support of his case. P. C. Robert Pill, water bailiff under the Fishery Commissioners, was examined by Mr. Pease, and stated that on the 28th of July last, at four o'clock in the afternoon, he was at Glynn Pond, and saw three gentlemen fishing there with rod and line for trout. Two were in a boat and one on the bank. He asked the one on the bank if he had a licence for fishing, and he said "No," and that he did not require any licence there. Witness asked his name, to which he replied, "Mr. Bovill, Clerk of Assize," and he added, "This pond is ornamental water, and twelve months or two years ago a policeman spoke to some gentlemen who were here fishing, but it was decided that no licence was required here." Witness said it was a tributary of the Fowey river, and that he thought they should have a licence to fish there. To that Mr. Bovill replied, "It is all right. The other two gentlemen who were in the boat came to the bank, and witness asked them if they had licences; and they replied that they had not. They gave their names as C. Vivian and S. Vigor, and Mr. Vivian said, "There is no licence required here; a policeman came here two years ago when I was fishing, and I spoke to Mr. John Collins and Mr. Richard Collins about it, and they told me that no licence was required; so it is all right," and they went on fishing, and witness saw each of them catch trout.

Cross-examined by Mr. Borlase Childs: Witness said he was not aware that he had no right on the grounds where Glynn Pond was situate. Was not present at a meeting of the Conservators two years ago when there was some talk of prosecuting Mr. Vivian for fishing. Fish could not get upwards from the Fowey river into the pond. Did not know that that pond had been stocked with fish by Lord Vivian himself, but thought they came down from the stream above. They did not come from the Fowey river.

Cross-examined by Mr. Wallis: Even with a licence no one could fish in Glynn Pond without the consent of Lord Vivian. There were no salmon there. Did not know as a fact that Lord Vivian specially preserved trout there.

By Mr. J. B. Collins: Beyond being water bailiff within the district, had no other special authority for going upon this property. Knew the Assizes were on at the time and that the defendants belonged to the Western Circuit. Reported the matter to the District Fishery Conservators, and it was considered at a private meeting, no reporters being present.

Mr. Pease: In all cases when witness found persons fishing with rod and line for trout, he asked for their licences, and summoned those who could not produce them. In this case witness had not done anything different from his usual practice. This concluded the evidence in the case.

Mr. Childs, who appeared for Mr. Vigor, contended that Glynn Pond was a private pond and not a tributary of the Fowey, being surrounded on all sides by Lord Vivian's property, and that the trout being preserved his son and his friends had, therefore, the right of fishing without a licence.

The solicitors for the other two defendants concurred in arguing that no licence was required. The magistrates, after a short consultation, inflicted a fine of 6s. and costs on each defendant, but gave a test case on the point of law in the case of Mr. Vivian, which is to govern the other two cases. The case created great interest in the neighbourhood.

[This is another case proving strongly how much the Freshwater Fisheries Act of 1878 requires alteration. It ought never to have been possible to so interpret it as to apparently justify such an impudent invasion of private rights as is described above. We say *apparently*, because the magistrates inflicted a fine and costs, but we trust their decision will be speedily reversed and that the bailiff will be summoned for trespass.—ED.]

CLUB AND OTHER JOTTINGS

By L. B.

Re Thames Rights Defence Association. There are very few London angling societies of any pretension upon whose tables one or more copies of the anglers' organ, the FISHING GAZETTE, does not each week find a welcome place, and it is indeed strange if the good example set by our friends of the Waltonian Angling Society (a report of which appeared in last week's number) in voting a handsome donation, and, further, promising an annual subscription to the funds of the above capital association, does not find many imitators among London's from 160 to 180 angling societies.

A No. 2 District West Central Association visit will be paid the Sir Hugh Myddleton Angling Society, the Empress of Russia, St. John Street Road, Clerkenwell, nearly opposite Messrs. Carter and Sons' well-known fishing tackle establishment, on Tuesday evening, October 10th. The room is a very large one, and capable of accommodating a great number, so it is to be hoped the "bobs" will "come along."

A complimentary visit or house-warming and local visit combined, will be paid the Alliance Anglers upon the removal from the Old Red Lion, Warner Street, Clerkenwell, after being located there twenty-two years, to the Clerkenwell Tavern, Clerkenwell Road, on Friday evening, October 10th.

On the same evening, Friday, 10th, a meeting of the working committee of the West Central Association will take place at the Portman Arms, Great Quebec Street, at nine sharp.

Readings in angling societies. The long winter evenings are coming on, and it is worthy of consideration whether a regular series of readings, either among the whole of the London clubs or among such of them as are willing experimentally to try it, would not be a great success. The expense, principally for postage and stationery, would be very small indeed, and I feel sure would be readily subscribed by the clubs which joined in a trial of this kind. I may state that I am in correspondence with the secretaries of several angling societies at this end of the town (west and north-west) whose members would, I believe, readily support such a movement; and I certainly will not fail to report from time to time to the readers of the FISHING GAZETTE how we progress.

The usual monthly meeting of the United London Anglers' Central Committee was held on Monday evening last, at the Bald Faced Stag, Worship Square, Mr. S. Morgan presiding. A lot of business was got through, much of it relating to the river Lea. Messrs. Murphy, Wainwright, High, Ghurney, Manning, and others joined in the discussion which took place. The sum of £5 5s. was voted to the Thames Angling Preservation Society towards defraying the expenses of the recent Conference of Anglers at the Cannon Street Hotel.

CLUB REPORTS.

ALEXANDRA SOCIETY OF ANGLERS.

I beg to inform you that the members of the above society will fish a peg-down match at the Ordnance Factory on the river Lea, Sunday, October 15th. We had a most excellent show of fish on Sunday last, Mr. Chipchose, Mr. Wich, and Mr. Gripton scaling heaviest weights, from the Lea and Pulborough.—F. WAGNER, sec.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Holliday, perch; Mr. Howlett, roach and jack, 1 lb. 6½ oz.; Mr. Arnold, roach; Mr. Squire, one jack, 3 lb. 10½ oz.; Mr. Binks, perch and one jack, 1 lb. 14½ oz.; Mr. Larkman, bream, 1 lb. 14 oz., roach, 1 lb. 14 oz.—T. WORLEDGE.

Oct. 1.

ANCHOR AND HOPE ANGLING SOCIETY.

On the 1st most of our members were out, but the takes were rather poor. The following members weighed in:—Mr, J. Bowling, bream, 10 lb. 15¾ oz., one bream scaling 3 lb. 13 oz; Mr. D. Davis, bream, 2 lb. 4¼ oz.; Mr. A. Shakel, bream, 7 lb. 6¼ oz.—D. DAVIS, sec.

Oct. 4, 1882.

BERMONDSEY BROTHERS' ANGLING SOCIETY.

The members of this club fished for prizes at Amberley, but resulted in only two taking prizes, namely Messrs. Gafney first, with bream and roach, and Mitchell second, with bream. The next outing for daily prizes will be on Sunday, November 5.

BRENTFORD PISCATORIAL SOCIETY.

Only a few of our members have been trying lately with any success. I have had fair sport at Staines, with John Keene from Host Banfield's, with the barbel; Mr. H. White has also had a fair catch there, amongst the same fish. Mr. T. Waight weighed in some roach, one going 1 lb. I trust our members will show a little more activity than they have been doing for the last few weeks, and give me something more to report.—J. H. White, hon. sec.

N.B.—I have been to Stalham and Heigham Sounds, but with indifferent sport. Mr. Linstead and Mr. Field have been with me.

Oct. 4.

BURDETT ANGLING SOCIETY.

We had a good show of fish at this club on Sunday last. Mr. Lamb, roach; Mr. Coughland, rudd; Mr. Shervill, roach; Mr. Creffield, carp and rudd. The last-named gentleman had a very nice Prussian carp, weight 1 lb. 2½ oz.—T. G. WALKER.

Oct. 5.

CITY OF LONDON ANGLING SOCIETY.

Eleven of our members were pegged down at Amberley on Sunday to fish for five prizes, only two of which were taken. Mr. G. Pratt, first, winning a copper kettle given by Mr. Castell; Mr. Plumstead, sen., second, winning a well furnished tackle case, given by Mr. Perry, both weighing in bream.—CAS.

CLAPHAM JUNCTION ANGLING SOCIETY.

The annual dinner of the above took place on Thursday evening, September 28th, at their headquarters, the Lord Ranelagh, on which occasion about thirty members and friends sat down to a capital spread, provided by our host, Mr. Speed. In addition to which, Mr. Innes, as usual, sent his present of a basket of the finny tribe to add to the comfort of the members. Mr. Willoughby occupied the chair, and Mr. Innes the vice. After the usual loyal toasts were got over, success was drank to the Clapham Junction Angling Society, coupled with the name of the worthy secretary, Mr. E. Wilson, who read a statement of affairs, and concluded by saying that the society was never in a better condition than it was at present. The prizes were then distributed, the successful members being:—Messrs. Turner, Innes, Withers, Wakeford, Maslin, Welman, and E. Wilson. Some capital harmony followed, and the evening was brought to a close with a vote of thanks to the chairman for the able way in which he had presided. The following members weighed in fish on Sunday last:—Messrs. Valentine and Innes, barbel and perch, from Shepperton; Messrs. Wakeford and Maslin, jack and roach, from Kempton Park; Mr. Turner, jack and roach, from Weybridge.—E. WILSON, sec.

COBDEN ANGLING SOCIETY.

The third match of this young and prosperous society will take place on Sunday next, 8th inst., at Denham Straits. The prizes will be ten in number, viz., a handsome silver watch, two hand reading lamps, chromograph, new rod, landing net, jack line, bait can, cruet stand, and fishing box.—C. REEVES, sec.

Oct. 4.

CRESCENT ANGLING SOCIETY.

This society, which was formed on Wednesday evening, the 20th September, at the Giraffe Tavern, Newington Crescent, S.E. (proprietor Mr. James Collins) held its first quarterly subscription night on Wednesday the 4th inst., when a good muster of members assembled. Considering the short time (a fortnight) the society has been in formation, it may congratulate itself on its success, twenty-two fishing and four honorary members having been enrolled. Prizes to the amount of 4½ guineas, and one of Sowerbutt's best roach rods were presented as an encouragement for the first competition, which takes place on Wednesday, the 25th inst. Gentlemen wishing to join, or desiring any information may apply to the secretary, F. Pearson, at the club house. Meeting nights Wednesdays and Sundays, 8.30 sharp.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

On the 1st October the members of the above club fished for special prizes and a large sweepstake. The most successful were Messrs. Holdsworth and Stevens, roach and dace; and Messrs. Jones, Tracey and Morris with some fine jack.—W. G. GARDNER.

October 4.

GOOD INTENT SOCIETY.

There was a good show of fish brought in on Sunday last, Mr. W. Snook having a tray of capital roach and perch; Guntrip, bream; Haines, roach and rudd; Maybury, roach; Gadbury, jack; W. Hughes, jack; Huggett, bream. The members will fish at Boxwood on Sunday next for twelve prizes, the first £2 2s., five of £1 1s, and six 10s. 6d. prizes. We have also two special prizes for the month, heaviest weight of roach and heaviest weight of jack; and a splendid watch, given by Mr. H. Brookwell for the largest jack taken during the season.—R. MURPHY.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

The next general visit of all the angling societies will be held at the Robin Hood, Southampton Street, Pentonville, on Monday, October 16.—J. A. FITCH, sec.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This Society held its weekly meeting at nine p.m. last Monday, at the club house, when a goodly muster of members were present, including Dr. Mitchell, president; P. Courtenay, Esq., vice-president, who, I am sorry to say, has been obliged to resign that position, and whose services will be a great loss to this society, he being one of its first members, although we cannot but congratulate him on his promotion. Amongst other gentlemen present were Mr. Bennett, who weighed in on Saturday 14½ lb. of bream, Mr. Hamersley, who, I am sorry to say, finishes his stay in Yarmouth during the present week, and Mr. J. H. White, Brentford Piscatorial Society, and other gentlemen. After the usual business the secretary reported a jack, weighed in by Mr. Hewittson, of 7 lb. from Ormesby, and also that he had received several letters from London anglers promising their attendance and assistance at the forthcoming first annual dinner of this society, proposed to be held during this month, when the members from the country and other gentlemen will be invited to attend, and it is to be hoped that everyone who has the interest of this society at heart will help, to the best of their ability, to make it a success.—J. LARK.

IZAAK WALTON ANGLING SOCIETY.

Five special prizes were fished for in the Stort on Sunday last, the 1st inst. After a keen competition, the following was the result:—Mr. W. H. Mecham, first; Mr. J. Barnes, second; Mr. G. Manning, third; Mr. G. Bliss, fourth; Mr. H Auburn, fifth. As Mr. Auburn was in the act of throwing in his line, a moor-hen flew from the rushes close by, and seized the bait as it was sinking; after a game resistance, he succeeded in landing it, and it is now in the hands of Mr. John Barrett, of 11, Diss Street, Hackney Road, to be preserved. Mr. G. Bliss was again on Wednesday amongst the large roach; he had five, which weighed 3 lb. 14 oz., and which were in splendid condition.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, and had capital sport. Mr. Hurwood again heading the list with a fine show of roach and perch; Mr. Scott, a fine show of roach and rudd; Mr. Keene, jack; Mr. Raine, roach; J. Evans, gudgeon; H. Moore, roach and perch.—W. H. EVANS, sec.

Oct. 5,

NORTH WESTERN ANGLING CLUB.

On Sunday the 1st inst. a few of our members fished at Pangbourne for three prizes, roach only to weigh. Mr. Hill took first, with 3 lb. 6 oz.; Mr. Hillier second, 3 lb.; and Mr. Wynn third, with 10 oz. Messrs. Stead, Holmes and W. Roxbee also had roach.—H.

October 4.

PECKHAM BROTHERS' ANGLING SOCIETY.

The members of this society have been doing very badly as far as angling extends, the shows of fish being very small indeed. In vain has the hon. secretary tried his favourite swims at Staines, in vain has "Sloper" tried to draw the jack from the Lea. They both return with light baskets but heavy hearts, and have to console themselves with a mild and bitter at Host Reed's. The members will try their fortune at Pulboro' on the 8th for tbe "cup." Odds, 2 to 1 on the "Dotter," 20 to 1 against all others. The dinner, to commemorate the formation of this society, is fixed for November 7. Tickets, 2s. 6d. each, may be had on application to the hon. secretary.—W. H. PAGE.

Prince Albert, East Surrey Grove, Peckham.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

There has been very little angling news to record in connection with this society of late. The contests and outings this season have been "few and far between" in comparison with former years. Whether the increase of rodsters has decreased the fish in their favourite "hunting grounds" at Chichester and the Rother (at Salem) is a question; but this is certain, that the insignificant catches and the small size of the fish have deterred numbers of the good anglers from pursuing their favourite hobby Salt-water angling has been very favourable for the past month, and very large catches have been obtained, both from the land as well as in boats—principally bass, mackerel, pollack, and pout. While I am on the subject, I may add that Mr. Ritchie, a member of the club, last week, fishing from Southsea Beach, near Lumps, hooked and landed a splendid bass, weighing 7 lb. 11 oz.—DAGGERWOOD.

RODNEY PISCATORIALS.

On the 24th of September the members had an open competition for four prizes, but the fish taken, although according to the Thames rules, failed to come up to the society's standard, and therefore the prizes were not taken. On October 1st the competition was again renewed on the same terms; this time Messrs. Smith and Luland succeeded in getting the first and second prizes with bream from Amberley. At the meeting held on the 4th, information was received that Mr. Hockley would present a tankard for competition, Mr. R. Grant a handsome lamp, Mr. Canton £1 1s., and Mr. Ball a dozen tins of lobster. On the 15th a competition will take place for Mr. Grant's lamp, the two prizes left from the last competition, and Mr. Ball's lobster.—PIXIE.

ROYAL GEORGE ANGLING SOCIETY.

Several members of the Royal George Angling Society were out last Sunday, and had good sport. Mr. Trotter weighed in 7 lb. 4 oz.; Mr. Hughes, 4 lb. 14 oz.; Mr. Parsons, 4 lb. 6 oz., while Messrs. Chart, Palmer, Wood, Bernhardt and Mahoney had very good takes.—C. W. W. BERNHARDT, sec.

Oct. 3rd.

STOKE NEWINGTON ANGLING SOCIETY.

A competition for four prizes took place on Oct. 1, roach only to weigh. Very boisterous weather had the effect of diminishing the catches of fish, only three out of the four prizes being taken. Mr. T. Gretton won the first, Mr. A. Pring the second, and Mr. C. F. Robinson the third.—T. GRETTON.

Oct. 3.

SURREY PISCATORIALS.

On Wednesday next, the 11th inst., the members of this society will compete for the following prizes:—First, £2 2s., given by Mr. White; second, pair of boots (30s.), given by Mr. Nash; and third, £1 1s., given by Mr. Peters. Mr. Beckett and a friend visited Richmond on the 4th, and managed between them to get over 12 lb. of dace and barbel—the barbel weighed over 3 lb., and the dace were in splendid condition.—PIXIE.

Oct. 5.

THE PISCATORIAL SOCIETY.

There was every indication in the attendance of members at the club room, Ashley's Hotel, Henrietta Street, Covent Garden, at the weekly meeting on Monday evening last, that the holiday season was about over. Mr. David Goodger, an old and respected member of the society was called upon to preside, and there was this gratifying circumstance on the occasion, that the esteemed father of the club, Mr. F. G. Pearce, was present for the first time since January last, and after his long and tedions illness. It must have been very pleasing to him to witness the members as they came into the room making their way to express their delight with a hearty shake of the hands at seeing him amongst them again. There were also present Messrs. Thomas Gillatt, T. Huggett, R. S. Fenning, J. P. Wheeldon, W, H. Brougham, F. C. Hatfield, R. L. Pugh, H. B. Brown, H. Wilkinson, G. E. Latchford E. Russell, George Robinson, C. P. Wheatstone, E. Bennett, James Lander, T. Norman Harrison, E. Walker, &c. The special occasion was a Thames roach fishing competition of fish not less than six ounces, but as it is always late before the bulk of the competitors arrive, other business is previously transactea. The chairman advances the bnsiness element of the meeting, so as to give those who live at a distance the chance of getting away early, whereupon the houorary secretary, Mr. James Lander, reads his minutes of the previous meeting, which are unanimously confirmed. The presentation of a copy of "Beaten on the Post," by the author, Mr. J. P. Wheeldon, is highly appreciated, and on the resolution of Mr. T. Gillatt, seconded by Mr. C. P. Wheatstone, a hearty vote of thanks is accorded, to which Mr. Wheeldon gracefully replies. The scales are now at work in the weighing in room. The three first shows did not number more than a dozen each—then there was a momentary lull speedily broken by the announcement ot "a good basketful"—then the rejection by a mere shade of not unsizeable fish but unweighable ones. The evening wore on most pleasantly and harmoniously relieved by these occasional arrivals. Mr. F. C. Hatfield was heartily congratulated ou some of his recent piscatorial achievements Mr. George Robinson, the great roach fisher in the Avon, did not compete in the Thames, but was full of interest in the result of the present Metropolitan river competition. It may altogether be said of the meeting of Monday evening last that it went well, and Mr. Goodger conducted the duties of a chairman with his usual courtesy and spirit. The following is the result of the Thames Roach Competition of 1882:—Mr. Beasley took took the first prize of £2 12s. 6d. with 6 lb. 1½ oz. of fish: Mr. E. Foreman, the second prize of £1 11s. 6d, with 3 lb. 11½ oz.; and Mr. Walker got the special prize of one guinea for the best specimen fish, offered by Mr. C. P. Wheatstone, with a roach of 1 lb. 3¼ oz. There was a rejection of about 40 lb. weight of roach, which doubtless when caught would have weighed six ounces each, but in the room would not turn the scales. It should be mentioned that Mr. Thomas Dawson presented the society with four handsomely framed views of Boulogne. A cordial vote of thanks was passed at the close to Mr. Goodger, as chairman of the evening.—B.

TRAFALGAR ANGLING SOCIETY.

The members of this society had a nice show of fish on Sunday. Mr. Potter, roach from the Thames; R. Gaze and Mr. Richardson, roach and perch from the Wey; H. Wilson, roach from the Mole; Mr. Goldstine, rudd and gudgeon from the Medway; Mr. Humphries, 3 bream, 3 lb. 12 oz.; J. Gaze, 1 roach, 1 lb. 4 oz, 1 perch, 2 lb. 4 oz. from Amberley; Mr. Lord, roach from the Colne; Mr. Morris, bream from the Harp.—J. GAZE, sec.

October 2.

WALWORTH WALTONIANS.

On the 15th the members will compete for the following prizes:—£1 1s., given by Mr. Mawbey, and 10s. 6d. given by Mr. R. Cain, condition "go where you like" and fish how you like, all fish to weigh according to club rules. In regard to the October competition, all fish must be weighed in the club house the same day as they are caught. Mr. C. Bansback, jun., has been appointed to weigh the same in the absence of the secretary or any member of the committee. On the 24th September Mr. Bayley had some nice roach from Amberley, and on the 29th September Messrs. Evans and Boalch had some good sport among the dace at Twickenham.—PIXIE.

WESTBOURNE PARK PISCATORIAL SOCIETY.

A "Go where you like" match took place to-day by members of the above society. Mr. Adeane, the secretary, took 1st prize with a very handsome show of roach from Godfrey's water, West Drayton, 12 fish, weighing 10 lb. 13½ oz.; Mr. Jines, 2nd prize of £1, with 3 barbel from Thames, scaling 8 lb. 4½ oz.; Mr. Garham took 3rd prize, 10s. 6d., with 4 lb. fish from Harfield. Messrs. Tapping, Buttery, Evans and Beatly also added to the display, which was the finest this season.—G. EVANS.

Oct. 3rd.

THE CAUSES OF THE DECREASE OF FISH IN THE THAMES.

IT would be difficult to connect the above subject with the science of ballooning, and yet we are not surprised to hear that the energetic Balloon Society of Great Britain has secured from the hon. sec. of the Gresham Angling Society, Mr. T Crumplen, the promise of a lecture on the causes of decrease of Thames fish. The lecture will be given on Friday evening, October 13, at eight o'clock, in the society's lecture-room at the Westminster Aquarium. Admission is by ticket only. We can promise all who are present on the occasion a very able and interesting paper, the subject being one to which Mr. Crumplen has given much attention.

PROPAGATION OF BLACK BASS IN OHIO.—A sportsman of Chagrin Falls, O., writes as follows regarding the efforts of the local club to stock the waters in that locality with the best varieties of game fish. The propagating pond built by the Chagrin Falls Fish and Game Club here last summer, and into which were placed six small-mouthed black bass (two of which died) last Fall, is now well stocked with little bass about an inch long, there being hundreds of them in sight around the borders of the pond. These little bass are to be used in stocking waters in this vicinity which do not contain this kind of fresh water fish. The experiment proves, what has heretofore been disputed, that small-mouth bass can be successfully propagated for stocking purposes in small ponds. In view of the success attained by the Chagrin Falls Fish and Game Club in propagating black bass, they will attempt the propagation of the other fine varieties of fish. The club has done much already in the way of planting the small-mouthed bass in waters formerly barred of this excellent fish, and in procuring and distributing German carp, through the kindness of Professor Baird, of the United States Fish Commission. They propose to push the work further and more vigorously than ever before, and desire the co-operation of the public in the work.—*Turf, Field and Farm.*

REMARKABLE BICYCLE RIDE.—The 24 Hours' Road Competition promoted by the manufacturers of the "Facile" Safety Bicycle, took place on Saturday last. The event has attracted great interest among bicyclists and others, and the start was made from Anderton's Hotel at 12 midnight on Friday, in the presence of an immense gathering of spectators. There were 26 starters, and the result of the race was as follows:—1st prize, value £10 10s., won by Walter Snook; distance ridden in the 24 hours, 214½ miles. 2nd prize, value £6 6s., won by W. F. Sutton; distance ridden, 198 miles. 3rd prize, value £4 4s., won by C. H. Cole; distance ridden, 189 miles. Besides the above, 14 riders are entitled to the gold medal, value £3 3s., having accomplished 150 miles, and two to the silver medal, value £1 1s. (128 miles). All the competitors rode "Facile" bicycles, varying in size from 36 in. to 44 in., and, taken altogether, the performance of the winner may be considered the most remarkable that has yet been accomplished upon the "silent steed." The whole arrangements for checking the race were in the hands of Mr. G. P. Coleman, official time-keeper to the Bicycle Union.

A MAN CHOKED BY A LIVE FISH.—The Hawaiian *Gazette* states that a native named Kehale, while fishing at Milako, came very near being choked to death by a small fish, which slipped from his hand into his throat, as he was attempting to kill his finny captive by biting it upon the head. The fish was removed from the throat with the greatest difficulty. American anglers will please take warning.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS

MID-THAMES.

"Amongst the views of many, mine."—SHAKESPEARE.

The river is still very bright and fish difficult to obtain in satisfactory quantities In consequence of frosty nights perch are beginning to herd, and may be best had with a lively minnow on a fine gut paternoster. The use of a chumpy cork float above the paternoster is very desirable, as it keeps the tackle erect, besides enabling the eye, as well as the hand, to detect a bite. Those who try this style of perching will soon find out its utility. Chub and barbel are very shy in this clear water, but small roach may now be caught galore; the big ones, however, are still in the weeds, but surely will soon quit their odoriferous quarters for fresh fields and pastures new, as the weeds are rotting fast, and will soon be—where? "Why, down by the sea." Jack are now on the war trail, and anglers will have little difficulty in finding in them foemen worthy their steel. The Henley waters have recently been much disturbed by being drawn off, so I have no items from that quarter; but a Henleyite has taken three jack in the Hambledon district. At Medmenham, H. Rhodes, Esq., with Tom Street, on Tuesday got a pretty sample of roach, and Mr. T. Huggett, on Monday, got some 3 dozen roach, but could get few fit to weigh the Piscatorial Club standard of 6 oz. Marlow, Cookham, and Maidenhead reports all tell of decent sport amid the roach with an occasional jack or clinking perch to grace the baskets. The weather is delightfully autumnal, and old Father Thames just now, with his outside coat of many colours, is well worth a jaunt of miles to view.—MARLOW BUZZ.

Ancholme District.

Roach and bream have fed very well during the past week, and the water is in excellent condition for pike fishing. Trout fishing has been brought to a close. It is under contemplation to restrict some of the becks during the coming winter. The newly-established club at Grimsby is making headway. One match has already taken place, and it is intended to hold another on Saturday, the 21st of October, at Thoresby Bridge. Several valuable prizes have already been promised, and it is hoped that the list will be considerably increased before the eventful day. The annual dinner will be held at the Masons' Arms on Tuesday, the 31st inst —THOMAS FORD.

Chichester.

Sport during the past week has slightly improved, some good takes of small fish coming under notice. Perch have given fair sport, Mr. Young taking a good fish. Some good bream were taken after dark last evening by Messrs Young and Summers. Pike are disporting themselves in the basin, the first jack of the season being taken by Mr. Smith with live bait. To-day, with a north-easterly wind. several members of the Portsmouth Waltonians paid a visit to the canal, but, like myself, were unsuccessful, a few small roach and perch only coming to hand; in fact, until late in the day fish were entirely off the feed On the Rother, near Petworth, Mr. Moser recently landed some nice roach averaging 8 oz. The railway company having discontinued the Sunday train service to Selham, Midhurst, &c., Petworth and Pulborough will doubtless be the venue for future outings.—GEORGE F. SALTER.

Derwent (Chatsworth).

The weather during the past week has been very favourable for anglers, and the water never in a better condition than at the present time. Sport since my last communication, trout excepted, has been quite first-rate. Practically speaking, trout fishing on this river is now over, but angling for grayling is just getting to its best, and right up to December the ardent grayling follower will be busy, no matter how cold the weather may be. One gentleman during the past week has had some very good takes, having caught no less than 50 brace with the bumble and little blue dun.—WHEATSHEAF HOTEL.

Dove.

We have had an excellent water all the week, there having been what is known as a woodland tint in it, just the sort of shade our rodsters like to see. The dark October dun has been on the surface in myriads every day when the sun has set. I learn that the keeper of the Okeover length killed seven brace of trout on Saturday, which was the last day of the trouting season. Heavy dishes were also killed the same day below Norbury and Rocester. This week the speckles have been rising freely to the angler's grayling flies, but when taken they have, of course, but to be returned to the river. Coarse fish have been biting first rate at the maggot and worm, and rodsters at the lower parts of the stream have had famous sport daily. Weather still beautiful.—THE SPLODGER.

Eden (Armathwaite).

The water has been low; but on September 28 a good basket of trout was got by George Ferguson; on the 29th, Canon Whitmore and Mr. Steel each had a nice basket; and Mr. Crowther, four, averaging $\frac{1}{2}$ lb. each. Trout season finished on Saturday. The river is now in first-rate order, and salmon are coming up plentifully, so good reports may be expected next week.—SKIDDAW.

Exe (Tiverton).

The river continues in good order for salmon fishing, and fish are being taken daily.—WM. MUDFORD.

Kent (Westmoreland).

Our trout fishing season closed on Saturday last, and has, on the whole, been a fairly average one. Perhaps on the lower portions of the river fewer fish have been taken this season than during some previous ones, and this may be owing to the disease which two years ago, and again last year, appeared to almost decimate the fish down there. Trout have run to a greater average size than usual, and as there was an unusual amount of food on the water they were in capital condition. The previous mild winter would be instrumental in producing such a desirable state of affairs. There is at present considerable sprinkling of fish affected by *saprolegnia ferax*, both salmon and trout, but it is not so bad as last year. Considerable dissatisfaction is expressed at the trout nets being worked up to the end of the season, and this, too, when there are salmon and sea trout in the river. Who is to see that the latter are returned when caught? This also applies to Windermere. Two of a family of poachers the well-known Shepperds, were caught the other day at the river side with chloride of lime in their possession and a portion they had placed in the river. This was proved without a doubt, but after adjourning the case, the charge against the fellows was dismissed because no dead trout were produced! The thanks of all anglers are due to Mr. G. Teasdale, who followed the men and caught them in the act for which they should have been convicted. We have had some capital sea trout fishing at nights during this September moon, mostly on private waters. On Friday last the writer was fortunate enough to catch a very fine mort or sea-trout (*Salmo trutta*) weighing just 7 lb. This is the largest fish of the kind ever killed with rod on the Kent; it was rather a long than thick fish, but when cooked was capital both in flavour and colour. Two or three small salmon have likewise been taken lately, and the slight fresh of this week and the recent high tides should send plenty of new fish up the river.—SPRINT.

Leicester.

The week taken upon the whole has been fine, but the cold easterly winds have not been in favour of anglers. A good number of devotees have been out, and many have met with good success. On Friday, the 29th September, a pike weighing, $8\frac{1}{2}$ lb. and measuring 1 yard $5\frac{1}{2}$ inches in length was caught at Welford Reservoir by Mr. H. G. James, of Ribworth, and was landed with the assistance of Mr. T. Hardy, of Leicester, who was fishing close by at the time. The fish, after about twelve minutes' determined struggling, was landed, and has been sent to London to be set up in a case. Mr. Haddon, on the 30th, took a nice basket of roach, weighing 8 lb. Mr. Lewis, on the same day, also had 4 lb. of roach; Mr. Ridgway a couple of brace of pike, taken spinning; whilst Messrs. Bennett, Blockley, and Burgess have been fairly to the front with some good takes of roach and perch. At Aylestone roach and chub have been caught in larger quantities than has been the case for the past few weeks. From Barrow matters are reported as rather quiet, but, on the other hand, statements to hand from the Wreake are of a most encouraging character, and several Leicester anglers fishing these waters have returned home with good baskets of both roach, perch, and pike. To-day (Thursday) the weather has been fine, but cold, with the wind in the east, but little has been done. Waters fine and clear, but not in bad condition for angling.—ALERT.

Nen (Northampton).

The water is now in good condition, and I hope next week to be able to forward you some good takes of fish. As I told you in my last, the third-class members of the Nen Angling Club turned out in good force on Saturday to compete for their prizes, offered by local gentlemen. But the heavy rains on Friday morning caused the river to overflow its bank on Saturday, which was not favourable for angling, and not one could rise the stipulated weight, so the prizes will have to be competed for again. I noticed a number of the Northampton Working Men's Angling Club were out on Saturday. J. Seal caught a nice 8 lb. bag of roach and 1 pike $3\frac{1}{2}$ lb.; H. Smith 2 brace, largest $3\frac{1}{2}$ lb.; C. Eyte, 1 pike, $2\frac{1}{4}$ lb.; altogether a nice show of fish was on view at the club house, W. Rigby, Half Moon, Bridge Street. The members of the above club hold their next series of prize fishing on Saturday next, when prizes to the amount of £2 10s. will be competed for in the upper water.—THOMAS JONES.

P.S.—This day (Thursday) H. Smith and H. Hewlett, members of the above, had a grand day, killing $6\frac{1}{2}$ brace of pike in the lower water.

Ribble and Hodder.

The rivers are now in nice order for salmon fishing, but only two salmon have been caught just below Hodderfoot. Last Saturday one fisherman caught three morts and two sprods, and another three morts and four trout, in a clear water. We have had a gentleman from Liverpool staying here; on Tuesday he caught a very nice mort, and yesterday two mort, and hooked a salmon, but lost it.—E. DUGDALE.

Taw (N. Devon).

Water just right, and salmon and peel in abundance. Mr. Bradshaw and other gentlemen, fishing in the Mole, have done well, and landed some large salmon and peel, all with the Barnstaple minnow. Some gentlemen, who do not wish their names made public, have taken some salmon in the Lower Taw, I saw a dish of good trout taken on Saturday, for the wind up, and the fish were in good condition. A gentleman staying at Abbotsmarsh upon the Taw, I hear, got over thirty salmon and peel this year, and I am certain Mr. Bradshaw must have bagged over 300 peel and salmon.—RUSTY GAME.

Thames (Goring).

Water in good order for roach fishing. Roach biting well. Jack and perch not on much. My best day, 10 lb. of roach, four jack, and a few perch.—JOHN RUSH.

Thames (Hallford).

The river is very low and bright. Different gentlemen fishing with me since last week's report have had takes as follows:—First day, Mr. Valentine, three barbel and a perch, best barbel weighing 4 lb.; second day, two gentlemen, four bream and two barbel, altogether weighing $20\frac{1}{2}$ lb.; third day, Mr. George Palmer, four bream, three barbel, two roach, and a chub, altogether weighing 24 lb.; fourth day, Mr. Young, three barbel weighing 9 lb.—GEORGE ROSEWELL.

Thames (Richmond.)

The river is now in good fishing order; but the fish are not feeding quite so well as they did last week, though I anticipate a good report next week. All the punts here are out most days, and the patrons of the Richmond fishermen have had some good takes of roach, which have been of good size. The average takes have been from 10 to 16 lb. per punt for each day, all sizeable fish.—John Bushnell.

Thames (Twickenham).

Wind N.E. The rain we have had during the week has improved the river. I have had 29 punts out during the week, and yesterday (Wednesday) I was obliged to send some of my customers back to London without wetting a line for want of punts. I am pleased to say we are now getting some good fish, and everything looks promising for a good autumn fishing. I will again advise my customers, to prevent disappointment, they should write or wire in advance if possible. I should be taking up too much of your valuable space if I were to give you each punts taking in detail, but each punt will average from 6 to 10 dozen a day, of course some taking more than others. Jack Spong, with Mr. Eydman and friend, of the Acton and Ealing Angling Society, took a nice basket of roach and dace, fit to show anywhere; the same with Mr. Howes and Goodwin, of Dalston, and with Captain Martin 15 lb. beautiful fish, and yesterday with Mr. and Mrs. Pitcher, of Warwick Lane, Newgate Street, 25 lb. of splendid roach and dace. "Our Joe" has been fully employed, taking some roach weighing over 17 oz.; these were the finest roach taken here this season; also 2 barbel, but not of any size worth note, one weighing 2 lb. and one $3\frac{1}{4}$ lbs. Dick Moffatt and Farmer have both been well employed, Dick one day with Mr. Goodyear took 8 dozen good fish, and any amount under club size. I am sorry to hear that some of our Richmond brethren have stated that my reports are not truthful. If there is any further doubt I shall be pleased to send them the address of any of my customers whose náme I give in my report, and they will answer for themselves.—Alfred Perrin.

Thames (Windsor).

Thursday afternoon. The river is very low, for the rain we have had. I went up the river to bait for barbel with worms and greaves; saw nobody out; fish ought to bite well now if tried for, a few stray jack and barbel have been caught. G. Lumsden.

Teme (Ludlow).

During the last few days there has been little or no fishing here, owing to the state of the water, which has been very high and muddy; but it is now getting into good order for grayling fishing. In the latter part of last week, a fair amount of grayling were caught in the neighbourhood, one or two very good baskets being taken.—C. B. Marston.

Torridge (Torrington).

The river is in splendid order for salmon and peel fishing, and I am pleased to report good sport has been had, 9 peel falling to one rod yesterday. Many salmon have been seen sporting, 2 were hooked on Thursday, and after being brought almost to land, lost. A $2\frac{1}{2}$ inch bright Devon minnow has been the most successful bait in ensnaring 26 peel since last report.—John D. Bastard.

Torridge (Woodford Bridge).

River this week in capital order, a gentleman from Padstow has had some excellent sport. Mr. Borlase killed twenty-eight on the river Waldon, a small river running into the Torridge; some good sport also in the upper waters. For the last forty years I have not seen the fish in such excellent condition for so late in the season. Several dace have also been taken, the favourite flies being the blue upright, and red palmer, and the Devon minnow. —John Blake.

Trent (Newark).

The very heavy rains of last week caused the river to rise some two feet or so, but not much colour came with it; it is now getting in condition rapidly. By the time this is in print it will be in fairish condition for any sort of angling that can now be practised. Not much has been done this week, a few anglers have been out, but bags have not been very heavy. A few nice dace have been taken; gentles have been the most successful lure for those fish. A few small chub have also been had with worms for bait; in short, sport has been of such a meagre character this week that there is nothing worth recording as far as I could learn. At the time of writing (Thursday night, 7 p.m.) the prospects look a little better, despite the adverse state of the elements. Gentles and worms will be as good baits as can be tried just now, while the angler might try the roach with paste and creed wheat just for a change. Chub should soon get into their winter quarters, and revel in the luxury of pith and brains, and jack ought soon to reward the spinner by "hanging on" one of the triangles of his flight.—The Trent Otter.

Trent (Nottingham).

Sport during the week has varied a good deal. In the early part of the week the water, through rain, was much discoloured, and in some of the lower reaches bream fed freely, although, as a rule, the takes were not large. In the upper reaches some splendid dace have come to hand from Swarkestone, one that I saw weighing $10\frac{1}{2}$ oz. Mr. Field, at Weston, has caught a nice lot of barbel in the Severn below King's Mills Weir, but the season for these game fish is now almost at an end. A few cold nights will drive them in their winter quarters. At Kneeton, Mr. J. Theaker, fishing with Mr. H. Barton, has caught a nice bag of chub, and some of the same species have been shown from Shardlow.—The Man at the Clubs.

Wharfe (Yorkshire).

This river is now in good order for fly-fishing, and should no more rain fall there will, I expect, be some good sport among the grayling; the small willow fly, honey dun, bumble, water-hen, and orange and needle brown will perhaps be the best flies to employ; the weather during the past few days has been close and warm for the time of year.—Francis M. Walbran.

Wye (Bakewell).

The water is a little high for grayling fishing; it will be in good order by Monday if we have no more rain. There have been a few gentlemen out, they have killed some good grayling, but not many. Apple green and olive quill, furnace, and needle flies have been killing.—R. H.

Wye and Derwent.

Trout fishing closed with us last Monday, the 2nd inst., according to the Fresh-water Fisheries' Act, and I must say, taking the season on the whole, we have had a very good one in Derbyshire. Both rivers are now in excellent condition for either fly or bottom fishing, and I am pleased to say since my last report some good baskets of both trout and grayling have been killed fly and bottom fishing, and baskets from 5 to $10\frac{1}{2}$ brace per angler have been made. Both duns, bumbles, and furnace flies have all killed fish, the bumbles taking the greatest quantity. I have just received a letter from a gentleman, H. Cotes, Esq., of Manchester, who was fishing in the Tees last Saturday, with one of my bumbles—on drawn gut—he hooked a salmon of nearly 5 lb., and killed him, after having him on over half an hour. This is a wounderful performance for to kill a salmon on fine drawn gut, it only shows what fine gut will do if properly handled. Weather very close, and rain threatening to-night Thursday.—George James Eaton.

Yare (Norwich).

The high tide which prevailed the latter part of last week made angling in the lower parts of this stream of hardly any account, the majority of the disciples of old Isaak who were out returning with nearly empty bags; here and there was an exception, and in each case I note the successful piscators were those I should term "early birds who are out with the worms," and who know the water well; in each instance they have come up stream. On Saturday last, a well-known visitor at the Buckenham Ferry, took, with a friend, 84 nice roach. The same day at Brundall, 54 fine roach were taken in a short time by two rods, and this was the only instance of luck here as far as I can ascertain. A Sprouston angler caught early this week 109 roach, weighing $39\frac{1}{2}$ lb., the largest fish scaling 1 lb. 11 oz. I have heard of no other catches worth noting. I am very pleased to inform you that Mr. Thomas, the gentleman who wrote you with particulars of his sport and experiences of Wroxham Broad, has become a subscriber to the Yare Preservation Society, and should he visit this locality next year, it would afford your correspondent pleasure to be of any service to him. I trust more London brethren of the angle who visit our waters will follow Mr. Thomas's example. The water here is in good condition, and I hope for good sport during the next week.—Robert Moll.

Yore (Hawes).

The water here is in first-class condition, and will continue so for some days; in fact, fly-fishing for grayling could be carried on with advantage for a fortnight without more rain. However, should we have a fresh, say once a week, it would not retard, but add to the pleasure of those who love the "gentle craft." As the trout season has only just expired, little or nothing has been done in Upper Yore during this week very few of the natives availing themselves of the opportunity which the well-conducted association of Hawes and High Abbotside affords them, and of which Mr. Beck Thompson, of the Crown Inn, Hawes, is secretary, a gentleman who I can with confidence recommend, not only through his widespread hospitality, but the claim which he justly holds as being an undoubted disciple of I. Walton. As regards suitable flies for the upper part of the Yore, I should say black and red palmers, and any other bright or tinselled flies, in fact, any flies that are found to act well in any other part of the river; in a fresh, the small worm.—Cotton.

AN ENGLISH ANGLER IN AMERICA SINGS.

"As pants the hart for water brooks,
So do I pant to be
Once more an angler on thy banks,
My river bright and free.

"The summer winds, that tremblingly
Through reeds and flag-flowers quiver,
Sing thee a dreamy lullaby,
O, gentle angling river!

"Roll on, roll on, I shall not draw
A moral from thy race,
Enough for me, O, angling stream,
Thy pleasant banks to trace."

The Thames Angling Preservation Society.—We would be pleased to record the advent of an association in America similar to the Thames Angling Preservation Society, one having wide influence and power to check, if not entirely suppress, the illegal fishing which is openly engaged in upon many of the best lakes and streams at all seasons.

A Hint to the Angling Fraternity.—Those who are so fortunate as to cast their lines in pleasant places should carefully preserve the memories of angling days by the equally entertaining lines of the pen. Strangely enough, the angling fraternity is not so communicative through the medium of the press as the brothers of the gun; and this characteristic is commented upon by a contemporary as follows: "It seems astonishing that people who will talk about fish and fishing by the hour will not write about the same subject for a minute. As a rule, it is difficult to get much information from anglers for publication. They have their favourite streams, which they keep quiet about, and their favourite flies, which they keep secret. They will seldom take up the pen to write a few points which will be of interest to their fellow-sportsmen, yet these same readers will find fault if there is not plenty of fresh news for them."

Leading a Cheese.—Charles Matthews used to tell, with great glee, a little story of Charles Lamb, which he vouched for as authentic and believed to be unpublished. One evening Mary Lamb took a sudden and violent fancy to have some Stilton Cheese for supper, an article of which they had not a scrap in the house. It was very wet, and getting rather late; but Charles with that self-denial which showed itself in a life-long devotion to his sister, at once volunteered to try whether any could be got. He sallied forth and reached their cheesemonger just as the shutters were being put up. In reply to his demand, he was assured that they had some very fine ripe Stilton; and the shopkeeper proceeded to cut off a slice. As it lay on the scales Lamb's attention was forcibly arrested on the lively gambols of a number of maggots which came to the surface of the "fine ripe Stilton." "Now, Mr. Lamb," said the cheesemonger, "shall I have the pleasure of sending this home for you?" "No, th-th-thank," said Charles. "If you will give me a bit of twine I cou-cou-could p'rhaps l-l-lead it home!"

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

FISHING PLACES NEAR MANCHESTER.

Sir,—In reply to Mr. J. Brooks' enquiry respecting fishing places round Manchester, I enclose a list of those most frequented by our local anglers. Those marked "by permission," Mr. Brooks must join our local club, and by making good use of his time, will soon learn how and where to obtain permission; or if he prefers to communicate with me direct, you, sir, have my address, and I shall be pleased to give him all the assistance I can.

In addition to those named there are hundreds of private waters (locally termed lodges) where good rough fishing may be had, and in most of the canals there are good roach.

To aid others interested in Mr. Brooks' enquiry, I give names of places, stations, lines, distances, and class of fish to be found.—I am, &c.,

W. R. R.

[We beg to thank W. R. R. for the trouble he has taken. We give below the table.—Ed.]

Names of Places.	Station.	Line.	Mls.		Class of Fish.
Weaver	Halton	L. & N. W.	23½	Free	Trout, pike, bream, roach, graining, gudgeon and eels
Weaver	Northwich	Cheshire	20¾	Free	Trout, pike, bream, roach, graining, gudgeon and eels
Dane	Northwich	Cheshire	20¾	Free	Trout, bream, chub, roach, graining, gudgeon, and eels
Lostock Brook	Northwich	Cheshire	20¾	Free	Trout, bream, chub, roach, graining, and gudgeon
Lostock Brook	Lostock Graham	Cheshire	16½	By permission	Trout, chub and eels
Smoker Brook	Plumbley	Cheshire	17¼	2s. 6d. per day	Trout, chub and eels
Bollin	Heatley	Cheshire	11¾	By permission	Trout, chub, pike, roach, graining, gudgeon, eels, and perch
Pie Mere	Lostock Graham	Cheshire	16½	Free	Bream, roach, perch, eels and pike
Marbury Mere	Northwich	Cheshire	20¾	By permission	Bream, roach, perch, eels and rudd
Acke Mere	Delemere	Cheshire	28	By permission	Bream, roach, perch, eels and rudd
Newton Mere	Newton Bridge	L. & N. W.	15¾	By permission	Trout, pike, perch, roach, bream and eels
Woodhead Reservoirs	Hadfield Crowden	M. S. & L M. S. & L.	13 17¼	By permission By permission	Trout, perch, and char in one of them
Whaley Bridge	Whaley Bridge	M. S. & L	15	By ticket at — per day*	Trout, pike, roach and perch
Bury	Bury	L. & Y.	12	By ticket at 1s. per day	Trout, pike, roach and perch
Buxton	Buxton	L. & N. W.	25	By ticket at — per day	Trout and grayling
Miller's Dale	Miller's Dale	Midland	29½	By ticket at — per day	Trout and grayling
Nicholls' Pools	Altrincham	Cheshire	8	10s. 6d. per an.	Pike, perch, roach and bream

* This used to be 1s. per day.

THE SIZE OF EXE TROUT.

Sir,—I should not have thought it necessary to notice the letter by "Brobdignagian" and "Tivertonian" touching R. A.'s fishing, had not your editorial note thereon been in some degree spiced with incredulity.

"Brobdignagian" says he does not doubt my statements; his other observations are unworthy of reply. I shall therefore dismiss his letter at once.

I must confess "Tivertonian's" epistle puzzled me till I remembered that I had before heard that narrative of the "young gentleman killing seventy-one trout," &c. It is a tale that often appears in one individual's discourses—in fact, the King Charles that so often obtrudes himself in Mr. Dick's memorial—and, necessarily it discovers the writer. Why he objects to the introduction of any class of flies differing from his own is now sufficiently clear to me, and possibly outsiders may guess the cause. It is simply a matter of business.

While always happy to discuss flies and fishing, I prefer doing so with those who understand those subjects, and "Tivertonian" will, I hope, pardon my stating that having fished the Exe day by day for the last five seasons and never yet seen him fishing, that if he now lays claim to being himself an angler he is at all events not a very enthusiastic one, and that the circumstance of merely living on the banks of the river for any number of years will hardly constitute him an authority on the art. He must remember this is a progressive age. Insulation for a life time in Tiverton will not teach an angler all there is to be learnt. Strangers who have not seen the Exe a couple of times in their life have been known to visit Tiverton and kill with the fly heavy fish that those who had "fished the river for forty years" thought it utterly useless to try for.

I am perfectly aware that I expose myself to the criticisms of anglers of "forty years experience" stamp by advocating anything like a departure from the standard Exe flies, and it is satisfactory to me to find that "Tivertonian," who "knows the river so well," is sceptical of eight fish each above a pound in weight being taken by one rod in one days' fishing; it shows that his own flies will not do as much. Now, in addition to these fish being killed, there were also taken with my flies, on two consecutive days fishing, a basket of twenty-six fish weighing 13 lb., and another of between twenty and thirty fish (I do not remember the exact number) weighing 12½ lb.

These catches were all made during the season of 1881, and I shall be pleased to give "Tivertonian" sufficient proof of these statements if he will favour me with a call; and lest he should urge doubt of my identity as a reason for his taking no further steps, he will perceive that I affix my name and address hereto.

It was not, however, with any view of engaging in a controversy that I wrote my article on "fine" fishing; I wrote for general information, to add to that knowledge of the art for which the Fishing Gazette is invaluable in diffusing among piscators. If anglers prefer big flies and their coarser belongings, let them do so by all means, I have no objection; but I think it is scarcely fair or just, whatever may be the interests of one or two individuals, that in return for my pointing out the means by which I have been successful, that they should make me the object of a personal attack.

"Tivertonian" does not think that the orthodox flies will probably kill double these weights when the stickles are fished in the ordinary manner! I should scarcely think he would imagine it, notwithstanding his citing the instance of the "young gentleman who made a basket of 71 trout weighing 18½ lb., and not one fish being under a quarter of a pound." How marvellously of a size the fish must have run! But I think there was a sequel to this exploit that piscator has forgotten to mention. Did not an indignant remonstrance appear in the local press against such a slaughter of the innocents? This, however, brings me back to my original statement. Let an angler, by assiduously fishing the stickles all day, succeed in catching twice the weight of fish I do when dry fly-fishing, I hold that my day's sport, so far as the pleasure is concerned, is the best. The "young gentleman's" take, the best basket "Tivertonian" ever saw, is a case in point. I would much rather kill a couple of brace of pounders on fine tackle than any number of such troutlings.

Your own remarks, sir, as applying generally to the size of trout in the Exe are perfectly correct. A pound fish is the exception, smaller ones being the rule, although I am of opinion, and so are many other anglers, that the trout, while not so numerous, are running much bigger than they used to do.

But there are one or two spots in the river where the fish, in size and their modes of rising, are essentially different from other Exe fish, and one of those places is at the mouth of the river Lowman, where it runs into the Exe, immediately below Tiverton. There the fish may be seen congregated in large numbers and size, rising all day long if the weather be not too bright. Even at this late season the fish are there, for on Saturday last I counted thirty-seven rises in the brief space of three minutes. During the early spring months the larger fish are not so numerous, but as the warm weather approaches they push up from the pools below, and there are few people in Tiverton who in their rambles through the shaded paths of Collipriest have not observed what I state, even "Tivertonian" himself cannot deny it. You have therefore two facts before you, first that the fish are there, next that they are constantly rising and taking flies. The uselessness of casting over them (unless, perhaps, in the dark) the ordinary Exe flies had become so apparent that very few anglers wasted their time with them when passing down the river, and, as I before observed, I turned my attention to fabricating flies that have not only killed good baskets in that particular spot, but also in other places in the Exe where big fish are to be found.

When I wrote my article I think the fishing of last season had barely commenced, now it is over, and I am able to say what I could not then, that many other fishermen have used these flies successfully among the bigger fish, and if "Tivertonian" be still sceptical their testimony is ready to be given as to their success. These fabrications are simply imitations of the flies on the water, dressed as nearly like the originals as I can make them. They are dressed on superfine drawn gut, and a hook made to my special order with no superfluous metal about it to scare away a suspicious trout that has too often been pestered with a pot-hook wrapped around with staring tackle and flaunting dubbing, the colours of which the angler fondly deems to be attractive. The flies I have used are duns and spinners, and some of the lesser browns, together with crane flies and the black gnat, the latter dressed as a midge. With them I have repeatedly killed trout that had previously broken me and found my broken flies in them.

A practical angler like yourself will readily understand all this, although it puzzles some of the fishermen here; the lesson is as old as Tiverton itself. It was known in Walton's time, yet some here do not seem to remember it.

If the flies of which I write have any merit, as against those of the other types, you, sir, a practical angler, will be able to recognise it, and I should be glad if you would record your opinion in a future issue of the Gazette. For your inspection I enclose three I have just dressed, two duns and a spinner; they require a touch of varnish at the head; but being late for post, I must post them as they are; they will serve the purpose for which they are intended.—I am, &c.,

2, Angel Road, Tiverton, R. S. Austin.
3rd Oct., 1882.

[Never having fished the Exe lower down than two or three fields below the Carnarvon Hotel, near Dulverton station, we cannot say anything about the fishing below, except that we have often been told that the fish run larger as you get lower down. The flies sent us by Mr. Austin are nicely made enough and on very capital hooks, but we have seen flies quite equal to them, made for us by Mudford of Tiverton and Miss Arnold. In the spring the ordinary run of flies used by local anglers is rather larger than we ever use; but we could mention some Dulverton anglers who use smaller flies than those Mr. A. sends, when the water is low and bright. It would all the same be unfair to say that, *as a rule*, one can get such flies as these in Devonshire, unless specially ordered, or that Devon anglers use such flies. We cannot help agreeing with Mr. Austin that a basket of seventy-one trout, each fish weighing almost exactly one quarter-pound (four times eighteen is seventy-two) is even more wonderful as a single day's take from the Exe, than one of eight fish, each over a pound. We do not dispute either statement, being only too glad to hear such testimonials to a favourite river.—Ed.]

THE ANGLER'S CURSE.

Sir,—This association (Liverpool Angling Association) has recently acquired the right of fishing in a reservoir near Ruabon, North Wales, which is well stocked with fine trout averaging ¾ lb. each. Myself and two members were fishing it with the fly on Monday, September 25th, but although the fish were rising all over the pool and almost under our feet not a single one could we stir. I changed my flies time after time, but all to no purpose. I caught several flies that were about, but none of these would move a fish, although I cast, and the others too, over scores of "rises." In one case where a "pounder" was feeding right under my nose, I saw him come up and deliberately eye my artificial, and then quietly turn tail and disappear, although the very next moment he was at it again rising at something on the water, but what not one of us could make out. We only managed to land a 1 lb. 2 oz. fish all day, though there were hundreds of them plunging all about. This experience so exactly corresponds with your remarks under the heading of the "Angler's Curse," that I thought I would send this account to you for publication if you thought it worth the space.—Yours, &c.,

Liverpool. R. Woolfall.

THE "ANGLER'S CURSE" ON HAMPSHIRE RIVERS, &c.

Sir,—Concerning the "angler's curse," I had intended to write you precisely what I see your correspondent H. S. H. remarks at p. 473 of the Fishing Gazette. The "cuss" that we have been cussed with on the Anton and Test this past month or two has been a minute brown speck, any imitation of which is hopeless. You speak of having midge flies made on the smallest eyed hooks, but if I mistake not there are none made below the No. 1 size, none so small as the 0 and 00 of other makes. I do not care myself for eyed hooks for the very small flies, but I think for May flies—sedges, the coachman, large palmers, &c.—they are invaluable. It is such a convenience to be able to vary the thickness of gut to suit different times and rivers. With regard to the gut and hair controversy, it has always occurred to me that different people have very varied ideas as to what fine gut is. We continually read of large fish and even salmon (see the *Field* a week or two since) being taken on "the finest trout cast." Even Mr. Colquhoun, in the "Moor and the Loch," uses the expression, but in these cases I always fancy that the writers mean gut that on Hampshire rivers we should call very coarse. It is rather amusing, by the bye, to see "Herne the Hunter," that astounding son of a still more wonderful father, comparing the wariness of his six-inch trout with that of Hampshire three and four pounders! Your Test correspondent, September 23, speaks of the whole of the past season as having been bad. On the Anton, however, the fishing for the first two months was remarkably good; there was often even more fly than we wanted, and many good bags were made, but for the last three months there has been an almost total absence of fly, and no evening fishing at all. I have not taken a single fish this year with a large evening fly, though the river is full of fish. I send you herewith two or three of the flies which I have used lately, and should be glad to know whether the midge flies you mention in your note, p. 474, are smaller than these; also whether the fine drawn gut which you speak of is finer than the gut of these flies. The fly in the middle is what Mr. Cox, of Winchester, who made them, calls the "little cuss."—B.M.

[The flies B. M. sends are larger than those Mr. Hall sent on his eyed hooks and we should hardly call them midge flies. The spider, for instance, is the size usually fished by experts on the Wharfe. We are much obliged to B. M. for the sample of the "little cuss." It is a first rate pattern. The gut we refer to as the finest drawn gut is certainly finer than that B. M. sends, but then B. M.'s is not drawn gut; we never saw finer whole gut, and would give 16s. or more for 100 lengths of it for minnow-fishing and fly in a big spring water. We will send B. M. Mr. Hall's flies to look at. The eyed hooks are made in 0 and 00 by Messrs. Hutchinson. We are having some made now.—Ed.]

HAIR *v.* GUT.—IN FAVOUR OF HAIR.

Sir—Sarcasms 'aint argument Mr. H. S. H., nor is it quite fair of you to quote a portion only of a certain sentence of mine, when the remainder in a degree alters the meaning of the part you give. Nor are the members of our association only "restrained from a murder of six-inch innocents by a formulated rule of a club." Their sense of what is right would doubtless prompt them to return such undersized trout though the rule were absent. Argue fairly and we will not quarrel; but it is scarcely "good enough" for you to write as you do at the close of your letter last week. What would you say were I to suggest that members of your club were only prevented from stealing silver tea spoons because there is a law prohibiting the legality of such a proceeding? Yet, in a measure, this is similar to what you have done. This though has nothing to do with the matter at issue This is whether gut or hair is best for trout fishing with fly under certain conditions. I would never be such a fool as to assert that single hair is as a rule strong enough to kill these wonderful "sockdollagers" of the Test we hear so much talk about. Nor, so far as I am aware did Mr. Balderston ever make such a statement. The multiplicity of correspondents, as it were, put words into our mouths. I have a letter from Mr. Balderston, which says his hair is quite strong enough to kill fish of three-quarters of a pound weight. Hair I use is quite strong enough to kill a trout three pounds weight, under favourable conditions. But I would not use hair where there was much likelihood of hooking fish of such dimensions. One correspondent writes I talk of fishing for sea trout with hair, and condemns such a practice. Who, in the name of goodness ever suggested such a thing? I said I had killed sea trout up to a certain weight with hair, and so I have. But I never said I was fishing for them at the time. Trout were what I was after then. This is about a fair sample of the logic one has used against us. Not a word has been said against my arguments in favour of hair. "Ingleborough" writes as though I said gut could not be cast straight. I never said anything of the kind, for I can throw gut as straight as I can hair. The same writer alludes to hair curling. We have all heard of "curled hair," but all hair is not curled, neither does all hair curl. Any that does this must be discarded, such stuff should never be used. As I have previously written, where trout do not average more than from 8 oz. to 12 oz. each, I am prepared to prove that hair will be more successful in their capture than the finest drawn gut. I am surprised to find amid all this correspondence that no one has offered a single argument against those I advanced a fortnight ago; nor has there been a word forthcoming as to the soft, pulpy condition drawn gut gets into after being used for a few hours. I would be one of the very first to use fine drawn gut could it be procured to sail as well as hair, stand fishing and retain its stiffness as well, and be as free from entanglement when attached to a merry trout. My apologies are due to the "Southern Trout" if I libelled him, and I bend knees with all the abjectness required and in accordance with the penalty imposed for the commitment of so dire an offence. Trout are all brothers though they be from the Test or the Tweed—would that all anglers were the same—and I would as soon libel one of my own spotted fellows from the Kent as I would those from any other stream. And every one should know that I would not do the former. But really so much has been written respecting the obese proportions and gigantic dimensions of these south country trout, and a like amount about the half starved lilliputians of our northern streams, that I need be excused for the unintentional libel. From what I have read and from my own limited experience, I not unnaturally come to the conclusion that trout in rapid streams are more powerful than those in sluggish ones. Nor am I yet convinced of the contrary, for it is but reasonable to suppose that fish living in water so rapid as to make them require an amount of muscular exertion to procure food, are more likely to possess greater strength than fish which reside in spots where there is no current to stem, and where a *dolce far niente* sort of life enables them to wax fat and toothsome. I can quite appreciate the difficulty of keeping a big trout out of a bed of weeds, but if he is a big 'un, and he will go, he will go, despite the strongest drawn gut. The other night I had a 5½ lb. grilse on thin gut and a No. 4 hook, Kendal measurement—but not as this is erroneously given both by Francis Francis and Foster. This fish was hooked at dusk right amongst weeds and I landed him safely—but it was as much by good luck as good management. The smallest hooks of the Kendal make are 0 0, and the higher the number the larger the size. Imagine the effect of doing what one writer tells us, to dress a midge fly on No. 14 hook, Kendal size! Such a hook is used for an ordinary sized salmon fly. I shall be delighted to have from you, Mr. Editor, specimens of the midges you allude to in your note, and if we have any flies for our rivers in Westmoreland which you would like to possess, I will be most happy to return the compliment. Only please do not let your correspondents put a wrong construction upon what one writes. I am perfectly willing to be responsible for what I write and say, but not for what is often said one says and writes.

I am, &c., Sprint.

[It is a great pity the hook makers cannot agree to have one uniform list of sizes of hooks instead of the present horrible confusion. "Sprint" considers that his arguments in favour of hair have never been answered. Surely enough has been said in favour of gut! But, perhaps, next spring, on the Eden or Kent we can thrash this matter out; at any rate, there will be no fear that one of us will be rushing about to see if the other is cheating or has taken fish with him to pretend they are fairly caught!—Ed.]

HAIR *v.* GUT FOR BOTTOM FISHING.

Sir,—Some lengthy articles have appeared at different times in the columns of the Fishing Gazette, and among the number, a series on "The Theory of Flies." These articles and letters were signed by R. Balderston, "The Raven," &c., and as a sort of a finale to them a challenge was issued, signed by "Herne the Hunter." Now, I read all these articles with a good deal of interest, and somehow or other I could not help thinking that R. Balderston, "The Raven," "Herne the Hunter," &c., were one and the same person. "Verily," said I to myself, after reading the challenge of "Herne the Hunter," and using the words of one of old: "The hands are the hands of Esau, but the voice is the voice of Jacob." It appears now from recent correspondence that I was right in my conjecture as to the authorship of the articles in question.

At the outset, I am not going to say that hair is useless for the purposes of sport. If I lived in the neighbourhood of a water that only contained roach and fish of a similar size, where a half-pounder is a good one, and a pounder met with only very rarely, and after careful trial I found that hair was the best for that place, I should certainly use it. But I have had very considerable experience with both hair and gut; and I found that, generally speaking, hair turned out a delusion and a snare. What may be the merits of hair in fishing a burn or beck, or a small mountain stream (I mean fly-fishing for trout, where the fish run about half a dozen or so to the pound), I cannot say; for I have had no experience in that kind of thing. But I will just look at the question from a plain common sense point of view as a bottom-fisher, and look at the merits and demerits of gut and hair as it would have to be used on the Trent by an ordinary bottom-fisher. When I used to make my bottom tackles for roach out of hair, and use them in paste fishing, I cannot find on reference to my note book that I was more successful then than I am now with gut, using them under the same conditions of water, wind, and weather. Indeed, I believe that gut has the decided advantage, both as regards weight and number of roach taken. In the first place I used to find that the hair tackle had a tendency to break close to the shank of the hook, just at the termination of the silk whipping, sometimes before I had it in use five minutes.

In the next place, hair is porous, and is liable to stretch. A pound roach is hooked and landed, the hair tackle is stretched to its utmost tension by the process, and the very next fish you hook, if a tidy sized one—and you play your fish ever so carefully—results in the breakage of the hair and the loss of the fish. I have found it so, and I rather pride myself on my ability to play a fish with a delicate hand. Sometimes it is necessary to fish for roach with a big pelican quill float that will carry a dozen fair sized split shots, for the water may be fourteen feet deep and a moderate stream. You are, we will suppose, fishing from a boat, and your float travels down the stream moderately fast. If you had a light float, with only three or four shots on the tackle, your bait would not reach the bottom until it had got to the extreme end of the swim, even if that same swim was thirty yards long. A heavy float and tackle is necessary under those circumstances in getting your bait to the bottom as quickly as possible. Where would a hair tackle be under those conditions? Why smashed at the very first stroke. You have a lot of line out, your bait is fourteen feet deep, a smart stroke is necessary to fix the hook in the jaw of a fish, and well, in short, hair would not stand it at all; indeed, I have known it necessary to fish for roach with ordinary chub gut under those circumstances, as fine drawn gut would not stand the wear and tear of that work for an hour. Again, you perhaps are fishing for roach with a hair tackle using for bait tail end of maiden lobworms; and one of those big bream or barbel (for which certain parts of the Trent are so famous) would insist on taking your bait, and with it, of course, your hook and some of the hair tackle, for the chances are against you killing and landing your fish under those circumstances; or, again, you are fishing with gentles or a wasp-grub for roach, and a vigorous chub that had strayed into the swim, attracted by the ground bait, would close his hard leathery jaws on the bait, and the result would be a broken tackle, for nine out of ten hair tackles would not stand the strain, especially if they had been a day in use. Extra fine gut is now made to such perfection that I find no difficulty in killing a three-pound chub with it, when I get hold of one. Hair is a great deal thicker than this fine gut; and this gut does not magnify in the water as some anglers say it does, especially if it is stained a light blue colour. Some of the old fashioned school of anglers still persist in using hair for their bottom tackles for roach fishing, and will not be persuaded to use a gut tackle, be it ever so fine. They have a lively recollection of the gut of their younger days, which was very coarse and very unequal; and so they refuse to keep pace with civilization in its onward strides; indeed, one old angler (who has now gone over to the majority) told me that in his younger days gut was so coarse and bad that he preferred to make his barbel and chub tackles out of copper and brass wire. We know that there are certain of these old school anglers about at the present day. They refuse to listen to the voice of reason, let her talk to them ever so kindly; and I am sadly afraid that some young anglers are following in the footsteps of their elders in this respect. The angler of fifty years ago is not like the angler of to day; then every bit of his tackle from the rod down to the hook was of an unnecessary weight and strength. Now, the angler tries how lightly he really can fish; then an angler, more observant than his brethren, would, perhaps, discard the coarse gut and wire in roach fishing, and use the hair despite its disadvantages; and as time passed on, and improvements came out in gut and hooks, he still stuck to his time-honoured hair, even if he saw anglers using gut doing better than he was with hair. The fine drawn gut of the present day (I mean the very best) is as near perfection as can be, and only half the thickness of hair, with three times its strength. It is much pleasanter to use than hair, for no matter what fish in the ordinary bottom fishers' list you may happen to hook, you stand a good chance of landing him, if you exercise only ordinary care. Taking all things into consideration, after careful practice and observation, I am forced to the conclusion that gut is superior to hair in Trent bottom fishing. I don't want to set myself up as the best bottom fisher out, nor yet as "the son of the best bottom fisher in the world." I only fish for a little amusement during my spare time, being very fond of the study of fish life. I would not recommend anything to anglers that I should not think of using myself; and for ordinary bottom-fishing on the Trent gut is far away before hair; my notebook proves the fact. But I am afraid I am encroaching on too much space, and drawing this letter out to a tiresome length. Just one word about the match between Mr. Marston and Mr. Balderston. I have known Mr. Marston now for some years, and I know him to be incapable of doing the mean tricks that Mr. Balderston would insinuate. I am sorry Mr. Balderston wrote that letter to Mr. Marston after his defeat; it would have been more manly had he acknowledged he had met his superior, or sent an apology after his mind had calmed down, if supposing he wrote the letter in question during a period of mental blindness.—I am, &c.,

THE TRENT OTTER.

THE MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

SIR,—Enclosed please find copy of a resolution passed at the last quarterly delegate meeting of the Manchester and Districts Amalgamated Anglers' Association, held on Saturday, July 22, 1882, and issued about a week ago to the various clubs. Now, sir, the motion by Mr. Ridgway was made in consequence of a member of the Salford Club having caught a trout in January last and weighed it in for a prize, as the rules of that club allow fish to be weighed in all the year round. I don't know what your London societies would say to a ruling of this sort, but it certainly does seem funny for a large association like ours to say that if one district likes to allow its members to weigh fish in during close time, it may do so, forgetful of the fact that the law prohibits catching them. I hear our district secretary is going to retire from office after November next, for, as he says, he is not going to interfere with the dealers selling fish during close time while the clubs, encourage catching them. Hoping you will express your opinion on this matter, I am &c,

TROUT.

The following is the resolution as moved and seconded and passed:—

"The notice of motion given by Mr. W. R. Ridgway at the last meeting, viz., 'That no club belonging to the association shall be allowed to weigh in salmon, trout, or grayling during the close season,' having been fully discussed, it was proposed by Mr. Cribb, and seconded by Mr. Smith, that each district make their own bye-laws as regards the weighing in of fish canght by their members."

[In our opinion no club or association of clubs ought in any way to countenance the taking and "weighing-in" of fish of any kind when out of season.—ED.].

SALMON FISHING.

SIR,—First let me thank your correspondent, "Silver Grey," for his exceedingly courteous and kindly criticism of my late lucubrations anent salmon, and secondly permit me to ask him whether he has not made a small "boggle"? I have not got a copy of my salmon paper by me, but surely I never put it upon record that "the easier a winch goes the better," and there stop. Was there not some such addenda as, "so long as there is sufficient tension, or resistant power, to the sudden rush of a fish as to obviate overlapping." If not, why then I plead guilty at once to a "big boggle," only adding, as an extenuating circumstance, that I certainly meant there should be.

I fancy I said somewhere in the course of that paper that I did not intend, so far as my gossip went, to purloin any one's ideas and then foist them upon the FISHING GAZETTE readers as my own. I notice that not a few writers upon piscatorial topics do this kind of thing very freely, thus easily earning a spurious reputation among the many, while the few good judges shrug their shoulders, and, like that immortal parrot, say not much perhaps, but think a good deal. Now, practically my personal experience of salmon counts for little in comparison with other branches of the art. More's the shame and pity, but then when people will not write and say, "J. P., old fellow, come and catch a fish," how, in the name of fate, can I help it? Some day—ah, some day—I mean to have a salmon river all to myself, and then I'll only ask "Silver Grey" to come and try his hand. I shall get a rise out of exclusive proprietors then, if I don't out of the fish, always supposing there are any. But, as it won't come to pass just yet, I must ask "Silver Grey" not to pack up the portmanteau immediately.

Thus, therefore, I left off at the precise point where I felt myself competent to give advice of my own origination. But as to striking? Come now, "When you see the boil and feel the pluck," says Francis Francis, "what then? Why, when you do so you are all right, and may raise your rod smartly and with a fair tug over your shoulder." In this I entirely agree, and, although I have heard good salmon fishers say over their grog o' nights, "You should never strike," I have nevertheless seen them at work the next morning and watched them administer a palpable tug at the instant a salmon turned down with the fly, Then have I said, "Hallo, skipper, how about striking now?" and the answer, in the case of certainly my chief opponent, was, "Oh, that was not striking, man alive; that was simply a draw to drive the hook home." So far as I can see, it was a distinction without a difference. The effect was the same nevertheless, and in a general way, I fancy if anglers would content themselves with a backward draw, instead of an upward and diabolical jerk, there would be fewer fish lost.—I am, &c., J. P. WHEELDON.

October 2.

CAPTURE OF A LARGE SALMON WITH ROD AND LINE ON LOCH LOMOND.

SIR—The following letter may interest your readers:—

Messrs. F. T. Williams and Co. Oct. 1, 1882.

I think it right that I should inform you of my success in catching the largest salmon ever taken out of Loch Lomond with the rod on Thursday last. He was 3 feet 7¾ inches in length, and weighed 31 lb. 2 oz. and I was 2 hours and 7 minutes killing him.

I used your 16 feet green heart rod, large reel and line, and one of the salmon casts you sent me in August last. The fly, a sea trout fly, I obtained here.

The boatman's name is John Mac Pherson, and it is rather curious that he was also boatman when the next largest fish in the loch was killed. It was 22 lb.

When the salmon was safely in the boat, the rod had a very bad set, but next day it was all right, and yesterday I fished with it all day, and it is not a whit the worse of the severe test it underwent on Thursday.

Only a really good rod and tackle would have stood the heavy strain of such a fish. In one of his runs he left me only about ten yards of the hundred on my reel, and it was only the good management of the boatman who rowed rapidly, after the fish, that saved a break. For the first half-hour he was very violent, and it taxed all my skill and patience to keep command.—Yours, &c., H. MAXWELL.

(We beg to point out that such a practical testimonial as this may go some way to prove that those makers who charge an enormous price for their goods are not the only ones (as some anglers imagine) that can make good rods and tackle.—Yours, &c., F. T. WILLIAMS & Co.

10, Great Queen Street.

[It is quite true that while there is no greater mistake an angler can make than to buy cheap tackle merely because it is cheap (*i.e.*, appears cheap), it is equally true that rods equally good in every respect can be had at one place for just half the money charged at another place.—ED.]

CATCHING A WATER-RAT.—THE ALEXANDRA FLY, &c.

SIR,—It may possibly interest your readers to hear of two curious captures I have recently made when angling.

The first was that of a water-rat with the Alexandra. I noticed him swimming down the run I was fishing, which was too heavy for me to see just where my fly was, but did not think he was near the fly till I felt him hooked. After a little play I landed him, and found him hooked in the outside of the upper lip, and the body of the fly bearing marks of his teeth. It may have been an accident only, but I incline to the belief he had snapped at it; whether from curiosity, spite, or appetite I cannot decide. The second was that of a jack of a pound or so, which took the bare hook, a "Francis" snap, just as it was nearing the surface.

He was fairly hooked inside the mouth, and had, no doubt, taken it intentionally. The hooks were not bright, and the hour was dusk of a dark day, so there was no glitter to account for it, and he must have taken it simply because it moved.

With regard to Dr. Brunton's theory that trout take the Alexandra as a fly, they certainly do sometimes seize it at the first fall, with wings expanded, when I think it is taken without reflection as a brilliant fly; but when worked against stream I cannot see for what it can be taken except for a small fish. In fact, I have noticed roach fry in the sunshine whose green backs and silvery bellies have irresistibly reminded me of the appearance of the Alexandra when compressed by the stream.

The way in which trout take it and sometimes follow it for yards, is exactly as they do with a spun minnow.—I am, &c,

W. T. S.

Burslem, September 28.

[We have only once caught a water-rat on a fly line. He swam across the cast, got hooked, and the instant he got to land went two or three feet into some old woodwork at a weir with the line and flies. We have no desire to catch another. Jack will frequently take a big fly such as Alexandra, palmer, coachman, &c. Dr. Brunton often gets them with the Alexandra, so does Mr. Jardine.—ED]

A BIG PIKE.

SIR,—As an item of fishing news, I beg to inform you that this week my son took a pike out of a private water in Kent, measuring 3 ft. 8 in. in length. It has now gone to be preserved, and I shall be pleased to show it to you or any brother anglers when finished—I am, &c., W. HOLLINGSWORTH.

Sept. 29, 1882.

[What was the weight?—ED.]

THE CATCH OF YARMOUTH HERRINGS.

SIR,—I drove down to the fish wharf this morning, which was indeed a sight, the pavement being covered with baskets of beautiful fish just landed, and the clerk at the wharf kindly informed me that the sale to last night was over 1200 lasts more than in 1881, or 174 millions at 13,200 fish to the last; the catch up to this time being over 4600 lasts.

They have begun in earnest to alter the aquarium at last. There are many visitors remaining, the weather being still so lovely. I often think those who can should stay for this month, the most charming of all.—I am, &c.,

R. R. B. N

A COMPLAINT.

Sir,—They have a very convenient way at Sunbury of getting rid of the refuse from dust heaps. I was there last Saturday and Sunday fishing, when I came across a large heap of bad-smelling rubbish close to the river's edge, only waiting for a rise of the water to wash it away. Anybody can see it; it is nearly opposite the Flower Pot Hotel, down a little incline, where they land sand and gravel. I think anything of this kind could be prevented, for I am sure it does not improve fishing, let alone the water we have to drink. If you would kindly insert this in your valuable journal it may lead to stopping this sort of thing.—I am, &c.,

Blanc.

Brixton.

ANGLING CLUB WANTED.

Sir,—Will you kindly give me the name and address of an angling club, as near here as possible, that I could join? Same must be composed of gentlemen, and the meetings not held on a Sunday. Further particulars I could obtain for myself.—I am, &c,

Keppel H. Gifford.

Victoria, S.W., Sept. 29, 1882.

WEIGHT OF TROUT.

Sir,—What would be the weight of a trout in good condition measuring in length 18½ inches?

I caught one of the above length in Llyn Coron on Saturday weighing only a little over a pound. The general opinion among those who saw it was that, if in proper season, it would have gone over 3 lb.

Fish are rising better now in the lakes, several fish over a pound have been taken, principally with the March brown. I find they rise best in the middle of the day.—I am, &c.,

E. Gosling.

[The weight of trout in comparison with its length depends very much on the river it comes from. A good feeding river (such as the Colne, Itchen, Test, &c.), produces fish of 18 inches which would certainly weigh between three and four pounds. In a river flowing through a poor country the trout are not nearly so thick when of the same length as their southern cousins.—Ed.]

THE GRESHAM ANGLING SOCIETY.

The members of this still growing society held their meeting on Tuesday last at Masons' Hall Tavern, Basinghall Street, E.C., to which they have now permanently removed. The handsome cases of stuffed fish forming the nucleus of the society's museum had been tastefully affixed to the walls by Captain Alfred (curator), who had in addition lent several of his excellent paintings, which gave the meeting room quite an artistic appearance. Mr. Wheeldon was warmly applauded on taking the chair, and opened the proceedings by congratulating the society on its change of quarters, similar sentiments being expressed by several other speakers. Captain Alfred was then called on to read his paper on "The Science of Barbel Fishing," which proved to be a very clever and amusing essay. The paper was interspersed with a variety of humorous anecdotes, adding considerably to the interest occasioned by the practical information it contained. In advocating the use on all occasions of fine tackle, the lecturer recounted how, in 1850, he took twenty-six barbel in one afternoon from the Thames, fishing fine, whilst an "old hand" in the same punt, with coarse tackle, took none. In his opinion there were immense quantities of small fry in the river, not only of roach, dace, and other white fish, but also barbel, in spite of the disturbance occasioned by steam launches and other enemies of the fish. The Thames puntsman was one of the most conservative of men, and would persist in going to the same swims year after year, so that the swims became exhausted and good takes rare. He concluded by suggesting that, if the artfulness of the young barbel increased in proportion to that already possessed by their parents, it would require the very wisdom of a Solomon to circumvent the cunning of the progeny of those of the old Thames type. Mr. Jardine criticised the paper in his usual able manner in a somewhat lengthy address, noticing that the paper made no mention of "clay-balling" for barbel, which was much practised at Sunbury, and adding that he would recommend barbelling when the water was a little thick, fishing of course in the margin of eddies, where the fish knew food was sure to be carried. Mr. Frost followed with a very practical speech, correcting Mr. Jardine in one or two particulars, and relating some of his adventures when barbelling. Mr. Alfred Nuthall considered clay-balling more useful in roach fishing than in strict barbelling, and narrated his recent experience on the Thames at Kingston, where he had taken as many as twenty barbel in one morning. Mr. Nuthall advised anglers not to trust to any puntsmen, unless a well-known man, but to use their own judgment and select their own swims. Mr. Wheeldon, in calling on the members to move a hearty vote of thanks to Captain Alfred, said he would not detain them by a speech of any length, for they all knew the lecturer as a thoroughly practical angler, who gave them not so much the result of reading as experience. Mr. Crumplen, in supporting this, said he was sure the society would not only return thanks for such an admirable paper, but if anything could add to their obligation it would be the fact of the arduous labour their curator had voluntarily undertaken in consequence of the society's removal to Masons' Hall Tavern. Their collection had been admirably re-arranged, and Captain Alfred had also lent them the valuable paintings displayed round the room. The vote of thanks having been very heartily carried, Captain Alfred made a suitable response, replying to several little points urged during the debate following his paper. The chairman said they were always glad to welcome as visitors members of other societies, and he was pleased to find they had with them Mr. Clench, of the Richmond Piscatorials, besides representatives of the Piscatorial Society, the Walton and Cotton, Highbury, De Beauvoir, and other associations of anglers. Mr. Clench addressed the society in reference to the abolition of netting between Richmond and Kew Bridge, and his views seemed to meet with general approval. The health and prosperity of the chairman, Mr. Wheeldon, was then given with special honours, and very kindly replied to, after which the musical portion of the evening commenced, the chairman, according to "good old custom," as he said, leading off with the first song. The evening closed harmoniously, and probably a more truly pleasant meeting was never passed by any angling society. Among the company were Messrs. Austin, Bentley, Brett, Beningfield, Bryant, Dr. Theodore Cash, Callaghan, Cartwright, Clench, Crumplen, Dr. Defriez, Frost, Godwin, Jardine, Ghurney, Morgan, Nuthall, Parker, Wheatley, and many others. Mr. Crumplen (hon. sec.) is announced to deliver a lecture at the Royal Aquarium, Westminster, on Friday next, at 8 o'clock, "On the Causes of the Decrease of Fish in the Thames." The fish weighed in lately have been more limited than usual. A perch of 2 lb. 14 oz. has, however, been taken by Mr. Edward Bennett (Gresham and Yarmouth societies) from public water at Ormesby Broad. Now that the society has such an excellent meeting-room, there can be no doubt the attendance will largely increase, and its influence, great even as it now is, will be sure to grow in proportion. We must not omit to mention that Mr. Wheeldon presented a copy of his last novel, "Beaten at the Post," as a souvenir of the occasion, and Mr. Ghurney brought a framed tablet relative to that deserving institution the Anglers' Benevolent Society, the claims of which on all true anglers have never been forgotten by the Gresham.

THE GREEN FISHERMAN.

Sam Davis, of the Carson (Nev.) *Appeal*, tells the following, which though funny, is very true. Those who have done much fishing have often seen the green fisherman.

On Sunday last there was about a dozen of Carson's crack fishermen at the Mexican dam. Mr. Gilligan and Gus Lewis headed the crowd. There are many persons who never think of casting their lines without first getting the opinion of Lewis and Gilligan as to the best locality. On Sunday, just as the two experts were getting ready to fish, an old waggon drove up, containing an old farmer and his family. He tied his horses to a tree, and then pulling out a crooked hickory rod, proceeded to tie a line to the end.

"Wonder if the old coon is going to come here and scare all the fish away by splashing water?" said Lewis.

"If he does our sport is all gone for to-day," said Gilligan.

Suddenly an idea struck Gilligan; he told Lewis he would get the man anchored near some stagnant pool, where a trout would never think of coming, and thus keep him away from the good places The man was just getting his tackle in shape as Gilligan strolled slowly up.

"Going to try yer luck?"

"Thought I would."

"Ever fish much?"

"Back in the States about twelve years ago, for bull-heads, suckers, and such."

"You can't catch anything with that pole; where is your reel?"

"Never use 'em; I jest yank 'em right over my head."

"Your hook is big for the season."

"All I got."

Gilligan hated to see a man fish with such poor tackle, and offered him some hooks and leaders; but the old fellow said he would be sure to bust them, and he would rather use old tackle he was used to. He tied a nail to the line and then got out a box of worms.

"You can't use worms here, on a day like this, you must use a brown hackle fly with a little red on the body," said Gilligan.

"Don't go much on your new-fangled flies. Worms is my best hold."

"That is not a bad place," pointing to a spot where there was not a ripple or any sign of current.

"Just the place I was going to tackle," said the man.

Gillligan went down and told Lewis he had got the old fellow fixed where he would not get a bite in six months.

"It amuses me to see those green fishermen bring their old-fashioned lines and hickory poles, and fool away their time expecting to catch fish. Thunder! If he hasn't landed one a foot long!" exclaimed Lewis.

Sure enough, he had his fish on the bank, and it was a two-pounder. Probably he would not happen to do that again in six months.

The two experts continued to fish, wondering how a trout ever strayed into such water, and in about five minutes another trout described a half circle over the old man's head.

He threw the fish on the bank above him, and his wife took it off the line and baited the hook, and then he just slammed the tackle into the water as if he was threshing wheat. He kept this up for a couple of hours, and when he wound up his line he had thirteen fine trout, while the others had failed to get a nibble.

"You were right about that place, stranger," he said to Gilligan. "I have got some worms left, if you think you need them. How've you been gettin' along up here?"

"We ain't after trout," said Lewis, "we are just catching minnows to bait with this evening."

Lewis's Penny Readings.—Literature and Commerce.—There are numberless trade journals in existence, so that a definite alliance between commerce and literature has been established; but we have to note an entirely new relation which has been promoted by one of the largest of our great mercantile establishments. The house known as Lewis's, whose extensive stores and warehouses in Market Street are one of the attractions of Manchester, has just issued a marvellous publication under the title of "Lewis's Penny Readings," consisting of a handsome well-printed volume of about 130 pages, containing admirable selections from the famous prose writers, poets, orators, and humourists of the last three centuries. Its title is appropriate, for it is not only eminently suited for those entertainments usually called Penny Readings, but the price of it is only one penny. 2½d. in stamps to Lewis's will secure a copy on the day of publication.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers, A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

A WRINKLE FROM AN OLD FLY-FISHER.

"Among the earliest of Charlie Ebdy's lessons to me was this, that I should always note, not only the kind of fly on which the fish were feeding, but also the side of the river on which they were chiefly gathered. Sometimes he would point out that the wind being gentle the flies merely dropped from the bushes, and were quietly borne down the stream by their side; while on other occasions he would remark that the wind had blown the flies from one side of the river to the other, and that at the latter was the only chance of sport; and in these views I never knew him to be wrong. He had also a theory that it was well when beginning angling at, say 8 a.m., to try first the quiet, easy flowing water at the foot of the streams, and then as the morning advanced fish the upper portions more carefully, till at mid-day the top of the stream should be fished. After a rest of an hour or more, the afternoon was to be devoted to the shallow dubs. This theory, based on careful observation, was peculiarly his own, and long practice has led me to conclude that here, too, my Mentor was right."—From "My Life as an Angler," by Wm. Henderson.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, Furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, No. 57 and 58, Chancery Lane, E.C.

SATURDAY, OCTOBER 14, 1882.

IN MEMORIAM.

Oct. 9, 1882.

IN the early dawn of a beautiful autumn morning, there passed into the silent land, the dear, loving helpmate of one whose home is held in reverence by all true followers of Isaak Walton.

An unselfish, sympathetic soul, whose delight was in ministering to the wants of others, and in furthering the cause precious to her husband. She ungrudgingly laboured, uncomplainingly bore with the troubles and cares of a large household in order that she might be "unweary in doing good."

The wife of Philip Geen was one of those bright examples of English womanhood, who are a "crown to their husband." She felt that there was something worth living for in this world besides self. She forwarded every good cause. She listened to the voice of the poor and distressed, and in her immediate neighbourhood in the hour of misery and trouble she came as an angel of mercy. There are few who have enjoyed the hospitality of that now saddened home who will not remember the smiling face, the cheery voice, the keen interest, and the almost infallible belief that there was no other sport than angling, and no surer passport to her home and family than the reputation of a good sportsman. And her sympathy with the most hardened transgressor was proverbial, always ready to extenuate their conduct and to plead for mercy for their unfortunate wives and children.

There are those who stand round the open grave to-day, fellow labourers in our little world—men who have borne the heat and burden of the day—whose work is seen in the prosperity of our cause, who have felt her genial influence, and to whom her memory will be cherished as one of those bright souls whose lot in life was to cheer the weary, and the whole angling world of London will sympathise with the distressed husband and father, hoping that in this dark hour of his misery he may be cheered by the knowledge that many hearts are full of sympathy and he may rejoice—

Life's race well run,
Life's work well done,
Life's crown well won,
Now comes rest.

Fred. C. Clench.

AVON (LOWER).

THIS river runs through the counties of Wilts, Somerset, and Gloucester. It rises in Estcourt Park near Shipton mill-head, one mile south of Tetbury, not far from Minety (station G. W. R)., in the district of Braden Forest. Braden Pond hereby is the largest sheet of water in the county, being three-quarters of a mile long by half a mile broad. The Avon, after quitting the park, flows on to Great Sherston. Not far from this, to the south, is Castle Combe, lying deeply embosomed among steep romantic and wooded slopes, in an angle of one of those cleft-like valleys, which intersect and drain the range of limestone hills called the Cotswolds, and which extend southward as far as Bath. A small but rapid stream runs through the village of Castle Combe, and after some miles joins the Avon, near the village of Box (G. W. R.), whence it is known as the Box stream. At Castle Combe, William Scrope, the author of "Days of Deer Stalking" and "Days and Nights of Salmon Fishing" resided, the manor before and after him belonging to his family. Our stream, after flowing through Pinckney Park (W. H. Cresswell, Esq.), and by Easton Grey, working in its course several mills, reaches Malmesbury (inns, King's Arms and George), where the surplus waters from Charlton Park ponds join the Avon on the right bank. Here the Avon, which, having run almost due east, takes a southerly direction, passing Cow Bridge and Mill, King's Mead Mill, near Little Somerford, then round by Great Somerford, where the river divides for a while into two, at Dauntsey. Just before this some straggling streamlets combine from Milbourne Bridge, Garsdon, Sunday Hill, Somerford Common, and Fritters Well, serving Crab Mill and entering the Avon by two inlets.

Between Great Somerford and Dauntsey on the left, an important streamlet, composed of several feeders, enters. It is formed by Thunder Brook, which rises near a mill-pool four miles north of Wootton-Bassett, supplies three or more miniature broads waters several farms, and flowing under Idover Three Bridges, enters the Avon.

We now arrive at Dodford, between which and Seagry and its mill, a streamlet joins the main river from Dauntsey Green, which formerly had a good reputation for trout up to 1½ lbs. Then we push on to Christian Walford and mill and Avon village, next to Kellaways and mill, below which the river Marden enters from the east, touching Calne on its way, previous to which this effluent works three mills, coursing by Stanley Abbey and its woods.

At Chippenham (G. W. R.), (inns, Angel and George), where we now are, the Avon, after flowing south-east, suddenly turns back towards the north-west, and takes a straight line along one side of the town, and then as abruptly starts off almost due south, making an acute angle, which embraces at least two-thirds of Chippenham. Mrs. Kemble, of Barton Hill, is the owner of one bank of the river for a long distance between this and Malmesbury. At the apex of this angle, a brook, which rises on the south-east, waters Huish Park and passes Land's End, joins the river.

About three-and-a-half miles from Chippenham south-east, is Bowood, the magnificent seat of the Marquis of Lansdowne, with its splendid lake and cascades, the redundant waters of which escape by Fisher's Brook into our river, as well as the effluent from Corsham Park Lake.

The Avon now courts the company on its left bank of the Wilts and Avon Canal (in which are plenty of fish, including trout of a large size), shamefully poached by letting off the water under any trivial excuse, between lock and lock, and facetiously termed by the despoilers "taking poundage." Lacock Abbey is close to this (the seat of W. H. Fox Talbot, the inventor of the Talbotype). The hill which rises from its site commands most glorious views.

Melksham is our next halting stage (inns, King's Arms, and Bear). We now ramble by Broughton Gifford, where the Avon takes up a tributary from the west, at Whaddon, one from the east, and arrives at Bradford-on-Avon, (Wilts and Somerset Railway) inn, Swan. This town is most delightfully situated, and the angler can find comfortable lodgings in the suburbs, not far from the river, in the hollow, or on the steep slopes and terraces up which the houses straggle in picturesque disorder, and which, being built of grey stone, have a cleanly and cheerful appearance.

"From Bradford the railway follows the course of our river. The valley soon becomes very narrow, hemmed in between hills, in some places rising almost precipitously, clothed with hanging woods and orchards. The scene is strikingly picturesque, and the traveller may well feel regret at being hurried so rapidly through beauties that might make him wish to linger repeatedly. Happily the frequent stations give him opportunities of halting and examining the country more leisurely. . . . The Kennet and Avon Canal accompanies the river through the whole of the valley, and crosses it by an aqueduct below Moreton Combe." (*Murray.*)

The Avon at Bradford is joined by the Biss, an effluent from Trowbridge. After this, the river passes out of the county of Wilts There is an angling association here, which preserves the water for 3 miles, annual subscription, £1; monthly, 2s. 6d.; weekly, 1s. 6d.; day ticket, 6d. Quitting Limpley Stoke (station), a romantic village, with hanging woods and gardens, and Freshford, with its station on its borders, and about a mile from Box Station, enters the county of Somerset, touches the demesne of Claverton, where "the Avon's silver sheen" gives life and light to its beautiful valley, then by Warley House (H. D. Shrine), on to Bathford (station), where the tributary Box in Wilts comes down through Castle Combe, before alluded to, another effluent succeeds at Batheaston from the valley of Catherine, and a third from the heights of Lansdowne, after which we reach Bath (station); hotels, York House, Pump Room, Castle, Greyhound and Royal, close to railway. The river almost encircles this fine town. Here the Avon becomes navigable. At Newton Park (W. H. Gore Langton, Esq.), the river winds through rich green meadows; and below this is Saltford (station), a neat village where stands the ancient mansion of the Rodneys, with park-like pastures stretching down to our river. After Kelveston, the Avon divides Somerset from Gloucester, in which county the first town is Keynsham (station); inns, Lamb and Lark and Crown. Bitton (erroneously spelt Britton in many guide books), a pretty village close to this, through which flows a tributary called the river Boyd. It comes down from Dyrham Park, below, augmented by the Feldham Brook from Pucklehurst, and then combined, flows on through "the Golden Valley" to the Avon below Swinford, and supplies water-power to some paper mills, and forms a small lake before entering the main channel. There are several streamlets about this, the most important of which is the river Chew; its many feeders spring from the spurs of the Mendip Hills, and the angler cannot fail of testing their piscatory work. The Avon after this for some distance flows between rocks, when we reach Bristol (G. W. R.) Inns, Royal Hotel, College Green; White Lion, Broad Street; Vincent Roche Hotel; Queen's Hotel, Dowry Square; and the York Hotel. The Avon is now tidal, and from the muddy nature of the water presents no attractions to the angler.

The river Froome pierces Bristol from the north, rises at Dodington Park, in Gloucestershire, and after forming a lake in the grounds, (with carp and tench only,) flows in a western direction by the town of Chipping Sadbury. A mile further the stream is increased near Frampton Cotterell by the Laden, from Wickwar and Tytherington, and changes its course to the south, passing the village of Hambrook. A little below Stapleton it enters Bristol, and there loses itself in the waters of the Lower Avon. Sir Gerald Codrington is proprietor of the Froome stream. There are but few trout found in it. The Lechmere water follows.

There are many brooks which feed both the Avon and the Canal to which we have made little reference, although they mostly contain fish, the trout being of small size; but we have found them, while better sport was to be had in other directions, scarcely worth visiting, as they are likewise often dry in the summer, and shallow without holes at the best of times, being only minnows, stone-loach, and millers-thumbs to occupy the shoals. Occasionally, however, an adventurous trout will venture up, and, with dorsal fin scarcely covered, attract by its wake the poaching proclivities of the cowboy, who, from early habit knows how to make the wanderer an easy captive, before it reaches the haven of the next mill-tail, or can fall back and recover the last deeper water of a mill-head.

GRAYLING FISHING IN MONTANA.

MONTANA is a name not very familiar to English ears and still less so is the Big Hole or Wisdom river (as I see it is called in all English maps of the United States of America), but as Montana, the territory through part of which the Big Hole runs, is somewhat vague, containing 150,000 square miles, it will be of interest to locate more accurately the Big Hole river, and to explain how it is really the head waters of the father of rivers, the Mississippi. A glance at the map will show you that the Big Hole and Stinking Water rivers form the Jepherson river, which, together with the Madison and Gallatin rivers join the Missouri, which again, after travelling 2000 miles, in its turn falls into the Mississippi at St. Louis.

If my readers will patiently follow me for a thousand yards along the banks of the Big Hole, I can show them lovely scenery with timber rising in unbroken stretches for miles and miles, a bright blue panoply overhead, and the clear green waters of the river at my feet. Nothing else meets my eye, unless it be the kingfisher skimming along the water with that royal grace which its name denotes, or the parting of the waters for a few brief seconds whilst the fish rise to partake of some particularly dainty morsel.

Quantity not quality, may be the verdict imposed on the results of my fishing, but still I hope that some few persons will agree with me that there is some satisfaction and fun in filling a basket in an hour's time with forty or fifty grayling, running from ½ to ¾ lb. in weight. Half a dozen finer fish would doubtless look prettier, and give many people far more satisfaction, but I for one, am contented with the more humble specimens, and it is not for me to complain that the fish in the Big Hole are not bigger.

Fishing and rumours of fishing had been dinning in my ears for some weeks past, and eagerly but patiently had I waited for the spring floods to subside, and the water to lose that pea-soupy thickness and colour so fatal to any wishing to try their luck with the fly. With persistent obstinacy, the waters of the Big Hole this year, owing to a prolonged winter, maintained their dusky hue, and it was not until late in July that there seemed much hope of enticing the wary fish to regale themselves with the humble fly. On the 23rd of July, however, I had my first opportunity of trying my luck in the now becalmed waters of the Big Hole, and of testing the superiority of fly-fishing over the common Western mode, viz., with a very long and strong pole, to which is attached still stronger cord, and a hook cunningly disguised by the live bug. (Here I must pause to explain in this respect the Western vernacular with regard to the word "bug," a word which I know bears not a pleasant sound to the English ear. "Bug," in the West is a class name for most insects, and includes, in addition to those specimens known as bugs in England, grasshoppers, flies of all sorts, mosquitoes, crickets and beetles). The species grasshopper of the genus bug, was used on the present occasion. The Western fisherman goes more for blood than for sport (though of course, there are brilliant exceptions) and with a mighty jerk the unfortunate fish is hurled over the head of his captor.

I had been camping near a creek from which there were two roads to the Big Hole, one leading ten miles further up the river than the other. My friends, who had made this their main camp, immediately struck out up the mountains in pursuit of a mythical squadron of bear, and had very kindly placed at my disposal their wagon, horses, man-servant, and good wishes. Within six miles from the creek there was a lake, through which the creek ran, reported to be full of large salmon trout, so my readers will now see that I had within easy distance three different fishing grounds, *i.e.* two points of the Big Hole river and the lake. I determined to fish first in the Big Hole at the lowest point, where the road joined it, and to this place I was driven in the wagon on the morning of the 23rd of July. I did not get to the river till after eleven o'clock, and then found myself so hungry, that I spent a few minutes in devouring part of the provisions we had brought with us; after which I put up my rod, and having made my casting line ready, first tried two small dark flies, the English brown-palmer and an American fly, rather larger, with red body and brown hackle. The fish that rise most freely in the Big Hole at this time of the year are grayling, which run from ½ lb. to 2 lb. in weight, and for these it is necessary to fish with a wet fly, leaving the fly under the water about four inches. There are many trout in the river, but you do not get them in any numbers until later in the year. From the middle of September to the end of October is, I am told, the best season for them, when the grayling are creatures of the past.

Looking at the river, with my rod and line all ready, I was forcibly reminded of the poet's words when I saw the fish in countless numbers, for the river was now very shallow and beautifully clear:—

> I wind about and in and out,
> With here a blossom sailing,
> And here and there a lusty trout
> And here and there a grayling.

I began fishing, and I was soon thinking, not of Tennyson, but of fish, and fish only. In half-an-hour's time I had caught fifteen, principally with the palmer, so I then changed my other fly, putting on a very small one with grey hackle and body. This seemed to be a dainty morsel, and the fish greatly appreciated my catering for them; and as they now almost entirely repudiated the darker fly, I changed it for another grey-hackled morsel with yellow wing. I fished away with these two steadily for two hours, for certainly not more than 600 yards along the river bank, and in that time caught seventy-three, forty of which I threw into the water again, as they were under ½ lb. in weight. On six successive occasions I had two rises simultaneously, and thus landed two fish at once, there being generally a large fish on the tail-fly and a little one on the dropper. I have since discovered the reason for this, viz., that the big fish go for the fly which is deepest in the water, and only the small ones rise to the dropper, which I used to leave on the surface. The man who had driven me down had toiled with his pole and bug and had landed thirteen grayling and two white fish, as they are called, a fish almost exactly resembling the English dace. On this occasion, in the match of fly versus bug, or more properly of artificial versus natural bug, the former came out by long odds the victor. Being a novice in the art of fishing, I was greatly delighted, and have no hesitation in saying that an experienced fisherman would have in the same time and water caught many more. The fish were not large, the largest being ¾ lb., but when you find two fish on your line at the same time, you have some fun in landing them, if fishing, as I was, without a landing net. About four o'clock we returned home, and after cleaning and scaling the grayling, made an excellent supper off them, and although the lusty trout is doubtless a far more gentlemanly fish and requires much less trouble in preparing it for a meal, yet for delicacy of flavour and sweetness, commend me to a Big Hole grayling in preference to a Big Hole trout; but, as I have only caught a few of the latter, my opinion may seem warped.

On the next day, about 10 a.m., I set out with the servant and an old miner camping close to us, who was to act as guide, in search of the lake I mentioned above. As the country was rough and very thickly timbered, we were obliged to go on foot, and our walk was a lovely one, shaded as we were the whole way by the pines, and with no sound stirring except the gentle soughing of the wind in the tree tops, and the continuous chattering and babbling of the creek, from which we were never any great distance. After two and half hours' walking we found ourselves at the lake, and I immediately scanned it from a fishing point of view. In the first place it was much smaller than had been represented, and there had recently been a landslip, so that the tops of dead trees were visible just above the surface of the water; moreover, the timber grew quite close to the water, which was deep right up to the banks, thereby preventing wading, and the banks themselves rose about three feet above the water, making the landing of a large fish, without a net, a matter of some difficulty. There was a breeze blowing, and for the first time I felt that the arguments of my friends were correct when they told me that the natural "bug" in a lake of this kind would prove more deadly bait than the artificial fly.

I meant to try the fly for all that, and so after bathing, and lunching off bread and bacon, partaking "plus satis quam sumptus," for we were very hungry after our walk—and what does not taste good in that lovely mountain air? I got ready my rod and line and started once more in the match of Art versus Nature, leaving my companions to the old "pole and bug" game. It was difficult to throw the fly, owing to the wind and timber, but I managed somehow, though not very cleverly, to get my three flies well out into the lake. This time I was using three grey hackled flies of various sizes and shades, and in the first half-an-hour I caught three little trout, weighing not quite ½ lb. each, but the fish did not rise at all freely, so I made up my mind to fish quickly all round the lake, and to be thankful for all I got. After an hour's fishing without a single rise, I caught two in two successive throws, both fine ones, weighing nearly 1 lb. each, and I had nearly finished my circuit of the lake, when I saw a big fish rise about ten yards from me. I threw my flies right on the spot, and immediately had a rise and landed successfully a small but nice-looking trout, just under the ½ lb. This was not the fish I had seen rise, so I threw again, and this time the big fish went for my tail fly, and must have run out nearly thirty yards of line before I fully realised my position. I saw that the fish was dangerously near some stumps in the water, so I took in as much line as I dared, and the next run I was thankful to see in the opposite direction. It was fully fifteen minutes before I had brought him really close to land, and I then saw how difficult it would be to land him, as the hook was very small, and the fish was not very well hooked. My comrades I could not see, so, after a little deliberation, I took more line in, and laying my rod on the bank, pulled the fish gently up. I had just got him on the bank—a fine trout well over 1 lb., with beautifully pink skin—when he gave a jump, got unhooked, and thus I lost sight of him for ever. It was most disappointing, and the more so as I have only myself and my stupidity to thank for it. I consoled myself with another bathe and with my six fish returned to my comrades, one of whom had caught one fine trout thirteen inches long and the other nothing. About 5 p.m. we started home, and on our way saw some very fresh track of moose and bear. For the first half-way we went along right merrily, but when three miles only from home, the miner our guide, declared that he knew a short cut that would take us home in half-an-hour. I hate short cuts myself, and am a believer in the "more haste less speed" proverb (more so now than ever), but as the miner was our guide, I thought that it would be ungraceful to make any remonstrance. When we had trudged along for an hour in a direction which appeared to me to be at exact right angles to our right way, I mildly remarked that my friend's conception of half-an-hour was not very accurate.

Once, I am sure, after completing a circle in our wanderings, we came within a few yards of the point from which that long short cut had originated, but once more our guide, with persistent obstinacy, took us again at right angles, and we followed on and on until it became so dark, that not wishing to spend the night in the forest, we determined to make for the nearest opening. Both the servant and I had ordinary walking boots on without nails, and the soles had acquired the most beautiful polish from walking over the dry grass, so that we were unable to proceed as quickly as our guide. We got out of the timber just as the sun set, and then found to our dismay that we were still eight miles away from our camp. For the first time that day I was thankful that I had not got a heavy basketful of fish to carry. We soon came across a wagon-road and got into camp about 10.30 p.m., very tired, and vowing never again to take short cuts. After cooking the trout and some bacon, we supped, smoked the pipe of contentment, and slept soundly, until I am ashamed to say what hour in the morning. My comrades of the preceding day were very footsore, and did not feel inclined to try another days' fishing in the Big Hole till the morrow, so after breakfasting very late, I went down to the creek to fish, not for pleasure so much as for food, as we had nothing but bacon and bread for our supper. This time I made a compromise, putting a live bug at the end of my line and an artificial fly I used as a dropper. In three hours' time I caught seventeen fish, and bringing them to camp, cleaned and cooked them, and making an early supper turned in at sunset, intending to have on the morrow a long day's fishing in the Big Hole.

(*To be continued.*)

DEATH OF MRS. P. GEEN.

Every one of the thousands of anglers who know Mr. P. Geen, will join with us in expressing the sincerest sympathy with him and his family in their recent and almost sudden loss of one, who was so very dear to them, and so respected and loved by all who had the pleasure of knowing her. It seems only the other day that she was present at the Second Fishing Gazette Tournament, taking the warmest interest in the proceedings, and remaining to the dinner afterwards, the only lady present. In the name of all our brethren of the rod, we tender heartfelt sympathy to Mr. Geen and his family. Mr. Fred. Clench has most truly described the amiable qualities of the deceased in his "In Memoriam," notice in this week's Gazette.

MR. BALDERSTON'S LIBELS.

It having come to the knowledge of Mr. R. B. Marston, editor of this paper, that Mr. Balderston is circulating statements to the effect that Mr. Marston cheated in his recent fly-fishing match with Mr. Balderston, Mr. Marston again states that these accusations are utterly and totally false, and that Mr. R. Balderston has printed them in order to explain away his defeat. Mr. Marston feels that he owes it to the readers of this paper to make this statement and he can with the utmost confidence leave them to decide for themselves between him and Mr. Balderston; he would be sorry to think that this paper was read by a single angler who believed that its Editor was capable of acting in the unspeakably mean and dishonourable manner asserted by Mr. Balderston. Had Mr. Marston imagined for a moment that Mr. Balderston could act in the despicable way he has done, he would never have condescended to fish with him; he only regrets that he did not insist on the fishing being in the presence of witnesses as he suggested, but which Mr. Balderston would not agree to.

Mr. Marston begs to thank the numerous readers of his paper, including many gentlemen entirely unknown to him, who have written to him expressing their disgust at the treatment he has received from Mr. Balderston.

ELSTREE RESERVOIR.

Notice.

In consequence of the scarcity of water, no fishing will be allowed in the above reservoir until further notice. By order of the Proprietor. J. Hill.

EDUCATION OF FISHES.—TRANSFORMATIONS OF THE MAY FLIES.—HOW THE LOBSTER SHEDS ITS SHELL.—SALICYLIC ACID AS A FISH PHYSIC.—A NEW WAY TO CATCH DUCKS.

Your correspondent "Hampshire" seems to have been much more unfortunate on the Test than we have been here on the Itchen, and I really lament with him, if his complaint, "I don't know what trout fishing will come to in a few years, they (the fish) are becoming so cunning and difficult to catch," correctly describes the case. But is it on the face a genuinely reasonable grumble? Of course the fish are susceptible of education, like any other animal—it is only a question of degree. Look at the present tackle, as compared with that figured in the "Boke of St. Albans," published in 1496. Why, that tackle now-a-days would scare a shark, much less a delicate-minded "lady" grayling, or ancient Test trout of almost vulpine cunning. Yet, without doubt, it caught fish in those days, when angling clubs were not, and hooks were "enarmyned wyth yren" like a butcher's hanger. "The old order yieldeth place to new," and now the closest imitation of the "fisherman's curse" (as pointed out last week by Mr. Marston) it is possible for human art to manufacture, on the most invisible of "gossamer" gut, is often unequal to snaring the thick-backed chalk-streamer, I wot so pleasantly of. But is this a fault to grumble at? So much the greater victory if ye fox his wily troutship.

* * * * *

As to the May fly's period of embryoship, "Hampshire" is quite right in fixing the time, as one year, in the case of many of the *Ephemeridæ*, such, for example, as the duns. The large drake (*Ephemera vulgata*) must be excepted for a certainty, however. The larva of this fly has been kept by an entomological friend in an aquarium for over two years, and is now there. Of course, climatic and other agencies may have been at work to retard development, but there is the fact. Bye-the-bye, a very interesting history of the transformations, etc., of the Mayflies, is given in Pennell's "Fishing Gosssip," by Mr. Pinkerton, and every fly-fisher should see it. The emergence of the pseudoimago into its imago stage has no parallel throughout Nature.

* * * * *

This is the method of its accomplishment. After being released from the pupa state, and making use of the expanded wings for flight—sometimes to some distance—they fix themselves in a vertical position on some object, and withdraw every part of the body, even legs and wings from a thin pellicle which has enclosed them as the glove does the fingers. "It is easy to conceive," says the author of the article on the May flies, in Cassell's "Natural History," "how the body, and even legs can be withdrawn from their cases; but it is not so easy to imagine how the wings, which seem as thin, as much expanded, and as rigid as those of a fly, can admit of having any sheath stripped from them, much less how they can be withdrawn as they are through a small opening at the base of the sheath." Here, however, is the probable explanation. The fact seems to be that, though the outer covering is rigid, the wing enclosed in it, notwithstanding it is sometimes more than twenty-four hours before the change ensues, is kept moist and pliable. In proportion, therefore, as the insect disengages itself from the anterior part of the skin, the interior, or real wings, become contracted by a number of plaits, into a form nearly cylindrical—perhaps like a lady's closed fan—which readily admits of their being pulled through the opening mentioned. As soon as the insect is released from its envelope, the plaits unfold and the wings return to their proper shape and dimensions.

By-the-way, can Mr. Gosden or any salt water naturalist tell me how it is a lobster sheds his shell entire? I think the late Mr. Lloyd, of the Crystal Palace Aquarium, explained the matter once in print, but I can't for the life of me tell where. Can any reader say; it was either the *Field*, *Country*, or *Land and Water*.

* * * * *

Salicylic acid—an application for fungoid diseases of fish—is certainly not a new remedy. I remember trying it when the antiseptic qualities of the drug were so loudly extolled some half dozen years—more, I think—ago. When you paint a trout with it in solution, it does not, it is true, seem to distress the fish, but I cannot say; it destroys the white fungi, of the saprolegnia or salmon disease order, with undoubted surety, especially if the mycelium be long. What the black fungoid disease, referred to in your note, may be, I do not know. Mr. Frank Buckland's remedy has been most successful with me—a weak solution of perchloride of mercury painted on rapidly and the fish instantly returned to a running stream of water. However, the salicylic acid is a very potent arresting agent in putrid diseases of all kinds, and might be usefully experimented on.

* * * * *

Mr. Henderson's episode about catching a tom cat with hook and line, reminds me of a fair catch of a couple of ducks in a similar way. I had been paternostering and inadvertently left the minnows on the hooks, as I stood the rod by the door side, preparatory to taking refreshment at mine inn. Tame ducks and other fowl abounded, and I was just in the act of bathing my thirsty throat, when such a clatter reached me, accompanied by quackings of a most vociferous character. Rushing out, we saw a couple of ducks firmly hooked, and energetically playing at "pull devil, pull baker." Needless to add that they broke the gut and waddled away, each with a length and a No. 4 hook fixed in their crops. They didn't seem much the worse, and really I forgot to enquire if any operation was performed, except the all necessary one, before eating them.—Chub Chavender.

NOTTINGHAM REELS.—THE "GREEN" FISHERMAN.—PATERNOSTERING WITH FLOAT.—SNATCHING JACK.—COOKING JACK.—ITS HISTORICAL CULINARY VALUE.—THE FISHERMAN'S "CURSE."—GRAYLING, ETC.

"Idle Esox," in your last issue, asks several questions relative to the Nottingham tackle for jack spinning, amongst which I notice that anent the best material for Nottingham reels. I have certainly found the common make of wood reels warp and have had to take them to pieces, grind down with sandpaper the warped part, and blacklead the whole interior—this is by far the best lubricant. The winches Mr. D. Slater, of Newark on Trent, has made me with spring detaching and check arrangement, have never served me the trick. The outer wooden plate is kept rigid by means of cross brass bars, and the reel turns very easily on a steel pivot-axle. I have fished years with one of the same pattern, and it is now as workable as ever. You say, Mr. Editor, in your footnote, that ebonite is best, I prefer boxwood as against ebonite; but unless the outer plate, whereon the handles are placed, be very thin, both these materials are much too heavy for bottom fishing.

* * * * *

Apropos of "The Green Fisherman," given in your last week's issue, I know of an equally curious circumstance, in which all the beautiful tackle and unquestionable skill of the angler were unable to take fish, whilst an old, worn out and dilapidated bellows mender caught them as he liked with a rod made of superannuated umbrella sticks, and a line of some material resembling whip cord, to the bait.. We were fishing for perch during the early winter of '72, at Walton Sale, and could get nothing, till after we noticed the procedure of the old boy aforesaid. We had fished with minnows and paternoster, the bait, of course, being off the ground; he was fishing with gigantic lob-worms, on an eel hook, and on the ground, the bait being held there by means of a ledger, weighing, roughly speaking, about a quarter of a pound. Immediately we had recourse to similar tactics we took fish, indeed our ultimate sport was a very good basket of "pearches."

* * * * *

Perch fishing, by-the-bye, ought now to be prominently on the anglers *tapis*. "Marlow Buzz,"—of whose piscatorial exploits and knowledge I can bear high testimony from personal experience—advises the use of a "chumpy" float in paternostering, as an aid to eye and hand. There is much to recommend the float to all *dilletante* anglers, but I for one, especially in perch fishing, prefer its absence. One might as well fish with a gorge hook and float as combine float fishing with paternostering. Miss your fish rather, say I, than encourage a laxity of attention to the sense of feeling which should, in the good fisherman, unerringly indicate a bite. Besides, I question whether more fish in the end would not be missed when using the float than when the sensitive wrist measures the value of the tug, tug, of the perch. However, I don't want to say Mr. B. is wrong. Opinions differ, and we both, if I mistake not, graduated on the same river.

* * * * *

Talking of winter fishing, the jack are now in fine condition here (Hampshire). Of course, in the trout rivers he is a wretch of a fish, and must be destroyed ruthlessly. I wired one yesterday, of half-a-dozen pounds, whose stomach was literally gorged with small trout—Itchen fish. And what a pretty little game she led me before the collar was safely placed round her neck. Remain in one place she would not, but, thanks to the crystal clear water, we "copped" her at last. I climbed a tree overhanging to get at her with my fifteen feet spruce pole, and incontinently fell out of it into the water, whop! splash! She then darted across the stream and ahead, and remained at the tail of a brilliant branch of green tape-weed, looking as handsome, with her suit of emerald, as the water foliage itself, and not very distinguishable from it. However, my assistant worked her down, and I, keeping my own eyes fixed on her villainous orbs, gently lowered the wire noose over her head, and down gently, gently, beyond the pectoral fins, then, with one terrific pull she came to land—as thick and deep a female as I have ever seen. I had her cooked, and the flesh was as firm and toothsome as many a trout I have tasted. Of course, her food had been of the choicest.

* * * * *

I fancy in this connection hearing some of my London angling readers venting their indignation at the device termed "snatching," which I confess to having employed in the capture of the above fish. Let me increase your anger, dear reader, to apoplectic point. I wired twenty-three jack in three days last week, and mean to do as many, if they remain in my trout river, during the next three. Why, trout has no chance with them when the former are small, and surely then, this "jackicide" is justifiable. "Slay all and spare none," is the motto of this child, so, "Johns" of all sizes, ages, and denominations, I warn you to beware.

* * * * *

I said the 6lb. jack was good when on the table. This is how I cooked it to make it so. First it was filleted and boned, and then dipped in egg and bread crumbs, and fried, or rather boiled, in pure olive oil. The oil must be quite smooth before the fish is placed in it, and in order to tell if it (the former) be boiling, a thin sippet of bread should be dipped in it. If it comes out a light brown colour the oil is "fit." I forgot to say that after filleting I always sprinkle a little salt over the piece to extract the superfluous juices.

* * * * *

Mr. Manley, in his "Fish and Fishing," I think it is, who compares a pike done with spice, to a "water souchy of blotting paper," but really, such a verdict against this fish is contrary to traditional report as well as my own experience. True, it is that Ausonius (author of "Mosella") in the fourth century, tells us how the Luce is scourge and terror of the scaly brood, and is unknown at friendship's hospitable board, smoking only midst the coarsest food of the tavern:—

> "Lucius obscurus ulva lacunas
> Obsidet: His nullos mensarum lectus ad lusus
> Fumat fumosis olido nidore popinis."

Nevertheless, in a feast given by Archbishop Neville to Edward IV., 608 jack formed a part (rather considerable) of the banquet. In the thirteenth century few could afford to buy it, its price being about ten times that of either turbot or cod. In Henry VIII. time they were double as dear as a house-lamb in February, and a "little un" was as valuable as a fat capon. Ods bodikins, don't I wish the market in my part of the country was as good now!

* * * * *

Talking about the fisherman's "cuss," did any of my readers ever try the following formula given by Jesse? He says, "The only thing I ever found to succeed for the wings or legs is the feather of the tern or sea-swallow, the body of the same coloured dubbing mixed with a little yellow." I have seen Mrs. Cox's (of Winchester) "cusses," and they are certainly capital, but I should like to look at one made after Jesse's directions.

* * * * *

This fly is perhaps one of the very best for grayling, the capture of which will, I suppose, begin directly in earnest. What a pity it is that this "lady" of the stream, as Mr. Francis terms it, cannot be cultivated more extensively. What is the secret of its aristocratic exclusiveness? Why will it not grow, and why is it not found in Somersetshire, Yorkshire, Derbyshire, Herefordshire, Wiltshire, or am I misinformed as to this? Will some good reader enlighten on one and all of my questions?

* * * * *

And it is a fish of very respectable antecedents. Doth not the oft quoted German naturalist, Gesner, say of the fat of the grayling "being set with a little honey a day or two in the sun, in a little glass, is very excellent against redness or swarthiness or anything that breeds in the eye?" And doth not our sainted patroness, the Dame Inlyans of St. Albans, tell us "The grayllynge, by another name called umbre, is a delycyous fysshe to mannys mouth?" Even, indeed, in that quaint book, "Dialogus Creaturam Moralizatus," published some sixteen years before "The Treatysse of Fysshynge with an Angle," there is an imaginary dispute between a grayling and a carp, which being referred to Judge Dolphin, is summarily ended by his worship swallowing them, saying, with great and ponderous gravity—

> "No one ought himself to commend
> Above all others lest he offend."

—Chub Chavender.

[The grayling is found in all the counties named by C. C. except Somerset. If C. C. kept his jack alive he would soon find customers; some one advertised in the Fishing Gazette this or last week for live jack, but we did not think he would get many. Who sells them?—Ed.]

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

A DAY WITH THE WITHAM ROACH.

By The Trent Otter.

The River Witham, as it flows past the little village of Dry Doddington, Lincolnshire, is a stream of not much consequence as regards size—a dozen yards being about its extreme width; but as it contains a fair quantity of good roach, dace, chub, perch, and some extraordinary specimens of the bleak tribe, or "whitlings," as they are locally termed (a bleak caught in the Witham a short time ago turned the scale at 3¼ oz., a rare, very rare size), it is a stream of some little importance in the eyes of an angler. Hill and valley, woodland and meadow, give the surrounding country a variety of surface; while the river itself, flowing along through a place rich in natural beauty and picturesque spots, in this particular locality, winds about wonderfully; and the many rows of willows that line its banks add to the beauty of the scene.

Approaching Doddington Bridge from the Great North Road, and a few hundred yards above the river, the first object that catches the eye is a very queer and quaint-looking old church, that seems to stand in solitary state on the brow of the hill. The village of Doddington itself is nowhere visible from that standpoint. It is just over the hill, as though it had retired modestly into the background, having no wish to strike the beholder with awe by a sudden display of too much magnificence. The nearest railway station is Claypole, on the Great Northern line, and then the angler has a couple of miles to walk. It is about five miles from Newark, in a south-easterly direction; and on this particular day, I decided that my means of locomotion from Newark to the Witham should be on "Shanks' Pony." I had made my preparations the previous night—that is, with regard to my ground bait—for I am wonderfully particular about my ground bait when I go a roaching. I will tell you how I make my ground bait, or, to put it more correctly, how the "missus" makes it—(as the old lady in the Police-court said, "though I say it as didn't ought to say it," —Mrs. M. very much prides herself in the concoction of this particular ground bait). In the first place, I had given orders several days before that all refuse bread and crusts should be carefully saved. In the next place, on the previous night, I sent up to the nearest grocers for a pound of twopenny rice, and to the bakers for a pennyworth of bran, dividing the rice into two equal parts and putting them loosely into two pudding bags—I said loosely for this reason, the rice must have room to swell to its utmost size (the angler can gauge this to a nicety after one or two operations)—and then dropping the bags into the kitchen boiler, I left them to cree all night. The bread crusts in the meantime must be put into a small receptacle, and then boiling water poured on them, sufficient to cover them; a plate or something is then put on the top to keep the steam in, and allowed to stand all night. In the morning we are up betimes, the bags of rice are fished out of the boiler; they are creed beautifully, the bags are swelled out to nearly bursting point, and each separate one looks nearly big enough to fill your hat. Untying the bags and turning the rice out into an earthenware puncheon, we proceed to squeeze them to pieces. All the water is now drained and mixed from the bread, and it and the rice well worked up and squeezed together, taking particular care that no lumps are left in, because these lumps would rise to the top of the water and swim away, instead of sinking to the bottom and keeping there; so my advice is, don't be frightened about spending a little time in well working up and squeezing your ground bait. The bran is now added, and the whole again well mixed together, until it is a very stiff pudding. When I go a bread or paste fishing that is the sort of ground bait I take with me, and I know it is right, for I have proved it to my own satisfaction over and over again (I might just remark, *en passant*, that when I go after roach with creed wheat and malt for the hook bait, the ground bait is the same as just mentioned, with just a slight addition, and that is a couple of handsful of creed malt, well crushed up, is mixed with it). This ground bait will lick brewers' grains into a cocked hat, and the quantities I have given are quite sufficient for a day's roach fishing in a slow swim; the cost is only trifling.

Some anglers don't believe in ground bait, they wax quite eloquent in the defence of their system; but if they were to come to the Trent and say they were going to catch a bag of roach without using ground bait, say during the months of August and September, they would probably get laughed at. I have read that in some districts anglers use a ground bait that is as filthy a mess as can be concocted; "bullocks' blood, grains, clay, boiled greaves, &c., &c." being some of the ingredients used. Pah! the very thought is enough to turn one's stomach; but to return to my tale. The paste for the hook has now to be made, and here again the services of the good lady is required, for the bait must be made with clean hands (and the hands of a woman are naturally cleaner than those of a man who has to work every day for his living), for this, a piece of white bread about a day or so old, and about four inches square and one inch thick is taken, and dipped in cold clean water, and then squeezed until you get all the water out of it you can; it is now worked up with the fingers until it is a very tough and pliable paste. It is then wrapped up in a piece of damp white rag, and stowed away in the basket; I am very fond of that sort of paste, it is very seldom I use anything else in the shape of pastes, although I know that certain anglers use and recommend all sorts of scented and coloured pastes, the plain bread is good enough for me; but if the angler would like to know about coloured and scented pastes, &c., &c., I have given several recipes for making them in my new work on fishing; (I shall have to try "King's Natural Bait" for roach, for I have heard such good accounts of it). Let's see! I was going fishing a little time back, but if I go on at this rate I shall never get started. My ten ounce roach rod is now reached down, the reel with its eighty yards of the very finest of Derby silk twist is put in the basket, and the trusty old tackle pouch goes after it, and let's hope the "grub" and the flask is not forgotten; and if you are a smoker, the tobacco pouch and pipe. Let me caution you with regard to the latter; don't mix your tobacco ashes among your paste, nor roll up a pill of paste just after you have used that same finger as a "bacca stopper." You will very soon find out that if you like "bacca," the roach don't.

The reader must now suppose that I have traversed the five miles that lay between Newark and the place mentioned in the outset of this article, and am now standing on the bank of the Witham. It is a glorious morning in the first week of August. The stream here is only very slow, at the best of times only running about a mile an hour, and sometimes not even half that; the swim that I have chosen is among a lot of willows, and where there is a nice little opening, just big enough to strike and land your fish comfortably. Just below me a willow projects over the water two or three yards; the twigs and leaves kissing the stream as they are gently swayed up and down by the breeze. I decide to "peg" for them (the roach, I mean). There is four feet of water, and now just opposite me, about two yards out, I throw in two or three handsful of my carefully prepared ground bait and watch it as it sinks down and breaks up into little tantalising fragments. The tackle is now put together, and for my bottom I have one of the very finest drawn gut ones I can lay my fingers on, with a No 10 round bend Carlisle hook on the bend; a very light goose quill float is on the line that requires some half dozen very small split shots to weight it nicely; the landing net is laid handy, a pill of paste is put on the hook, and I am ready for any amount of roach. Throwing my baited tackle in it works gradually down to the twigs of the willow mentioned above, and then held stationary (this is called "pegging" for roach). I fish for half an hour, and am not rewarded by a nibble. I throw in another handful or two of ground bait, and another half hour passes without a fish. "They are a long while making up their minds this morning," thinks I, when my float gives a bob. I respond on the instant. "Missed him, by Jove," says I, and as I pull up I find my bait has gone. My float has scarcely time to settle before bob it goes again. I again give that roacher's turn of the wrist, but the fish is not on the hook. "Oh!" says I, to myself, "that's your little game is it." I now take off the No. 10 hook I am using and put on a No. 12, and have another try. In about five minutes the float gives another bit of a tilt, and, "Ah!" says I, "my boy, I have yer this time," as a three-quarter pound roach is pulling for life and liberty. After changing my hook I only felt one more fish that I did not land. The roach that day were in one of their peculiar biting moods, and required a good deal of persuasion before they would "hang on," but, however, to make a long story short, I that day, out of that one place, took thirty-one roach, that weighed altogether seventeen pounds; a nice level lot of fish, not one of them a pound though several went very near it. If I should be asked the question, "How do you account for so many fish being taken out of one swim?" I should say, "Ground bait did it." It is all moonshine for anybody to say that ground bait is no good. If one bag of fish is taken without the use of ground bait the angler might go a score of times before he had similar luck again; but, however, I suppose anglers will have their own way, so I will say no more, only just remark that if this little article proves of any practical value to any angler I shall be well repaid for my trouble in writing it.

NOTICES OF BOOKS &c.

Art and Letters.—We have received from Messrs. Remington the October number of *Art and Letters*, which commences a new volume. The list of contents reads as follows:—A Declaration of War (frontispiece), Frans Hals (with three illustrations), Pompeii and the Museum of Naples (with four illustrations), The Fan: its History and its Use (with five illustrations), Modern Landscape (with six illustrations), La Fortunina, Chapters XVI. and XVII., &c., by Mrs. Comyns Carr, and Art Notes. It is a cheap and very elegant publication.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held as usual at Masons' Hall Tavern, Mason's Avenue, Basinghall Street, E.C., on Tuesday last, Dr. Lloyd presiding. The river reports were all favourable, Bartholomew, of Goring, reporting several good takes. Mr. Young weighed in four barbel, which averaged about 3½ lb. each, taken with Rosewell at Halliford. Intelligence of Mr. Wheeldon's great take of roach was received during the meeting, and was a source of much pleasure to the members. Several good takes have been reported during the week, but have not been officially recorded. Mr. Hill, secretary of the North Western Angling Society, was present as a visitor, and very cordially welcomed. Following Mr. Bentley, who last week brought some excellent microscopes, by Steward, with sundry interesting objects (some of which were shown by polarised light), several members will shortly lend their microscopes, with specimens of subjects interesting to anglers, and a very enjoyable evening may be anticipated. Mr. Callaghan having made some interesting remarks relative to the fishing experience of himself and friend, a very cordial vote of thanks was passed to Dr. Lloyd, and the proceedings terminated, so far as business was concerned. The members afterwards indulged in a little harmony, and some excellent solos were given; Messrs. Young, Jardine, Clarke, Callaghan, and other gentlemen taking part.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

RIVER REPORTS.

MID-THAMES.

"Amongst the views of many, mine."
—SHAKESPEARE.

The Thames is now in prime autumnal order for roach, perch, jack, and chub. Excellent takes have been had of jack and roach at most stations from Staines upwards, and those fishermen who cannot do the frosty weather should now put in some good time, as the fish are biting, the water in prime fettle for all round work, and the tints of surroundings enough to make a piscatorial or other artist's back hair curl, or a bishop's lawn sleeves crimp without clear starching or goffering irons. At Maidenhead a Mr. Frost has had 14 lb. of roach, and at Cookham Goddin and other celebrities have been busy with roach, perch, and chub At Hurley, on Tuesday, Mr and Mrs. Brooksbank had 9 lb. of fine roach in a few hours, and at Hambledon G. Neal on the 8th had a fine jack of 12 lb. The Henley reports show a decided improvement, Mr. Russell getting a 10 lb. jack near Regatta Island; Mr. Phillips, with Harvey, some splendid chub, best 4½ lb.; Mr. Paton, with Parrot, three jack and two monster chub on one occasion, and nine chub and a 7 lb. barbel on another; Mr. G Arlet, a jack, 8 lb.; Mr. Bolton, with Vaughan, a 7 lb. jack and two smaller ones; Mr. C. D. Johnson, four pretty jack, live baiting. This is an improvement for Henley. In the Kennet last week Mr. Goodhind, with Holdway, thirteen barbel, chub and perch, 80 lb. together, best barbel 7¼ lb. Wind south-east; weather fine; every prospect of good all-round fishing during ensuing week.—MARLOW BUZZ.

Ancholme District.

Few notes are to hand this week from the main river, but I had the pleasure of inspecting a nice beck on Monday last, belonging to a local nobleman, and have the order to amply stock the same from the Manor Fishery during the coming winter.—THOMAS FORD.

Chichester.

The water here in the upper reaches, although a good colour, is still very low, large fish seeming shy and off the feed. Any quantity of small fry may be taken with maggot or paste. A competition was held a few days since by a few members of the Chichester Society. The lower reaches better, principally patronised. General Stokes took first prize with some fair roach; Mr. Rogers second. Weather fine. Wind northerly.—G. F. S.

Derwent (Chatsworth).

The weather during this week has been rather unfavourable, and in consequence there has been but few anglers out, but the river still remains in first-rate condition Grayling have been rising pretty freely all the week, and the few who have been out have had some very good takes, baskets averaging from seven to ten brace. Fine weather is the only thing that is required. The flies killing continue the same as in my last report, namely, bumble and little blue dun.—WHEATSHEAF HOTEL.

Dove.

Weather very unsettled, and there has been a good deal of rain this week, which has brought a lot of colour into the river. Grayling, since I last wrote, have been rising well, both on the public and preserved waters. There is a multitude of insect food on the surface, more perhaps than at any previous part of the season, and I attribute it to the fact that we have had one of the finest and mildest autumns on record. The takes this week have averaged about six brace per rod—on the preserved lengths more. The club fishers have been busy with pith and brains, and a few barbel have daily been captured with the worm. The season for the last named fish is, however, now rapidly approaching its end, as they will soon retire into winter quarters.—THE SPLODGER.

Eden (Armathwaite).

The river is now in good order for fishing. On Saturday, the 7th Thomas Bird caught a fish in the Castle water, weight 20 lb. On Tuesday George Ferguson got one 20 lb., and on Wednesday another 26 lb., in the Armathwaite Club water. They have been coming up the stream in numbers the last few days.—SKIDDAW.

Eden (Carlisle).

Last week there was not much of interest to report. There were a good many more salmon showing, but they were apparently too busy "running" to trouble themselves with a "Jock Scott" or any other gaudy fly that was worked over them. Last Thursday, however, a few fish were brought to bank, also on the following days, especially Saturday, when several local anglers had one each, one had two, another three. I hear that Captain Galagher, fishing in Sir Frederick Graham's private water in the Esk at Netherby, killed four on Friday and six on Saturday, some of them scaling 27 and 28 lb. But this stretch of water is an exceptionally good "lie," and very little fished. This week the water has been in fine order, but the weather very calm and sultry, and blanks have been the rule. There is now a fair show of fish, perhaps about half the number there were this time last year.—SILVER GREY.

Exe (Exeter).

The season just closed, in spite of the ever-changing winds, frequent storms, and heavy rains, for trout fishing has been a most successful one, the catches having been invariably good and the fish themselves of a superior quality, and for size extraordinarily fine. It is true the season commenced badly, and continued so for some time, although the weather at that time was fine and favourable. The run of the fish have surpassed many previous seasons. I do not recollect seeing so many fine trout in any one season before. Of the last thirty fish, shown me by various anglers, none were under 1 lb. each, and three others turned the scale thus—4 lb. 2 oz, 4 lb. 4 oz., and 4¾ lb. These fish measured from the eye to fork respectively 19 inches, 18½ inches, 21½ inches. This latter fish was rather narrowly made and a very dark brown, with large black spots on the gill covers, and dorsal fin. These figures may probably be of service to your correspondent E. Gosling, to whom I am also well known, who I observed in last week's "F. G." asked what the weight would be of a trout in good condition measuring 18½ inches in length. In addition to the above, numerous creels have produced two and three dozen per diem varying from 6 oz. to ¾ lb. each. Salmon are as plentiful as ever, and the upper water fishermen are doing well, and several fine fish have been taken between Cowley Bridge and Salmon Pool. Pike, perch, carp, and tench are giving very good sport, and for which Mr King's "Natural bait" comes in for some very creditable remarks, the following being taken from several others. Mr. J. A. Kelly, whom I met in the city, actually trying to soften some of the bait he had mixed the day previous, which was left unused, and I fancied he did not think much of it, since which he has had another package and reports the "Natural" bait a most enticing one for roach, tench, and carp, the latter especially taking it ravenously, as instanced by his taking two weighing respectively 4¼ lb. and 2¾ lb., while the third one broke his tackle and escaped. Mr. Carnell fishing with common paste and gentles for roach on Wednesday, six roach only. King's "Natural" bait on Thursday, five dozen fine fish. Mr. Thomas on Tuesday six dozen roach and perch. Two friends from London fishing some private water just out of Exeter 18 lb. weight of various kinds, and Mr. Snooks seven dozen roach, dace, and a flounder or two from the river; this gentleman was rather dubious about the bait, but is perfectly satisfied now, as well as the above-named gentlemen. For my own part, I cannot speak well enough of it; the results have been grand when fishing for coarse fish, either in the river, the canal, or ponds; it surpasses all other paste in its tenacity on the hook and attractive scent. As Mr. Blake was feeding his carp in the Aquarium he placed the remainder on the table, but missed it immediately. There was only the cat handy who must have taken it; so mixing a fresh piece, pussy walked up and helped herself, as before, and now looks out regularly for her share when the fish are fed. Anglers should take the hint, and not leave the paste ready mixed if there are cats about. Eels are very scarce—we generally get a moderate supply at this season. Plaice and flounders are plentiful in the estuary—the former especially, which has not been the case for many seasons. Lobsters and crabs falling off. Prawns have not been so plentiful this season as last.—FRANK GOSDEN.

Exe (Tiverton).

The river is of a brownish colour, better known as moorwater, but still in good order for salmon fishing; several have been taken with the fly during the past week.—WM. MUDFORD.

Ilfracombe.

There has been good fishing from the rocks and boats this last week. Thursday evening Souch brought in 21 lb. whiting, 6 conger, weighing 70 lb. The other boats had from 16 to 20 lb. of whiting pout and pollack. A lad fishing from the jetty hauled up a shark, it measured 6 feet 9 inches in length, and two men fishing from the flat rock off the Capstone, one hooked a large conger and had to call the other to help pull him in; when landing him on the rock he broke his hold and disappeared; they consider his weight to be from 40 to 50 lb. Friday and Saturday conger and whiting very plentiful. Monday, 21 large conger, one ling 20 lb., a large skate, one hake, and a lobster weighing 2½ lb. were caught with ground lines. Four boats from Clovelly, herring fishing, one caught 8½ maize, the others about five maize each and a quantity of whiting; several pollack and eels have been caught from the rocks. Thursday evening a small seine was set at Woolcomb Sands; they hauled 17 mullett, weighing 1½ lb. each, a quantity of salmon peel, some weighing 3 lb., several bass from 3 to 4 lb. each, and some brill and turbot, weighing altogether 130 lb. Friday night the seine was again set; a lot of peel, bass, turbot, brill, &c., were hauled, weighing 140 lb. Weather at present mild.—E. COMER.

Irt (Holmrook).

During the last week or ten days the rivers in this district have been low for salmon fishing, and although bright and clear several sea fish have been caught. On Friday last W. B. Addington, Esq., along with a friend, succeeded in hooking a splendid salmon, which fought him hard for nearly forty minutes. As the river was so clear those gentlemen did not think it necessary to take either landing net or gaff, which gave them little hope of ever landing their fish; but not to be done, a happy thought struck Mr. Addington's friend, and as quick as thought he succeeded in cutting down an ash sapling and cutting all the boughs off but one, and that the length of six inches formed a gaff, and with the greatest activity succeeded in landing at the very first click a most splendid salmon in the pink of condition, and weighing over 12 lb. weight, killed with fly and fine tackle. To-day we have rain, and if it continues till to-morrow the river will be in good order.—A. BROCKLEBANK.

Lake Currane (Waterville).

The fishing has improved since last report, one boat killed three salmon, the largest being 23 lb. There were about three dozen trout killed also by the same boat. The lake has been in nice condition for past couple of days; fair prospects of fishing next week. No boats could venture on the bay this week, weather too boisterous for sea fishing.—M. ELLYOTT.

Lea (Ware).

Good sport was had here on Sunday last among the roach, several takes amounting to 12 lb. and over. Several jack were also taken, and two fine chub weighing about 4 lb. each; these were taken near the "Boom." On Monday, the roach were again on the feed, but only a few anglers were out. The rain that has fallen the last three days has caused the water to rise a little and coloured it well, being just in the pink of order.—LION AND WHEATSHEAF.

Medway (Tonbridge).

The water is rather clouded, but still in first-rate condition for all kinds of angling. Good sport has been had during the week. Amongst other takes recorded were Mr. F. W. Hancock, a brace of pike weighing 7¼ and 8¼ lb; Mr. Morley, 3 pike, and Mr. West a brace of pike and a brace of carp from the Powder Mill Lock. The latter were taken with a lob, and weighed 7 lb. 7 oz., two very handsome fish. At the Ballast Pit Mr. R. A. Dallas Beeching has had pike and bream, while further up the river Mr. T. Elliott and other angler have been busy amongst the jack, which are this year found to be numerou and in first-rate condition.—YE MEDWAY WATER RAT..

Nen (Northampton).

Sport during the past week has not been satisfactory, the roach and perc being dead off the feed in this part. I have heard of one or two gentleme taking some nice pike. On Monday, G. Wright killed a nice fish of 12 lb.; o the same day, H. Smith killed 1½ brace pike. The members of the Northampton Working Men's Angling Club turned out on Saturday last to compete for the prizes offered by the club, but the takes of fish were very small. T. Turner, first, 15s.; A. Cook, 10s, second; F. Chambers, 5s., third; G. Miller, 4s., fourth; the following members taken the minor prizes: Messrs. Smith, Billingham, and Seal, sen. At the time of sending the report the river is rising fast, and I do not think there will be any chance of angling for a few days.—T. JAMES.

Severn and Teme (Worcestershire).

These streams are now in prime condition, and some good sport has been the reward for anglers who can use the fly or bottom tackle. Mr. Phillips and friend got amongst the trout the last day, near twenty brace of good fish being taken. Mr. James Deakin showed me a brace of good trout of over 2 lb. on September 30; Mr. E. D. Davis caught a splendid lot of grayling last Thursday; Mr. A. Bosworth landed two dozen of roach; Mr. C. Watkins, seventeen fish, in fact, I could name many who have returned from the river with from 2 lb. of fish up to 20 lb. in their baskets. I am quite convinced that our rivers are better stocked than has been the case for years. The flies I recommend for grayling are as follows:—The pale blue for the end fly, the dark willow next, the hare's ear or red ant as No. 1 drop. With these flies I landed five and a half brace and three and a half brace respectively, the pale blue was first favourite.—JOHN A. GRIFFIN, Portobello Inn, Worcester.

South of Ireland.

CLOSING OF THE ANGLING.

The Angling season of 1882 closes to-day, and in reviewing its results we may say that it was fully up to the average of previous years. The opening took place on the 1st February, a fortnight earlier than in the previous three years. Contrary to expectation, anglers captured a fair proportion of Spring salmon in the Lee during the month of February. The river appeared to be then fairly stocked with Springers, owing to the heavy floods in January, but it was not until the months of March and April that the real sport commenced. Some few unpleasant incidents marred the sport in the early part of the year. Farmers having fisheries on the river insisted upon exercising their right, and in a few cases had to be brought to book by their landlords, who were put to the trouble of proving that the rights of fisheries were reserved. In one fine fishery however, the tenants and their friends continued to angle despite of all remonstrances, and four gentlemen who had the right to fish from the lessee were obliged to abandon the privilege rather than run the risk of being assaulted. The fishery afterwards became a commonage, and those who had deprived the legitimate persons of their sport were themselves unable to grapple with the host of trespassers who soon overwhelmed the banks, and carried off the largest share of the sport. It was a commentary on the character of those men that four of them were recently fined £4 each and costs for strokehauling salmon. The peal fishing turned out a blank; the weather being dry, the river was too low to enable the peal to ascend to the upper waters. The net fishing was fairly productive throughout the season, and a steady average price was maintained. The opening prices in February were 2s. per lb. This price was maintained with slight variation until after Easter, when it dropped to 1s. 6d., and during the peal season to 1s. and 1s. 3d. The closing price to-day was 1s. per lb. Mr. Geo. Haynes made about the best individual bag for the season, having taken fifty-six springers and some peal.—ANGLER.

Thames (Chertsey).

I am sorry I missed the post last week, still my report is not heavy. Three days fishing last week as follows: First day, 4 bream, 1 barbel, and 1 perch; second day, 3 bream and 1 barbel; third day, 2 barbel and 1 chub. This week's report 2 barbel, 1 chub. Two days with Mr. Spreckley, 2 bream, 6 lb., 2 barbel, one 1 lb roach, 2 trout, one trout, 3 lb., swallowed the bait and died; the other fish, two feet long, all right; a fine fish; what would one give to get a fish like that? but I am glad to say the fish went back to his native element in the same place where Mr. Hatfield took his trout some time back. There is one thing about it, it shows there are fish in the old Thames—JAMES HASLETT.

Thames (Goring).

Water a little thick, in good order for roach fishing; jack and perch not on much. Roach have been biting very well. Have been out four days roach fishing; best day eight dozen of roach and a few very good perch.—JOHN RUSH.

Thames (Hall ford).

The river is now in good order for all seasonable fishing. Different gentlemen fishing with me since last week's report have had takes as follows:—Mr. J. C Inuis, three barbel, largest over 5 lb, and some good roach and dace; second day, Mr. Deacon, four barbel; third day, Mr. Abrahams, six nice barbel, largest 4¾ lb.; fourth day, out with Mr. Palmer three hours, took three barbel, largest 4 lb., and a nice chub.—GEORGE ROSEWELL.

Thames (Richmond).

The river is now in excellent condition for fishing, the recent rain having just coloured the water to a nicety, and the roach and dace are feeding well. All the punts have been out each day, and all the patrons well satisfied with their returns for the day, as the fishing has been good all the week.

P.S.—I was much surprised at Mr. Perrin saying that some of his Richmond brethren doubted his report. It would be better if Mr. P. would name the person, as each fisherman in Richmond is his own master. They are as follows:—Kit Brown, G. Howard, E. Brown, H. Howard, Job Brain, H. Wheeler, H. Platt, and John Bushnell, all men that have served an apprenticeship to the water, and who would hardly call Mr. Perrin a brother or one of them, and as each man has as much work as he can do, I don't think it would matter much what reports Mr. P. sends.—JOHN BUSHNELL.

Thames (Shepperton).

Since the rain the water is in much better condition for fishing. Fishing prospects are much better than they have been. F. Purdue, one day, 4 dozen gudgeon; H. Purdue, one day, 2 dozen roach; a gentleman and his son, fishing in his own boat, took 6 bream, weighing 12 lb., the largest weighing 4 lb; a young man from Weybridge caught a carp near Shepperton weir weighing 6½ lb. Ledgering myself, three days, 9 dozen roach and dace, 1 chub of 1½ lb., 4 perch, one weighing 2 lb., one 1 lb, the other two smaller—W. ROGERSON.

Thames (Twickenham).

Wind N.E. The water has greatly improved since the rain last night, and the takes to-day (Thursday) have been much better than any other day during the week; but I have not been quite so busy as last week. However, had 24 punts out during the week, and since I last wrote have been again honoured by a visit of Royalty: H.R.H. Princess Mary (Duchess of Teck), accompanied by H.R.H. Princess Victoria Mary, H.R.H. Prince Francis Joseph, and H.R.H. Prince Adolphus of Teck, attended by the Rev. Matthew and Mr. Freeborn. Jack Spong and "Our Joe" were the fishermen in attendance. But I regret to say it was the roughest day experienced this season for angling, the wind due east and extremely cold. Nevertheless, H.R.H. most graciously expressed her satisfaction with the whole arrangement, and said she had much enjoyed the sport.

N.B—I take this opportunity of thanking the officers of Thames Angling Preservation Society, coupled with Thames Conservancy, for the very efficient manner in which they have protected our waters during the recent holidays.—ALFRED PERRIN.

Thames (Windsor).

Since my last report nothing at all has been done here. I tried the barbel three days, but could not get them at all, nor are we likely to have any sport unless we get a thorough good run of water or some frost. The late rain has risen the river considerably. The jack should be going at the spinning bait.—G. LUMSDEN.

The Rother.

Weeds are now rapidly disappearing in the river Rother here, and with heavy rains this week the water is in good condition, and angling prospects greatly improved. Some fine dace taken this week.—J. A.

Torridge (Torrington).

We have been having some heavy showers, which have risen the river, but it is now getting in order for fishing, and should we have no more rain good sport may be looked for. Three salmon and nine peal have been taken since last report. S. Jackson, on Thursday last, took a salmon of 12 lb., and on Friday one which I weighed, 19 lb.; B. Rudd also took one on Thursday, 6½ lb. Many salmon and peal were seen yesterday trying to leap the weirs.—PRACTICA ANGLER.

Torridge (Woodford Bridge).

The river on Monday and Tuesday was in good order, and some good dishes of fish taken. Since then the water, by constant rain, has been high and muddy, with little prospect of anything more being done for some days.—JOHN BLAKE.

Trent (Newark).

Taking all things into consideration, sport has been a little better this week than last, for swims that can only be successfully fished in a very low water were in good trim, and some fair bags were made out of them. I hear of a good catch of barbel being taken at Stoke during the latter part of last week. I had a day on Monday, and got 16 lb. of bream and roach, but nothing very "tall." Biggest roach 1 lb. 1 oz. and biggest bream nearly 2 lb They took a deal of persuasion before they would "hang on." Tail end of maiden lobworms have been the most successful lure. Several nice bags have come under my notice, and in nearly every instance worm was the taking bait. I got my fish with only about an inch of the tail end of the reddest maiden lobworm I could find. The deepest swims have been the most successful as a rule this week. Mr. J. Chatterton got three nice jack on the 6th inst., live baiting, I think, weighing 5lb., 5½ lb., and 7 lb. respectively. Heavy rains have fallen this last day or two, which has caused the river to rise, and a bit of colour with it. I am afraid sport will not be very good for the next few days, for the water is still rising, and all our best swims out of condition. Worm fishing on the slopes or in quiet corners might be tried, as the fish have not yet got packed in their winter quarters.—THE TRENT OTTER.

P.S.—I have been informed that Mr. D. Slater and Mr. J. Chatterton, while out pike fishing last Monday, had the good fortune to land one each, the former a 25-pounder and the latter an 18-pounder. I naturally wanted to see them, but was told they had gone to Cooper's, London, to be "stuffed." I don't know whether the fish in question really went to get "stuffed," or whether they (my informers) were only trying to "stuff" THE TRENT OTTER.

Trent (Nottingham).

The river in this district rose several inches on Thursday through heavy rain which descended on Wednesday, but the rise will not be unacceptable to the majority of the bottom fishermen. A rise, in fact, was required, as the bed of the stream had become thickly entangled in weed, especially in the upper waters. On Wednesday afternoon Mr. C. B. Cox, of Hazleford, succeeded in taking three splendid chub in greaves, the largest (weighed in at the Wellington Association) turning the scale at 4 lb. 2 oz. So far this fish heads the chub list, and the club closes with the termination of the present week. From Weston news reaches me that on Monday and Tuesday Mr. A. J, Field and Mr. T. Wood caught, amongst other fish, two salmon weighing 15 lb. and 11 lb. respectively. Both took the worm, and many others were seen in the same neighbourhood endeavouring to surmount Kings Mills Weir. Thursday's influx will materially assist them, and the rise could not possibly have come at a more opportune period.—THE MAN AT THE CLUBS.

Tweed and Teviot.

Towards the end of last week the takes of salmon in the Kelso district of the river were more numerous than they had been for some time previous. On Thursday, the 5th inst., Mr. Alfred Denison, London, angling on Birgham Dub, was successful in killing an 18 lb. salmon and a grilse of 7 lb., and on the same day Mr. Brunlees, C. E., London, hooked and landed a fish of 16 lb. on the Sprouston water. On the Hendersyde upper water, on Friday, Mr. F. L. Roy, of Nenthorn, secured two grilse weighing 7 lb. each, while he also captured a salmon of 17 lb. on the Sprouston cast the same day. Mr. Brunlees caught a salmon which turned the scales at 18 lb. At Birgham Dub, further down the stream, Mr. Denison had a couple of fish for his share. Mr. Kermack, Edinburgh, fishing in the Sprouston lower water on Saturday, landed a salmon of the handsome weight of 22 lb., and on the same day on the Hendersyde water Mr. Pringle Elliott was successful in securing two fish. On Birgham Dub a pair also fell to the rod of Mr Denison. Owing to the heavy pluvial descents of Saturday night and Sunday, both Tweed and Teviot came down in flood, and on Monday morning the index at Kelso Bridge registered a rise in the river of nearly three feet. Angling was consequently put a stop to for that day. Large numbers were observed making their way up the river when it became flooded, and prospects are entertained of angling being yet productive of good sport. On Tuesday various casts were tried at different parts of the stream, but I only heard of two fish being captured, one of which was credited to Mr. James Kerso, who fished the lower Hendersyde water. On the Birgham water on Wednesday Mr. Denison killed three salmon, averaging about 18 lb. each, which was decidedly a good take. On the Cornhill water ten miles below Kelso on Saturday Mr. Henderson landed a salmon of over 20 lb. weight. During the past week trout angling has been prosecuted to some purpose. On Tuesday Mr. J. M Kie, Edinburgh, killed a basket of 8 lb on the Teviot, the principal tributary of the Tweed, and on the Eden on Monday Mr. R. Newton killed 6 lb. Other anglers have obtained baskets weighing from 3 lb. to 7 lb.—Maxwell.

Wharfe (Yorkshire).

This river is now very low and clear, and not much has been done with fly. S. Suttle, of Otley, on Monday, killed five nice grayling, with a small black fly; but other anglers that I have met with have only had poor sport. It is too soon yet to fish the worm for grayling, but a sharp frosty night or two would soon being them on the feed. Thunder has been hanging about, which may perhaps account for the poor sport.—Francis M. Walbran.

Witham (Boston).

The season for pike angling in the Witham and contiguous drains is setting in in a very promising fashion. At Tattershall some very nice pike have been taken, also at Burdney, at Chapel Hill, and at Dogdyke. At the first-named place, amongst others, Mr. Sherwin caught one $8\frac{1}{2}$ lb.; at Bardney the best was about 6 lb. Near to the Hermitage some good fish were landed up to near 6 lb., and at other points there have been sizeable captures. On the larger drains some remunerative sport has been experienced. Mr. Short has caught five at Cherry Corner, the best being one of $7\frac{1}{2}$ lb.; Mr. Allis, at Eastville, two, with a perch $1\frac{3}{4}$ lb; at Leake some Sheffielders had several, two securing them and losing two between them; and at Fishtoft there were others landed. These latter were all from the Hobhole. From the Mount drain Mr. Sykes took three, the best being one of 5 lb. along with a decent basket of roach, From the Forty-foot a lot of pike have been taken. Mr. Heath got one of 10 lbs.; Mr. Porklington, three; Mr. Gilmour, one; Mr. Wray, one; Mr. Day, one, &c. These gentlemen had also good takes of roach and rudd. On the same water Mr. Latham caught four perch, 1 lb. to $1\frac{1}{2}$ lb. each; Mr. Barnes over 30 lb. roach; and Mr. Spencer a well-filled basket of the same fish. Other roach fishers on this water that have done well have been Mr. Brown, Mr. Wilson, Mr. Henwood, &c. Among the luckier anglers on the waters here mentioned a gentleman visiting from Nottingham, who got on a shoal of good bream at Chapel Hill, several of those he landed weighing 3 lb. upwards, one $3\frac{3}{4}$ lb., and also a tench $2\frac{1}{2}$ lb.; and Mr. Jones killed 17 lb. of rudd and roach at Eastville. The water is in excellent condition almost everywhere, and the prospects of pike fishing are daily improving. Weeds are a nuisance in many places, but these are dying down and floating out at the flood doors.—The Yellow Belly.

Wye and Derwent.

We had a very great quantity of heavy rain fall yesterday (Wednesday), which has caused both the above rivers to have nice little flushes on them, which has quite put a stop to fly-fishing for a few days. The bottom fishers on the Derwent no doubt will do well now with both maggots and worms. Sport both on last Monday and Tuesday with both fly and bottom was very good, and baskets averaging fully 6 brace per angler was made. The killing flies have been bumbles, red ribbed with gold twist, and furnace flies, the duns have also killed a few fish. Both the Wye and Derwent ought to be in first-class condition for grayling fly-fishing by Monday.—George James Eaton.

Yare (Norwich).

Sport on this stream has been very fluctuating on account of the unsettled state of the weather and the prevalence of east wind during the past week. On Thursday a gentleman from Norwich took at Buckenham four nice jack with a spoon, though the water was thick and not at all favourable for spinning. On Saturday last Mr. Hubbard (of Sprowston) with the "constant visitor" at Buckenham Ferry took 100 good roach, many of them being very fine. I was at Buckenham with a friend, same afternoon, and only took between 20 and 30. The condition of the fish was first-rate, very few having the parasites to any extent. The same day a member of the Champion Angling Club (Mr. Stannard) with another angler, took at Brundall over three stone of large roach, but the reports from this station are not good, a stone being looked upon as a good take; next day at Buckenham Hubbard with one rod killed 89 roach, weighing $2\frac{1}{2}$ stone, and a jack $5\frac{1}{2}$ lb. yielding to the allurement of a live bait. The same angler, with Mr. Robert Harvard, jun., of this city, was out on Tuesday at Buckenham, and succeeded in killing 86 good roach at a spot near Strumpshaw Dyke, proving that (as last week) up stream was best; they scaled over 2 stone, so were fair sizeable fish. I might say that bread and bran has formed the Staple ground bait, and that gentles have proved the only temptation to which the shy ones have yielded. On account of the weather, prospects for the coming week are not bright.—Robert Moll.

CLUB AND OTHER JOTTINGS

By L. B.

Mr. P. Geen has for many years so closely identified himself with—nay, always taken a foremost part in every movement having for its object the advancement and protection of angling interests, that it is no exaggeration to say his name has become a household word to thousands, not merely within but far beyond the metropolitan area, and I therefore feel sure that anglers all over the country will hear with feelings of deep regret of the irreparable loss his children and himself have sustained by the death of the most devoted of mothers, and the best and most loving of wives—and that all alike will sympathise with them in their great bereavement (though many, perchance, will do so in respectful silence).

At the meeting of the executive committee of the West Central Association of London and Provincial Angling Societies, held on Friday evening, October 6th, two new clubs were enrolled, viz.:—

Crescent Angling Society, held at the Giraffe Tavern, Newington Crescent, Newington, S.E., secretary, Mr. Pearson; and the Rodney Piscatorials, the Albion Tavern, Rodney Road, Walworth, S.E., of which our old friend Mr. J. Hotham, takes the secretaryship. In each case not only were the usual questions "Do your rules provide for the strict observance of the close season and the return of undersized fish?" satisfactorily answered, but the said rules which were willingly submitted to the committee, were in all other respects capitally drawn up and certainly are in many respects among the best I have perused for a long time.

Owing to the extreme lowness of the water fishing has, in the interests of anglers themselves, been stopped at Elstree reservoir. Last Sunday, 8th, being announced as the last day until the—not only here but everywhere else—long expected and much needed push of water sets things right for what, let us hope, may prove a successful winter season.

An angler and friend recently fished out of the river Thames at Bourne End, with the help of a landing net, a well-conditioned female trout of about 5 lb., apparently dead only a few hours, and full of spawn. A careful dissection, it seems, tended to confirm the opinion formed by the finders at the time that the fish had come to an untimely end through being struck by the screw propeller of a steam launch.

A return visit will be paid the Great Northern Brothers' Angling Society, the Robin Hood, Southampton Street, Pentonville Hill, on Monday evening, October 16th.

There will be no meeting of the Anglers' Benevolent Society's committee on Friday, 13th; but a special general meeting is announced for Wednesday evening, October 18th, when business of importance will be dealt with. Rumours of fresh poaching comes from the river Colne on Staines Moor. One gentleman assured me that on a recent occasion "some netting vagabonds succeeded in a very short time in taking *out* three bushels of fish of all kinds, and wound up by chucking a keeper *in*."

The following occurs in a recent letter received from my friend, Mr. R. W. Hobden, of the Hammersmith United Angling Society, and as it may prove of interest to the readers of the F. G. I have reproduced it in Mr. H.'s own words.

"On Thursday last, I made my first acquaintance with Shiplake. The wind was north-east, and blowing a hurricane all day long, pleasantly varied with occasional calms and copious showers of rain. By dotting about from spot to spot my friend got a few perch and a nice chub; and in the afternoon I dropped across a few good roach. I fished in a little eddy by the side of the first weir, in about 16 feet of water, and my punt rod being only about 9 feet long, you can guess my troubles in getting out and landing my fish off a bank 6 feet high. I found that all these roach were feeding on the silk weed on the stones of the weir.

"I should think Shiplake a good fishing locality, and the pool of the first weir is a fine piece of water for size and depth, 10 and 12 feet close in to the bank. Our punt was above the lock, and my friend Arnold, 'of ours,' had put all his kit, rods, &c., and dinner, into the punt, which the lock-keeper proceeded to take down and through the lock; luckily, we were not in it, neither were my properties, for in emptying the lock the end of the punt got fixed in some way, and not being able to fall with the water, got filled therewith, and half of it sunk, completely submerging all Arnold's goods. You can imagine his dismay, also that of the lock-keeper, as a steamer was fast approaching to come up the lock. However, we managed to lead the punt out and prevent its entirely sinking, and rescued Arnold's soddened tackle, macintosh, and food. The lock-keeper soon rigged him out with dry food and macintosh, and we proceeded to our fishing. Walters, 'of ours,' told me last night that, fishing in the Colne on Thursday, he hooked good fish twice running, and on each occasion got round a sunken post, and each time went in to get the fish and also his tackle, but only succeeded in securing the latter, the fish escaping. What do you think of his exploit?"

A No. 2 District West Central Association visit was paid the Sir Hugh Myddleton Angling Society, the Empress of Russia, St. John's Street Road, on Tuesday evening, October 10th, and though the exceptionally large room was by no means crowded, there was a very fair attendance indeed. The chair was filled by Mr. W. Fowler, Mr. Mason facing him in the vice. Among the gentlemen who obliged with songs and recitations, several securing encores, were Messrs. Fowler, Toplis, Duncan, Beckwith, Raymond, Walsh, Steel, Barrett, Stephens, Thorley, &c. The roll was called shortly after eleven by Mr. L. Bonvoisin, the district visiting officer, when it was found the following societies were represented:—Amicable Brothers, City of London, Globe, Odds and Evens, St. John's, Sir Hugh Myddleton, Star, and Trafalgar; also the following societies not included in No. 2 district—Hoxton Brothers, North Western, Bostonian, Buckland, Eustonian, King's Cross United, Little Independent, Great Northern Brothers, Waltonians, and the Highbury, making a total of eighteen societies. During the evening, Mr. R. Ghurney, the secretary of the Anglers' Benevolent Society, spoke a few seasonable words about the steady progress of this capital institution, pointing out to all present, whatever their social position, the necessity of supporting so deserving an undertaking. A cordial vote of thanks to the chair and vice-chairman brought the evening's entertainment to a close.

Election of Conservators for the River Suir and its Tributaries.—The triennial election of conservators for the D division, Waterford district No. 3 was held at Clonmel court-house on Monday. Mr. F. Massy, Suir Castle, was moved to the chair. Five candidates were proposed for the three vacancies, and, a poll being taken, the following were declared duly elected by a large majority:—Major Mansergh, Ardmagh House; Mr. Michael Keating, Cahir; and Mr. Richard Bradford, Clonmel.

CLUB REPORTS.

ALEXANDRA SOCIETY OF ANGLERS.

On Sunday last we had a good show of fish from Amberley and Pulborough, and the Stort. Mr. Wilts the heaviest weight of roach, bream, and dace; Mr. Chipchase, roach bream, and dace; Mr. Gripton, roach and bream; Mr. Wilson, roach and bream. Several members from the Lea did not get a fish; this does not look promising for our peg-down match on Sunday, the 15th.—F. Wagner, sec.

October 12.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Medcalf, 1 jack, 1 lb. $5\frac{1}{2}$ oz.; Mr. Shury, roach, 3 lb. $1\frac{1}{2}$ oz., bream, 2 lb. $7\frac{1}{2}$ oz. from the Arun. Mr. Arnold, roach, 3 lb. 4 oz, dace, 4 oz. from the Thames; Mr. Tinson, 1 jack, 1 lb. 5 oz. from the Lea; Mr. Binks, 1 jack, 1 lb. 4 oz.; Mr. Farebrother, roach and dace from the Thames; Mr. G. Carrington, roach and bream, Amberley.—T. Worledge.

October 8.

ANCHOR AND HOPE ANGLING SOCIETY.

Sixteen of our members fished a roving match at Hatchett, on Sunday, the 8th inst., but owing to the bright state of the river none of the prizes were taken. The same will be fished off on Sunday, the 22nd, at Hatchett Albert Bridge to the lock. The prize, taken by A. Shakel at Pulboro, on Sunday, the 1st, can be seen at the club house.—W. Davis, secretary.

11th October, 1882.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge with thanks the receipt of £1 1s. from "Kuss," of the Gresham Angling Society. I shall be pleased to acknowledge many more such Kuss's.—R. Ghurney.

Oct. 12.

CHAMPION ANGLING CLUB

The members of this club held their annual dinner on Thursday 11th inst., at their club, "The Champion," Mr. S. F. Howitt, vice-president, in the absence of the president, presiding, Mr. G. G. Whincop occupying the vice-chair. A most excellent and well served dinner was provided by Host Chettleburgh, abundance and quality being equal. After all had done justice to the inner man, the chairman gave the usual loyal and patriotic toasts, and song and toast followed in quick succession as per programme. In responding to the toast of "The Champion Angling Club," proposed by the vice-chair, Mr. Moll pointed out the desirability of each member making angling a study, and endeavouring to become proficient in all its minor but still important details, so that the club might not only be composed of jovial anglers, but of thorough intellectual piscators which would place them second to none in the city. The committee was proposed by the chair, and responded to by Mr. G. G. Whincop and Mr. Hunt in very able speeches, each tending to advance the interests of the society. Mr. Moll proposed "The Yare Preservation Society," coupling with it the name of Mr. C. J. Greene, the esteemed honorary secretary, who in responding pointed out the benefit this important society had, and still was conferring upon the locality by its efforts. Norfolk and Suffolk were left out of the Bill introduced by Mr. Mundella, and lovers of the gentle art are thus enabled to go abroad all the year round without interference, and seek health and pleasure by the river side whensoever they choose. The society has just appointed a new river watcher in the place of Hewitt, and the committee trust he may prove as good a servant, and secure convictions of offenders on all possible occasions. He trusted that London anglers generally who visited these waters would support this society. He was proud to be a guest of this club, every member of which was a subscriber to the Yare Society. The toast of "The Ladies," ably given by Mr. Randall, and responded to by Mr. Sidell, brought a most enjoyable evening to a close.

CLAPHAM JUNCTION ANGLING SOCIETY.

On October 4th, Mr. E. Brewer weighed in a nice pike of $13\frac{3}{4}$ lb. Mr. J. Innes, 3 barbel, one weighing 4 lb $10\frac{1}{2}$ oz; roach and dace, 10 lb. $10\frac{1}{2}$ oz. On Sunday last members competed for several prizes at Weybridge, and were all taken by the following members:—Mr. W. Maslin, first; Mr. Boisseau, second; Mr. E Wilson, third; Mr. R. Wellman, fourth. Takes were small, the heaviest weight only being 1 lb. 15 oz.—E. Wilson.

CROWN PISCATORIAL SOCIETY.

One of our members, Mr. Willcockson, had 9 lb. of handsome rudd on the 8th. Several others out but returned with very little sport. The first half-yearly supper of this flourishing society will take place at the club house, the Crown Tavern, Clerkenwell Green, on Monday, October 23rd, 1882, at 8.30 sharp. Our worthy host, Mr. Caddell, has promised to well ground bait the swims. The chair will be occupied by Mr. Willcockson.—W. H. Burwash, jun., secretary.

October 11, 1882.

DUKE OF NORFOLK ANGLING SOCIETY.

At a special general meeting of the above young and prosperous society it was resolved to remove the club to more commodious premises, viz., Mr. George Grey's Ledbury Arms, Ledbury Road, Kensington, late of the Reform Anglers, held at the Jolly Coopers, Clerkenwell Close. Other clubs please take note of this, when we shall be pleased to see them, our host, Mr. Grey, having just taken possession.—J. Avon, secretary.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

The next general return visit will be paid to the above society on Monday, October 16.—J. A. Fitch, jun., sec.

October 12.

GREAT YARMOUTH PISCATORIAL SOCIETY.

This society held its weekly meeting as usual on Monday, under the presidency of A. Mitchell, Esq. This meeting was numerously attended, both by Yarmouth and London anglers especially, many well-known anglers being present. The chief business of the meeting was to elect a vice-president in the place of Mr. Courtenay, and we have much pleasure in informing friends that a well-known Yarmouth gentleman was duly elected in his stead, viz., Mr. J. Etheridge. Also several gentlemen were enrolled as new members. The society has caused, by its success, another one to be formed, called the Friendly Anglers' Society, which, I am pleased to inform you, has been offered any assistance that they may require, respecting information, rules, &c., from the Piscatorial Society. I forgot to mention that the jack referred to in my last report, caught by Mr. Hewetson, was caught on a single gut hook, and required a great amount of skill and tact to bring him to the landing net. Mr. Bennett also caught a very fine perch, $2\frac{3}{4}$ lb., at Ormesby, but the best fish was presented to the secretary by Mrs. Barber, of Regent Street, caught by her near St. Bennett's Abbey, weight $3\frac{1}{2}$ lb., a perch, 15 inches in length from centre of eye to tip of tail. The fish has been taken by our local naturalist, Mr. Lowne, of Fuller's Hill, and will soon adorn the walls of our club-room, and it is to be hoped that before the season is over some more specimens will be taken by our members and presented to the society.—James Lark, sec.

GOOD INTENT SOCIETY.

The members of this club to the number of fifty-four fished at Boxmoor on Sunday last for twelve prizes, but only five were taken, in the order named—Mr. Devon, 1st; Beale, 2nd; Raynor, 3rd; G. Bates, 4th; Howe, 5th. The members have decided to fish at Waltham on Sunday, the 22nd, for twelve prizes, pegged down. Tuesday last, being quarterly night, there was a full attendance of members, and a large amount of business was gone through.—R. Murphy.

HAMPSTEAD ANGLING SOCIETY.

Several of the members were out on Sunday, when the following members weighed in: C. Messenger, W. Messenger, W. Chiel had some very fine roach and dace.—W. Broom, sec.

HEARTS OF OAK ANGLING SOCIETY.

The members of the above society fished for a series of prizes at Pulborough last Sunday, three only of which were taken, by Messrs. A. Fish, H. Cook, and W. Rider respectively. I am sorry to announce the death of an old and respected member, viz., Mr. J. Carrington. I might mention that a benefit will take place for the widow and seven children, who are left totally unprovided for, at the Dolphin, Church Street, Shoreditch, on Monday, October 23. —C. J. Millie, sec.

HIGHBURY ANGLING SOCIETY.

Although the trays of our society have not lately been so well furnished in comparison with times gone by, still we have to congratulate our members upon their energy and perseverance in pursuing their favourite pastime, in order to keep the ball rolling. The result on the 8th was most satisfactory, the principal takes being contributed by Mr Highley with some capital perch and jack, the heaviest of the former scaling nearly $2\frac{1}{4}$ lb., as also Mr Wells, with a nice jack weighing 6 lb., while Messrs Anthony, Payne, Arnold, Ballard, and others produced a splendid assortment of roach and dace from the Thames and Lea.

HOXTON BROTHERS' ANGLING SOCIETY.

The members of the above society will have their first outing for prizes this season on Sunday, October 22nd, at Bourne End, when eight prizes will be competed for. The next return visit of the clubs on the Eastern District Visiting List will be paid to the Hoxton Brothers, on Monday, October 23rd. On Monday next, October 19th, a concert will take place at the Cherry Tree, Kingsland Road, for the benefit of the widow and children of the late M. Agombar, many years a member of the Hoxton Brothers' Angling Society. A benefit will take place on Monday evening next, October 16th, at the Bald Faced Stag, Worship Square, Finsbury, on behalf of the widow and four children of the late George Oram, many years an energetic honorary bailiff of the River Lea.—R. Ghurney, sec.

IZAAK WALTON ANGLING SOCIETY.

A good many of the members tried their best for a show on Sunday last, but only three had fish worth notice. They were Messrs. T. Dennison, senr., G. Wood, and T. Ward. Mr. T. Dennison, senr., was out again on Wednesday, and had a tray of nice roach and dace. Mr. T. Dennison, senr., wishing the members to patronise the new water at Harefield, will give a prize value 10s. 6d for the heaviest weight of any kind taken on the Wednesdays during November. Mr. T. Dennison, jun., will give a prize value 10s. 6d. for the heaviest weight of any kind taken on the four Sundays in November.

November 12, 1882.

LEEDS MARQUIS OF GRANBY ANGLING ASSOCIATION.

The members of the above association fished their first angling competition on Monday, October 2, 1882, at Benningbrough-on-Ouse, by the kind permission of the Hon. Payan Dawnay. This being the first competition of the society, which has only been established three months, and numbers eighty members, every one worked hard in securing minor prizes from friends, and exerted every effort to make it a pleasant, agreeable, and successful day. The competition was open to all England, £25 being given in money, besides twenty minor prizes, some of them valuable ones, consisting of handsome coloured album, tobacco jar, set of fireirons, fly-rod, Nottingham reels and lines, fishing panniers and books, knots of patent gut, &c., &c. The weather was everything that could be desired, the heavy rain on Saturday and Sunday caused the water to rise about 2 feet, and being slightly coloured a good catch of fish was anticipated. Seventy anglers left Leeds Station for York at 9.10, arriving in York at 9.55. They proceeded to Tendal Bridge, where a steamer was waiting to convey them to Benningbrough, $3\frac{1}{2}$ miles up the river. On arriving at the fishing ground we numbered 140 fishermen from Leeds, Sheffield, Harrogate, Stockton, Otley, Thirsk, York, and outlying districts. The ground was staked out under the superintendence of Mr. Arnett, of York, allowing each man 15 to 20 yards to angle in. The drawing commenced at 12.30, every man being strictly searched as he passed up the ground. One man, named Parker, of Bramley, was found with 15 oz. of roach concealed in his basket, and was at once disqualified, wisely taking himself off the ground, or he would probably have been gently ducked in the river. Fishing commenced at 1 and closed at 4 o'clock, the weights of fish were as follows:—1st. £8, W. Darley, Sheffield, 3 lb.; 2nd. £5, R. Spill, Sheffield, 2 lb. 12 oz.; 3rd. £3, A. Whittam, Marquis of Granby Club, 1 lb. $12\frac{3}{4}$ oz.; 4th. £2, J. Gresham, Marquis of Granby Club, 1 lb. $12\frac{1}{2}$ oz.; 5th. £1 5s, J. Isherwood, Marquis of Granby Club, 1 lb. $12\frac{1}{4}$ oz.; 6th. £1, J. Stevenson, Bramley, 1 lb. 8 oz.; 7th. 16s., A. Owen, Marquis of Granby Club, 1 lb. $7\frac{3}{4}$ oz.; 8th. 14s., F. Thompson, Leeds, 1 lb. 6 oz.; 9th. 12s., H. Kirby, York, 15 oz.; 10th. 10s. 6d., W. Hirstwood, York, $14\frac{1}{2}$ oz.; 11th. 10s., A. Croft, Sheffield, 13 oz.; 12th. 10s., F. Scatcherd, Marquis of Granby Club, Leeds, $11\frac{1}{4}$ oz.; 13th. 7s. 6d, J. Ward, Rothwell, 11 oz.; 14th. 7s. 6d., G. Grant, Leeds, 10 oz.; 15th. 7s. 6d., J. Duce, Leeds, 10 oz.; The prizes were distributed at Mr. Smith's, Haymarket, York, who catered for the Leeds' anglers in an excellent manner; the day closing with singing, reciting, &c.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday. Our trays were not so full as we should like them to be. Mr. Petrie, jack and roach; Mr. Thompson, roach; Mr.

Hurwood, roach and gudgeon; Mr. Humphreys, dace and gudgeon. The great Northern Brothers paid us a visit on Wednesday last, and a jolly evening we spent. They gave us some handsome prizes to be fished for.—W. H. Evans, sec.

October 11.

NORTH WESTERN ANGLING CLUB.

On Sunday, the 8th inst., Mr. Bonvoisin weighed in chub, Mr. Stead chub and roach, one of the chub going 3 lb., and Mr. Hill roach. A visitor also showed 18 lb. of roach from Twickenham —H.

October 12.

ORIGINAL ALEXANDRA ANGLERS.

We had a good day's sport yesterday, amongst those weighing fish being Mr. High with a good show of roach; Mr. Hewett with roach, dace and bream from Amberley; Mr. Dymond, sen., had a fine show of jack, Mr. Dymond, jun, had also jack, and Mr. Towndrow had some good perch.—E. Dymond, sec.

October 9.

PECKHAM BROTHERS' ANGLING SOCIETY.

The match for the "cup" at Pulboro' was won by Mr. Lang; Messrs. Williams, Stidolph Page and Otjan also had fish. Mr. Matthews, in company with Mr. Cox, fished the Roden, and brought home three nice perch and one jack. The largest perch was sent to Needham for preservation.—W. H. Page, hon. sec.

PORTSMOUTH WALTONIANS ANGLING SOCIETY.

A few of the members of the above society paid a visit to Chichester on Thursday last, the 5th inst., to compete for prizes in connection with the club. On their arrival at the canal many of the old rodsters who had filled their creels in days "lang syne" shrugged their shoulders in seeing the miserable state of affairs. The water has never been known to be so low as at the present time—the deepest parts barely three feet—occasioned, it is said, by some defect at the end of the Birdham Locks. At all events, like good and true brothers of the angle, each went in for the "glorious uncertainty," and after four hours of hard and patient work—for several went in for jack, spinning with the spoon bait, but to no effect in the basin—only four of the members took fish, viz., Messrs. Bracey, roach; Dyer, perch; Harris, perch; and Smith, roach, Thus ended one of the most miserable outings the Waltonians have experienced for many a time. This will be their last competition for the year 1882; and now the members will be looking forward to the cozy gatherings at their club-room during the long and wintry evenings.—Daggerwood.

PRINCESS OF WALES' ANGLING SOCIETY.

Important Notice.—The Go-where-you-Please Competition.

The committee of the Princess of Wales' Angling Society beg to state that the competition for the marble clock on November 12th, 1882, will be under the following conditions:—All fish, bar jack, to weigh, their respective sizes being—roach and perch, 7 inches; dace and rudd, 6 inches; carp and tench, 8 inches; bream and grayling, 9 inches; chub, 10 inches; barbel, 13 inches, all tip to tip. All competitors to fish from the bank. No competitor to fish any private water (W. C. A.'s waters excepted). All competitors to weigh in at the Prince of Wales, Great Barlow Street, High Street, Marylebone, W., and to be in the room on the night of competition by 10.30; the weighing-in will commence at 8.30. Each competitor to pay an entrance fee of 1s. After the expenses are deducted, all the overplus will be given in money prizes. A brass watchstand has been added to the prizes by the kindness of Mr. R. Fellowes, of the Golden Barbel Angling Society. The clock is on view at the Prince of Wales, Great Barlow Street, where tickets can be obtained at any time of the day of Mr. Hodges, the landlord, and on Sunday and Thursday evenings of Mr. F. Robson, the secretary. The prizes will be distributed on the following Thursday evening, when a statement of accounts will be read.—H. J. Robson, chairman.

RICHMOND PISCATORIAL SOCIETY.

At the Richmond Piscatorial Society's meeting on Wednesday Mr. F. C. Clench, informed the members, with deep regret, the loss our friend and honorary member of this society, Mr. Geen, had sustained by the death of his wife, a lady devoted to angling and a true friend to all anglers. Mr. Terrill proposed that a vote of sincere condolence with Mr. Geen be forwarded by the secretary, which was very feelingly seconded by the vice-chairman, Mr. H. Dickinson. Messrs. Houghton and W. Abbott weighed in two trays of nice roach and dace from the Thames. The water has been very bright, but will improve beyond doubt with the late rain. The next competition will be for a prize given by Mr. Little, of Fetter Lane, to the amount of five guineas—either a sterling silver cup, fishing tackle, or money prize, at the discretion of the winner, on condition the same be fished for in the Thames between Teddington Lock and Richmond foot-bridge, for roach and dace only; one rod, time 8 a.m. till 5 p.m., weighing in at society's rooms not later than 8 p.m. Punt wells not to be used on this occasion, each competitor to use his own bag or basket as if bank fishing. Mr. Lucas (R.P.S.) has kindly promised a second prize. The entrance fees of 1s. each will constitute a third prize. A unanimous vote of thanks was accorded Messrs. Little and Lucas for the prizes offered. A very interesting discussion on roach fishing and general piscatorial topics occupied the greater portion of the evening. During the week, Mr. A. J. Little weighed in one bream from tidal waters, 2 lb. 6 oz.; Mr. Terrill, 9 lb. 16 oz. roach and 11 oz. dace; Mr. Houghton, 7 lb. 13 oz. roach and 18 oz. dace; Mr. W. Johnson, eleven barbel 31 lb. 8 oz., two jack 6 lb. 12 oz., one roach 10½ oz., one chub 1½ lb., all taken from the Thames. There were present:—Mr. F. C. Clench, chairman; Mr. H. Dickinson, vice-chairman; Mr. Houghton, treasurer; Mr. Gaynor, curator; Messrs. Terrill, A. J. Little, J. Dunn, R. East, Wm. Abbott, H. S. Giles, J. Munro, G. Hester, F. J. Hayward, A. P. C. Percival, E. Powell, W. C. Wells, W. Cockburn, J. Neville, H. Davis, H. Lucas, F. A. Crew, &c.—John H. Gaunt, sec.

RODNEY PISCATORIALS.

On the 8th we had an excellent show of roach, about 30 lb., all in splendid condition, weighing from 12 oz. to 1¾ lb. each; several of the best fish have been sent to be preserved and the rest were distributed among the members and their friends. Several members visited Pulborough, Ponder's End, and Tottenham. From the latter place Mr. Diggins succeeded in getting a nice plump jack, about 4 lb.; he only fished a short time in the afternoon. Members are requested to attend on Wednesday next, for the purpose of passing several rules. Members not attending will have to conform to the rules passed by those who do attend, and therefore must not complain afterwards, as this is to be considered as sufficient notice to all members.—Pixie.

ROYAL GEORGE ANGLING SOCIETY.

On Sunday last a somewhat novel gross weight competition for six unknown prizes, presented by Mr. Millard, was fished by the members of the above society, with the following result:—Mr. Word, 5 lb. 10 oz.; Mr. Hughes, 3 lb. 1 oz.; Mr. Trotter, 2 lb. 5 oz.; Mr. Holden, 1 lb. 13 oz.; Mr. Chart, 1 lb. 4 oz., and Mr. Parsons, 1 lb. The same day witnessed the conclusion of the competition for Mr. De Quincey's two prizes, given for the heaviest gross weight and the heaviest specimen fish, which were awarded to Messrs. Trotter and Wood respectively. The presentation of the unknown prizes on Tuesday evening caused considerable merriment. The lucky ones having been requested to vacate the room, six brown paper packages of various shapes and sizes are placed upon the table. The prize winners are now called in, and instructed to make their selection in succession. No parcel may be opened until all are taken. To touch a parcel is to choose it. The first choice is soon made—the gentleman taking the nearest parcel. Now the next—hesitation. Shall it be the one which strongly suggests a frying pan, or the bottle. Alas! in another instance the charms of the latter are fatally seductive, and the bottle is chosen, Champagne! The string is cut and the enveloping sheet of brown paper removed disclosing another string, and another paper—the bottle is unaccountably shorter. Yorkshire relish! This covering removed and another is seen. Bottle still shorter. Seltzer! Again a cover removed and a cover discovered. Bottle shorter yet. Blacking! Many more papers are unfurled, small card boxes are opened, and carefully wrapped in cotton wool is the kernel of this nut. The heart of the mystery is disclosed. This prize is "no bottle" at all, but consists of a small uninflated balloon. The prizes are not all however, of this character, as among the six are found a handsome, electro-silver engraved salver, a pound of tobacco, pouch, &c., and a silk handkerchief. The members fish a gross-weight sweepstake in two prizes next Sunday, go where you please, but fish from the bank only; also, for two subscription prizes, under the same conditions. A handsome 8-day clock, presented by Mr. Trotter, will be fished for on the three following Sundays; and a prize is offered for the largest chub taken this month. The return visit from the No. 1 District Association will take place at nine o'clock on Monday evening next.—C. W. W. Bernhardt, hon. sec.

October 12.

SIR HUGH MYDDLETON ANGLING SOCIETY.

The members of the above society were out on the 7th for three cash prizes—£1, 15s., and 7s., go where you like. It was a splendid day, and hardly a ripple on the water. We anticipated having some good takes. I regret to say that the majority of the competitors had to put up with very poor takes. I will give the takes as follows:—1st prize, Mr. E. Smith, handsome tray of chub, 13 lb. 3 oz., Thames; 2nd prize, Duncan, a nice show of roach, 7 lb, 10 oz., Thames; 3rd prize, John Allard, 1 jack, roach, and dace, 2 lb. 3½ oz., Ouse; Caborn, roach, dace, and perch, 1 lb. 5½ oz,, Iver; Billings, chub, 1 lb. 3½ oz., Thames; Jeffreys, bream, roach, and dace, 1 lb. 1 oz, Wey; Sanders, gudgeon, 11½ oz., Thames; Taconville, roach, 11 oz., Thames. The first three gross weights took the prizes in rotation.—G. Caborn, sec.

October 9.

SOUTH LONDON UNITED.

The clubs forming the South London United District Visiting List will fish their sweepstakes at Amberley on Sunday next, October 15. It will be a pegged-down match.—Wm. Allen, hon. sec.

Oct. 11.

STANLEY ANGLERS' SOCIETY.

Our members have been this last week very busy among the roach, in consequence of which our trays have been graced with some good shows of very handsome roach. Mr. D. M. Humby, sixteen roach, weighing 5 lb. 10 oz.; Mr. W. R. Humby, thirty-eight, scaling 13 lb. 8 oz. and thirty-eight for 13 lb. 14½ oz., also half a dozen good dace; Mr. H. Rose, dace and thirty-four roach weighing 11 lb. 2½ oz.; Mr. Walker, twenty roach, 7 lb. 9½ oz. All the above being one day's take from the Thames. Mr. Wheatstone, fishing two days, had a splendid take of roach, 122 fish, weighing 42 lb. 8 oz., the sample of all the shows was very fine, the average being not quite three to the pound. Mr. Wrightson exhibited a nice jack 3 lb. 12 oz.—G.E.W.

SURREY PISCATORIALS.

The members of this society had an open competition for the three prizes I mentioned in my last report of this society on the 11th inst. The following is the result: Mr. Beckett, out with C. Brown at Richmond, won the first prize, with some very nice roach and dace; Mr. F. Griggs came second, and Mr. Murray third. The next competition will take place on November 8, for the undermentioned prizes: 1st., a sewing machine, given by Mr. Harris; 2nd, a dressing case, given by Mr. Martin; 3rd, clothing to the amount of £1 1s., by Mr. Sutcliffe; 4th, a leg of mutton given by Mr. Harris.—Pixie.

THE PISCATORIAL SOCIETY.

At the weekly meeting on Monday evening last, at Ashley's Hotel, Covent Garden, Mr. Marsden weighed in three tench, from the Avon, scaling 9 lb., the largest 3½ lb.; Mr. Walker, two perch, weighing 4 lb. 6 oz., the largest 2 lb. 7 oz. The Annual Pike Competition on the Thames for Shentonian prizes takes place on Monday next, October 16, and there is one excellent arrangement in this contest, that no fish under 3 lb. will be allowed. On the following Monday evening, the anniversary supper will be held, in the club room, on which occasion it is expected that Mr. F. G. Pearce, the father of the society, will preside, which will make it more than usually attractive. The courteous manager of the hotel, Mr. Bass, who is an excellent caterer, has promised to do the entertainment properly, therefore a good muster is anticipated.

WALTONIANS.

Mr. Skeats headed the list with a mixed take of jack, roach, bream, and perch, about 12 lb. (one roach scaling 1 lb. 9¾ oz.), from Lowestoft. Mr. Bowering had a barbel 5 lb. 8 oz, taken ledgering with cheese paste. Mr. Phillips had a chub 4 lb. 7½ oz., another small one, and a few roach. Mr. Burton had roach 5 lb.; Mr. Togwell had roach 3 lb. 1¾ oz.; Mr. Waltham, roach 3 lb.; Messrs. R. Dodge, Malcom, and Marriott, also weighed in.—A. J. Marriott.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

TENCH IN THE THAMES.

Sir,—I have always been led to believe that there were not any tench in the Thames, but I find that I have been misinformed, as one of our members (last Sunday, Oct. 1st) helped a native of Bourne End, Bucks, to land one weighing over 4 lb., also a splendid perch about 1 lb., which the native gave to a gentleman from London of the name of Armstrong. Do you, or any of your readers, know of any other cases where tench have been taken from the Thames? If so, let me know through your paper, and oblige yours very truly,

R. Knight,
Chairman of the
Marylebone Angling Society.

[It is certainly a rare thing to hear of tench being taken from the Thames, but there is no doubt it holds a few; indeed, the T.A.P.S. have put a good many in within the last few years if we are not mistaken —Ed]

SIZE OF EXE FISH.

Sir,—From information received, and from the pointed remarks in Mr. Austin's letter, I am credited with writing that letter signed "Tivertonian" in your issue of the 30th ult. I beg to deny having written, or having anything whatever to do with it; but I can endorse the truth of the statement respecting the basket of 71 fish weighing 18½ lb. As regards size, they were just about one size, and caught in one pool; there was not a fish above 5 oz. amongst them. The local press Mr. Austin refers to was an Exeter paper (not a Tiverton one) which never saw the fish, as it said "We will suppose so many were 12 oz., and so many 8 oz., see what an average the remainder must have been," and they protested against the wholesale slaughter of such little fish; "and if parties wanted to make sensation baskets they had better not state the weight."

I am glad Mr. Austin acknowledges the authorship of the letter in question, as it confirmed my opinion, notwithstanding his denial of it at the time it appeared.

Wm. Mudford.

Fore Street, Tiverton,
October 10th, 1882.

P.S.—I have been requested to send you the enclosed letter for publication—

Sir,—A report having been circulated in Tiverton by Mr. R. S. Austin, of Angel Hill, in this town, that I saw the eight fish which he mentions in his report to the Fishing Gazette—viz., one of 1 lb. 14 oz. and the remainder each over 1 lb., I most flatly deny that I ever saw such fish, or anything approaching it, in his or any other shop in my life caught with the artificial fly in the Exe.

Levi Saunders.

Leat Street, Tiverton.

[Mr. Austin's article seems to have created quite a stir in Tiverton. We never pay attention to "rumours" and "reports", and Mr. Mudford is responsible for the above letters; if Mr. Saunders is not the person referred to by Mr. Austin, Mr. Austin will doubtless say so, and bring forward someone who did see his fish, if he thinks it necessary.—Ed.]

MARKET DEEPING.

Sir,—Whilst spending my holidays at Bourne, Lincolnshire, I visited this grand fishing station on the Welland.

My brother and I drove to Deeping, seven miles, and had some fine sport; unfortunately it came on wet; but as "Gudgeon," of *Bell's Life*, says, such dace, and I can add such roach, you very seldom see; the maggot was the bait used. The landlord where we put the horse up told me his nephew caught a bream 4½ lb. only a few days previous, so there are some good bream, if not many of them. There were several London rodsters staying in Deeping at that time, so your clubs should soon get the necessary information Should any one staying there fancy a change of river they have only to go to Fre land Mills, on the Glen, about 3½ miles away, where, by asking Mr. Chatterton, the miller, who never refuses, you can catch roach, dace, trout, chub, pike, &c.; in fact, it is a grand little river, I fish it annually. Any one thinking of trying it, writing me, shall have all the information I can give them.

I will enclose the day ticket I received at Deeping, the N.B. below the rules on the back thereof I think will amuse you —I am, &c.,

Wakefield. S. S. B.

P.S.—What is the greatest weight dace attain?

[Dace rarely exceed 1 lb. in weight, though heavier specimens have been recorded. In fact, if we are not mistaken, one London club has a specimen from the Colne said to have weighed nearer 2 lb. than 1 lb. The Yore, at Tanfield, holds more fine dace than any river we know.—Ed.]

THE UNITED BROTHERS' ANGLING SOCIETY.

Sir,—Mr. T. Hoole has received the following letter from the above Society:—

"When the scheme for the propagation of coarse fish was first taken in hand it was proposed and carried unanimously, that upon the formation of a society for the above purpose we should contribute an annual sum of £1 1s. in addition to any sum paid by members individually, our members thinking the small sum proposed to be charged each holder of a privilege ticket would not be sufficient to do any great amount of good, taking into consideration the number of anglers who fish the metropolitan waters, and hoping that if some club set the example others would soon follow, and thus allow the sphere of action to be greatly extended."

Bravo ye "United Brothers." That's the right spirit to take the matter in. What do you think, ye grumbling, mean beggars, who are not content in refusing to pay the extra paltry 1s., but must do all you can to get others to follow your bad example?

Hail "Brother, well met" will not apply to some people, unless they mend their ways.

I am sure there are members amongst those three clubs who refuse to take the fishery tickets, who would be ashamed to own they belonged to them did they know the full facts of the case; but the few persons who are their leaders, and whose game it is to sow seeds of discord, take care the true state of things shall not come to light if they can help it. Well, by and bye, they will find, when too late, that they are not in the "hunt."

I heard Mr. Hoole say a few nights since that he would visit these three clubs and fully explain the whole working of the "Fisheries Society," and if he does you may bet there will be no pleading ignorance of facts afterwards, and it will be quite as well, if mis tatements have been made, to correct them as soon as possible; for those who made them may find Mr Hoole's remarks rather too close to the point to be pleasant.

How it is possible for an angler to object to pay a paltry 2s. per year for a ticket which permits him to travel cheap, and another that permits him to fish free, I cannot conceive. Are you anglers, or are you pothunters? If you are anglers you have been misled; if pothunters, I would advise you to take to something else.

Let me ask you who object to pay your fair share of the necessary expenses, do you think it honest to take the benefits that your fellow members have worked for years to gain without helping to pay? Do you think all these benefits can be gained and upheld without funds? If you cannot afford 2s per year you cannot afford to go fishing. To stop at home is my best advice —I am, &c.,

Thrasher.

THE MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

Sir,—I am pleased to see, in your last issue, the remarks of "Trout" on—what in my opinion, and must be the opinion of every fair angler—one of the most disgraceful transactions that has occurred in connection with any anglers' association. That an association like this, having over 2000 members, should pass a minute to allow, if not to encourage its members to poach—for no other term can I use, the three species of fish in question being protected by law—is far beyond my comprehension. What are the individual clubs about that send delegates who pass minutes of this description? No wonder "Trout" hears that his district secretary is going to retire. It will surprise me greatly if there is an officer left. Let us trust, Sir, that the members of the association will not allow this slur to remain on them, but that we shall hear that they have rectified this awful blunder at their next meeting.—Yours, &c., Lex.

HOW TO PREVENT WOODEN REELS FROM SWELLING IN THE RAIN.

Sir,—"Idle Esox" complains of his wooden reel swelling by the wet on it. I can give him a remedy which I have proved to be effectual. Let him take the best purified spirits of naphtha, add gum mastic, make a very thin varnish, take his reel to pieces and paint inside and out with this thin varnish, which the wood will readily absorb; give several coats of the varnish, taking care to let each coat be thoroughly dry before applying a fresh one. He will see by its appearance when there is sufficient varnish on it. For the last coat make the varnish a little thicker; he will not complain of his reel swelling after this treatment.—I am, &c., J. Garle Browne.

Oct. 10.

FISHING AT SHARNBROOK.

Sir,—Could you give us any information whether there is any public or subscription fishing at Sharnbrook? An answer would greatly oblige.—I am, &c.,

W. Broom.

[There is good fishing in the Ouse there; but if free or not we cannot say.—Ed.]

CAPTURE OF AN OTTER AT MAPLEDURHAM.

Sir,—While fishing with a friend at Mapledurham last week it was my good fortune to witness the capture (by Edward Shephard, the fisherman there) of a fine female otter full grown. The traps had been set under water, and the otter was caught by both its fore legs, a trap on each, which held it under water, drowning it. It weighed between 15 and 16 lb., measuring from nose to tip of tail 3 feet 7½ inches.

I believe the otter has since I left been purchased by Mr. Pugh from Shephard, who, I hope, will shortly have another to dispose of. This is the seventh he has killed, and speaks well for his energy in the interests of anglers. All anglers who fish this beautiful part of the Thames will rejoice at the capture.—I am, &c., Geo. E. Walker.

NETTING THE MOLE.

Sir,—I take the opportunity of mentioning through the valuable medium of your columns a fact that may interest some of your readers who are in the habit of fishing the river Mole. Whilst in a draper's shop within a few yards of my residence, I happened to open up the subject of angling, and I was informed by one of the assistants, who said that he resided at Leatherhead, "that he was in the habit of netting the Mole in that quarter every week when he went home, and that he knew of a first-rate hole where he could depend upon getting fish, and took out of it last Saturday two jack a little over a pound each, and several trout of 1 lb. each or more." While such a scandalous state of things as this exists, what hope have legitimate anglers of success in that river?—I am, &c. Cyril Barton.

3, Bramber Road, West Kensington.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

LINCOLNSHIRE FISHING GROUNDS.

MANY lovers of the angle are equally good with their gun, and fishing and shooting to them become kindred sports. I have been visiting some of the fishing quarters on the Great Northern Railway during the past month, and filling up intermediate periods with following the gun, the exercise of the latter far exceeding anything connected with the rod. I have, at a previous time, given a descriptive account of the fishing at Sleaford, Grantham, and Peterborough; but in these days of progressive angling, there is always something to learn, and a visit to each of these places is by no means unprofitable. On that account, and with a view of keeping up a connection with some of the piscators at each place, I determined to have another turn round as a kind of inspection, and, if necessary, another wake up for the good folks at Sleaford, where there is such a fine trout stream, and no association to use and preserve it. I started from King's Cross Station for Grantham, by the ten o'clock "Special Scotch Express,"—which was due at 12.9, but preceded that time by about three minutes; a most enjoyable run. I first of all made my way to Sleaford, but with about three hours to wait, I went into the old and capital town of Grantham, and it was market day. I called upon my friend, Mr. Ogden, the proprietor of a first rate fishing-tackle shop, whose son is the leading planet in the Angling Association, and has become a bright star in the piscatorial art. I was informed, upon enquiry, that the Association is going on most prosperously, and the members have been getting better sport; but, as I am reserving Grantham for the last, I will first of all give a bit of opinion on Sleaford, and only wish the Editor of THE FISHING GAZETTE was there to show his masterly skill in fly-fishing and evidence a tangible and practical result. The river Slea runs through the very heart of the town, and on the bridges which span the streets, the sight of the spotted beauties is lovely beyond description. I am not a fly-fisher, or I should have sought permission from the Marquis of Bristol's agent, who, I am told, is very nice, to have got amongst them. No successor has been found to the late Mr. Boutel to manage the affairs of a local association. The new line of railway which is worked unitedly by the Great Northern and great Eastern companies between Spalding and Lincoln, opens out fresh and additional neighbourhoods. There are plenty of wealthy residents both in Sleaford and the outlying districts, and I am still informed the agent would give every facility to any association that would preserve and use the river. There is, therefore, nothing wanting except two or three kindred spirits to resuscitate the old association, and if only some one could be found to take the position of honorary secretary it would soon revive, and, I am assured, find plenty of supporters. I have for the last two years been endeavouring to stir up the anglers of Sleaford through the columns of the FISHING GAZETTE, and I am not without hope that something will yet be done. I was invited to spend a day with the shooters, and eagerly accepted the invitation; but the day proved to be most unfavourable. The three shooters Mr. J. L., Mr. J. C., and Mr. F. B., however, turned out for a chance in the pouring wet rain, and in the comparatively short time of one hour and a half returned like drowned rats, their bag in that time containing nine brace of birds and nine hares. Had the weather been right I am sure there would have been a result of at least forty hares and forty brace of birds. Anglers can fish and protect themselves from a heavy rainfall and feel at their ease in a punt; but that is in direct opposition to shooting, where walking through muddy stubbles and full-grown turnip-tops is a striking contrast. My friends felt it to be useless to think of going out again, and sought refuge in-doors, consoling their disappointment under the refuge of the whist-table, which they did not quit until six o'clock in the morning, excepting the time spent in discussing a capital dinner and some good old port, for which the better class of Lincolnshire farmers are known to be famous. I now come to my more immediate sport, the science of angling, and my thoughts concentrated in the movements of the Grantham Angling Society. It happened to be the day of the annual fishing match in the canal, for which some fifty members had given in their names as competitors. They started at a tolerably early hour, having a few miles to travel to get to the scene of active operations. In the most systematic manner the ground was measured, and a certain space allowed for each competitor. Unlike the day of shooting, the weather was all that could be desired, and all were soon heart and soul in the work; the worthy secretary evidencing all activity in conducting the entire arrangements until the end of the day came. The sport was not perhaps equal to some of the previous contests. The heaviest take was about 13 lb. weight, and, of course, all the rest receded from that point in the scales. It was a pleasant day, and all enjoyed it; and on their return to Grantham they spent the evening in their customary quarters and partook of their annual feed; my good friend, Mr. Ogden, sen., discharging the duties of chairman in a thoroughly efficient manner. What struck me most in connection with the contest was the liberal support that was accorded to it by nearly every prominent tradesman in the town of Grantham, each contributing a prize of some useful article, whilst the patrons and vice-patrons subscribed money prizes in addition, which were, of course, made the leading ones of the day, there being between forty and fifty prizes offered. The Grantham piscators are ardent lovers of the sport, and the association, conducted in good form, has become a conspicuous success. The committee have made themselves popular, as will be inferred by the support of the tradespeople, and long may the Association continue in its present good state of prosperity. My duties in London necessarily curtailed my visit and compelled my attendance there to take my position in the deputation that was formed to wait upon the Board of Thames Conservators, in reference to some objections that had been made to their proposed new bye-laws for the whole of the Thames, and which I am sanguine enough to believe will be agreed to and complete a great triumph. There are in Lincolnshire some good fishing grounds, and plenty of available private waters, easily approached by the Great Northern Railway. Anglers should make headquarters at Grantham, where Mr. Ogden will supply all possible information, and give permission to fish in the Association waters. A thorough sportsman is the proprietor of the George Hotel, and he is a first-rate caterer. A clerical friend of mine in the neighbourhood has had some good fly fishing for trout at Great Ponton, the next railway station to Grantham. I had intended visiting Peterborough; but the demands for my presence in London intervened, and I have left it for another time. I was only away for a few days, and if I had been a day or two longer I should have been in the "Hue and Cry." However, my return was hailed with satisfaction.

B.

THE HERRING CATCH AT YARMOUTH.—Quantity delivered during week ending October 11, 1236 lasts; quantity for this season to date, 6283 lasts; quantity last year, 4754 lasts; largest catch this week (*Sneafell*), 14 lasts. About 430 boats delivered this week.

HOTELS, INNS.
ANGLING QUARTERS & WATERS.

ROACH & BREAM FISHERS

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY.

CAPITAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

"Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. PEARCE, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. PEARCE, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid. The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

GRAYLING FISHING IN HAMPSHIRE.

By R. B. Marston.

" . . . . You know the Test, one of the finest trout streams in Hampshire, and of course in England; when I first knew this stream, twenty years ago, there were no grayling in it. A gentleman brought some from the Avon, and introduced them into the river at Longstock (about two miles above Stockbridge). They were for two or three years very abundant in that part of the river; but they gradually descended, and though they multiplied greatly, there are now scarcely any above Stockbridge. There were, four years ago, many in the river just below; but this year there are very few there, and the great proportion that remains is found below Houghton. I ought to mention that the water is particularly fitted for them, and they become larger in this river than in their native place, the Avon, some of them weighing between 3 and 4 lb."– From *Salmonia, or Days of Fly-Fishing*, by Sir H. Davy (1828).

"Lower down the Test, near Stockbridge, a society has been formed, called the "Houghton Club," by a party of gentlemen, and the water is well preserved. They meet early in the spring, and I believe it may be truly said they are a band of brothers, for one of the club infomed me that he had never seen a shade of temper or heard an unkind expression from one to another since he had been a member.

"I have been so fortunate as to have seen their common-place book, in which every member is expected to narrate the events of his day's fishing, his triumphs, miseries, &c. I was highly delighted and amused with the gaiety and good humour I found in this witty and curious miscellany. The book is also embellished with original sketches by members and visitors, of caricatures, scenery, &c.

"In my introduction to this work, I have attempted a defence of the 'art of angling,' and should I have there failed, I am quite sure the following list of names forming this Stockbridge club will alone be a sufficient answer to the sneering and prejudiced caviller, or to the morbid sensibility of those who contemn the 'gentle craft.' The members for the year 1838 were :—

The Earl of Hardwicke.
Lord Saltoun.
W. H. Whitbread, Esq.
Henry Warburton, Esq.
Edward Barnard, Esq,
G. W. Norman, Esq.
Sir Hussey Vivian, Bart., M.P.
The Rev. F. Bendon.
Francis Pepham, Esq.
Sir Francis Chantry, R.A., F.R.S.
Colonel Mudge.
Colonel Long.
John Jarratt, Esq.
Richard Purn, Esq.

"When a fly-fisher visits the Test he must provide himself with mackintosh boots, as the river is bordered with 'water meadows,' that is, sluices admit the water from the Test for the purpose of irrigation. The clearness of the stream requires fine tackle and rather small flies."—From *The British Angler's Manual*, B. T. C. Hofland, Esq. (1839).

" . . . . The matter that is of consequence is that the grayling suits many of our streams, and would suit many more if it were introduced to them. It is found in the Teme, the Lugg, the Wye and their tributaries, wherever they are found to suit it. It is found in the Yorkshire rivers, the Yore and the Swale especially. It is found in the Derbyshire streams, as the Wye, the Derwent, and the Dove. It is found in the Hampshire rivers, the Avon, Itchin, and Test, where they run to a large size. I have caught them in both Itchin and Test up to 4 lb. weight; but here we know that it has been introduced. They were formerly few in the Test; but at the Houghton Fishery, formerly belonging to the celebrated Stockbridge Club (thanks to the encouragement extended to them by the proprietor, Dr. Wickham), they now abound there."—From *A Book on Angling* by Francis Francis (1867).

" . . . . . I have lately been fishing below Winchester, down by Twyford, and the increase of store fish there too—trout and grayling of half a pound—is amazing. I got three and a half brace each day of capital fish, where there used to be but a poor show three years ago. I wound up with a day upon the Itchen Valley Fishery (Mr. Chamberlayne's), and I had a capital day—indeed, I never have fished that water when the weather was anything like favourable that I have not had good sport. It is one of the finest waters on the Itchen. You can fish either the barge stream or the river, according as the wind suits; and there is splendid grayling fishing on most of the waters. It happened to be a capital day when I was there on the 28th, and the fish rose at intervals all day. The water, unfortunately, was terribly overgrown with great bunches of weed, with streams between, in which the fish rose. In the open water by your own bank the fish knew all about it, and were wary; in the waters further out they took well, but then you had to drag them over the weeds. I lost quite two-thirds of my fish dragging them over the weeds, and the number of fish which bolted into weeds, and the number of flies I lost, I should be sorry to say. It was a day of great exasperation and some strong language. I got out five brace, however, three of them were between 2 lb. and 3 lb., the rest $1\frac{1}{4}$ lb. and $1\frac{1}{2}$ lb. It was as handsome a dish of fish as I would wish to see. Only twice before have I bettered it on that water, once getting seven and a-half brace there; but that was in the Mayfly season, and they averaged over 2 lb. each fish—a very big average. These, however, were mostly taken with the smallest dun. I ought, with luck and a fairly clear river, to have bagged at least fifteen brace of fish instead of five; but what I want to note most was the great increase of nice half-pound fish, both trout and grayling, which I saw and took out and returned to the water. This speaks very well for the future, and here again is distinctly visible the benefit of clearing out the pike. Some rare big ones have been slaughtered there—there would not have been all these store fish had there been many pike about. . . . . Very small dun, quill body and light wing and hackle, has been the favourite fly on, though a lot of grayling have been killed by a new kind of Wickham, tied by Mrs. Cox. The Itchen grayling take it savagely, and even of large size, which is a great advantage in fishing for grayling, as you lose fewer with a big hook, their mouths being soft. If the weather only keeps open and fine, there will be some first-rate grayling fishing to be had on the lower reaches of the river, and though some people despise grayling, I do not. These Itchen grayling, to my surprise, fight as well as their Test friends. They do not all fight alike, but some of them show an amount of vigour, activity, and stubbornness, which even a trout does not equal."—Francis Francis, in the *Field*, Oct. 7, 1882.

"The Test.—The Houghton trout season terminated on the 30th ult., and may be classed as one of the windiest that has occurred for many years. The wind certainly was from the right quarter, but raged so violently that it was far worse than light airs from the north. A fair average of trout was made altogether, amongst them a goodly number of 1 lb. and $1\frac{1}{2}$ lb. fish, which is a very good sign, whilst very few big black ones were caught. Except on one portion of the fishery (Black Lake), the Mayfly was almost absent, which perhaps is not such a great disadvantage after all, for, if the Houghton trout had a regular annual feast of Mayfly, they would be almost uncatchable afterwards—certainly in the day time; and evening fishing has been getting worse year by year, simply because there has been so little fly for them to rise at. The grannom came on about April 10, but bad weather prevailed nearly all through the month, and the fly being a fine-weather one, little was done with it, and I really believe that, if one stuck to the hare's ear ribbed with gold, from March to the end of May, one would get more trout than by changing one's flies. We now have the grayling season with us, and, of course, a strong northerly wind. The fish rise very well in the forenoon, and again in the evening with quiet weather, but the difficulty has been to get the right fly. The grayling is a very capricious fish; at times he will take almost anything; on other days he won't look at a single fly you may offer, although he be rising hard everywhere. It has been so lately. At this time of year "drifting" (especially in the evening) is almost more killing than casting up to your fish; but—as Mr. Francis warns us—beware how you strike. Six choice flies were given to me the other day, four of which were left in grayling on striking. It is the most difficult strike to make I know, for, of course, there is slack line floating down behind the fly, and it has to be straightened and the fish hooked at the same moment, and, if you "hit" the least bit too hard, your fly is gone to a certainty. Where grayling are rising freely, I invariably sit down on the bank just so far from its edge that I can fish above and below me with the rod close down to the water; the reason for this being that the grayling are wandering fish, and occasionally come right in under the bank, not more than a rod's length from you, where they will rise well for a minute or two. To catch these fish, you must keep the rod close down to the water and pitch a short line up, without letting your point get above you. In recovering your line you must do so by bringing the line under the rod without raising the point, and be careful not to take the line off the water with a jerk, for as often as not a grayling will let the fly go past him, and then turn down stream and take it greedily at your very feet. For flies now a very good one is a small sandy body and hackle with starling's wing. With that, or a small hare's ear, you cannot be far wrong. The fish now apparently are taking something under water, as they make "bulges" more than rises. It may be the willow fly, of which there has been any quantity about; but hitherto I have utterly failed to get anything tied that even faintly resembled that insect. The average of grayling taken now is about two brace of sizeable fish per rod, but not large ones, usually from 12 in. to $1\frac{1}{4}$ lb. As the season advances, so the larger grayling seem to seek the deeper water, where probably they feed on the bottom. The mill pools at Houghton are full of huge grayling, but they seldom come to the surface, and the only way to get them is with a biggish fly well sunk, and allowed to go where the eddies carry it. Weed-cutting will probably commence next week."—South West, in the *Field*, Oct. 7, 1882.

The above extracts give a most interesting picture of grayling fishing as it was and as it is in Hampshire. I need hardly tell my fly-fishing readers with what pleasure I looked forward to a visit to the Houghton Club water. I happened to mention to my friend Major T. that I wanted to have a turn at the Hampshire grayling this season, he gave me an introduction to Dr. Wickham, and that gentleman very kindly sent me a permit for two days, with the hope that I should "kill some good ones."

Leaving town by the 5 o'clock train, I had plenty of time during the slow journey to Andover to recall many a pleasant day with the grayling, which I have had during the last twenty years. Days on the Lugg, the Teme, the Clun, the Severn, the Derbyshire Wye, Dove and Derwent, the Yorkshire Yore, Wharfe, Rye, and Derwent. Which river do I like best? Well, it would be difficult to say, some are better than others; but then each river has some peculiar charm of its own, making it seem ungracious to praise one above another; perhaps someday I may give my experiences on each of them. But here we are at Andover Junction; the ride from Basingstoke had been shortened by a very pleasant chat with a gentleman who lives at Andover, and who gave me some interesting particulars of his fishing in the Anton there. He told me he had taken thirty brace of trout, fishing from his own garden, which runs down to the water and affords him room for a cast of two (otherwise the fishing is all preserved); among his fish were several ranging from two to five pounds. "But Clatford is the best place for trout; I never saw so many fish together as in the mill stream there, it is always full of good fish." I made a mental note of Clatford and its mill stream with a view to future possibilities. I told him I wanted to catch the 7.20 train to Horsebridge in the morning and by his advice went to the Railway Station Hotel at Andover, as although perhaps not quite up to the White Hart, it would suit me better, as being only a minute's walk from the train. I found the Station Hotel very comfortable indeed; there was a cheerful fire in the smoking-room, local celebrities kept dropping in, everybody knows everybody else in these small country towns, and we had quite a lively evening. I was particularly amused at the account Police-serjeant Chuck gave us of his manner of dealing with the gipsies, who frequent the fairs held in the neighbourhood. Mr. Chuck was a wiry, thick-set individual, who certainly looked quite equal to doing all he said. "There's only one way to treat a gipsy, you must stand no nonsense from him, knock him down and he will respect you, but treat him gently and he will smash your skull in or put a knife into you. I knocked twenty of 'em down once, one after another." "Come, come, serjeant, that's rather strong, eh?" said one of his audience. "It's true, all the same, and not much to boast about either," said the serjeant. Of course, he was asked to tell the story. "Well, it was about eight years ago, when ——fair was on, I was stationed at———, it was late in the evening when an order came to send all the force available to ——, as the gipsies had taken possession of the corn booth and were fighting and playing the very deuce of a game. We went off at once, and sure enough there was a row going on! Twenty or thirty of 'em mad drunk and fighting like wild Irishmen. I sent a party of our men into the tent and told 'em to pitch the gipsies out and I would settle 'em at the door, and then as each was tumbled out the scruff of his neck, I knocked him down with a whack on the head. You see it was pitch dark outside, and what with the glare of the light and being so drunk they were quite dazed. The best of it was not one of 'em knew where the blow came from, and if you had seen the utter astonishment it gave them you would have roared; they were as quiet as lambs after that. It's the only way to treat 'em, they're worse than soldiers, I won't say but what they aint worse than raw militiamen!" I have met gipsies in wild parts of the country at all hours of the day and night, and I must say I never found them troublesome; though once when fishing in Berwickshire and returning late at night I noticed that two men left a gipsy encampment and followed me—one on one side of the stream and one on the other—for nearly a mile. I did not feel perfectly easy as to their intentions amongst those lonely Lammermuir Hills, and after lashing the joints of my rod together with a bit of the winch line and leaving the winch on, I put them, with the bright steel spike showing, over my shoulder as ostentatiously as possible. Seeing that I had observed them they dropped behind, and then one took a short cut behind a fir plantation and struck the stream in front of me and waited. I lit a pipe to consider what to do; whether to go through the plantation or past the man in the open, and decided on the latter. It was just light enough to see that the fellow was an ugly customer to tackle, and there was not much chance for a run with a basket of fish on my back and wading stockings on. When I got level with him he said, "Can you tell me what time it is, Sir." It flashed across me that this was only a dodge to see if I had a watch or not, and so I told him I thought it must be somewhere about half-past nine. I went on and saw nothing more of either of them; but I never had such an unpleasant walk before or since, expecting at each dark corner to see a galaxy of stars through the medium of a big knob stick. I pictured to myself the gipsies supping off my trout, while I was slowly coming to myself again, sans teeth, sans purse, sans watch, sans everything! It is not a pleasant sensation either to come round a corner in the dark and find two or three gun barrels pointing at you; whether they are held by keepers thinking you are a poacher, or poachers thinking you are a keeper is equally unpleasant, as I know from experience.

"Your chop is quite ready, Sir," reminded me that I was hungry, so I said good night to the gipsy feller and the rest and walked into the parlour, the chop, and some beer. Before retiring, I made an elaborate appeal to the landlady to have me called in good time to have breakfast and catch the first train. "All right, Sir, you can make yourself quite easy; going fishing, I suppose?" "Yes." When I awoke next morning, it was with a sensation as though forty gipsies had been jumping on me, and I made a solemn vow to avoid Andover whiskey for the rest of my life. On looking at my watch I was horrified to find it was nearly seven o'clock. There was a bell-rope on the wall, if I pulled that hard or not I leave to the inmates of the hotel to say. Fancy having to dress, shave, breakfast and catch a train in twenty minutes! It meant a loss of half the day if I missed that train. How I did it I hardly know, but I did it, and was soon rattling along through the charming valley of the Anton, past Clatford to Fullerton where the Anton joins the Test, and then along the valley of that fine stream past Stockbridge to Horsebridge, there I put up at the inn close to the station. To my enquiries as to whether I could have a bed the good landlady gave me to understand that it was just within bounds of possibility; but evidently she thought I did not deserve it for not letting her know beforehand that I was coming. There was equal uncertainty about getting any dinner. "You see, we have nothing in the house, and the nearest town is Southampton." I apologised for my want of thought, and intimating that anything would do and that I should be back soon after six, I got her to direct me on the right way to Houghton. "Go over that bridge over the river, and then it's about half-a-mile until you come to the mill."

"My word, what splendid trout!" was my exclamation on looking down from the bridge into the wonderously clear water of the Test. It did not take me long to walk to Houghton mill, and after asking the miller a few questions as to the extent of the Houghton water, for it was my first visit to it, I commenced fishing in the main river just above the mill. It was a bright day, as hot as a June day, and of course I knew that nothing but the finest tackle would avail. Close to the mill is a sluice gate which carries off the surplus water, and I was afterwards informed by Mr. Francis that in the pool below there are many very heavy grayling. Being uncertain as to whether this pool belonged to the club or not, I did not then fish it, greatly to my regret now. I fished up the right bank, which for some hundreds of yards is higher than the meadow behind it, so that it is not a very difficult matter to get your fly over rising fish, but you must keep well down or you will see them move off in that quiet, business-like manner which shows they are aware of your presence, but do not intend to hurry themselves. I began with three flies, just to see if it would answer at all. There was a fine fish rising in mid-stream, I threw a couple of yards above him, and let my end fly swing round just over him; a swirl in the water, a gentle tightening of the line, and then my running line came away, leaving nearly three yards of gut and three flies attached to the fish. The cause of this mishap was apparent on examining the single link of gut remaining, there was a minute curl in the end of it. The fact is that it is quite possible—as I have before noticed—to sacrifice security to neatness in making up a very fine gut casting line. It is not safe to cut the ends at the knots quite so close to the knots as is generally done, the consequence often is, as in this case, that though while dry the line feels strong, directly the gut gets soft and limp the slightest pull is sufficient to make one of these knots slip apart. Nor is there the least necessity for cutting the ends so very short, the sixteenth of an inch left on the ends after tying makes all the difference between perfect security and a very probable slip. I have so strongly advocated the use of these extra fine drawn gut lines that I must point out this little matter to the many anglers who are using them through my suggestion, in order that they may not blame the gut for what is really merely an error in making it up into lines.

While putting on a fresh collar I noticed two or three grayling rising about twenty yards up stream; creeping up opposite them and making myself as small as possible, I saw that they were feeding on a small cock-wing dun, apparently an olive dun. I put on a beautiful little quill-bodied olive and sent it well up stream, so that it might float down unconscious-like among its natural prototypes. It floated in this way half-a-dozen times through these rising grayling. They would take the natural so close to it that one felt almost sure it was taken, but no, there it is still floating and dancing on the ring of the rise. Then one by one the fish began to move off, as much as to say, "Well, if you cannot see we are not green we must go, but its a shame to stop us rising when that lovely olive is on." Finding that the fish on my side were evidently well acquainted with the difference between feathers and steel and the real thing, I fished farther out, the open ground making it an easy matter to throw a long line. I found this plan answer beyond my expectation, for in the next bend, well over on the other side, I got a splendid rise and then for the first time in my life was fighting a Hampshire grayling. Test and Itchen trout I have a grear respect for, but for its size I never killed a gamer fish than this grayling. His first act was to leap clean out of the water! "pretty well, that, for a grayling," I thought, "but doubtless that was only an accident and he will come in quietly now." Never was I more mistaken. With the rapidity of lightning he was ten yards down stream, then he dashed into a bed of weeds, going through them and rushing up stream again, nothing seemed to tire him, and it took me quite five minutes to get him up to the top and draw him into the net. Of course, you can never put as much strain on a grayling as on a trout, but I have often killed trout as heavy with half the strain I had to put on this fish; it weighed twenty ounces thirty hours after it was killed, and was in splendid condition. I did not know that these Hampshire grayling are noted fighters, but I can now quite endorse Mr. Francis's remarks on this point in the extract given above. The Test thus far—that is from the mill to the island below Sheep Bridge, has a gentle current, in fact, it forms the mill dam. It reminded me forcibly of that pretty stretch of the Colne at Harefield, between the Horseshoe Bay and the weir below. I caught a brace of about ½ lb. fish below the island, and returned a few under the eleven-inch standard. Above the island there is a broad flat which holds many grayling. I had crossed the bridge and fished the capital ford below it, getting and returning a trout of about 1½ lb., and was fishing down the left bank when a gentleman hailed me by name, from the opposite bank. It was Major Carlisle, the secretary of the club, who was going to the mill for his rod. He asked me what sport I had had, and gave me some useful hints as to the best places and flies, and also said that Major T., the gentleman who had got me the permit, had met with a bad accident. It appears he was shooting with a friend over broken ground, when his friend in firing at a rabbit, managed to send some shot from his 20 choke bore into the Major's face, one shot striking an eye and seriously endangering the sight. This was sad news to hear of any one, but for such an ardent rod and gun sportsman as Major T. to be knocked off his legs in the middle of the shooting season, is doubly hard. It ought to be voted bad form to use a gun of the above description when shooting in company, it is a moral impossibility to tell where the shot will go—much farther than it is always possible to distinguish a brown shooting-jacket among autumn leaves.

Finding that the olive-dun was "off," I put on a Derbyshire red tag, one of three (dressed, I think, by Eaton, of Starkholmes) which Mr. Walbran had kindly given me when I was fishing with him on the Wharfe. I put it over a fish which had refused the "olive" and he took it instantly. I then got another brace of fish with it directly. All the fish fought splendidly, and I now entertain the highest respect for Test grayling as well as trout; of course, all grayling fight better in the colder months, but most certainly at no time of the year do any grayling in England fight so well as those in Hampshire, though they are not by any means such good table fish as their Northern brothers. A little below the lower end of the island a fence divides the water meadows, and through an opening in this fence I saw a good fish feeding close to the edge, amongst some long pointed reeds. There is a tree at the end of the fence, and my only way to get the fly over this fish was to make a side cast over the fence. I managed to get the fly in above him and let it sail between the reeds, he had it in an instant, and I fortunately kept him on while I got over the fence, and after a capital bit of sport killed him; he was just over a pound. Had a trout been feeding in such a spot, he would have been off as soon as I approached the fence.

My next move was back across the bridge and up the right bank. The water here is much faster, in fact, for a hundred yards above the bridge it runs in as pretty a stream as one could wish to see. This stream is full of big and little trout and also holds many heavy grayling, but the rise was now quite over for a time. Above the fishing house I met another member of the club, using a double-handed rod and fishing the dry fly up stream with long line. This gentleman told me he had only taken one fish. I happened to mention that I had left my pipe behind and he very kindly sent his lad off to the village for a couple of clays and some sealing wax, the latter to make a mouthpiece when part of the long stem was broken off, for I doubt whether the most ardent lover of a "long clay" could use one when fly-fishing! Thus through the kindness of a perfect stranger, I obtained the only thing wanting to the perfect enjoyment of my first day on this lovely and famous water. This gentleman told me that though there were grayling here and there all up the river for another half mile or more, the best grayling water was that I had fished over. After lunch I went down to the bridge again and there saw Major Carlisle landing a grayling of about ¾ lb.; he had taken another previously, both with the "apple green." He showed me the fly, which appeared to be made with starling wing, green wool body, ribbed with gold twist. He said it was a standard favourite of his for grayling at this season. Crossing Sheep Bridge again, I went to the end of the island, and then waded out so as to cover the water below it. I ought to have mentioned that, as Hofland says, waders are a necessity on the Test, as the banks are often half under water, especially in this lower part. The wading is good where the bottom is clear of weeds, but beware of stepping off the banks on to a weed bed. I incautiously did so once or twice and thought I should never stop going down. I had put on a mulberry bumble for a change, and soon caught a fish or two with it, though there was no fly on the water and consequently no rise. I found that the fish took the bumble under water.

The sun was sinking, making the autumn foliage look redder than ever, and after fishing the Sheep Bridge stream and getting only two trout, one a splendid hen fish, apparently in perfect condition, the other a male, long and thin and as black as a nigger, I fished back to Houghton mill with a view to trying the sluice-pool. It was almost dark when I got there, and it very soon was too dark to fish. I got a small trout and a decent grayling, and then put up. On getting back to my inn I found that dinner was laid for three, and the landlady informed me in an injured tone, that she had just previously received a telegram from London, to say two gentlemen would be down by the train about seven. If gentlemen would come without letting her know she could'nt help it. But in spite of her injured feelings, there was such an air of neatness and cleanliness about the place that I felt no fear of having to go to bed supperless—besides, every now and then there came such an appetising aroma from the kitchen as was truly comforting to a hungry angler. On turning out my creel I found I had five brace of grayling from ½ lb. to 1¼ lb. I had got through the best part of a pipe of tobacco when I heard two voices outside in the passage. "Here we are, and now let's see Mrs.——" I knew that voice well enough, but could not remember the owner for a moment. "Hullo, Mr. Francis!" "Hullo, Mr. Marston! Well that is rum, we're always turning up together unexpectedly at out of the way places." Mr. F. then introduced me to his friend Mr. C. Our hostess now appeared on the scene and looked as if she would eat the lot of us. Could Mr. F. and his friend have beds? "No." Anything to eat? "No." Leastwise, if gentlemen would come without letting her know, they must put up with what they could get, and the nearest town was Southampton. Mr. F. was quite ready to put up with anything, and it was really of little use for Mrs.—— to stand there and tell hungry men there was nothing to eat with such an almost digestible odour of roast chicken and boiled bacon rolling into the room. The upshot of it all was that in a very short time we three were seated in a comfortable room with a comfortable fire, enjoying a very comfortable dinner indeed. A tender roast chicken done to a T—a Bath chap, of delicate flavour—bread sauce, three kinds of vegetables, a damson tart and good bread, butter, and cheese, and a clear, brisk glass of ale to wash them down with! (Oh ye 'grand' hotels, gilded sepulchres that ye are, go and take a lesson at a wayside inn!) Mrs. —— was going to apologise again for the dinner when clearing away, but our protests were so strong that she did not get so far as Southampton this time. After dinner we had a very jolly evening. Mr. F. is splendid company, and from his long and varied experience of men and things can always pull out an amusing story or rich joke. Even if I possessed the Boswellian art it would not be quite the thing to retail after dinner stories, but for the benefit of my shooting readers I must give the bones of one of them. We had been talking about Major T's accident. "Bad thing that, very bad, very sorry to hear it," said Mr. F.; and from that we got on to shooting generally. "Did you ever," said Mr. F., looking across the table at me, "hear about Mr. S. and the hare?" "No." "Well, you ought to hear old G—— tell it. S. had made a pot of money in the beer line, and retired, took no end of a fine place in the country, with a lot of shooting, could'nt shoot a bit, but somehow or other he did kill a hare one day. Next day he came up to town and happened to meet G——; very proud of his skill, he began telling G—— that he had shot a hare. 'You shot a hare, did you?' said G—— 'Yes, Sir, I shot a HARE!' 'Did you now,' replied G——, 'what a d——d unfortunate hare!'"

Mr. F., who is a member of the Club, told me I ought to consider myself very fortunate to get five brace of fish, as two and a half and three brace had been the average recently.

Next day found us all three early on the water. I was there first, and getting into the stream from the road fished the sluice pool up carefully and did not see a fly on it and only had one rise loosing the fly, a "red tag" in the fish. I never expected to see that fly again! It is by no means always "the early bird that catches the worm," for when I met Mr. F. an hour or two later at the Sheep Bridge he told me that when he got to the sluice pool the grayling were rising all over the place at the badger fly, and that he had lost no less than four "big" fish, regular "busters," of 2 and 3 lb. weight. We fished opposite each other for an hour or so, just above the bridge; the grayling were rising here and there, and enormous trout would every now and then make big waves as they dashed at each other—for, like bucks, they get terribly jealous as the pairing season comes on. Mr. F. goes in for a big double-handed rod and makes every inch of it do its work too. I shall never forget seeing him fish that stream from the bridge to the fishing house; it was done by inches, every bit of water was searched by his single wee fly, dried well between each cast, and so fine was the gut casting line that I could rarely see where it fell on the water. Mr. F.'s fishing opened my eyes to one thing, and that was, that it is possible to fish as lightly with a double-handed as with a single-handed rod, and of course more water can be covered. Nevertheless, not being of quite such a big build as Mr. F. I shall stick to my light ten-foot rod. There was a small gnat on the water and the fish would not look at our flies. I got two grayling, and Mr. F. had a fine bit of sport with a $2\frac{1}{2}$ lb. trout in this stream. "Sprint" ought to have seen this trout fight. Twenty yards of line went out at the first rush, then he was in the air, then off down stream. Every ruse was tried for a long time, but in vain, he was landed and returned. But my paper is getting too long, I fear, and I must wind up. Mr. C. joined us about lunch time, he had taken a brace of grayling, not large, and I left him with Mr. F. flogging away above the bridge and went to Houghton mill in the hope that Mr. Devereux might be at home, and that I could get permission to fish on his water, but he was away for the day. However, I walked down his water. What a lovely stretch it is! and as for fish, well, it is fairly crowded with them. When I got back to the fishing house I found Mr. F. had been taking it easy and Mr. C. had done nothing more. I got a pounder in the ford and then walked up half-a-mile just to see the water. It is the very perfection of a "chalk stream," and the big trout seem more numerous than the small ones, but I saw no grayling rising. Mr. C., when I got back, told me he had lost a little red tag I had given him in a big grayling, and another fly in the same way. Mr. F. in a very philosophical way considered he had had his chance in the morning and lost it, and could not fairly grumble. It was getting late, or rather dark, for six o'clock can hardly be called late, and we went back to dinner, which in spite of Mrs.—— laments, was as good as anglers want. Another pleasant hour or two's chat and I had regretfully to leave for town, wishing my friends good sport on the morrow. That it was not a vain wish the following note will show.

Dear Mr. Marston,—I got $3\frac{1}{2}$ brace of grayling on Wednesday, besides two or three trout, one $2\frac{1}{4}$ lb., and lost a bigger one above the hut. Yesterday I got six brace of grayling, and three good trout; the biggest grayling was $1\frac{3}{4}$ lb., the next $1\frac{1}{2}$ lb, and so on down to 12 inches. C. got $2\frac{1}{2}$ brace, losing several, and one he got out had one of your red tags in his jaw. How you caught 'em with that I don't know; it's double the size we use, and I have tried the red tag several times, as it is a "top sawyer" with me in Derbyshire. I should have had a rattling day, but at 2.30 a big black cloud came over the sun, and a strong north wind came down stream, and I only got one keepable fish after.—I am, &c.

Francis Francis.

The red tag Mr. Francis refers to was one of those I mentioned as having been given to me by Mr. Walbran. It was certainly one of the largest flies I tried. For my part I do not think it is bad policy to put over the fish something different from what they have been criticising daily for many seasons past, and I have always found it answers. Some day I hope to get that big grayling I have promised Mr. Bonvoisin for his club room. My six and a half brace when I got home weighed over ten pounds; but I should not think of offering him anything much under three pounds.

P.S.—Since writing the above, I have received my red tag back from Mr. C., with the following note:—

Dear Sir,—You were good enough to give me a "red tag" the other day at Houghton. I can't return you that one, but I enclose one of its brothers, which I took from the mouth of a grayling I caught in the little pool by the mill. It was a very decent fish. As it seemed an odd coincidence, I thought you would like to know it. We had very good sport, but personally I was very unlucky, getting broken a good deal, but Mr. Francis did very well.—I am, &c.,

A. C.

On examining the fly I see it is made thus, body green peacock herl, hackle strong red from cock's neck, and a little bit of magenta coloured wool, as a tag or tail. I also use some very much smaller red tags, made somewhat differently by Mrs. Cox, of Winchester.

R. B. M.

[Owing to a pressure on our space we are compelled to hold over the continuation of the article "Grayling Fishing in Montana," until our next issue.—Ed.]

The Scottish Fisheries.—The report of the commissioners of the Scottish fishery board for last year, shows a total of 14,809 fishing boats, manned by 48,121 men and boys, with apparatus valued at £1,398,461. This is an increase over the previous year of fifty-eight boats, 990 individuals, and £109,853 in value of boats, nets, and lines. The report shows a falling off in the quantity of fish cured and exported. The decrease in the number of barrels of herring cured was 362,445, and 264,000 barrels less were exported. Cod showed a proportionate decrease.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. $1\frac{1}{2}$d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

A DAY IN PRIVATE WATERS.

Whenever I get permission to fish in private waters, I always give my friends the benefit of it, and I frequently wish I had more permissions to meet the demands I have for them, as it is to me one of the most disagreeable things I have to do, to be compelled to say: "I am unable to do it." Most of my friends know that from an accident I had nearly twenty years ago, I am not able to use these permissions myself. At that time I was on a visit to a friend who was then living at Middleham, and as he did a little grazing of cattle, I assisted him one day to drive some Irish beasts out of a field, when, quite unexpectedly, I was savagely attacked by one of them, but with sufficient thought to take the animal by the horns. Twice was I thrown down, when some friends came to my help, and got the infuriated animal away. The result was, that with the strain from the fight, my muscles gave way, and I have no power left in my arm to hold a big fish. It will be in the remembrance of most who read this, that the morning of Saturday last gave every indication of a charming day for jack fishing—on the evening previous the spiders' webs were streaming in the air, a sure sign of an approaching fine day—and so it proved. It was arranged that my visitors on this occasion should be Captain Hanwell, Mr. St. Martin and Mr. Pasha, all agreeing to meet at one particular place, the nearest station to the private fishing ground, and at one particular time. I had the first start, and at one of the intermediate stations I alighted in order to call at a favourite hostelry for a friendly visit. My friends were at breakfast, and I was invited to join them, but as I had previously performed that duty at home, I had some peppermint and gin instead, and not a bad thing either, though some may laugh at the idea. I had not been there long, but one of the visitors left the breakfast-table to catch his train, but he was too late, the train had gone. The worthy host, sharply turning the corner from the bar into the bar-parlour, sent my glass of peppermint and gin flying off the mantelpiece, destroying the contents, and breaking the glass into a thousand pieces. I exclaimed, "Here is an unfortunate start," but I was cheered with the remark, "Bad beginnings make good endings." The time came for me to meet the train with Mr. St. Martin and Mr. Pasha in it, which I did, and found them there; but following up the series of unfortunate commencements, I discovered they had no bait with them, and on ascertaining the reason, it appeared a can of six dozen of dace was to meet them at a certain station, but the train they went by was not a stopping train, and they had just time to call to the man to follow by the next train, but there was no other for over two hours, and that a slow one. On our arrival at the railway station near the fishing ground, which was close to a river, Mr. St. Martin, who is equal to any emergency, went amongst the punts, and by hook or by crook possessed himself of about a dozen small bait, principally gudgeons. Here Captain Hanwell joined us, and then we quickly drove to the scene of our angling operations, the conveyance putting us down close by a favourite swim, which a facetious friend of mine has designated "Cabby's Hole." Instructions were then given for the conveyance to meet the 10.45 train, and to bring the man with the baits as quickly as possible. The driver of the conveyance who brought up the man, was a good type of the Wellington build, and on witnessing four or five jack lying on the grass, exclaimed in somewhat military style, "What splendid fish! Are they salmon?" I did not answer his question then, but afterwards he repeated the enquiry. "Are these splendid fish what you call salmon?" Fancy an old veteran of three score years and ten, knowing no better, and in this piscatorial age. I imagine when I said, "They are jack," he did not believe me, but that was of very little consequence. Going back to the time of our arrival at "Cabby's Hole," Mr. St. Martin, who made himself the working man of the party, put all the tackle together, and without any necessary haste, it was soon ready. I told Captain Hanwell to throw right across the water to the opposite bank, but he only got it half over. "Never mind," I exclaimed, "your float has gone, and you have got a run." Mr. Pasha directly followed suit, and away went his float. Mr. St. Martin was now full of excitement, and the keeper put in an appearance with the assurance, "The water has been all alive with fish this morning." It was very clear they were well on the feed, and the attention required to the two anglers gave my good friend, Mr. St. Martin, no chance of putting his rod together, although the captain exclaimed he would not go on unless he did. No sooner were fish landed and the bait again in the water than there was the cry, "The two floats are both under water," and a more exciting time it would be impossible to describe. The game continued for nearly three hours, and I firmly believe if the bait had been there at the start instead of using the comparatively useless ones, we should have had a more splendid result. At mid-day the fish left off feeding, and we all thought it was time for us to feed, first stopping for half-an-hour at the lawn swim and landing three or four more fish. The punt and provisions were sent round to the summer house, and the anglers crossed the lawn in a much nearer direction than by water. Here Mr. St. Martin entertained the party with a sumptuous luncheon, and no man has better capabilities of doing it in a thoroughly complete style. It has always been usual to put the lines out opposite to the summer house during the process of feeding, but the anglers were so satisfied with their morning's work, they decided upon having their mid-day meal in peace. In discussing the merits of the repast, no small praise was due to Mrs. St. Martin, for the excellence of the cooking portion of it. There remained only about three hours to continue the sport, but it soon became evident the fish had fed so well in the morning they were in no hungry mood in the afternoon, and the result was the piscators added very little to their stock of fish. It was somewhat remarkable that Mr. Pasha, who comes from Egypt, and who was to return there on the following Wednesday, whilst professing himself no angler, had the best of the sport all day, and during the most excitable part of it, there were the repeated exclamations of "The fish are all going to Egypt," and "Egypt again," so that Mr. Pasha possessed the main portion of the jack. I never remember a morning of much greater excitement, and the fish, though running usually small in this water, were a decided improvement on previous years, and the anglers lost some really good fish, which was clearly indicated by the marks they left on the bait. After returning some fish to the water, they brought away with them fifteen of the best fish, and Mr. St. Martin did not forget the porters at the railway station, who were monstrously pleased at being presented with a nice jack each. Our day was terminated with a thick tea at the snug hostelry close by the station, and what with beautiful weather and satisfactory sport, it was, as Mr. Pasha remarked, "The end of a very pleasant day." B.

THE FIRST ANNUAL "FOREST AND STREAM" ANGLERS' TOURNAMENT.

THE following account is from *Forest and Stream*—it will be read with much interest by English anglers. There is every prospect that the Tournament will be a grand success, and that President Arthur, himself a keen and clever angler, will be present.

During the next fence months, we hope to get up some tournaments between our leading angling clubs by offering prizes.—ED. FISHING GAZETTE,

"THE 'FOREST AND STREAM' ANGLERS' TOURNAMENT.

"The Commissioners of Public Parks of the City of New York having kindly placed the Harlem Mere at the service of the committee of arrangements, the first annual 'Forest and Stream' Anglers' Tournament will be held there. The only postponement will be on account of rain, when it will take place the first fair day following.

"This tournament will be the best one ever held in this country, and will give people a chance to see what a beautiful art it is to cast the fly to a distance and to do it with delicacy. It will draw the attention of anglers to this style of fishing, and no doubt will add many recruits to the ranks of those who use the fly in preference to baits. Should the day be fair, many ladies are sure to be present; and as there are a few ladies who cast the fly with skill, there are no doubt others who would like to do so, and here they will have an opportunity to observe the contestants and note their different styles without leaving the city to do so.

"Below we give the adopted rules which govern the contests, and a partial list of the prizes—a list which will be completed next week. It will be seen by a glance at this that many valuable prizes are to be contested for, and that the amateurs have not been forgotten. The amateur class we regard as the most important one on the list, being designed to bring out new men, and as this class will be called first, it will give the leading ones an opportunity to enter the other classes if they wish. Many arguments were held at the meetings of the Committee of Arrangements in regard to the rule, especially in regard to the rule, which is held in other tournaments, requiring the contestant to recover his line after casting. It was decided to leave this regulation out of the present rules, the argument being that it was a useless requirement, and one that was impossible of enforcement when automatic reels are used. Certainly a person who can cast his line can retrieve it; but all do not do so. Another departure is in making no allowance of distance for length of rod. This, we hold, is the correct principle, for if a man cannot cast with a short rod as well as with a longer one, let him provide himself with a tool that he can use. Besides this, abolition of allowance will tend to show what length of rod is the best. There are anglers who talk of a rod "fitting a man," meaning that a tall man can use a length of rod that a short man cannot. We do not believe this, nor do we believe that a tall, long-armed man has any advantage in casting for distance. We think that a man may be "fitted" with a rod of a weight to suit him, but weight does not always express the drag that comes on the muscles of the arm. Leverage is a more powerful factor, as Mr. Van Siclen has shown, through the figures of Mr. Michell. We recently had two rods of exactly the same weight shown us, but the weight was so differently distributed, that one felt to be nearly twice the weight of the other.

"There are many questions regarding fly rods which can only be settled at tournaments where the casts are measured and comparisons can be made, and, as a means of educating the public in the beauties of our art, and of training the rising generation of anglers in the way they should go, these contests are of the greatest value.

"Two meetings of the Committee of Arrangements have been held since our last issue, and Mr. James L. Valloton, president of the Pasque Island Club, has been added to the committee. They have decided to consider delicacy and accuracy in the awards of fly casting; but a scale of points, with their value, has not yet been made. Next week we will give the full prize list and the entrance fees.

"RULES FOR FLY AND BASS CASTING.

"SINGLE-HANDED CONTESTS.

"(1) No rod shall exceed eleven feet six inches in length, and it shall be used with a single hand.

"(2) Any style of reel or line will be allowed, but a leader, or casting line of single gut, of not less than eight feet in length, to which three flies, one stretcher and two droppers, shall be attached.

"(3) No allowance of distance shall be made for difference in length of rods.

"(4) Persons entering these contests shall draw lots to determine the order in which they will cast, and will be ready to cast when called by the judges.

"(5) Each contestant will be allowed five minutes to cast for distance, and will then stand aside until called in his turn to cast for delicacy and accuracy, when he will be allowed five minutes for this purpose.

"(6) The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified by the judges at least once each day of the casting. A mark shall be made on the ground from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed so to do by the judges, the loss in distance shall be his.

"(7) The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important. A contestant may claim time for repairs, which shall be allowed by the judges. Or the judges may order the next on the list to cast while repairs are made, in their discretion

"SALMON FLY CASTING.

"(1) The foregoing rules shall govern, except that the rods shall not exceed twenty feet in length, and may be used with both hands, and that only one fly will be required.

"HEAVY BASS CASTING.

"Rods shall not exceed ten feet in length, any reel may be used, but the line shall be of linen not less than twelve threads. The casts shall be made with sinkers, weighing two and a half ounces. (These will be furnished by the committee). The casts shall be made in lane formed by the buoy line and a line parallel to it, and distant twenty feet. Each contestant will be allowed five casts. His casts within the lines shall be measured, added, and divided by five and the result shall constitute his score.

"LIGHT BASS CASTING.

"The above rules shall govern except that the sinker shall be one ounce, and there shall be no restriction as to lines."

CLUB AND OTHER JOTTINGS

By L. B.

THOSE who attended the Westminster Aquarium—at the invitation of the Balloon Society—on Friday evening, and heard Mr. Thomas Crumplen read a capital paper on "The Causes of the Apparent Diminution of Fish in the Thames, with some Remedial Suggestions," had reason to be well pleased. Written in an easy, pleasant style, delivered in a manner that emphasised point after point, without any apparent effort, but simply as the result of a thorough mastery of the subject, Mr. Crumplen held his audience deeply interested, among whom were a number of ladies—right through to the closing words of his paper, which was greeted with rounds of applause.

Among the many points enlarged upon by the reader were pollutions, steam launches, swans, poachers, the taking of undersized fish, the inefficiency of certain preservation societies in the past, &c.

Mr. Wheeldon followed with a few remarks entirely in support of Mr. Crumplen, and relieved his feelings by having a good go in at those abominations, steam launches and spawn gobbling swans. Mr. Sachs, who occupied the chair, Messrs. Ghurney, Bonvoisin, and several other gentlemen, whose names I did not catch, also adding a few words.

During the evening it was announced from the chair that Mr. J. P. Wheeldon had promised, on an early occasion, to read a paper, or perhaps I would be more accurate if I said address a meeting, as Mr. W. does not read on those occasions, but speaks extempore, on the "Science of Angling." Premising that I am one of the individuals favoured by the hon. sec., Mr. Lefevre, with a ticket of admission, I wouldn't miss that little treat for a trifle.

Mr. F. Hill, the worthy secretary of the North Western Angling Club, and myself, after the meeting had a march round the building to inspect the tanks, the whole of the representation of the liquid element seem of the freshwater species, jack, perch, trout, tench, carp, bream, barbel, chub, dace, bass, eels, roach, &c., some of them giants, and no doubt once mighty fish worthy of an angler's steel. Now, alas! in only too many cases blind, covered with fungoid growth and otherwise unsightly.

This (Friday) evening will be held the usual monthly meeting of the West Central Association of London and Provincial Angling.

The Fisheries Society now rent the Weybridge water by deed under seal, and boards defining the limits of the fishery, sizes of fish retainable, &c., have been duly posted in prominent places.

Re readings in angling societies. I have received very kind offers of assistance from several quarters. I thank all these gentlemen, and hope that we shall be able to call upon them shortly and avail ourselves of their services.

I have before me a copy of the FISHING GAZETTE of October 7, and under the heading of "Fishing Places near Manchester," I find a carefully-compiled table, wherein it is mentioned that rare fish "graining are to be caught in the rivers Weaver, Dane, Lostock, and Bollin Brook." At the risk of appearing ignorant, I must confess to never having seen one of these fish. From description, however, I believe they are not large, and very much resemble dace. Would it be asking too much if I asked your correspondent W. R. R. next time he catches or come across one to let me have a specimen of this fish. I will gladly pay expenses of carriage, and I know the members of the society I belong to would certainly have so uncommon a fish either stuffed or preserved in spirits, according to size, and would be grateful to W. R. R. for such a gift.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION.

Important Notice.

We again draw the attention of all British manufacturers of fishing rods, tackle, &c., that applications for space must be sent to the secretary of the Exhibition, 20, Haymarket, London, during the present month.

American competition will be very strong indeed. The improvements in the American hexagonal machine-made split bamboo rods have placed them far ahead of anything of the kind yet made in this country.

RIVER REPORTS.

MID-THAMES.

"Amongst the views of many, mine."
—Shakespeare.

The exceedingly heavy downpour of rain during the past eight or nine days has had the effect of raising the Thames to flood height and rendering it clay coloured and all but unfishable. In the Dorchester district during the past fortnight, excellent takes of roach, perch, and chub have been had, also some grand tench, many of the fish scaling over 4 lb. In the Sonning and Wargrave waters, roach and perch have been rewarding bankers, and a Mr. Partridge has nailed a 7 lb. jack trailing; this is an unusual size for this lazy method of angling. From Henley I have the following:—On the 13th, Mr. Hazeltine, 5 jack from near Marsh Lock, weight $19\frac{1}{2}$ lb.; same day, John Swiney 4 jack, largest 6 lb.; and Mr. Cook, the hon. sec. of the Henley Angling Association, a fine basket of chub, several of which bumped the scale at 4 lb. On the 15th, Mr. Paton 9 chub, 16 lb. altogether. At Medmenham on the 15th, Mr. T. Huggett with "The Boy," got over 3 doz. perch, only two or three of which came up to piscatorial weight of $\frac{1}{2}$ lb. The following day Mr. Huggett essayed the jack for the piscatorial competition, but not a fin would wag to the enticements of live bait, dead gorge and spinning the most silvery of dace. In the Hurley waters, Mr. Bergie has had some chub, a 2 pounder being the best; and two bankers, staying at the ancient "Bell," on Sunday got 17 lb. of roach. A patron of Townsend's on Monday, entered in the piscatorial jack Thames competition, got a nice fish of about 7 lb.; the angler was anxious to have it weighed ere the day was out, and unfortunate Townsend, in returning from this errand to replace the fish in the well, slipped into the water and lost his prize, to his own chagrin and the intense mortification of the angler, who, with such a fish in the cruel state of the elements which prevailed, had every chance of taking first or second honours from Henrietta Street. At Marlow, Bourne End, and Maidenhead, punts have been busy amid roach, but decent jack seem conspicuous by their absence.

Thursday Evening. As I write it is raining fast, but the glass is going steadily up and the river steadily down, and will, I opine, be in fine trim by Sunday, especially for worm fishing in the eddies.—Marlow Buzz.

Ancholme District.

The water has been in very fine condition for pike-fishing during the past week, but the weather is becoming quite cold and winterly. Some spinning and trolling have been done, both with naturals and artificials, and some fair pike have been taken. Two large ones were hooked by one local angler, but owing to weak tackle they both got away. I have not yet heard of any one in this neighbourhood, except myself, fishing for these gentry with pike flies, with a good two-handed rod, as in salmon-fishing. I opine they would find it tolerable sport, and withal invigorating.—Thomas Ford.

Bure (Horning Ferry).

Visitors staying at this famous fishery station during the past week have had very fair catches all round, but especially jack. Two gentlemen out last Monday landed six good fish, spinning. With the disappearance of the high tides which have prevailed lately, the water is now in a very favourable condition for spinning or live baiting; for my own part, I at present prefer the latter mode, as the weeds are still very troublesome. Host Thompson, who is a thorough sportsman himself can always be depended upon to make visitors to his quarters thoroughly comfortable, and also to assist them in their angling. I consider the prospects good for the next few days.—Robert Moll.

Camel and Inney (Cornwall).

Much rain of late and good fishing has resulted from the state of the waters. Many peel and salmon are coming up and are near the town. One fisherman, E. Stott, took a beautiful basket of trout containing five dozen fish, together with a peel and a salmon weighing 7 lb. Several other fine fish have been hooked but missed. Large worms are the best bait for big fish; Devon and brass minnows will also kill. Ordinary trout flies dressed large are good for peel.—H. O. Pengelly.

Chichester.

Jupiter Pluvius has in a great measure placed a veto on angling pursuits, the past week, the rain falling in torrents at intervals. What few rodsters have braved the elements fared badly. The jack fishermen have taken some good eels with live bait, one taken by Mr. Smith weighing $3\frac{1}{2}$ lb. The members of the Chichester Angling Society held a competition on the 15th, nearly all patronising the lower water. Small takes were the order of the day, some rodsters from early morning till dewy eve coming away fishless. Mr. Stokes again secured first prize, with $1\frac{1}{4}$ lb. of roach, while Mr. Summers took second prize—a spinning minnow presented by Mr. J. Harding—with $13\frac{1}{2}$ oz. Sixteen members competed These rains will greatly benefit the canal, and on clearance of the weather good sport may be anticipated. The next competition is fixed for the 22nd, the canal the *venue*.—George F. Salter.

Dove.

After the heavy rains of last week had raised the river to an abnormal height, the water rapidly receded, and on Monday it was in fair fishable order, a great deal of the decayed weed having since Friday been swept away into that bourne whence probably no weed ever returns to trouble the irrepressible piscator. The effect of the rise has been to give the fish a jolly good stirring up, and this was just what they wanted, pike especially, as they have been lying idle and off the feed far too long to please rodsters. Since Monday we have had many devotees at the river side, the weather having been all that the most exacting could desire, considering the time of the year. Grayling have been rising best in the middle of the day, and the duns and bumbles have "fetched" them best. The baskets have averaged $6\frac{1}{2}$ brace per rod. Chub are taking pith and brains best, while some few barbel have fallen victims to the roseate attractions of the lobworm.—The Splodger.

Eden (Armathwaite).

The river is now getting too low for fishing. On Friday, 13th, Thomas Bird caught two salmon, one 20 lb. the other 10 lb; had hold of another which gave him good sport, but managed to escape. On Tuesday he got one weighing 19 lb. in the castle water.—Skiddaw.

Exe (Exeter).

"Roll on, thou dark and deep blue *river*, roll." These words have been more than verified during the past week. To have seen the commotion and turbulence of the Exe since Saturday last, one would almost imagine it unequalled by any other in the country. First, the leaves came down in such abundance as literally to put a stop to anything like comfortable fishing, although of fish there was no lack. The brewing storm seemed to have excited them to more than ordinary liveliness, and salmon were seen doubly busy in their progress upwards, scorning even to glance at the tempting minnow or the gaudy flies, since which the river has overflowed in many districts and locomotion has been carried on by means of boats instead of shanks s pony or otherwise. Trees, apples, gates, and debris of various kinds, also sheep and pigs have been brought down with the flood. Sad havoc has been perpetrated, and destruction brought upon the finny tribes. Several pike and large carp have been drawn from the river in terribly mutilated condition, thus showing much rough usage in their passage down stream after death. It is still pouring in torrents, which no doubt will spoil the last few days, of the rod fishing for salmon. Trout are very fine and plentiful (like crows on a Sunday) now the season is closed. But if the weather should be moderate during the latter part of the year, we may expect, when viewing the royal domain and homesteads of the salmon and trout, to see more than the usual quantity in their preparations for the birth of their progeny, and see the ova in countless thousands deposited in its gravelly bed. "To be or not to be?—that is the question," I mean with regard to large pike-fishing this season. Latterly they have been very small, in fact, for some seasons past; but I have been told some very large ones have been seen fighting with the stream. No doubt they have had, by aid of the flood, some sharp-practice service served upon them, and they have to quit rather unexpectedly. So we may be fortunate to find them more widely distributed, and their destruction more evitable. Previous to this freshet, some splendid roach, rudd, and perch were taken from the river, and a few tench from the ponds. Canal fishing good, but very small: but no doubt when the water subsides sport will be A 1.

P.S.—I am in want of a brace or two of fine carp. Should like them alive, but should not object to one or two brace just killed.—Frank Gosden.

Exe (Tiverton).

The river has been in flood all this week (owing to the continued downpour of rain), and will not be fishable for a day or two should we have no more rain.—Wm. Mudford.

Ilfracombe.

Sea fishing has been very good this week for big fish. Saturday, P. Redmore brought in 175 lb. of conger; J. Davie, three ling and one conger, 30 lb. Monday, some large conger were caught, one weighed over 50 lb., others from 20 lb. to 30 lb. each. Tuesday, one large cod and a quantity of conger, weighing from 20 lb. to 40 lb. each. Wednesday, the sport again was very good, each boat having some fine conger, three weighed 126 lb.; and some good baskets of whiting pout were also caught. Friday night, a seine was set at Combe's Gate, near Barracane, they hauled five bass, weighing 5 lb. each, and eighteen mullet, 2 lb. each. Saturday night, two seines were set on Woolacomb Sands, they had several bass, from 4 lb. to 5 lb. each; mullet, from 2 lb. to 3 lb. each; and a quantity of salmon peel, turbot, brill, and three thornback, weighing altogether 180 lb. I see several strings of fish have been caught with rod and lines from the jetty. Thursday morning, one boat only out, drifting for herrings—they hauled sixty-one. Weather wet and squally.—E. Comer.

Irt (Holmrook).

This river for ten days or more has been low, but to make up for that there has every day been a splendid breeze, which has made the fishing pretty good in the tidal waters. I have before named to you Mr. Richard Harrington, a blacksmith, and almost my nearest neighbour, as a most successful fisher of sea fish; he yesterday succeeded in hooking a most splendid salmon, and although in a very difficult place for landing succeeded, after nearly an hour's play and excitement, in gaffing and landing a very fine fish weighing over 19 lb., and in the pink of condition. This, I believe, makes over 140 sea fish Mr. Harrington has killed this year. To-day we had a tremendous storm, which will immediately put this river in splendid condition for fishing. Rod fishing in the Irt, Esk, Eden, Bleng, Mite, Calder, &c., all adjoining rivers, continues open till November 14.—A. Brocklebank.

Lea (Ware).

Rain having fell incessantly, with slight exception, since my last report, the river here is highly coloured; still it has risen but very slightly. Very few anglers have been out, except on Sunday, when several fair takes of roach were recorded, two members of the Reform having about 6 lb., whilst several others belonging to the Bloomsbury Brothers and other clubs were equally successful. Several runs were had with jack, but none were landed, the fish evidently not being in a feeding humour. I was shown by a gentleman fishing near "Tumbling Bay' no less than four fine baits which had been killed and much disfigured, without his having had the slightest chance of striking his fish. With reference to the trout weighing 12 lb. I reported as having been taken by Mr. Webb at Stanstead, I have been asked by that gentleman to state that instead of the fish being of the weight reported, it actually weighed 16 lb. 5 oz, and its measurement as follows:—Length, 2 feet 6 inches; girth, $28\frac{1}{2}$ inches. Mr. Webb informed me that the club he belonged to was the King's Cross United, and no doubt this magnificent fish will shortly be seen in the room of this club. Rain still falling at time of writing.—Lion and Wheatsheaf.

Ouse (Littleport).

I thought, after the rain last week, I should have had a good report, as the roach came on for the first time on Saturday, when Mr. Hewitson, of London, had the pleasure of taking the first bag of any account that has been taken this season, a nice one of 12 lb. This catch Mr. J. Cole, of the St. John's Wood Piscatorials, followed up on Sunday with a bag going 10 lb. good roach. Two Cambridge gentlemen also had a fair show; two pike of $4\frac{1}{2}$ lb. and 3 lb. were taken at the Branch by Mr. Harper Ely. Monday and Tuesday the cold east wind took them completely off the feed again, but they showed up at intervals again on Wednesday, when Mr. J. Cole again got 11 lb. nice roach. I hope to have something better to report next week.—C. South.

Ribble and Hodder.

The rivers are both getting too low for salmon-fishing, and there has not been much sport during the last week. A salmon, $14\frac{1}{2}$ lb., was caught at Hodder-foot on Friday, and one about 6 lb. caught above the House in Ribble, and another hooked on Saturday. It is raining, and the water rising. If it comes a fresh now there will be good fishing till the end of the season.—G. Dugdale.

Severn and Teme (Worcestershire).

Since last I wrote these streams have been flushed and quite out of order for angling. The eel traps have paid for attention, some of them having taken several hundredweight; but when the eel is running down to the coast but few are taken with the line; they seem not to feed when going down to spawn. Grayling fishing is out of the question for at least three or four days; if we get fine weather by then, there will be some good sport to be had with the gentle a few days before the flush. Mr. Samuel James had a fine run of grayling, some scaling $1\frac{1}{2}$ lb each. There are some good fish at Knightwick, Martley, and Stanford Bridge. On the Teme Knightwick is 9 miles from Worcester on the Worcester and Bromyard line. You can get leave to fish it from the inns at either place. To fish it properly you should wade, as the best fish are to be caught in the deepest part of the stream. The water bailiff has seen some large salmon going up to spawn; he calculates them at from 30 lb. to 40 lb. a fish. The largest fish taken last season weighed over 50 lb., it was taken in the Severn below Worcester. The roach are feeding, and many are taken with the paste; some make it with new bread, add a little water, and press it in the hand until it becomes tough, then take a piece as large as a pea, use a small hook, about No. 10 short in the shank, a fine gut line, a small quill, and strike quick, but not hard, when the float moves, or else your bait will be taken off. If you go in for fly fishing you cannot do better than use the flies I recommended last week.—John A. Griffin.

Taw (N. Devon).

Rivers much swollen over their banks, but on Monday Mr. Connop got an 18 lb. fish, Mr. Haddon two salmon, Capt. Palisser a fine peel. Water will not be fishable for two or three days. All the fish are taken with the Devon minnows. I hear of fish far up the river which run into the large streams. A gentleman fishing in the high Torridge told me he saw and heard of six salmon caught last week. Just heard of six more fish taken in Taw. Mr. Hynam, Mr. Bradshaw, and Rev. Wilson have taken fish this week (Monday).—Rusty Game.

Thames (Goring).

Water now very high and thick, a flood prospect at present. Looks bad for the next few days. It will take a week, if fine, to get the water in good order for all-round fishing. Sport during the week has been some good takes of roach, 15 lb. some days; each punt will average 10 lb. or 12 lb. of roach per day. My best day was 15 lb. of roach, the largest 1 lb. 3 oz.; one jack of 4 lb. and a few perch.—John Rush.

Thames (Hall ford).

Owing to the late heavy rains, the river has come down very thick, and by the time this is in print it will be in first-rate order for all seasonable fishing. Since last week's report, I have been out with different gentlemen three times. First day, Mr. Matthews, fishing with me, took four barbel and nine roach. Second day, Mr. Innes, two barbel, largest $5\frac{1}{2}$ lb; Mr. Ellis, barbel and chub, largest $3\frac{1}{2}$ lb. Third day, Mr. Reynolds, two barbel and three perch.—George Rosewell.

Thames (Twickenham).

Wind, S.W. I am sorry to say we have not been doing much this week; the heavy rains have caused a rise of water, but if we are favoured with fine weather we hope to have some good sport next week. "Our Joe," with Messrs. Jacobs, of Covent Garden and Borough Market, took 12 dozen good fish, amongst them some very fine roach. Jack Spong, with Mr. Walker, 8 dozen good fish; other days have averaged about 5 or 6 dozen of fish. Mr. Johnson, of Cross Deep, has been getting some fine roach in the Deeps.—Alfred Perrin.

Torridge (Torrington).

River has been in flood most of the week, and it is rising now. Thirty-two peel have been taken since last report. I have not heard of any salmon being taken with the rod near here. P. Bremridge, Esq., took a salmon last Saturday on the Taw with the fly. Salmon are very plentiful near the estuaries, and are selling at 6d. and 7d. per lb. retail.—Practical Angler.

Trent (Alrewas).

The late rains have brought down a good fresh in the river, and there is now plenty of water, but too much discoloured for any chance of sport. A few good roach were taken last week, but no quantity worth speaking of. Before the fresh, and while the water was clear, grayling were giving excellent sport with the fly, one angler getting as many as ten brace of fair fish in one day. Burtonwards I hear that the roach have been feeding at the "sewage hole," and I also learn a fine trout 5 lb. in weight was captured whilst spinning for pike at Rugeley; but whether it was kept or returned to its native element as being out of season the "deponent knoweth not." Pool fishing has been almost a dead letter. I made a start pike fishing last Saturday week, with the president of the Birmingham and Midland Piscatorial Association; the fish run fairly well the early part of the day, but only three-pounders, which were marked and returned to grow larger. I landed a nice fish for the president 10 lb., and he returned the compliment with one of 6 lb. The afternoon, although beautifully fine, was all against pike fishing, and we made tracks for home at an early hour without any further good luck. Weather to-night (Thursday) very unsettled, and the chance of fishing the next few days out of the question.—James Gregory.

Trent (Newark).

Owing to heavy and long-continued rains the river has been very high and thick all the week, and angling at a standstill. To-day the water has been going down a little; but it has been raining very heavily all day, so I expect the water will again come on. Prospects look very bad under the present circumstances. Anglers had better stay at home and mend their tackle or rig up a few pike traces, for I am sure angling will not be worth the candle for a week at least. Nothing has been done in the way of sport, or even attempted, this week, as far as I can learn.—The Trent Otter.

Trent (Nottingham).

The Trent during the week has been running at a great height, and on Thursday, when we expected a subsidence, rain fell rather heavily. Sport has varied. On Tuesday at Weston Mr. Theaker caught a splendid lot of dace and roach, and higher up, namely, at Willington, some magnificent dace were taken with the cockspur worm. Two gentlemen fishing in the Dove, near the Trent, on Saturday, succeeded in taking upwards of 50 lb. of barbel, chub, roach and dace. The barbel were killed with the maggot, and the chub with the worm. Some coarse fish have been taken in the Rolleston length and a big take is reported from Collingham, bream, in this instance predominating.—The Man at the Clubs.

Tweed and Teviot.

Since our last the takes of salmon on these river have been very fair, all the casts having been angled on. On the Maxton and Rutherford waters the Hon. H. Brougham has killed 4 salmon, the largest turning the beam at 32 lb. On the Birgham Dub, Mr. Alf. Dension, London, has had very good sport, on Thursday last killing 3 salmon, averaging 18 lb. each. Owing to a rise in the river little was done, owing to the river having risen fully 7 inches. On the same day, however, on the Hendersyde water Mr. P. Elliot, Kelso, killed a brace of grilse, and on the lower Sprouston water, Mr. Kermack, Edinburgh, got one very good sea trout. Mr. Cockburn, London, on the Makerstown water, has had fair sport, killing three fish and running several others. On Friday last the Hon. H. Brougham killed two of 18 lb. each, and on the same day, at Birgham Dub, Mr. Denison had a brace of the same weight. Mr. Bayliss, C.E., London, on the Sprouston water had one salmon of 18 lb., and on the Hendersyde water, Sir G. W. Griffiths killed a brace, 17 lb. and 24 lb., respectively. Mr Bushfield, Edinburgh, on the Sprouston water, got one. On Friday, on the Rutherford water, Col. Trotter, Charterhall, had one of 23 lb, and Mr. Denison, on Birgham, had one of 15 lb. On the Sprouston water, on the same day, Mr. Kermach, Edinburgh, got one fish. Saturday, nothing was done; and the rain of Sunday and Monday occasioned a flood of $2\frac{1}{2}$ feet, which has now had the effect of stopping angling ever since. Trout angling, however, was prosecuted on Monday, with good success, three baskets weighing 25 lb. and many small baskets were got, ranging from 3 lb. to 7 lb. No salmon fishing to speak of took place on Monday, and on Tuesday; Mr Denison killed one fish of 19 lb on Tuesday, on Birgham Dub, and that was all that was done that day. No fish have been caught up to this time (Thursday) on the the Floors Castle water, and the same may be said of the Ednam House water.—Maxwheel.

Witham (Boston).

There has been rain almost every day since last report, with cold N.E. winds. Higher up on the Wolds there has been much wet, consequently a fresh is coming down the Witham, and at the moment it is not fishable. The weather is now brightening, and if no more rain falls the river will be in a fair state for angling by Saturday. The net men have been doing well among the eels at the Sluice, some of them being very large. Good sport is had just now in the haven, among the butts or dabs. The fish are of good size, some running up to 2 lb or nearly so. Before the fresh came some good sport was had on the river among the pike. Several were landed on Saturday at Bardney, the best $7\frac{1}{2}$ lb., and at Kirkstead there were also several taken, running up to about the same weight. Some good eels were also taken in the same locality. At Chapel Hill pike were taken, one taken by Mr. Howard scaling $6\frac{1}{4}$ lb. From the drains some capital roach takes are reported, as well as pike. At Leake, on the Hobhole Drain, Mr. Jones caught 29 lb. roach and rudd and a 4 lb. pike. Some of his rudd were fine, running up to 2 lb. On the Forty-foot some good roach bags were made by Messrs. Barnes and Enderby; and on the Mount Drain pike were caught up to 5 lb., as well as a lot of roach. Some good perch were taken at Kirkstead.—Yellow Belly.

Wye and Derwent.

We have had a great quantity of rain fall to-day (Thursday), which has discoloured both rivers a little. This rain will quite put a stop to fly-fishing for a short time. Sport with the fly since my last report has been but very middling, and only small baskets have been the order of the day; in fact, grayling for the last two or three days have risen remarkably short, and been rather particular in their choice of fly, there being such an abundance of flies on the water of the smallest species. The small ash dun, bumble, and dyed hackle flies, ribbed with gold twist, have all killed fish. The bottom fishers have done fairly well with both worms and maggots, killing both grayling and coarse fish.—George James Eaton.

Yore (Hawes).

Trout are now busy ascending the runners preparatory to spawning. Grayling well on the rise, the "daddy long-legs," blue dun, and cow-dung being the best killing flies. Every appearance of a fresh. Splendid fly water at present. Grayling fishers scarce as yet.—Joseph Corry.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

Following my last report of Sept. 30, Mr. Cook on seven occasions has weighed in fish, principally roach and dace, with a few perch; Mr. W. Eydmann, roach and dace four times; Mr. Simpson, three times roach and dace; Mr. W. Howell, roach and dace twice; Mr. A. Eydmann, roach on one occasion—all fish from the Thames. Messrs. Cook, Eydmann and Simpson have on several occasions seen snatching going on lately at the Drain at Surbiton; it seems it is now practised from a boat instead of the bank, as formerly. Cannot the T.A.P.S. or some of our Kingston friends stop it?—perhaps some of them know Butcher. It may interest some of your readers to hear of an incident coming under the notice of one of our members—Mr. Simpson—who while roach fishing lost a fish in the morning through a defect in the tackle. Some hours after he foul-hooked his line and recovered the same with the fish attached, proving that the fish had remained in the same locality after being hooked. We have a competition coming on the last day in this week, and three days in next, so as to suit all parties, if possible—of course only one day's take to weigh. Bank only; any fish to weigh; any water if public. First prize, pair of fishing boots; second, tackle case; third, silver-plated fruit basket.—Black Bag.

ALEXANDRA SOCIETY OF ANGLERS.

Nineteen of our members contended for eleven prizes, at the Ordnance Factory, on Sunday last, Mr. Harry Shaw being the only successful member, taking first prize, with roach only. The members intend fishing the remaining prizes off at Amberley, on Sunday next, Oct. 22. Mr. Chipchase weighed in 8½ lb. of roach, dace, and bream, from Pulborough.—F. Wagner, sec.

Oct. 19.

AMICABLE BROTHERS' ANGLING TOCIETY.

Mr. Larkman, one roach, 1 lb. 8 oz.; Mr. B. Chevalier, roach and bream; Mr. Shury, roach 3 lb. 4½ oz., bream 1 lb. 11 oz., dace 3½ oz.; Mr. Arnold, roach 6 lb. 1 oz,, dace 3½ oz., bleak 3½ oz.; Mr. Howlett, one jack, 4 lb. 4 oz. and one roach; Mr. Farebrother, roach, 2 lb. 14½ oz.; Mr. Lewis, roach and perch.—J. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday, the 15th inst., but the takes were rather poor, only the following weighing in:—Mr. J. Ferguson, bream 6 lb. 13 oz.; Mr. J. Bowling, bream 3 lb. 4½ oz.—D. Davis.

CHICHESTER ANGLING SOCIETY.

At the fortnightly general meeting held at The Globe on Tuesday, Mr. S. Young gave an able and practical sketch on bream and bream fishing in Chichester waters, for which a warm vote of thanks was accorded him. On Tuesday the 31st, Mr. G. F. Salter will read an article on "Pike and its Capture."—G. F. Salter, sec.

CRESCENT ANGLING SOCIETY.

This society held its usual meeting on Wednesday evening, the 18th inst., when a good muster of members attended. Since our last report we have enrolled eight fishing and three honorary members, so that, by a special resolution, the full complement has been raised from thirty to fifty. Next Wednesday, the 25th inst., the first prize competition takes place, and over twenty members are expected to take part. The conditions are:—"Go where you please, gross weight," winner to have choice. Gentlemen wishing to join, or desiring information, can attend the meeting or write to the Secretary, F. Pearson, at the club house, Giraffe Tavern, Newington Crescent, S.E.

DUKE OF CORNWALL.

The members of the above club had a very successful day on Sunday. Messrs. Kettle and Hyde had a good show of roach, the former some very nice ones; while the other members had a roving match for five prizes, but only two were taken, Mr. Mann the first and the secretary second.—J. Heckford, sec.

Oct. 17.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

On Sunday last, this young and flourishing club had a magnificent show of jack, by Messrs. J. Collyer, W. Sellwood, and B. Lowin. Mr. A. Warner had some fine roach, and Mr. W. Aimes perch. Wednesday last, Mr. W. Jones, a beautiful jack. Notice to members—Wednesday, November 1, is quarter night.—W. G. Gardner.

Oct. 19.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The above society held its weekly meeting on Monday, the 16th inst., when more new members were duly elected, it having been decided that all gentlemen visiting Yarmouth angling, and who are members of angling societies or clubs, shall be admitted as visiting members at a fee of 2s. 6d. each. This was introduced by a well known angler visiting Yarmouth for the jack fishing to the notice of the Society, and I am sure no one will ever regret its becoming a bye-law; and we trust that next year that we shall have waters preserved to ourselves to send them to. Our jack fishing has now set in in earnest. Mr. Bennett has again weighed in two jack of 5½ and 4¾ lb., caught by a single gut hook on a paternoster. The water is now in good condition, and the report now is fish are well on the feed, especially at Ormesby, where Mr. Bennett will, no doubt, secure more jack by the next meeting. A most encouraging letter was read by the president from Mr. Birkbeck, M.P., in reply to an invitation to preside at our inaugural dinner, regretting through pressure of business his inability to attend, as Parliament meet on the 24th., but wishing the society every success. It was resolved to fix the dinner for Thursday, the 2nd November, at the Victoria Hotel, and it is to be hoped that as many of our London friends as possible will attend the first Yarmouth piscatorial meet to inaugurate the formation of the society in question.—J. Lark, secretary.

IZAAK WALTON ANGLING SOCIETY.

Mr. J. W. Morgan had a nice day's sport in the Thames on Wednesday, Oct. 11, 1882, having 46 lb. 9 oz. of barbel, chub and perch, three of the heaviest barbel, weights as follows:—8 lb. 10 oz., 7 lb. 4 oz., and 7 lb. 1 oz., are in the hands of Mr. J. Barrett for preserving. The shows of fish on Sunday last were small, Mr. W. Mecham, had bream and roach; Mr. H. Butt had roach. Mr. G. Bliss had another one of his beautiful trays of chub and roach on Wednesday, Mr. T. Dennison, sen., had roach and dace; Mr. T. Dennison, jun., had roach on the same day. In addition to the two special prizes announced last week, Mr. C. Green will give a prize to go with the one given by T. Dennison, jun., for the heaviest weight of any kind taken on the four Sundays in November; members to choose their own fishing water.

NORTH BRITONS ANGLING ASSOCIATION.

The half-yearly supper in connection with the above association was held on Monday evening at Mr. Fred. Matthews, the York Castle, Northgate Street, Leicester, when nearly the whole of the members sat down to an excellent spread. The good things provided having received ample attention, Mr. J. Greenwood was called to the chair, Mr. J. Wiggington taking the vice chair. The usual loyal and patriotic toasts being given, the chairman called upon the secretary for his report, which was found to be of a satisfactory nature. Prizes, consisting of various useful articles, were presented to the following successful anglers:—Messrs. J. Wiggington, Clarke, Gask, Cave, Noon, Paterson, Greenwood, Burrows, Farrow, Lumb, Debrex, and Ward. A vote of thanks, proposed by the chairman to the officers of the association and committee of management for their services, was carried unanimously, and Mr. A. Ward responded. Other toasts being duly honoured, the remainder of the evening was devoted to song and sentiment, Messrs. Noon, Burrows, Ward, Cave, and Greenwood contributing in no small degree to the evening's amusement.

NORTH-WESTERN ANGLING CLUB.

On the 15th inst., Mr. Wynn weighed in a nice jack, from the Harp, 5 lb.; Messrs. Marshall and Hillier, roach, from the Thames, the former a good tray of 12 lb. I regret to have to report the death of Mr. Harry Smart, a late esteemed member of the above—one respected by all who knew him.—H.

Oct. 19.

ORIGINAL ALEXANDRA ANGLERS.

Our members were out yesterday. Mr. Blackledge had a fine show of dace, Mr. Newton had some good perch; Mr. Dymond, jun., jack; Mr. Towndrow, roach; Mr. W. High, jack; and Mr. Stanton, our country member, jack from the Thames.—E. Dymond, sec.

PORTSMOUTH WALTONIAN ANGLING SOCIETY.

The above society has been presented through the president, Mr. A. L. Emanuel, with a very fine female otter, trapped by keeper John Barry in the employ of E. Goble, Esq., of Fareham, who is the curator of the Titchford and Fareham preserved waters. This is the second that has been taken this year, which accounts for the scarcity of fish in these popular trout streams during the past season. The animal is in splendid condition, weighing over 16 lb., and measuring from nose to end of tail nearly 4 feet. It has been sent away to be stuffed, and will make a welcome addition to the many cases of fish which adorn the walls of this club.—Daggerwood.

RODNEY PISCATORIALS.

"Oh! I should like to have a take like that." "What sport it must have been." "I fancy I feel the knock at the end of my 20 foot pole, and can almost feel the thrill run through me as I try to land that big joker," and any one present could have seen a gleam of delight in the eyes of the last speaker as he imagined he was struggling to land a big roach that laid among some 50 or 60 lb. of roach and jack, taken by Mr. Hughes and a friend, and exhibited in the club house of the above society on the 12th. I must say that they were beauties. Our members competed for prizes on Sunday last, Mr. Diggins succeeded in winning the first prize, a handsome bronze lamp, given by Mr. R. Grant, with some nice roach from Tottenham. The following prizes:—1st, 4 lb. of tea, given by Mr. Diggins; 2nd, £1 1s. box of fireworks, by Mr. Marsh; 3rd, bottle of gin and 6 tins of lobster; 4th, money prize; 5th, six tins of lobster. All to go to Walton and fish from the bank.—Pixie.

ROYAL GEORGE ANGLING SOCIETY.

The following members weighed in on Sunday last:—Mr. Chárt, with 6 lb. 15 oz. roach; Mr. Bernhardt, 5 lb. 5 oz. roach and dace; Mr. Wood, 5 lb. roach; Mr. Holden, 4 lb. 10 oz. roach and dace; Mr. Parsons, 1 lb. 13 oz. roach; and Mr. Hughes, 1 lb. 6 oz. roach. The gross weight prizes for the day were won by Messrs. Chart and Bernhardt. Several members fished a sweepstake in two prizes, the successful ones being Messrs. Chart and Wood.—C. W. W. Bernhardt, hon. sec.

Oct. 18.

SOUTH LONDON UNITED.

The angling sweepstakes in connection with the above came off at Amberley on Sunday last, October 15th, and was a great success for a first effort—everything went off well, except the pistol. Mr. Jones, Angler's Pride, 1st prize, £1, 3 lb. 11½ oz.; Mr. Bowling, Anchor and Hope, 2nd prize, 10s., 3 lb. 5 oz.; Mr. Glass, Anchor and Hope, 3rd prize, 7s., 2 lb. 15 oz.; Mr. Wall, Anchor and Hope, 4th, 3s., 2 lb. 8½ oz.—Wm. Allen, hon. sec.

STANLEY ANGLERS' SOCIETY.

During the week, since my last report, the following fish have been weighed in at our society's room:—Mr. J. Duncan, 2 jack, 5 lb. 5 oz., 34 roach 11 lb. 10 oz., dace 9½ oz.; Mr. Wheatstone, jack, 2 lb. 12 oz.; Mr. D. M. Humby, 30 roach 11 lb 12½ oz. and a perch of 5 oz.; Mr. W. R. Humby, 27 roach 10 lb. and 1 dace 5½ oz.; Mr. Scull, 22 roach 8 lb. 4 oz.; Mr. Walker, 24 roach 9 lb. 3 oz. Most of the above were from the Thames, but it is to be feared that the recent heavy rains will spoil sport among the Thames roach for a few days.—G. E. W.

STALYBRIDGE ANGLING SOCIETY.

The members of the above society held their annual dinner on Saturday, 14th inst., at their club-house, Back Grosvenor Street. Mr, Henry Abrams, the president, occupied the chair, supported by Mr. Wm. Jackson, as vice. A most excellent and well served dinner was provided by the worthy host, Mr. David Shaw. After the removal of the cloth the chairman gave the usual loyal and patriotic toasts, and song and toast followed in quick succession throughout the evening. In responding to the toast of "The Society," proposed by the vice-chairman, Mr. Thomas Pilling (father of the anglers in this district) said he was always happy when he was amongst such a jovial company as was congregated together on the present occasion, and he was happy to see the progress that was being made by the young anglers in the district. Mr. William Wardle, on behalf of the members of the society, presented the secretary, Mr. Jas. B. Udale, with a gold pencil-case, as a token of respect for his services for the twelve-months. Mr. Udale, in thanking them for the way in which they had received his services, and said he hoped every angler in the district would take the same interest in the gentle art as he had done. The secretary then read out the names of the successful anglers in the heaviest for each class. David Shaw, pike and roach; Samuel

Wood, bream; David Shaw, chub; Wm. Jackson, perch and eel. The remainder of the evening was passed in singing and reciting by the members and their friends. The Act of Parliament put an end to one of the most jovial meetings that has been held for a long time in this district. The usual vote of thanks to the host and hostess closed the meeting.—Udale.

THE PISCATORIAL SOCIETY.

The pike competition of this year came off on a most unfavourable day, as during the whole of Monday last there was a pitiless rainfall, and although anglers as a rule are unmindful of the weather, it required a very brave piscator to go on the chance of catching fish. Mr. Edward Foreman was the only competitor that put in an appearance with fish at Ashley's Hotel, Covent Garden, on Monday evening last, and he is entitled to no small amount of credit for the splendid show of jack which he made on that occasion. Regardless of the rain he commenced fishing with his regular fisherman, Ned Andrews, below Bray Lock, and continued, like a thorough angler, all the day. After rejecting all fish under 3 lb., he weighed in 27 lb., the largest fish 6¼ lb. Mr. Foreman remarked that his fisherman, Ned Andrews, was out on the previous Saturday with Mr. Stanger and took ten fish, weighing over 30 lb., thus proving that the prevailing idea that there are no jack in the Thames is a delusion. The Rev. J. E. Vaux occupied the position of chairman for the evening, and the announcement of Mr. Foreman's success was received with much approbation, and he was warmly congratulated by his brother members in producing so fine a display of fish on such a miserably wet day. Mr. W. B. Adlington gave a very interesting account of his capture of a 12 lb. salmon in Cumberland. In spite of the bad weather outside, the evening was pleasantly spent; and previous to the close the energetic honorary secretary, Mr. James Lander, called attention to the anniversary supper in the clubroom on Monday evening next, expressing a hope they would all make a point of being present, especially as their good friend and father of the society, Mr. F. G. Pearce, would occupy the chair. The new card contains a design of three fish, artistically grouped by Capt. Alfred, and it was much approved. Votes of thanks were accorded to Mr. E. Foreman, Mr. W. B. Adlington, and the Chairman.—B.

THE WALTONIANS.

On the 15th Mr. R. Dodge had roach 5 lb. 10½ oz.; Mr. Starr roach, 5 lb. 8 oz.; Mr. Togwell roach, 3 lb. 15¼ oz.; Messrs. Dodge and Rushbrook also weighed in, and I weighed a barbel 2 lb. 12 oz. taken at Bourne End from the bank.—A. J. Marriott.

TRAFALGAR ANGLING SOCIETY.

She members of the above society had a good show of fish from the Thames on Sunday. Messrs. Potter, Wilson, J. Gaze, Richardson weighing roach, and J. Humphries bream; Mr. Abington roach from Pulborough. The members will fish a pegged-down match at Taplow on Sunday, October 29th. for three prizes: Mr. Foley, a fly rod; Mr. Cooper, a roach rod; Mr. Goldstine, 10s. 6d.—J. Gaze, sec.

WALWORTH WALTONIANS.

The result of the competition that took place on the 15th among the members of this society is as follows:—Mr. Weatherhead, 1st, and Mr. Delehaye 2nd; Messrs Delehaye, junior, Hawkridge, and Beale also had fish. The October competition is going on pretty fairly; but the excitement is not quite so keen as it was last year. Messrs. Dale, Bansback, Cain, Delehaye, senior and junior, have weighed in fish for it. Mr. H. Dale weighed in on the 14th 9 lb. of very nice fish. On the 12th a challenge was received from the South London to fish 12 members of this society at Sawbridgeworth on the 12th November for a supper for 24, the losers to pay the bill. Gentlemen wishing to take part in this competition are requested to attend the society on Thursday evening next, the 26th. Mr. Delehaye, junior, informs me that a short time ago he was fishing at Weybridge in the association water, and he was much surprised to catch with his line a stout night line, much to his disgust, as he thought such style of fishing was not allowed in that water.—Pixie.

Oct. 19, 1882.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The next match (Thames only) will take place on the 22nd inst., when the following prizes will be contended for:—1st prize, £2 10s.; 2nd prize, £1 10s.; 3rd prize, 2 chromos value £1 1s., presented by Mr. Morrison; 4th prize, 18s. 6d.; 5th prize, 15s.; 6th prize, 10s. Result next week.—H. Adeane, sec.

WOOLWICH INVICTA ANGLING SOCIETY.

W. C. Watkins, of the above society, took on Sunday last, while live-bait fishing at Dagenham lake a very fine perch weighing 3 lb. 8 oz., which has been sent to Messrs. Cooper for preservation. Length, 19 inches; girth, 14¼ inches. Also Messrs. Foster, Jones, King, and Latham, with roach and perch.—C. Foster, sec.

Black Bass for England.—Mr. W. T. Silk, the well-known fishculturist, of England, in charge of the fishcultural establishment of the Marquis of Exeter, arrived here on Saturday last in the *Germania*. Mr. Silk has tanks on board in which to take back black bass. He desires very small ones, of two or three inches long, if they are to be obtained. He called on us and we referred him to Mr. W. O. McDowell, of Greenwood Lake, who will probably assist him to some large specimens, if not small ones. Mr. Silk has taken over these fish in former years, and tells us that both he and Mr. Marston of the Fishing Gazette, have taken the fish in English waters from the former plantings. We wish him success both in obtaining the fish and in their transportation.—*Forest and Stream.*

[The cost of the experiment has been undertaken by Lord Exeter, Mr. R. B. Marston, Mr. W. Oldham Chambers, Mr. Carrington, and one or two other gentlemen, and the fish are to be divided according to the amount subscribed. —Ed.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

PEGGING FOR ROACH.

Sir,—I very much enjoyed reading "A Day with the Witham Roach" in your last issue, a truly admirable article by "The Trent Otter." A friend of mine says he should like a description of "pegging" for roach, and I am sure we should be all greatly obliged if "The Trent Otter" would favour the angling public with a wrinkle or two on the subject.

To an angler who has not indulged in this scientific and killing style, the term is one likely to occasion considerable perplexity.

To those who thoroughly understand it there is no occasion for the "Otter" to dive into the stream of explanation; but merely after a simple reference to it to say to a complete stranger to this style, this is called "pegging" for roach, dace, or barbel, as the case may be, the stranger is all abroad.

In the interest of the unsophisticated, I would venture to ask:—

(1) What length of line is best to use between the top of the rod and the float?

(2) Which is the best way to hold the line, do you recommend it to be held round the fingers, or not?

(3) What kind of strike is the most successful to send the hook home? Is not a very quick, peculiar strike necessary?

(4) Will the "Otter kindly explain if it is not absolutely necessary to fish much deeper than the stream to allow for the work of the water on the shot and bait, the bait, I imagine, being on the bottom.—I am, &c.,

Mark Antony.

[We thought it would save time if we got the "Trent Otter" to answer these queries in the same number, and feel sure he will kindly do so.—Ed.]

Answers.

In the first place, I must beg Mark Antony's pardon for omitting to describe this "pegging" more at length. I forgot for the moment that every angler, perhaps, does not understand fishing with divers kinds of tackle.

(1) "Pegging," or, as it is known in the vernacular of this district, "stret pegging," is the most deadly method of roach fishing that is practised by the Nottingham school of anglers; it is principally practised with paste baits, and in a slow swim—a swift, rattling stream is no use for it. We will suppose an angler has "set his stall out," and elects to "peg" for roach, just over a row of flags, &c., &c., and he wants to be as near the bank as possible; he throws in his baited hook, with his light goose quill and some half-a-dozen small split shots on his tackle—(I might just say that the angler ought to sit as low down on the bank as possible with this method)—and the slight stream works the bait down below him to any distance he likes, from two yards up to twenty, according to circumstances. I prefer to have the float about ten yards below me, if possible; but, of course, the angler must be guided by the circumstances of the case. I have seen splendid roach hooked time after time when the float has only been a foot from the bank, and fifteen yards or more below the angler. I think that is an answer to the first query.

(2) Which is the best way to hold the line? I should certainly not hold the line round the finger, but simply hold the line close to the rod (immediately above the reel), with the right hand, the same that holds the rod.

(3) I do not know that any peculiar strike is necessary to drive the hook home, a great deal depends on the biting mood of the fish. Sometimes it is necessary to be at them the very instant the float tilts, while at other times it is best to wait about half a second; experience alone can teach the angler the best method of striking. We will suppose the float to be ten yards from the rod point, and only about a yard from the bank—of course, the slight stream is sufficient to cause a tight line between rod point and float—the float stands in a slanting position, with the tip end towards the angler; the rod point is only about a foot or so above the water; the float gives a bit of a bob, caused by the bite of a roach. If I have hold of the rod, on the very instant this occurs, I just give the rod point a bit of a twitch in the opposite direction to the flow of the stream, a hard stroke is not necessary, a short twitch of the rod is all that is required.

(4) With regard to this query, a good deal depends on the stream. If the stream is very slow, an inch or two more line between float and hook than the depth of the water is all that is required: while in the swiftest stream that this method is tried in, six inches is all that is required. As I said before, a slow stream is the best; in fact, do not operate on a swift stream if you can help it when trying this "pegging" business. So you will see by this that "pegging" is merely fishing with a stationary bait, with the float held tight, below you, according to the circumstances of the case.

In my new work on fishing I have treated roach fishing in all its branches most fully, from p. 76 to p. 98. My spare time is always at the disposal of the readers of the Fishing Gazette, and I shall be always happy to answer any queries. I have been advised to keep a stock of rod, reels, lines, and tackle, suitable for fishing in the Nottingham style—and I think I shall. See my advertisement in next week's Fishing Gazette.—The Trent Otter.

HAIR *v.* GUT.—IN FAVOUR OF GUT.

Sir,—As my Fishing Gazette for October 7 has only reached me to-day (October 13) I have been unable to notice "Sprint's" remarks before now. I wish to make my peace with him, and assure him that I did not intentionally suppress any part of his letter with a view of giving point to what he is pleased to call my "sarcasm." Of course he is not likely to see the thing exactly in the light in which I do, but I only intended to give a spice of humour to my remarks about 6-inch fish. From my point of view "Sprint's" last letter seems to contain more than one sentence of covert sarcasm or irony; but I am quite willing to give him the benefit of any doubt in the matter, and acquit him of having "rote sarkastic," as Artemus Ward used to say.

One word as to the game qualities of trout in rapid streams, as compared with those in the slower, deeper streams of the south. I often think a fish seems gamer in a rapid stream because the play of the rod and strain on it is more brought into action, not because of any marked constitutional strength and activity inherent in the trout of rapid rivers. By way of contrast to this, many people must have noticed how wonderfully strong and game a pound trout is in a Scotch loch. Even with a big fly and stoutish gut you can't do what you like with such a fish and haul him into the boat until he has had his fight out. The longest and most stubborn fight I ever had with a trout was on a lake. The fish was between three and four pounds, on a largish fly and moderately fine gut. It was a long and fairly exciting tussle; but I felt from the beginning that, barring accidents (or some egregious blunder on my part), it was simply a question of time, and not of skill. Many a score of 1½ lb. fish have I killed in Hampshire, which required far more skill and judgment; and my conviction still is that it is harder to basket a big fish on a chalk stream than it is to land one of equal weight on a rapid northern stream. This brings me back (for the last time) to the points I have contended for all through.

(1) That a big fish (from a pound upwards, we'll say) is, as a rule, shyer and takes far more killing than a half pounder.

(2) That flies tied on hair won't rise the big fish of Hampshire streams. They are shy of the finest drawn gut, but still shyer of hair.

(3) Shy as they are, with all their years of experience to suggest prudence and caution, the three or four pounders do repeatedly fall victims to a seductive fly on fine gut. And this in streams which, in their perennial clearness, will vie with any in the kingdom.

(4.) What is good enough to tempt to his doom the shyest, the most cunning of old, wary, experienced trout is certainly good enough for fish which average less than half a pound, and to make a good bag under adverse circumstances it can never be necessary to resort to hair. As a matter of convenience and comfort there may be two opinions, but on this side of the question I have never ventured to give an opinion at all. But I shall never be convinced by any man who uses any such argument as this, "Oh, yes, drawn gut—great deal of nonsense talked about it, mere fad of you unskilful southern anglers, not to be named in the same day with hair, you know—at least, in the hands of a skilful man who can fish; may kill three or four pounders on the Test, perfect Schouvaloffs in cunning; all very well for that sort of cattle, but not at all suitable for the lively little denizens of our rapid streams, where a half-pounder is an exceptional fish, a pounder rarely met with; while as regards the fortunate captor of anything still larger it would not be inappropriate to quote from Lewis Caroll:—

Oh frabjous day, Calloo, Callay,
He chostled in his joy."

But I must say no more, or I shall be accused of sarcasm; anyhow, I don't fire my last shot at "Sprint," or any one in particular, I merely sum up the impressions left on my mind by all this lengthy correspondence. There is one which I have not mentioned. Is it possible that some people still use hair because it is "the thing to do" in their part of the country, because they like to be able to say they've killed big fish on a single hair? Young Sheridan said he meant to go down a coalpit. "Why go down a coalpit?" said Sheridan the elder. "Merely to be able to say I have been there." "You blockhead," replied the high-principled sire, "what is there to keep you from saying so without going?"

These are my last words; on no condition whatever will I write another single line on the Gut *v.* Hair question, or the other side-issues which have cropped up during the discussion.—I am, &c., H. S. H.

[Some of our correspondents the other day said that fine drawn gut got tangled and twisted by grayling. All we can say is that we have never found any trouble of this kind; for instance, fishing for grayling in Hampshire last week we killed on one and the same drawn gut-line thirteen grayling, weighing over 10 lb., besides also catching with it and returning two or three good trout and some half-dozen grayling just under the 11 inches limit. The line was practically as good as new after the two days' work, only one link requiring to be replaced.—Ed.]

TENCH IN THE THAMES.

Sir,—Mr. Knight, the chairman of the Marylebone Angling Society, asks in last week's Fishing Gazette if any of its readers "know of any cases where tench have been taken from the Thames." The sluggish and muddy parts of the river abound with tench, but they are seldom specially fished or baited for. The reach of water from Spade Oak Farm to the wharf at Bourne End contains many a thumper yet, although I and others have had at least fifty therefrom within a few years. At Marlow, during the past week, Mr. Hoddenott has had some excellent tench, and Mr. Brooksbank last season in the Hurley waters took 26 tench, averaging 3 lb. per fish. In the Dorchester water last week, several tench of over 4 lb. have been had. Likely spots should be carefully baited. Tench are splendid eating and afford grand sport on fine tackle.—I am, &c., Marlow Buzz.

Oct. 19, 1882.

TENCH IN THE THAMES.

Sir,—Mr. Knight will see, if he looks at "Greville F.'s Upper Thames Report in last Saturday's *Field*," that tench cannot be so scarce in the Thames as he thinks. Mention is made of two catches, one of five tench, and another of two, near Dorchester; and I think I have read before now of other takes thereabouts.

I have never heard of many elsewhere. Fishing for many years at Goring I have only taken one (of 3 lb.) which came from a well-baited deep hole at Basildon, and I have not heard of others being more fortunate.

My fisherman, John Rush, tells me he has sometimes found one in his eel-wheels.

I fancy that, as you descend the Thames they get more and more scarce.—I am, &c. W. P. H.

P.S. I enclose the report referred to.

Oct. 16.

SIZE OF EXE FISH.

Sir,—Having read the correspondence in your paper concerning the size of Exe fish, which was commenced by the very interesting article of Mr. R. S. Austin a few weeks since, fair play induces me to corroborate his assertions, and give my experience in the use of R.A.'s midge flies. I have seen him kill as large fish as he states, and moreover I have in an evening's fishing killed several trout over a pound each repeatedly with those flies, in places, and at times when I knew from experience that ordinary flies were worse than useless. I may add that R.A. was the first to introduce these flies on our part of the river. Some four years since, on a fine evening in the month of June, while fishing that part of the Lowman which runs below the town of Tiverton, with the artificial minnow, I met R.A. for the first time; he was then fishing with a six-feet gut cast and a single midge fly. He showed me his tackle, and I smiled a sickly smile as I thought of the apparent absurdity of trying for these big fish, which never take the artificial fly; when, to my utter astonishment, I saw him raise and kill fish after fish, most of them over a pound in weight My own experience of Exe fishing extends over many years, ever since I was a small boy, and without egotism I may say with a very fair amount of success. I do not write this in ignorance of the merits of ordinary Exe flies, as for years I have spared neither trouble nor expense in breeding the best blue game fowls which are so necessary to produce the true colour of our great variety of blue flies.—I am, &c.,

Fore Street, Tiverton, Oct. 14. William Payne.

SIZE OF EXE FISH.

Sir—I can vouch for the truth of Mr. Austin's statement as to the size and number of trout he has caught with the artificial fly in the Exe. I not only saw him catch several composing the dish he alludes to, but saw the fish laid out afterwards when he brought his basket home. Living on the land and renting the fishing opposite that particular portion of the Exe where Mr. Austin fishes, I have had frequent opportunities of seeing him kill large fish and have myself used the flies he describes, with great success. I may add that at the close of the present season I took from the same spot four fish weighing five pounds. On referring to my diary I see that in April, 1879, I took three fish with the artificial fly, one weighing 3¼ lb, another 2¾ lb., and a third 2½ lb., two from the Exe and one from the mill-stream adjoining, which is a part of the river. I know several gentlemen who have had catches almost as good as the one that Mr. Austin alludes to, and no doubt if they see your valuable journal will send you a description of the same.—I am, &c.

Tiverton, Oct. 17, 1882. Fredk. W. Whitney, M.R.C.V.S.

SIZE OF EXE FISH.

Sir,—Whether Mr. Mudford wrote the letter he refers to, or whether it was written by any of the people about him, is to me a matter of indifference, since, in the absence of proof to the contrary, I am satisfied of its source. This, however, has nothing to do with the question whether my own statements regarding Exe fishing are correct or not, and letters verifying them and calculated to enlighten Mr. Mudford as to the capabilities of the river will, I believe, reach you before you go to press.

The writers, not hiding behind any *nom de plume*, are both Tivertonians, well known anglers, and second to none on the Exe, and I question if even Mr. Mudford will not hesitate before he impugns their veracity.—I am, &c., R. S. Austin.

Tiverton.

MONSIEUR JARDINE ET LES BROCHETS.

Sir,—Last Saturday, induced by the weather, I opened the campaign of this season against *Esox Lucius*. The day was cold, with enough wind to make a nice ripple on the water. My friend, Brett, accompanied me; the water was fine and clear, but by using gut traces we had capital sport, capturing twenty-four pike, of which we kept fourteen, weighing together 80 lb. Two large fish were feeding well I invited each to lunch off small dace on "snap-tackle," they accepted my hospitality, and, after some "coquetting" on their part—being females—were handed ashore by my friend, who gently "chucked them under the chin" with his gaff; their weights being respectively 18 lb. and 14 lb.

In addition to some handsome jack, my friend caught several roach and perch; he returned many to grow larger. Weeds are decaying and disappearing fast.

The pike are at present inhabiting the deeps, where they will be found during the remainder of the year. In January and February fish the shallows and quiet corners. In March pike retreat to "rushy-beds," on nuptial cares intent, to propagate their scaly broods.—I am, &c., A. G. Jardine.

38, Old Change, Oct. 17.

THE MANCHESTER AND DISTRICT AMALGAMATED ANGLERS' ASSOCIATION.

Sir,—In answer to your correspondent "Lex," I am sorry to inform him that at the delegate meeting held on Saturday last, Mr. Bailey, of Hulme, having proposed to rescind the resolution passed at the last delegate meeting (copy of which appeared in your issue of Oct. 7), it was outvoted by a majority of 8 to 6 exclusive of the officers. So that the awful blunder still remains a blot on the association. Hoping that some more able pen than mine will prescribe a remedy.—I am, &c. Trout.

THE GRESHAM SOCIETY AND GROSS WEIGHT.

Sir,—A few weeks ago there was a deal of preaching from the above young society about taking only a few fish, keeping the specimen fish and returning all the rest to the water. I beg to enclose you a puff which appeared in *Ye Cripplegate* this week. Please notice the slaughter by a well-known member of their society, viz., 80 lb of roach, taken on Saturday, October 7. Why, it is as much as the best Lea cracks weigh in at their clubs in the nine open months. Well, it is amusing to see how quickly practice alters theory. I guessed how long their specimen rage would last. What have Messrs. Crumplen and others to say now?—I am, &c., A Roacher.

[We wish that gentlemen who make attacks of this kind would sign their names. "A Roacher" is a respected member of a well known London angling club, and sends us his name and address. On a public question of this kind he has a perfect right to demand space in this paper. We think we can say with certainty that no personal spite prompts him to attack a most prominent member of a most prominent club. That he will get a "Roland for his Oliver" is highly probable.—Ed.]

FISHING AT SHARNBROOK.

Sir,—In reply to Mr. Broom's enquiry, I can inform him that the fishing between Sharnbrook and Felmersham has recently changed hands. The present owner makes a charge of 3d. per diem to the villagers, or 1s. to strangers, and gives the proceeds to the infirmary, No tickets are required, the money being collected at the river side. Roach and bream fishing are good; jack fishing, unless considerably improved within the last year or two, very moderate From Sharnbrook to Bletsoe, downstream, the river is in other hands, and not open to the public.—I am, &c., Bedfordian.

Bedford, Oct. 14.

FISHING AT SHARNBROOK.

Sir,—Mr. Weston, at the Old Swan, Sharnbrook, gives permission for some portion of the waters to visitors staying at his house. From what I hear at Wellingboro', whence I have just returned, permission to fish the waters near to the railway station is not difficult to obtain. No Sunday fishing. The river is now in flood. A. J. Marriott.

POACHING AT THE WELSH HARP.

Sir,—Will you kindly give publicity to the following? On Sunday last a friend and myself went to the Welsh Harp to fish. While there we saw a piece of unfair angling. We saw an angler catching young bream. The first took the bait in the middle of his back, and the next in the belly! On asking him how it was that he caught them in that peculiar manner he said, "Oh, I have been fishing three years; I always get plenty. This is how I do it: I well bait a spot, then I put a bare hook into the water, and so foul the fish." But I discovered, on looking more closely at his tackle that he had about seven naked hooks on his line!

On my remonstrating with him, and asking him if he was going to use them as live bait, he made use of most abusive language. I said he was fishing unfairly, and so got myself into a row. I do not profess to know the technical terms of angling, but I think it is very unfair that fishing of this kind is permitted. I have been angling now five weeks, and have only taken one roach 8½ inches. Surely if this state of things is carried on much longer (especially if there are two or three more at the same game), what a nice state the fishing will soon be in. Perhaps you or some of your readers will hint at a suggestion, and oblige yours, &c., Fair Angler.

[We advise "Fair Angler," and any other anglers who catch men "snatching" fish to get Mr. Warner to wait on them. We are quite sure he has no idea such poaching is going on in his splendid fishery. We hope he will put up notices offering a reward for their detection, and make an example of the first scamp he catches.—Ed.]

SNATCHING AT SURBITON.

Sir,—Cannot something be done to stop the snatching pursued by some poaching fellows at the mouth of the drain in the Thames at Surbiton. On several occasions within the last three weeks some of our members have seen the same two men, in a boat at the mouth of this drain, fishing with a flight of hooks on their line, and only baiting one hook, and at every swim snatching their line, and nearly all the fish landed were foully hooked.

One of our members called on them to desist last week, and he was only abused for his pains. He then called the attention of the constable on duty on the Parade to them, and he told them if he caught them again he should take proceedings against them. I may say they soon left off, and I expect went somewhere else to pursue their work.

As our members are often fishing in that locality, we do hope you will bring your powerful organ to bear upon this unsportsmanlike pursuit, and try and put a stop to it, as it is quite impossible to catch any fish near these fellows, who of course get the best swims.

In conclusion, I may say that this is, in my opinion, another one of the reasons that the fish are decreasing in numbers in the Thames.—I am, &c.,

Acton, Oct. 17. W. Eydmann,
Of the Acton and Ealing Angling Society.

[The only remedy we can suggest to Mr. Eydmann is the very simple one of giving the men in charge for breaking the law, and the local magistrates would then soon put a stop to such practices. But anglers must lend a hand themselves if they want the thing done.—Ed.]

GRAYLING FISHING WANTED.

Sir,—Will you kindly inform me if you know of any good grayling fishing within fifty or sixty miles of London; also the best time of year to take them with a fly? Is it too late now?—I am, &c., Constant Reader.

[Grayling fishing is in its prime from September to March. You will get no grayling fishing much nearer than the Dove. Go to the Izaak Walton, Ilam, near Ashbourne, and you will often go again.—Ed.]

HOW TO PREVENT WOODEN REELS FROM SWELLING.

Sir,—I find I said, "use gum mastic with the naphtha." It should have been "gum shellac."—I am, &c.,

October 16th, 1882. J. Garie Browne.

GENERAL ROD OR SPECIAL ROD.

Sir,—Will you kindly advise me on the following point:—I am thinking of purchasing a new rod for next season. I have hitherto been used to bottom fishing, but next summer I wish to try what I can do with the fly. To avoid carrying too many rods, &c., do you think a "best general rod"—say with three tops—would answer my purpose, or whether I am compelled to buy a regular fly-rod?—I am, &c., Richard James.

New Swindon, Wilts, Oct. 16.

[A "general" rod is a general nuisance, in our opinion. The mere altering the top joint will not turn a good fly rod into a good pike rod. A "general" rod is generally too heavy for bottom fishing, too weak for pike fishing, too stiff and heavy for fly fishing, in fact, it is like a "jack-of-all-trades"—not really good at any one of them. The fly rod should be used *only* for fly fishing. An ordinary strong bamboo with a variety of tops will answer fairly well for bottom fishing and spinning.—Ed.]

THE ACME FLY LINE, &c.

Sir,—Can you oblige by letting me know in the next issue of Fishing Gazette where I can get the Acme fly line; also the tackle book mentioned in the "Scientific Angler," by Foster? What is your opinion of this Acme line? Is it suitable for an amateur? Is all the tackle mentioned in that book procurable at one establishment?—I am, &c., J. B. R.

[The Acme line is a very good one indeed, and we often use it, especially in windy weather, as it casts better against a wind than any other line. It can be obtained of the makers, Messrs Foster, of Ashbourne, and also the other tackle mentioned in the "Scientific Angler."—Ed.]

Gilpin's "Forest Scenery."—Messrs. Sampson Low, Marston and Co. are about to publish a cheap edition of the illustrated re-issue of Gilpin's *Forest Scenery*, edited, with notes bringing it up to date, by Mr. F. G. Heath, author of *Autumnal Leaves*. It is a curious fact that the existence of the third edition of *Forest Scenery*, which was revised by Gilpin himself, and which forms the text of Mr. Heath's reprint, was unknown to Sir T. D. Lander, first editor of this famous work, and there is no copy of it even in the British Museum.

THE GRESHAM ANGLING SOCIETY.

The members of this society met at Masons' Hall Tavern, as usual, on Tuesday last, J. Callaghan, Esq., in the chair. After confirmation of the minutes, the usual river reports were read, that from Goring intimating that there would probably be no good fishing there for the next week or ten days, consequently on the effect of the rain. The secretary made a report as to the fish taken since last meeting. Captain Alfred had four nice barbel, Mr. Edward Bennett, at Ormesby Broad, took two pike, both on single gut paternoster, one going 5½ lb., the other 4¾ lb., when weighed by the Great Yarmouth Piscatorial Society. An extract from a letter by Mr. Bennett was read to the meeting, advocating that country members, not competing for prizes necessarily, should be allowed to weigh in at the nearest local society, so that the total taken by Gresham members might be recorded, and his letter was very favourably received. Mr. Crumplen and his younger son, fishing with Bartholomew, of Goring, had a good take of roach from the Thames, and, after returning a large number, brought home some 14 lb. of well conditioned fish, several of which went ¾ lb., and all averaging about ½ lb. each. Messrs. Brett and Jardine reported an enjoyable day's "piking," in which they took fourteen fish weighing near 80 lb., one of 14 lb., another of 18 lb. falling to Jardine's rod, Mr. Jardine giving the society an extremely humorous account of the adventures of himself and Mr. Brett on the occasion, as well as of the hospitality extended to them by their host, who gave them permission to fish his water, which except by Mr. Jardine had not been previously fished for very many years. All these fish, and others returned to the water, were taken with snap tackle and paternoster on gut traces. Mr. Wheeldon described his recent day's roach fishing on the Avon, where he had a great take—20 of the fish weighing in all 30 lb.

The chairman said the society was indebted to all the gentlemen who had that evening entertained them by a description of their fishing exploits, and he was sure he expressed the unanimous feeling of the meeting in tendering them very hearty thanks. The ballot for new members was previously taken, and Mr. R. Parker duly elected. The names of four other gentlemen appear on the society's notice board as candidates for membership, and will be balloted for in due course.

Mr. R. Stebbings, secretary of the Central Association, and Mr. H. Howse, secretary of the Walthamstow Angling Society, were present as visitors, and received a cordial welcome. The formal business being concluded, the members indulged in a little harmony, Mr. Wheeldon singing "The Wolf," with even more than his usual ability. Mr. Jardine sang several songs; Messrs. Young, Crumplen, Parker, and also the chairman aiding in the musical portion of the evening. Mr. Winterbottom, whose talent is so well known, gave an admirable pianoforte solo. Mr. Brown accompanied throughout the evening, and sang also "The Death of Nelson" in a very effective manner. The proceedings, after a very cordial vote of thanks to Mr. Callaghan, terminated with the National Anthem.

GREAT MARLOW THAMES ANGLING ASSOCIATION.

General Meeting and Dinner.

The Annual General Meeting of this Association took place on the 7th inst. at five o'clock, p.m., at the Complete Angler Hotel, between the Suspension Bridge and the fine Marlow weir pools. A committee meeting preceded at four p.m. Mr. W. Ritchie, in the absence of several of the leading members of the association, was called to the chair. There were present Messrs. T. S. Chapman, A. C. Faulkener, R. F. Jackson, T. Wright, C. M. Foottit, W. J. Stockbridge, C. Sturgiss, Owen Wright, and Major Simpson Carson, hon. sec.

The minutes of the previous general meeting having been read and confirmed, and other routine business gone through, a correspondence was read respecting the appointment of bailiff from Mr. James Englefield and Mr. Howard Vyse. Hereupon the committee's report as to its decision upon this subject was given, and which confirmed the recommendation of the appointment of bailiff for the ensuing year. After a lengthy discussion, as the question has been the cause for years past, the meeting decided to leave the matter entirely in the hands of the committee.

The treasurer being absent, it devolved upon the hon. sec. to lay the following items before the meeting.

Balance in treasurer's hands, March 31, 1881				£19	8	1½
Subscriptions, year ending March 31, 1882				52	5	0
Expenses				55	10	10½
Balance				16	7	3
The current year now entered upon, 1883, to 6th Oct.—						
Balance brought forward	£16	7	3			
Subscriptions	52	5	0			
Cash in treasurer's hands	19	8	1½			
				88	0	4½
Expenses incurred to date				60	0	1½
Balance				27	0	1½
Unpaid subscriptions to date	18	18	0			
Liabilities to March 31, 1883	22	0	0			
				40	18	0

The hon. sec. informed the meeting that this year the stewards had supplied seventy trout to the open waters; that 271 good-sized trout had been bought from Mr. Davis, of High Wycombe, for the Association's waters; and the chairman stated that the hon. sec., Major Simpson Carson, had most generously contributed, at his own expense, nearly eighty good-sized trout to their pools. Indeed, during the last season, that at least fifteen trout had been captured in the association district, thirty-two of which had been retained, and the remainder restored to liberty.

The meeting then occupied itself in the election of officers for the ensuing financial year. President, Mr. G. H. Vansittart. Vice-presidents, Messrs. Somers, Cocks, J. P. Ellams, Major-General Owen Williams, M.P., Mr. L. W. Wethered, Mr. J. T. Knowles, and Mr. Howard Vyse. Treasurer, Mr. T. O. Wethered. Joint Hon. Secretaries, Major Simpson Carson and Mr. R. F. Jackson. Committee, Messrs. P. Borgnis, J. Englefield, A. C. Faulkener, W. Ritchie, J. Shone, T. Wright, A. K. Wright, O. Wright, and, in addition to the Vice-presidents, Lieut.-Col. Wethered and Mr. C. M. Foottit's names were added to the committee.

A vote of thanks to the chairman closed the proceedings.

There was a dinner in the evening, placed upon the table in the usual elegant style for which the hostess, Miss Compiere, has gained so high a reputation; and amongst those who sat down, besides those above named at the meeting, were the Rev. Arthur Fearon, Vicar of Marlow, Mr. T. O. Wethered, Lieut.-Col. Wethered, Mr. Arthur Butler (hon. sec. of the Reading Angling Association), and others.

THE DECREASE OF FISH IN THE THAMES.

At the usual weekly meeting of the Balloon Society of Great Britain, at the Royal Aquarium, under the presidency of Mr. Sachs, a paper was read by Mr. T. Crumplen, the hon. secretary of the Gresham Angling Society, on "The Causes of the Decrease of Fish in the River Thames." The lecturer stated that at the present moment there were not far short of 180 angling societies in London alone, boasting some 8000 members, and at many of these societies papers on fish and fishing were regularly read. After referring at length to the fact that only a century since salmon, trout, perch, roach, dace, eels, flounders, and other fish could be caught in the Thames in abundance at London Bridge, whilst hundreds of fishermen earned their livelihood in the heart of the City by the very fecundity of its waters, he remarked that whatever might be said for or against the good old days in other matters, there could be no doubt of their reality so far as angling was concerned, and no less doubt that, for the present at least, they had passed away. What applied to the Thames also applied in a greater or lesser degree to all fresh-water fisheries, which were undoubtedly failing. For the most part fish had disappeared from the river running through the metropolis, and in the upper waters of the river they were neither so numerous nor large as they used to be, and were being gradually overtaken by the fate that befell their metropolitan *confrères* two generations ago. What he might call the fisheries of Old London succumbed only as docks, factories, and gasworks multiplied, the noxious refuse from which was turned into the Thames, there to mingle with the sewage of a great city, the whole being stirred up or battered by the iron or copper bottomed steamboats. These or similar causes were now in operation, in a minor degree, in the non-tidal waters of the Thames, and just in proportion as these causes increased, so would the stock of fish inevitably diminish. A great question for consideration was that of protecting the spawn, as, if proper harbours were provided for fish, and Nature given a fair chance, she would stock the river with more and healthier fish than could be raised in any other way. A step in the right direction had been gained under the new Thames bye-laws, making the minimum size of fish allowed to be taken uniform from Oxford to Richmond Bridge, instead of a lesser scale, as formerly, beyond the City Stone at Staines. He hoped during the next Session of Parliament to see an improvement on the Mundella Act, and the fence months more adapted to different fish, as, if they had fence months, it was most desirable they should be adapted equally to all kinds of fish, otherwise they disturbed what might be termed the balance of power in the river, and by upsetting the natural equilibrium unconsciously defeated the object they had in view. Pursuing the subject of destruction further, the lecturer proceeded to demonstrate that the chemical refuse discharged from paper mills and artificial manures destroyed great quantities of fish, though another and more serious evil on the Upper Thames was the prevalence of steam launches, which, if they did not altogether mar the sylvan beauty of the river, would in time denude it of its fish. The wash from these vessels, beyond the question of danger and destroying the banks of the river, dispersed and spoiled vast quantities of spawn. He hardly knew what remedy to suggest, short of their entire abolition in the non-tidal waters, but being, as they were, used almost exclusively for pleasure parties, the matter might perhaps be compromised by allowing them to run at a regulated speed during the months of August, September and October, so that they should not interfere with the chief spawning season. Another enemy to fish was the swans, but this might be got over by feeding them judiciously in spawning time. The lecturer referred in somewhat strong terms to the laxity of the various preservation societies in the past, though he believed that they were now endeavouring to benefit by past experience and keeping the interest of anglers in view. In this they might rely on being supported in the manner they deserved. Thanks were due to the Thames Preservation Society for what they had lately done in helping to restock the river, and the endeavour to stop all netting between Richmond and Kew would, he hoped, be successful. In conclusion, he said let them follow as much as possible in the footsteps of Nature; impose no needless artificial barriers to the stream; keep the river from pollution; let the preservation societies combine and take not merely a police, but a scientific view of their duties; let the angling clubs of London forego the capture of small fish and act in the true Waltonian spirit; then there was yet time to arrest the destruction going on, and to restore a strong and healthy progeny to the Thames (hear, hear).—A discussion followed, in which Mr. Wheeldon, Mr. Clench, and other gentlemen took part, and a resolution pledging the meeting to support the Fisheries' Exhibition of 1883 was unanimously agreed to. Votes of thanks to the lecturer and chairman closed the proceedings,

Fishing Contest at Ilkeston.—An annual fishing contest, in connection with the Gladstone Angling Association, meeting at the Gladstone Inn, East Street, Ilkeston, took place on Saturday afternoon, in the Erewash Canal, at Gallows Inn. Prizes to the value of over £10 were given by the gentry and tradesmen of Ilkeston. Forty-five competitors put in an appearance, but the weather was not in favour of heavy takes. Fishing commenced at 2.30, and was brought to a close two hours later. The following is a list of some of the competitors, and the weights of their baskets:—H. Shaw, 1 lb. $1\frac{1}{2}$ oz.; R. Hunshaw, 10 oz.; J. Trueman, $6\frac{3}{4}$ oz.; O. Bostock, 6 oz.; W. Robinson, $5\frac{1}{2}$ oz.; S. Manners, $5\frac{1}{4}$ oz.; H. Smith, $5\frac{1}{4}$ oz.; E. Waters, $5\frac{1}{4}$ oz.; J. Pritchett, $4\frac{1}{4}$ oz.; W. Slater, 4 oz.; A. Baker, 4 oz.; H. Thompson, $3\frac{3}{4}$ oz.; J. Pollard, $3\frac{1}{2}$ oz.; A. Wildgust, $3\frac{1}{2}$ oz.; J. Hunshaw, $3\frac{1}{4}$ oz.; W. Freeman, $2\frac{1}{2}$ oz.; E. Eaton, $2\frac{1}{4}$ oz.; J. Manners, 2 oz.; J. Aram, 2 oz.; S. Shaw, $1\frac{3}{4}$ oz.; S. Shaw (No. 2), $1\frac{3}{4}$ oz. Eleven others took less than $1\frac{3}{4}$ oz., and the remainder were not successful in bringing a single fish to bank.

SPECIAL NOTICE.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION LONDON, 1883.

WE again beg to remind all those who intend to exhibit at the above exhibition and who have not sent in their applications for space, that no applications can be received AFTER NOVEMBER 25.*

Secretaries of angling clubs are particularly requested to take notice of the above. Every club which possesses cases of stuffed fish should endeavour, as a public duty in the interests of angling, to be represented at this grand exhibition. Every fishing rod, winch, fly, or other tackle maker who has any desire to improve his business, should have a case at this exhibition, which will be visited by hundreds of thousands of anglers from all parts of the world. No charge is made for space, and it ought to be unnecessary for us to point out that such a splendid chance as this of improving a business has never been offered before and may never occur again. Applications for space should be made at once to the secretary of the exhibition, 20, Haymarket, London.

GERMANY AND THE LONDON INTERNATIONAL FISHERIES EXHIBITION, 1883.

IT is with great regret we learn from Circular No, 7 of the German Fisheries Association, that up to the date of that circular (October 10), the applications for space from Germany had not been numerous. Here is what the committee of the association say :

"As our readers are aware the London International Fisheries Exhibition will open on the 1st of May next year. Participation in it appears to be general, and in the department of sea fisheries especially promises to be on a grand scale. Only from Germany, as we learn, are the applications for space few at present.

"No one would pretend that by sending an exhibit to the London Show Germany would secure any direct gain to any appreciable extent. At the same time, nearly all the concessions made by the State for many years have been given on the principle that—whenever it is a question of the representation of great fields of labour, of the improvement and elevation of the arts and industries, of competition with civilised nations—whenever it was a question of any of these, it was not reasonable for Germany to remain at home, much rather is it her duty to take her place in the first rank of the combatants.

"We shall, therefore, deeply regret if before the end of the time during which applications for space can be made (*i. e.*, up to the 25th of November) a brilliant number of patriotically-minded German fishery and fishing devotees do not announce their intention of participating in the exhibition.

"The German Fisheries Association will most willingly supply information and advice. At its office prospectuses of the exhibition together with lists of prizes can be obtained. We trust that the prize of 12,000 marks. offered for the best form of life-saving boat, will induce some of our German ship-builders to enter the lists.

"An imperial German subsidy must NOT be looked for. Nevertheless, we live in hopes that through the goodwill of our Government an adequate representation of German Exhibitors in London, both before the commencement and during the exhibition, as well as reports on its results after the close will be provided."

GRAYLING FISHING IN MONTANA.

(*Continued from page* 490.)

AFTER making our usual meal off bacon and fish in the morning, we started quite early in the wagon and drove to the highest point at which the road joined the river. We got there in two hours' time, and found the horse-flies and mosquitoes so troublesome, that we had compassion on the horses and made some "smudges," the smoke of which successfully drove away the flies. (In case any should be ignorant of the meaning of "smudge," I will at once tell them that it is a small fire giving out the least possible amount of blaze, with the greatest possible amount of smoke). The day was lovely, very hot and still, and I could see by the manifold circles on the water's surface that there were many hungry fish eagerly waiting to be fed. I put on three grey hackled flies, exactly similar to those I had used when fishing in the lake, and about 12 o'clock made my first throw. Three fish immediately rose, one to each fly, and in five minutes time 2 lbs. of grayling were lying in my basket. In exactly forty-two minutes' I had caught fifty fish, therewith filling my basket. I always had two simultaneous rises, and generally three, and the fish here ran much heavier than they did ten miles lower down the river. Once I had three fine fish on together and they gave me quite a nice little amount of fun and must have weighed all 2 lb. I caught a very small percentage of small fish compared with last time, and the white fish were conspicuous by their absence After fishing for two hours longer we counted our bag. The man had caught 39 and I had before me 129, and had thrown back again 34. The voraciousness of the fish on this occasion was most astounding, and if I had had a longer casting line, I should have liked to have tried six flies at once, for I verily believe that five out of the six would have been taken immediately. To illustrate the greediness of the fish. On more than one occasion, when I had three simultaneous rises to my fly, I lost one of the fish, and before I could land the other two, a third fish had taken the vacant fly. There was hardly any cessation in the rise, although at 10 o'clock, for a few minutes, I only landed one fish at a time, which at other times was the exception, not the rule. The man who was fishing with me, was surprised to see me catching the fish so plentifully, for on coming back I fished over his water and found the fish rise very freely, although he had carefully fished with his bug over the same water not ten minutes before. We fished for exactly three hours and in that time I had caught 163 and the man 39. Better, *i.e.* finer fish, I can well conceive, but more plentiful I cannot imagine, and I only hope that when the trout come in September that they can be caught as plentifully.

---

* As will be seen from the advertisement on the back page of our present number the date has been altered from the 1st to the 25th of November.

Wishing to be in camp early, in order to welcome back the hunters whom we expected that night, by 4.30 p.m., we had harnessed the horses, and putting the fish in a sack on the wagon, drove home in the highest spirits. The horses were very much troubled by flies, and seemed as anxious to get to camp as we were. As the road was rough, the wagon at times jolted horribly, and we laughed merrily each time at our attempts to sit tight on the seat, but nothing happened before we were within half a mile from home, at the top of a steep hill leading into some timber. I could see that the horses were pulling hard, and I shouted to my companion to mind the trunk of a fallen tree which lay in our path but—all too late,—the wagon went over it and jolted in the most threatening manner, giving me all I could do to stick on. I was laughing heartily at the jolt, but on turning round, imagine my horror and dismay to see my comrade, who had been driving, on the ground, being dragged by the reins which were twisted round his leg. The horses were dreadfully frightened, and were going as fast as they could. In vain I shouted for the reins, so I determined to stay in the wagon as long as Fate would permit. About twenty yards the horses tore along and left the road entirely, but after that one of them went on one side of a tree, and the other on the other side, and I heard a crash, and felt myself flying through space at a most uncomfortable rate of speed. I was thrown on my right side, just clear of the wheel and tree, and immediately jumping up caught one of the horses, who, in the most wonderful manner, without breaking the traces, had turned right round and now faced the wagon. Joe, the servant had caught the other horse. We each asked the other if we were hurt, but beyond a few bruises and a huge tear on an unmentionable part of my clothing, we had escaped. We congratulated ourselves, and proceeded to inspect the damage done to the horses and wagon. The former were unharmed, but not so the latter, for the tongue was splintered into small pieces and the double-trees were broken, the wagon box was also broken in places, but not seriously at all. Here the Western handiness proved very useful, for Joe, taking a hatchet out of the wagon, cut down a small fir tree, and after improvising out of it a new tongue and double-trees, he lashed them together with picket ropes, and after patching up the harness, which was not greatly damaged, we put the horses once more in front of the wagon, with Joe driving and myself leading, We managed to get into camp about 8.30 p.m., or two hours later than we had intended. The hunters had not returned, so we lighted a huge fire to serve them as a beacon in case they should be late, and after eating a dozen of our fish, turned in with the unpleasant thought that the next day must be devoted to the repair of the wagon, which had to carry us twenty-five miles before we could get a fresh means of conveyance. Joe declared that I kept on shouting "whoa, whoa, there," in my sleep, but that I do not remember. All I do know is that I had had a perfect day's fishing and a very narrow and lucky escape. We had fish again for breakfast, and then proceeded to cut some red fir, the stoutest timber to be found on the spot, and after heating the irons and hammering them straight on a smooth stone for an anvil, and a hatchet for a hammer, we burned holes in the rough wood in which to put bolts. Joe, with, I am afraid. very little assistance from me, put the wagon into quite good repair, although, as the Americans would say, it was not quite such an "elegant" article as that in which we started. At 5 p.m. I began salting and dressing my fish, and had completed nearly sixty when the hunters returned very hungry, and in the highest spirits, one having killed a very fine mountain goat and the other a black bear. Very jovial were we that night as we smoked round the camp fire and related our various adventures, and I only hope that my readers will find as much interest in the account of them as we did ourselves. On the next morning we started home again, and before concluding, I must tell you that I gave 75 of my fish to the old miner, who was fond of short cuts, that he salted them, and said they would last him for a month, and that the wagon carried us beautifully, up hills and along plains, and through rivers. Unfortunately we just missed the train which was to take us home to Butte City, so we stayed for that night at a ranche, and the next morning got into Butte in a luggage train, about 1 p.m., and right glad we were to get into respectable and clean clothes once more, and to vary our diet of fish and bacon, bacon and fish.

GUPPY.

[The grayling of North America is a superb fish; equal in all respects to our European variety, and exceeding it in beauty of colouring. This interesting account of its capture is by an English gentleman now roughing it "out West."—ED.]

ANGLING IN NAVARRA, SPAIN.

AS a very humble follower of Izaak Walton, and a constant reader of the FISHING GAZETTE when in London, I am aware how welcome is a description of a good day's sport to the subscribers of your journal, and however amateur my style may be in such narrative, I am wishful of imparting to my brother anglers my experience with the rod in this part of the world, apologising in anticipation for all non-professional expressions and terms.

The province of Navarra, North Spain, is one of the Biscayan Provinces, and is on the French frontier; and it will be remembered by many of my readers of historic tendency, that it was here where Don Carlos made his greatest stand against the Imperial army, and it is in this province that he has his greatest supporters and admirers. Why, it is beyond my "ken" to say. Pamplona, the capital of Navarra, where I am at present residing, is a very ancient city, and to the lovers of antiquity many days of real pleasure can be had, but as my purpose is solely piscatorial, I leave antiquarians to their own resources, while I impart my experiences in a day's fishing in the Arga.

This river runs just outside of the fortifications of Pamplona, and is sluggish and shallow, with deep holes here and there. Having obtained a licence, which the municipal government enforces rigorously here, for the sum of five pesetas (about four shillings) and the loan of a rod and line—the latter of the most primitive class—I left the city about 6 a.m., and after a walk of twenty minutes, reached a spot in the river in appearance "fishy." I tried with red worm with a depth of about four feet, and in about an hour landed seven speckled beauties, averaging about a pound each, the largest going 1 lb. 3½ oz. Truchas (trout) here are a dark description of fish, beautifully marked, but I must say, yet write it with pain, without the "go" of our English fish. I next fished a deep hole in the bend of the river, where a spring ran from the mountain side, with the same bait, but from float (a quill) to bait quite ten feet, and was rewarded in about forty minutes with five handsome yet small barbel (bardo in the Spanish language) of about 2 lb. each. Walking on a little further up stream I tried some shallows, with silk line and small bright grey moth, caught by side of river, and landed in a short time about twenty madrillas with six small trout—the former a small river fish unknown in England and about the same size as the small trout, viz., 5 to 7 oz. I returned to the river the trout, with as little damage as possible done to them, but in consequence of my having only large sized hooks, my attempts at tender handling did not meet with the success I wished for. I then returned to my barbel hole, which I had taken the precaution to bait, by throwing a couple of handfuls of chopped worms with clay, and before twelve o'clock was rewarded with a "pile." The number, including the small fish, returned very tenderly, must have exceeded at least twenty-seven fish, the heaviest, two hours after, going 5 lb. I broke away twice, through my own stupidity or unwieldiness of rod, and had no opportunity of ascertaining the size and weight of fish lost, although the latter mishap must have been caused by a fish much larger than any I had had the fortune to land.

The sun being too hot here to allow of remaining in the unshaded open after 1 p.m., I bagged my fish and trotted on towards home; but on my way encountered a friendly Spaniard who good naturedly imparted to me many "wrinkles" as to the whereabouts of the fish. Thinking I might with profit spend yet an hour at my favourite sport, I took his advice, and tried the river again at some bushes, opposite a small cottage on the other bank, and was again rewarded with seven handsome trout weighing, (and I weighed them separately) 11 lb., besides some small fry returned to their element. I was thoroughly satisfied with my first attempt in the Arga river, and as my stay here will extend over a long period, you may rest assured of my determination to again try my luck for Pescado Espanol, accounts of which I will duly advise you of.

I regret to say that on passing through the market here, I was grieved to find on sale a large quantity of small trout, the majority not scaling 4 oz., some much smaller. If the municipal government would only take as much trouble to prevent the sale of undersized fish, as it does to enforce the licences, the residents in

Pamplona and the lovers of the gentle art would be much benefited thereby.

The natives here eat the barbel—I cannot say that they take my fancy. To my taste they are even more insipid than the English fish; the madrillas also have little taste, however carefully cooked, but the trucha (trout) is "real fine." W. C. K.

NOTICES OF BOOKS &c.

THE NEW EDITION OF THE "BIBLIOTHECA PISCATORIA."

THE last portion of this long expected work by Messrs. Westwood and Satchell, has been for some time in the printer's hands, though it is not likely to leave the Press before the end of the year. It will form a volume of nearly five hundred pages, and contain some new features of interest to the book-loving fraternity for whose behoof it has been prepared. The size of the present edition, which is more than six-fold that of its immediate predecessor, is to be accounted for, in part, by the more precise and minute mode of treatment now adopted, and more largely by the very great increase in the number of books registered. While the first English "List of Angling Books," for which we are indebted to Sir Henry Ellis, contained but 70 distinct works, the next by Pickering 180, that by Dr. Bethune 300, by Russell Smith 204, and by Westwood 650, the present edition contains nearly 2100 works in above 3000 editions. In five cases out of six, the titles and dates of all the books enumerated have been obtained from an actual examination of them by Mr. Satchell, either in the famous Denison collection, which has contributed no fewer than 1685, or in the British Museum and the various private collections to which access has been granted. The Fisheries Section, in addition to a large number of scarce pamphlets, has been enriched with a list of all the Parliamentary papers (570 in number), and by the Acts of Parliament, of which there are nearly 400, that have dealt with the encouragement and regulation of the fisheries and the preservation of fish from the time of the Plantagenets to the present day. This will probably incite, as it will assuredly aid, some competent hand to give us a more complete account of this interesting chapter in our domestic history than has yet appeared. The Fish-culture Section, though treated neither so exhaustively nor with the bibliographical precision of the other portions of the book, includes the principal works on the art in English, French and German, and treats the earliest essays on the subject with special attention. An interesting collection of citations from old English authors, on angling and fishing, has been added in an appendix by Mr. Westwood. A voluminous index completes the work.

"Reports on the Condition of the Fisheries of the German Empire, Austria, Hungary, Switzerland, and Luxembourg." Compiled for the German Fisheries Association, by Max von dem Borne. Berlin; W. Moeser, 34 and 35 Stallschreiber Strasse.

THESE most valuable Reports comprehend a complete survey of the waters of the above mentioned countries. The plan followed by Herr Max v. d. Borne is to take a principal river (such as the Elbe, Rhine, Danube, &c.), to describe its varied nature thoughout its course, its fish, and the localities in which they are most abundant, the present condition of the fisheries, the effects of contaminations from mills, factories, &c., what is being done in the way of fish culture, &c. Then he takes the tributaries and treats them in a similarly exhaustive manner. Nor are the lakes omitted. Particular descriptions are given of the nature of the soil forming the bed of the water—whether river or lake. As a specimen of the work we translate the following from the description of the Elbe:—

"The Elbe rises at Elbbrunnen (Elbe Springs), at the eastern base of the Hohen Rad in the Riesengebirge range, and after leaving the mountains below Aarnau, flows through the Shanklin sand of the upper chalk formation to Raudnitz. It there breaks through the basaltic and tertiary strata of the German Mittelgebirge, and at Tetschen with a broad valley again enters the sandstone, and as far as Pirna continues its course through this characteristic rock formation of Saxon Switzerland. At Meissen the Elbe flows over granite and syenite, but leaves the rocky strata at Riesa, and enters the North German lowlands, which it flows through in a N.W. direction to empty itself into the North Sea at Cuxhaven; the Elbe is a tidal stream as far up as Geestadt, above Hamburg.

"The principal kinds of fish in the Elbe are distributed as follows:—In Bohemia, according to Fric, the trout is found from the head waters down to Aarnau, the barbel from above Aarnau, the bream from above Pardubitz, and probably as far as Königgrätz, inasmuch as the Adler river flowing in there contains both bream and barbel. In the Saxon Elbe both barbel and bream are common. After the Elbe leaves its rocky bed and enters the diluvial plains of North Germany, the barbel can no longer so generally hold its own. Only at Torgau, Magdeburg, and Lanenburg are barbel and bream equally plentiful; in the whole distance between Riesa and Hamburg the barbel gives place to the bream, and in the districts of Stendal and Osterburg the barbel is only found in small numbers. At Hamburg it disappears entirely, and the bream becomes rarer, but in solitary specimens is found as far down as Stade. Indeed, below Hamburg the fresh water fish generally become scarce, their places being taken by flat fish, smelt, and the migratory fishes.

"The perch is common all along the Elbe, and only disappears below Hamburg.

"The pike-perch is found everywhere with the bream, but only in solitary specimens.

"The pope is very common in Bohemia and Saxony, and below Hamburg as far as Stade; it appears to be less general in the middle Elbe. Burbot are found everywhere in the bream district; the wels (silurus or sheat fish) according to Fric, ascends as far as Elb-Teinitz, and is frequently caught at Magdeburg. The carp is more plentiful in Bohemia and Saxony than lower down; Crucian carp and tench are only found in mud-bottomed, quiet reaches, and old back waters which once formed the river's course. The zärthe (*Abramis vimba*) is very common in the Elbe below the trout district, and is found occasionally as low down as Stade. The white bream is mentioned as being found in quantities only at Magdeburg and Genthin; bleak are plentiful everywhere from Bohemia down, while the tailor (*Alburnus bipunctatus*) is much less common in Bohemia, and not found at all below. The rapfen (*Aspius rapax*) is a common fish; it is found in almost all the larger rivers of Bohemia, occasionally of the weight of 15 to 20 lb.; it is often caught at Dresden. The ide (*Idus melanotus*) is found in Bohemia at Melnik and Lissa, also at Stendal and Bleckede. Roach are common in the whole bream district; rudd are not so common. Chub are plentiful in the barbel district, more in the upper than in the lower Elbe. The dace is much rarer than the chub. The pike is found everywhere, from the trout district down to Hamburg, and is caught up to 25 lbs.

"Below Hamburg the fish-fauna is quite different.

"At Hamburg smelt and eels are most plentiful; sturgeon, zärthe, flounder, lamprey, ide, bream, and roach, are plentiful; salmon, perch, pike, pike-perch, burbot, shad, schnapel (*Salmo cœruleus*) and cray fish are also found.

"At Ottendorf, near the mouth of the Elbe, the water is brackish and the tide very strong. In the spring the smelt appears there, then come sturgeon, shad, bream, flounders, ide, plaice, rapfen, zärthe, carp, burbot, lamprey, and shrimp.

"The schnapel ascends the river in September and October to spawn. The smelt goes up about 20 miles above Hamburg.

"The salmon ascends the Elbe as far as Bohemia, but is not nearly so plentiful as formerly.

"Sturgeon also ascend as high as Bohemia, but their numbers have also greatly fallen off; in 1834 3000 sturgeon were caught at Magdeburg; the annual catch there now is only from 40 to 100 fish.

"The whole course of the Elbe, from Bohemia to the sea, is free from any obstructions to the ascent of fish.

"The nature of the river is eminently favourable for fish.

"The chain-boats, which are used as high as Bohemia, are said to be prejudicial to the fisheries. At Riesa the Elbe is polluted by refuse from an oil factory, and at Gröba by tar and gas water from an iron factory, to such an extent as to be visible beyond the Prussian frontier; the chemical works at Neustadt and Dresden are also prejudicial to the fishery. There are complaints that from Torgau to Werben the improvements in the navigation have done injury; at Magdeburg the river is polluted by sewage from the town and its factories; dynamite and *coculus-indicus* are employed there to take fish.

"At Torgau, Dessau, Genthin, Neuhaus, Boitzenburg and Werben, otters do much damage. Herons are very common at Dessau and Neuhaus. Porpoise and seal destroy great quantities of fish (eels, burbot, sturgeon, &c.) in the estuary. But the greatest damage is done by the universal system, on the lower Elbe, of using nets of such small mesh, that even the smallest fry cannot pass; the young of all kinds of fish is destroyed in this way, to an enormous extent, and in some cases is used for feeding pigs and for manure. To this reckless destruction must be attributed the decline in the salmon, sturgeon, and other fisheries."

The above is only part of the description of the Elbe fish and fisheries, and the tributaries are treated in the same way. The work, which extends to 300 quarto pages, is a most valuable one, not only from an economical, commercial, piscicultural, but also from an angling point of view, forming as it does a complete guide to the rivers and lakes of Germany, Austria, Hungary, Switzerland, and Luxemburg. The index shows that about four thousand rivers, lakes, brooks, and other fishing waters are referred to by name and described.

We congratulate Herr Max von dem Borne on his work, which we shall have bound for reference, and any of our readers wanting particulars about fishing in the above mentioned countries will know that we can supply it.

"The Wheelman."—Messrs. Iliffe and Son, of 12, Smithford-street, Coventry, send us Part I of the above American magazine, devoted to bicycling and tricycling, which is to be published monthly. We give it a very hearty welcome. It is thoroughly well got up from beginning to end—well edited, well written, well illustrated, and well printed. We need not say more to introduce it to the notice of English "wheelmen"; they will recognise its merits just as quickly as the general public has those of the two leading magazines of the day—viz., Harper and Scribner. We know many anglers who are enthusiastic "wheelmen" also; in fact, they find that the silent steel steed is a capital aid in getting to their fishing quarters. They will see at a glance that this new magazine will just suit them.

"Leve and Alden's American Tourist Gazette." London Office: 48, Fenchurch-street. This is a monthly Gazette, published by a firm in America who seem to occupy a similar position to that held by Messrs. Cook and Son here. Their Gazette must be very useful to tourists, and especially to English tourists in the States.

THE "FISHING GAZETTE" PIKE TRACE.

MESSRS. J. GILLETT AND CO., 40, Fetter Lane, London, have just brought out from our pattern a trace for pike fishing (both spinning, live baiting, &c.), which will be appreciated, we think. It consists of a yard of the best and strongest twisted dyed gut, on which are three brass swivels, and with loops at each end, one of the loops being large, and made of gimp for attaching the spinning and other flights to. We maintain—after using a trace of this kind for many years—that for pike fishing it is in every way preferable to gimp. It is stronger, more durable, and far less visible in the water. The object of using brass swivels is to avoid rust, which decays the gut in contact with it in time. The gimp loop can be renewed when necessary, say once a year, as gimp soon gets rotten. Messrs. Gillett only charge 1s. each for these twisted traces (equal to two yards of salmon gut), and we think pike anglers will eagerly secure them.

THE PISCATORIAL SOCIETY.

THE forty-sixth anniversary of the establishment of this society took place in the club room, Ashley's Hotel, Covent Garden, on Monday evening last, on which occasion the usual supper was provided under the personal superintendence of Mr. Bass, the manager of the hotel. The prominent item on the *menu* is always tripe and onions, but other good things were satisfactorily served up. Mr. F. G. Pearce, the Father of the Society, presided on the occasion. Amongst those present were Messrs. T. Gillatt, James Lander, H. Gray, W. H. Brougham, J. Pattison, H. B. Eyre, M. H. Blarney, H. B. Browne, Dr. Coates, Dr. Brunton, Thomas Huggett, B. Perelli-Rocco, J. G. Andrew, George Robinson, Thomas Crumplen, R. King, Edward Foreman, J. Ross-Faulkner, W. B. Adlington, D. Goodger, C. P. Wheatstone, F. H. Lemann, J. W. Gant, T. N. Harrison, &c., &c. The chairman in giving "Sucess to the Piscatorial Society," referred to its practical usefulness in days gone by, when the reading of papers and harmony were occasionally given, both of these in the present day having revived to a much greater extent. The society had gone through a variety of phases, but it was never in a more prosperous condition—it was at work for the anglers when there were only about three angling clubs in London, and it is working now amongst something like one hundred and seventy angling clubs. The toast was drank with great cordiality. The next toast was "Kindred Societies," coupled with the name of Mr. Thomas Crumplen, who in reply expressed the pleasure he felt in being a member of the Piscatorial Society, strongly deprecating any feeling of jealousy with any other club, his idea being that all should work harmoniously together with one great object in view, that of promoting the interests of true angling. This toast was followed by "Success to the Thames Angling Preservation Society," associated with the name of Mr. W. H. Brougham. In his reply, Mr. Brougham remarked that the Piscatorial Society was the first angling club that extended the hand of fellowship to him, and the first to make him a honorary member, and his affection would always be centred in that society. He had now been twenty-five years connected with the Thames Angling Preservation Society, during which time he had faithfully discharged his duties. In referring to the proposed new bye-laws, he had every reason to believe the Conservators would approve of the suggested alterations by the recent conference, and then the Thames would possess a splendid set of bye-laws. Dr. Coates, who had throughout the long illness of Mr. Pearce, professionally attended him, proposed "The Health of the Chairman," and congratulated those present on his recovery, which he had doubts about at one time. The expression of feeling which followed the proposal of this toast must have been very gratifying to Mr. Pearce, who replied in a very kind and feeling manner. The only other toast was "The Visitors." There were some good songs given in excellent style by Mr. Harrison, Mr. King, and others, and the company after spending a most enjoyable evening did not separate until a late hour. A capital fish painting in oil was exhibited, from the pencil of Mr. Edward Henson, of the Nottingham Arts Society, and its merits favourably considered by the members. Mr. Henson is only a rising artist in fish painting, and his example of trout was of a very promising character. B.

DEATH OF A NOTED SCOTCH ANGLER.

IT is with much regret we hear from Mr. D. Wells, of Edinburgh, that Mr. Robert Lindsay, of Dunfermline, died last week. Mr. Lindsay was an enthusiastic angler and ever ready to lend a hand to assist a brother of the rod. Indeed, we can ourselves testify to his kindly good nature, for when in Edinburgh he gave us much assistance. The following lines are from a very appreciatory notice of him, which appears in the *Dunfermline Press* of last week:—"It is with sincere regret that we have to record to-day the death of one whose name has long been a familiar one in many a household, not only in Dunfermline, but in numerous towns and districts in Scotland. In the prime of life, Mr. Robert Lindsay has been somewhat suddenly removed from his labours by the hand of death. Mr. Lindsay joined to his active business habits and indomitable perseverance, a deep interest in the prosperity of the city and county of his adoption—an interest which found expression in various ways for the general good. Ever ready to give his services where wanted, and well versed in municipal politics, Mr. Lindsay was, in 1875, induced to accede to the request of a large number of the ratepayers to represent their Ward in the Town Council; and, during his three years' term of office, he did much to forward many of the important schemes which the Council had then on hand. In particular, he laboured earnestly to make the Glendevon water scheme the great success which it has since been. Genial in disposition, and a great admirer of healthy sports and recreations, our deceased friend's familiar form was well known on many a stream and loch in Scotland, where the disciples of Izaak Walton love to follow the gentle art, as well as on not a few fields where the athletes of Scotland contested for the supremacy. His love for animal as well as human nature found fitting expression in the local and other ornithological societies, at whose annual exhibitions he was a frequent contributor; and he latterly occupied the honourable position of president of the local society. As R.W.M., of St. John's Lodge, Dunfermline, Mr. Lindsay took a prominent part, along with the Provincial Grand Master of Fife, Mr. Whyte-Melville, in laying the foundation-stone of the New Corporation Buildings; and by all the brethren of both the St. John's and the Union Lodge was much respected and esteemed for his many social and fraternal qualities. Conservative, or rather old Whig in politics, Mr. Lindsay took much interest in the several elections which have taken place in the burghs and county since he came to Dunfermline. Possessed of much genuine humour, and a great admirer of our national poets, Mr. Lindsay was early led to cultivate the poetic Muse, and was a frequent contributor to the *Dunfermline Press* and other provincial newspapers; and many of his effusions have already gained a more than local fame. Not a few of the clubs and societies in Dunfermline found in him a warm supporter; and his beaming countenance and hearty co-operation will be long missed in such societies as the Celtic and the local Parliamentary, as well as on many a well-contested curling rink. It has been well said of him by one who knew him well, that while he made many friends wherever he went, he made no enemies—a remark, the truth of which was amply verified by the large numbers who followed his remains to their last resting-place on Thursday—many of whom came long distances by railway to pay their last mark of respect to their departed friend. Much sympathy is felt with his wife and family in their sad bereavement. *Requiescat in pace.*"

A CLERGYMAN CHARGED WITH SETTING TRIMMERS.

BEFORE the North Holland (County) magistrates at Boston, on Wednesday, the Rev. A. L. Joynt, curate of Langrick, near Boston, appeared on a summons, charging him with fishing otherwise than with rod and line, on the 28th ult. The charge was denied. A policeman, sworn, said he saw the defendant set a trimmer in the Witham, baited with roach; but he did not tell him that he was acting illegally. Another witness deposed to seeing him bait a hook with roach, throw the hook into the river, and tie the line to a tree. Another witness said he saw defendant throw the line, with float attached, into the river. He then took his rod off the line and fastened the line. Half-an-hour afterwards it was still there. He was accustomed to fishing, and considered that a trimmer—— For the defence, it was stated the defendant had merely tied the line near the ferryboat for the purpose of going to a house near for a trolling hook. He never attempted to set a trimmer. The case was dismissed, the chairman remarking that the explanation was a very probable one. He considered it a pity the officers did not speak to the gentleman on the matter. The prosecution was at the instigation of the Boston Angling Association, the information being laid by the bailiffs.

ILLEGAL FISHING AT OXFORD.

ON Tuesday, October 10, before the Mayor, J. Jenkin, Esq., Ald. Spiers, and Messrs. W. Ward and Brain, Joseph Gynes, of Thames Street, St. Aldates, was summoned for using a net in the Inner Thames prohibited by the bye-laws during the month of September. The Town Clerk, Mr. J. J. Bickerton, appeared to prosecute. The defendant pleaded guilty. The information received was to the effect that Police-constable Fundell reported that G. C. Simpson, of Queen Street, whilst fishing in company with a young man named Mallett, of St. Ebbe's Street, about 6 p.m. in August last, saw the defendant take a drum net out of the Thames, at the back of the Old Mill, Isis Street. Also that Robert White and Josiah Gurden saw Gynes on

September 12, punting about outside the mill and take a drum net out of the water with fish, and take the net away. Again, that on September 15, as two lads were rowing past the same place, one of them caught his oar in the net, causing it to float down the river, and that Gurden took it out and gave it to the defendant. The Town Clerk said the penalty was £5. The defendant said that, being a Freeman of the city, he was under the impression that he had an undoubted right to use the net. He, however, had since discovered that such was not the case. The Mayor said the Magistrates thought the defendant had done wisely in pleading guilty, and supposing this was the first time he had done anything of the kind, they had taken a lenient view of the case. He would be fined 5s. and costs, 18s. 6d.

CLUB AND OTHER JOTTINGS

By L. B.

On Friday evening, 20th, the usual monthly meeting of the West Central Association of London and Provincial Angling Societies was held at the Portman Arms, Great Quebec Street, Baker Street. The chair was occupied by Mr. L. Bonvoisin, Mr. Beckett facing him in the vice. Immediately after the reading and confirming of the minutes of the previous meeting, the chairman made feeling allusion to the great loss Mr. P. Geen, the respected president of the Association, has recently sustained. and his suggestion "that the secretary do convey to Mr. Geen the deep regrets of this meeting, and assure him of its heartfelt sympathy," met with the unanimous respectful approval of all present.

A letter was then read from Mr. Arthur Butler, the secretary of the Reading and District Thames Angling Preservation Society, acknowledging, in kindly terms, receipt of cheque £5 5s., recently voted by the West Central. Concerning the application made for a reward by David Hackett, of Shepperton, for a conviction recently obtained against a person laying grig wheels in the preserves, some considerable discussion took place, and at one time it appeared as if the meeting was about to have to listen to a discussion between two or three delegates, as to whether an eel was a fish, and whether the prevention of the laying of grig wheels and the protection of eels were among the objects we had in view in offering rewards for convictions obtained against persons "guilty of illegal practices as wiring, snaring, netting, snatching, &c." After considerable discussion, however, in which Messrs. Murphy, Fides, Adeane, and others took part, the payment of the £1 1s. reward to David Hackett, was unanimously voted. At the request of the Acton and Ealin g Angling Society, Mr. Hoole said he had made application to the Great Western Railway Company, with a view to obtaining the issue of anglers' cheap tickets from Brentford—he regretted to say he had received an answer from the authorities stating that they did not see their way to grant the issue of tickets from the station named. Mr. Hoole stated this was the third application he had made for this very station within a very short time, and he was of opinion it certainly had best not be renewed, at all events, for some time.

A letter was read from Mr. W. H. Brougham, in which, referring to the new proposed Thames bye-laws, that gentleman stated he quite believed the Conservators were prepared to grant all the angling public had asked.

The elections by the committee of the Rodney Piscatorials and the Crescent Angling Society, were then confirmed, the election of other societies whose secretaries have been in communication with Mr. Hoole, but who were not represented, was postponed until the next meeting of the executive committee, Friday, November 3rd. Concerning the application to the South Eastern Railway Company, for the issue of cheap travelling tickets on their line, Mr. Hoole said he had reason to hope it would be satisfactorily entertained, and this time would be successful.

Mr. Copeland was elected to fill the office of auditor to the Anglers' Benevolent Society.

Mr. Dean, of the Acton and Ealing Angling Society, asked whether the issue of anglers' cheap tickets from Richmond, applied only to the members of one society, or whether the privilege was extended to all members of enrolled societies? Mr. Hoole replied—"Most undoubtedly the latter," adding, "in the event of any member being refused a ticket, if he will let me know the particulars—as time, date, &c., I will immediately make representation in the proper quarter."

Mr. Thomas Crumplen then made some remarks about the Great International Fisheries Exhibition, 1883. He regretted that the executive committee had not deemed it expedient to follow the usual practice of paying all expenses, carriage, &c, and insuring loan exhibits, he would nevertheless urge the London clubs to be well represented at so important an exhibition—probably the greatest ever held—above all, intending exhibitors must make early application for space, as none would be entertained if not made before the 1st of November.

A letter was read from an angler—a member of a London Club, enrolled on the Association books, asking for advice in the following matter. (I cannot do better than use his own words.)—"On Sunday last, accompanied by my old fishing friends, Messrs. ——, went to Tilehurst, on the Great Western Railway, and had not been fishing long before we were ordered off the towpath of the river Thames by a gentleman who stated the said towpath was his private property, and moreover, that unless we did not leave off fishing, he would fetch such of his servants as would quickly remove us. Of course we immediately left off, not wishing to bring discredit on the Association to which we belong. I may state, for the edification of my brother anglers, that this owner of property, whose name he told me was —— claims the banks of the river for miles, as his property, and that he does intend to stop all angling from the same, and will order off or prosecute all such as may persist in doing so." As the meeting decided "that Mr. Hoole should place himself in communication with Mr. Arthur Butler, the secretary of the Reading and District Thames Angling Preservation Society, and that the matter should also be referred to the Thames Rights Defence Association, with an urgent recommendation," it would be unwise to enlarge upon the matter, and I have suppressed all names, &c.; but it is impossible to exaggerate the importance of this question, not only to the thousands of humbler anglers in the metropolis, but to the whole of the angling population along the entire course of the river Thames, above Teddington Lock.

Shortly after 11 the roll was called by Mr. T. Hoole. The following societies, 35 in number, being represented, most of them by two delegates: Amicable Brothers, Anglers' Pride, Acton and Ealing, Bostonians, Brunswick, City of London, Cambridge Friendly, Critchfield, Crescent, Duke of Norfolk, Duke of Cornwall, First Surrey, Golden Barbel, Good Intent, Gresham, Hammersmith United, Hammersmith Club, Junior Piscatorials, Knights of Knightsbridge, Norfolk Brothers, North Western, Nautilus, Phœnix, Prince of Wales, Portsmouth Waltonians, Princess of Wales, Queens, Rodney Piscatorials, Savoy Brothers, Sir Hugh Myddleton, South London, St. John's Wood Piscatorials, Trafalgar, Westbourne Park, Waltonian Anglers. While the Central Committee were represented by Messrs. R. Ghurney, Chambers, and Metcalfe; the meeting then terminating with the customary vote of thanks to the chair and vice chair.

The Watford Piscatorials not only propose having smoking concerts at their own club house every first Monday in the month, but a grand public concert in the town is in contemplation, the proceeds to swell the funds of the Anglers' Benevolent Society—well done, Watford Piscators.

I dropped into the Cherry Tree, Kingsland Road, the home of the Hoxton Brothers' Angling Society, on Monday evening; the local visit was fairly attended, the big room being comfortably filled, and some very good singing and instrumental music made the time pass jollily enough.

A heavy perch, 3 lb. 8 oz, has been taken at Dagenham; some of the heaviest perch I have seen come from this place, and some splendid jack, too; during the winter months—not many, mind, but good, and handsome—as—well, "as paint."

BLACK BASS FOR ENGLISH WATERS.

We have before alluded to the success attending the efforts of English anglers and fish culturists in the introduction of black bass on the other side of the Atlantic, and the growing appreciation of its game qualities abroad. Englishmen are proverbially fond of all manly field sports, and many of them make occasional visits to America for the purpose of enjoying a greater variety of shooting and fishing than can be obtained elsewhere. The game qualities of the black bass attracted the attention and admiration of certain anglers from Britain, and the glowing reports given to the fraternity in Merrie England through the FISHING GAZETTE, awakened a general desire to know more of the fish. In 1878 a lot, consisting of about 150 black bass from the upper Delaware, were placed in Whitewater Lake, a preserve owned by the Marquis of Exeter, and the year after nearly a thousand of the same species were transferred to the lake, where they thrived and grew to maturity. The success of this experiment was such that Mr. W. T. Silk, one of the most practical fish culturists of England, who superintended the transplanting of the first and second lots, has recently returned for a larger supply, to be taken from Greenwood Lake and the Delaware. Mr. Silk proposes to secure about 2,000 of the small-mouthed variety, and these will be distributed in different parts of England, a portion being intended for the Norfolk Acclimatization Society, and others for the Westminster Aquarium, the public reservoir at Wakefield, in Yorkshire, and also for the preserves of the Duke of Manchester, and Mr. R. B. Marston, editor of the English FISHING GAZETTE. Many well-known lovers of the angle throughout Great Britain are enthusiastic over the acquisition of such a game fish as the black bass, which is now recognised as second only to the trout by those best qualified to judge.—American *Turf, Field, and Farm.*

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invite Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sen or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kenda' hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS.

MID-THAMES.

"Our doubts are traitors,
And make us lose the good we oft might win,
By fearing to attempt."
—Shakespeare.

The river is in flood and the colour of brown paper: still if anglers will but attempt the task, fish may be caught in eddies and lay-byes, but the bait must titillate their olfactory nerves, for assuredly in the present consistence of the water, it cannot be seen. The flood will do an immensity of good in scouring the bed of the river from decaying weeds and other *debris* and impurities which accumulated during the summer months. As far as reporting the capture of fish, "my occupation's gone" for none have been taken that I can hear of; but I would advise Thames anglers as above to try their luck with lob worms in the eddies for roach, or a silvery dace on a paternoster for jack.

Thursday Evening.—River still rising, and likely to, after the severe storm, or rather hurricane, of Tuesday.—Marlow Buzz.

Ancholme District.

Some good catches of roach were made on Thursday, the 19th instant, and here and there some nice pike have been taken. The weeds have been cut in the top pool, but the water is now in high flood, and much discoloured by the heavy rains which fell on Tuesday last. Fishing is, therefore, out of the question for some days to come.—Thomas Ford.

Chichester.

This has been a poor week for rodsters, rain falling in torrents nearly the whole time. Some few small roach and bream have been taken, also a good perch of $1\frac{3}{4}$ lb. At the weekly competition of the Chichester Anglers, Mr. Stokes for the third time secured first prize with roach and bream, while Mr. Lewis lost a good carp, fishing with tight tackle. To morrow s competition will take place at Seham. Trains not running, a conveyance has been chartered, about 20 members having entered for three prizes. The following are the prizes:—Leathern tackle case, presented by Mr. Pound, and a silver spinning spoon, presented by Mr. Summers. The canal is rising rapidly, but is in good condition.—George F. Salter.

Derwent (Chatsworth).

The river is very much swollen, owing to the great downfall of rain during the week, which has quite put a stop to fly fishing for a time; but if the weather is favourable the river may be again in fishable order by Monday. Previous to the heavy rains sport had been very tame and nothing noteworthy taken, although the water was in fair condition.—Wheatsheaf Hotel.

Dove.

It will be almost needless for the reader to be informed that the above river, like most others in the country, has been running most of the week in high flood. Angling operations since Tuesday have been practically stopped, and it does not appear as if the water would be in proper condition again before to-day (Saturday) or Monday. Previous to the heavy storm on Tuesday—that is, on Friday, Saturday, and Monday—grayling were rising freely to the dark October and other autumn duns, and many good dishes were taken in the neighbourhood of Ilam, Ashborne, and Mill Dale. Pike were also running freely, and both the live and artificial baits were killing better than at any previous part of the season. The present flood will fortunately have one beneficial effect, if no other, namely, it will sweep the river clear of the immense masses of decayed weeds, reeds, leaves, &c., which at one time or another during the last five months have grown or found their way into the water.—The Splodger.

Exe (Exeter).

"Sweet is pleasure after pain."—Dryden.

Indeed, the sensations of my friend and myself when at length we found ourselves once more on the banks of our favourite stream were much to be envied, and our present enjoyment is keen in proportion to the recollection of recent discomfort and distress at the long-continuance of stormy weather. The river had fallen considerably—in fact, sufficiently to allow at least a try; so, abandoning for the time every other object, we sallied forth, with a solemn resolution to catch a pike, by hook and not by crook, several having been seen battling with the stream among the salmon. The day turned out moderately fine, but there was no new mown hay to perfume us on our way, or "wavy corn" to refresh the eye. But after a very agreeable walk we reached Countess Weir. Shortly after our arrival my friend made a cast with a lively little dace, at the same time being prepared for a struggle, but not exactly for such a one as followed. After the fish was struck and found fast on the line, he made a rush out into the main stream, and apparently having lost all command over himself in the frenzy that followed the first prick of the hook, seemed determined to run down. But after he had gone about sixty yards he slackened speed, and was brought to bank after twenty minutes' sport. This was the first of the season to us, and weighed just over 8 lb. Several smaller ones were taken during the day, since which we have had some heavy rains, consequently the river is again very high, so that perch, rudd, roach, dace, &c., fishing is out of the question. A few small carp and tench have been found stranded in the meadows, wherein the ponds have been overflowed by the waters coming down from the higher lands. Salmon are making good headway against the heavy stream, which at night looks like a sea of foam. Trout are very plentiful, and many look ready to spawn We have had rain every day and night during this month, and mostly heavy rains, lasting for two days and nights at one time. It is raining now sharp.—Frank Gosden.

Exe (Tiverton).

The river is in flood, and has been since last week. There is very little prospect of any more fishing this season, which closes on the 31st. inst.—Wm. Mudford.

Henley.

On the 16th inst, at Henley, Mr. Russell, of that place, took a well-conditioned jack of $10\frac{1}{2}$ lb.—A. J. Marriott.

Ilfracombe.

Sea fishing: Thursday evening several conger where caught, weighing from 20 to 25 each. Friday, P. Redmore had 6 conger weighing 140 lb. Tom Davie 1 cod 20 lb., 1 ling 18 lb., 1 conger 28 lb, and a few pounds of Whiting. Saturday a quantity of conger was brought in, and a few ling Monday, blowing and raining, no boats out. Tuesday, one boat had a short drift off the harbour and hauling 24 herrings; blowing strong from N.W. Wednesday, moderating at little, several boats went out and had a drift, they hauled altogether from 8 to 10 maize of herrings. To-day fishermen all very busy getting there nets in, as they anticipate some good fishing this moon. Weather at present mild.—E. Comer.

Medway (Tonbridge).

The river is as thick as it can be, and has been over the fields and far away all the week. No prospect of angling for ten days or a fortnight.—Ye Medway Water Rat.

Ouse (Littleport).

I am fairly sold in my expectation of a good week, as the late rains have done too much to the water, which will not be in order again for fishing for at least three or four days, as it is very high and thick. However, we managed to do something the first four days, as the water has only gradually thickened. The following are the best takes:—Oct. 20th, Mr. George, Bassingbourne, 7 lb. roach and a pike, $3\frac{1}{2}$ lb.; Mr. Palmer, London, with his brother, nice little take of roach, not weighed Oct. 21st, Mr. J. A. Fielden, Cambridge, $3\frac{1}{2}$ dozen roach; Mr. Walter Brown, Romford, 6 lb. roach, $2\frac{1}{4}$ lb. jack, and pike 5 lb.; Mr. S. Allpress, Ely, a nice pike, 8 lb.; Mr. E. Hills, a pike, about 3 lb., not weighed. Oct. 22nd, Mr. Walter Brown, Romford, 6 lb. roach. Oct. 23rd, Mr. George, Bassingbourne, 6 lb. roach, and pike, $4\frac{1}{2}$ lb.—C. South.

Thames (Chertsey).

I have but little news this week, as the punts have not been out. I have had but one day, two barbel, one perch, four roach. The weather being so unsettled, I expect the anglers doubted their luck; still, there was a nice day or so that I wonder the knowing ones did not take advantage of. Saturday was a good day, Monday also, and Tuesday would have done, but after that all over for a time in the main part of the river. Still, I am happy to say the water is falling to-day, and any one liking roach fishing in a day or so will do. This rise of water will drive the fish to quarters. Even now there are jack and perch to be had. The cockspur worm or well scoured brandlings will find some good roach. Recently mention has been made in the Fishing Gazette of the capture of a 1 lb. tench in the Thames; a gentleman out with me took one weighing 2 lb. 11 oz. I believe a gentleman at Dockett Pointt took several ledgering for barbel last season —James Haslett.

[The above was too late for last week.—Ed.]

Thames (Goring).

A very high flood here. Water rising very fast. I helped to kill Mr. Bossin's pig in the punt, in the middle of the river, at Gatehampton Ferry on Thursday. —J. Rush.

Thames (Oxford).

The country around Oxford presents the appearance of an inland sea, intersected with houses, ricks, and trees, and even if a spell of fine weather should set in, of which at present there seems very little chance, it will take, roughly speaking, at least a fortnight or three weeks before the Thames and its affluent stream the Cherwell are restored to a fishable condition. I took a walk last night after 11 p.m., to Magdalen Bridge, which spans the two branches of the Cherwell. The flood-water was level with the banks of the Water Walks, and was rushing with a deafening roar through the arches nearest the college, in a brown, discoloured, seething mass, on which the moonlight glinted and played, in continually changing flashes of coloured light. At the other end of the bridge, which is in course of being restored and widened, the stream had overflowed the dam, playing sad havoc with the newly-laid foundations and completely stopping the work. During the night there has been a rise of six inches, and I am informed by an inhabitant of the Friars that it has not been so high since the year the Duke of Wellington died. I have heard of no damage save that early this morning the employés of Messrs. Hale and Co. were hastily summoned to assist in removing the flour from the ground-floor of the Castle Mills, the water having risen over the dam. When the water on the inundated meadows begins to assume its normal colour and condition, we shall see the puntsters hard at work amongst the fish which have taken refuge in the flams, but that will not be for some time yet. The present season, as far as sport is concerned, has not been a very remarkable one, owing to the high water at the commencement; we did very little execution among the chub, even the infallible crayfish tail had apparently lost its charms. Mr. Peek had a few good catches of carp, which are very plentiful in the Cherwell. Mr. Chas. Harman, when I last met him, informed me that he had just completed his twenty-fourth brace of jack. Mr. Dickinson has also enjoyed good sport amongst these fish, taking several brace of a fair size, in addition to losing a veritable monster of the deep, which, after keeping him occupied for some time, at last made a dash for a bed of rushes and succeeded in making his escape. Mr. Butler, also, in the same water, captured a fine perch, which turned the scale at $2\frac{1}{4}$ lb. In the narrow stream between the Hythe Bridge and the Castle Mill, a most unlikely spot, a man named Busby captured a large pike weighing 12 lb., and good bags of roach were also taken. Mr. Joseph Gynes was charged at the City Court, on Friday week, with using a drum net. I am sorry to say that, to the surprise of everyone, Joseph escaped with a fine of 5s. and costs. I think it a great pity that, after this, the latest display of his peculiar talents, as the magistrates had it in their power, that they did not give him free lodgings for a short period at the elegant castellated building on the New Road, where, in the healthful and innocent occupation of shot drill and oakum picking, Joseph would have learned that there are other people besides Satan who can find work for idle hands to do.—U.

Thames (Twickenham).

Wind S.W., and raining in torrents. Last night (Wednesday), tide was the highest we have had for some time past, it being 30 inches in the upright higher than it has been for several years. We have not attempted any fishing since last Sunday, when Jack Spong took Messrs. Jacobs, of Covent Garden, and "Our Joe" took Messrs. Jacobs, of the Borough Market. Jack getting the start, took the "Oak Apple Pitch," and managed to capture 3 dozen good fish, while "Our Joe," after working hard the whole day in the "deep," just saved himself from a blank, it being impossible to get a swim with such heavy land water coming down; but I am pleased to say this contest is to take place again when the river is in fishing condition, and I shall not be surprised to see the Borough piscatorials take the laurels, for "skill" will tell against luck.—Alfred Perrin.

Torridge (Torrington).

Torridge river has had the biggest flood this week for the season. This will be the making of the fishing, for there will be no lack of water, and hundreds of the spawning fish will find their way to the spawning beds, all making good for the next season's fishing. Three peel were taken last Saturday morning; since then the river has been too full. If not much more rain good fishing may be looked for next week.—Practical Angler.

Trent (Alrewas).

Angling has been at a complete standstill since my last report, neither is there any likelihood of a recommencement for at least a week under the most favourable circumstances. The water to-day (Thursday) is reported all over the meadows for miles, from the almost phenomenal storm of last Tuesday.——James Gregory.

Trent (Newark).

A very heavy flood is now sweeping down the valley of the Trent, hundreds of acres of meadow land are now submerged, and as a natural consequence, angling is entirely out of the question. The valley of the Trent looks like one vast lake, only trees and hedges visible above the wild waste of waters. The latest news is that the water to-night (Thursday) is still rising at Nottingham, and if this is the case a very disastrous flood will be experienced down here.—The Trent Otter.

Trent (Nottingham).

Angling operations have been at a standstill during the week. The river is flooded for miles, and was on Thursday scarcely reachable. I have no items whatever to communicate excepting the Wellington Hotel Association had a most successful dinner on the night of the 20th. Mr. Eddowes, clerk to the Trent Conservancy Board, attended, and made a capital speech in reference to the doings of the board. He also dealt with the question of the pollution of the river, and mentioned that during the year three or four salmon licences had been taken out, in addition to seventy licences and twenty previous salmon licences.—The Man at the Clubs.

Wharfe (Yorkshire).

Owing to a continuance of high waters and inclement weather, grayling fishing has been at a complete standstill during the past week. I heard of a fine grayling scaling 1¼ lb. being taken near Otley with fly, but beyond this nothing worthy of notice has come to hand.—Francis M. Walbran.

Witham (Boston).

Very much as was predicted, the river and the drains had run down towards the close of last week, sufficiently to allow of a little angling; but rain again on Saturday settled the question, so far as the Witham was concerned. On Monday it was running high, with a stream like a mill race, and the larger drains had become quite as bad, for, though the stream was not as strong decaying weeds and other material were running with it, and therefore it made angling almost impossible. By getting out of the way of eddies, and exercising care close to the banks, some respectable roach takes were had however, and it was not altogether a blank week. Probably by the time this is read things will be much better. Some of the best takes since my last occurred on the South Forty Foot. A couple of anglers caught 180 roach including some fine fish; another 75 roach and two pike; another 2¼ lb. roach, and so on. On the Bargate Drain some good roach fell to Mr. Tooms, Mr. Short, and others, besides a good pike of 6 lb. At Mount Pleasant there were some good pike taken, and I have heard of some rare eels being taken at the sluice.—Yellow Belly.

Wye and Derwent.

Last Tuesday we had a very heavy fall of snow, accompanied with rain, which caused both rivers to be in flood on Tuesday night, which quite put a stop to angling till to-day (Thursday), when the bottom fishers all up and down the Derwent have done well, both amongst grayling, roach, and dace, both maggots and cockspur worms being freely taken. The cleach net party killed a few fish with their nets on Tuesday night on the Derwent. Sport, both on last Saturday and Monday, was fairly good on the Derwent, the bottom fishers killing some nice dishes of good-size grayling. Fly fishing has been *nil* since my last report. There will be no good grayling fly fishing on either rivers before another week or ten days, as both rivers are very full. I quite agree with Francis Francis's remarks about flies in the *Field* newspaper.—George James, Eaton.

Yare (Norwich).

The weather has been most unfavourable for the angler during the past week; the early part one or two had fair sport amongst the roach at Buckenham; but the heavy rains and the storm of Tuesday last have made things very unsatisfactory. The stream at Norwich to-day (Thursday) is over its banks in one or two places. The tide is high, and the waters still coming down the valley from the Upper Wensum. The prospects are not at all good unless a speedy change comes.—Robert Moll.

Yore (Hawes).

As predicted in my last, the river rose by Sunday. On Monday I caught a few grayling with the small red roadside worm, well scoured. I hear of several decent catches being made with the same bait. I may give a hint to those about to commence grayling fishing with a float:—As soon as the float goes, strike sharply and steadily; I scarcely ever miss striking a fish that draws my float under when I follow the advice given above. Many runners that are now full of water are very destructive to spawning fish, inasmuch as they are dry the greater part of the year. Fish ascend them in the spawning season, and, owing to the scarcity of water after the autumnal flood, both fish and spawn perish. I should advise gratings to be fixed at the mouths of such runners. I am convinced much good would be done by such a course. I think I have never seen as many fish on the spawning beds in a runner close to my residence as there are at present. When fishing for grayling the other day, I caught two female trout that had evidently shot their spawn and returned to the main river. I take this to show a very forward season next spring. The water is in splendid fly trim.—Joseph Corry.

Yore (Lower waters).

Heavy floods have prevented anglers from trying their hands at grayling fishing during the past week; but previously to that one or two good dishes were killed with the little red worm. On one occasion a local hand had fourteen nice fish. The present state of the river will conduce, no doubt, to the easy ascent of the salmon to the upper portion of the river.—Francis M. Walbran.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. Arnold, roach, 8 lb. 8 oz.; Mr. Larkman, one bream; Mr. Binks, one jack, 2 lb. 5½ oz., perch, ½ lb.; Mr. Howlet, one jack and one roach; Mr. Medcalf, one jack, 1¾ lb., and one perch, 1 lb 9½ oz.; Mr. Carrington, dace, ½ lb.; Mr. Dwelley, roach and dace. The members will fish a pegged-down match, in the river Colne, on the first Sunday in November, for nine prizes.—J. Worledge.

Oct. 22.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the following donations:—£1 1s. Great Northern Brothers, £1 1s. Good Intent, 10s. Mr. Snook, Good Intent Angling Society; 7s. 6d. G. Laxton, Silver Trout Angling Society—R. Ghurney, secretary.

BIRMINGHAM AND MIDLAND PISCATORIAL ASSOCIATION.

The annual dinner of the members and friends will take place at the Grand Hotel, Colmore Row, on Thursday next, November 2, at five o'clock. Oliver Pemberton, Esq., F.R.C.S., the president of the association, will preside.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

On Monday last, October 23rd, the above association held their third contest for the year, which took place at Bradford on Avon. The weather being anything but favourable the members were asked before leaving Bristol if it would not be better to postpone it for another week, but the show of hands soon told that they intended to be gallant and "stand the storm," and so they proceeded on their journey. The pegging out and judging arrangements were carried out by that venerable fisherman Mr. I. Inch, who was much complimented for the manner in which he performed his duties. The competitors numbered 34, and succeeded in bringing home a creditable catch of fish—considering the weather. The fish were hampered and brought home to the club house to be weighed in where the members assembled to know the result. The duties of weighing were most satisfactorily accomplished by Messrs. Wride, Haddon, and Inch, after which the members partook of refreshments and a most enjoyable evening was spent. Appended are the names of the successful competitors in order named:—Mr. R. J. Box, J. Hadden, A. Matthews, J. Clements, G. Pain, J. White, R. Mallet, G. Trickett, W. Harrison, W. Cox and E. Tippitt tie, A. Helliar, W. Bryant and J. Shadwell tie, J. Hacker, W. Hives and W. Froome tie, J. A. Everett H. Inch and H. Sparks ties, F. Cornish, F. Withers, J. Brown and A. Hamilton tie, H. Warr.—Lewis Wride, sec.

CARLISLE PISCATORIAL SOCIETY.

A number of gentlemen met on Wednesday, 25th inst., at the Queen's Head, Amelia Street, Walworth Road, and resolved to form a new angling society; they determined to name it the Carlisle Piscatorial Society. Anglers and gentlemen wishing to participate in the benefits derived from being a member of a club are requested to leave or send their names to host Fotheringham as soon as possible, as the number will be limited. Meeting nights on Wednesdays and Sundays at eight, when the attendance of brother anglers will be appreciated.—Esox Lucius.

Oct. 25.

COBDEN ANGLING SOCIETY.

This young and flourishing society fished their fourth match of the season on Sunday last at Bourne End. There were nine prizes contested for but only six were secured. The result was as follows:—Mr. Reeves, 1; Mr. Weeks, 2; Mr. Hallows, 3; Mr. Wilkinson, 4; Mr. Jenkins, 5; and Mr. Tame, 6.—C. Reeves, sec.

DUKE OF NORFOLK ANGLING SOCIETY.

The members of the above club move to their new quarters on November 8, the Ledbury Arms, Ledbury Road, Bayswater, when the members will be pleased to see as many as can can make it convenient to attend the inauguration.—J. Avon, sec.

Oct. 19.

GOOD INTENT SOCIETY.

The members of this club fished at Waltham on Sunday last for twelve prizes, but only five were taken, the first by G. Robinson; Maybury, second; Haines, third; J. Baker, fourth; H. Winter, fifth; the remainder are to be fished for next Sunday, the members to go where they like. I am pleased to say the members voted £2 2s. to the Thames Defence Fund, and £1 1s. to the Anglers' Benevolent Society. A concert will take place at our club house on Monday, November 6, on behalf of Mr. John Bell, a member of our society, who has been laid up several weeks, as the death of a child and other misfortunes coming upon him during his illness our club benevolent fund is not sufficient to meet the case.—R. Murphy.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

The next Central Association return visit will be held at the Robin Hood, Southampton Street, Pentonville, on Tuesday, October 31.—J. A. Fitch, jun., sec.

Oct. 26.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The above society held its weekly meeting at 9 p.m. on Monday, when several gentlemen were duly elected members The subject of renting waters by the society was freely discussed by A. Mitchell, Esq., the president, and other members, and no doubt by the opening of the angling season of 1883 we shall be able to have one piece of angling water under our jurisdiction. We have received several replies from our London members promising to attend our dinner of the 2nd Nov. Fish weighed in were only from one, Mr. Bennett, five jack caught at Ormesby by him on Friday. Total weight, 19 lb. The weather has been very much against good sport.—James Lark, sec.

Oct. 2, 1882.

HAMPSTEAD ANGLING SOCIETY.

Several of the members were out on Sunday, when Messrs. C. and W. Messenger brought in some very fine barbel, roach, and gudgeon from the Thames, several of the other members coming home with a blank.—W. B., sec.

Oct. 23.

JOLLY ANGLERS' CLUB (LEICESTER).

Fifty of the members of this club sat down to an excellent supper at headquarters, the Earl of Leicester, Infirmary-square, on Friday. Mr. Chamberlain, the host, provided the repast in his best style. After the cloth nad been drawn Mr. W. Marshall took the chair, and Mr. J. Cave the vice-chair, and the prizes were given to the successful fishermen, as follows:—For perch: 1st, Mr. J. Q. Hardy; 2nd, Mr. W. Marshall; 3rd, Mr A Dudgeon. For roach: 1st, Mr. M. Hayfield; 2nd, Mr. H. Starkey; 3rd, Mr. C. Pole. For dace: 1st, Mr. J. Spencer; 2nd, Mr. G. Appleby. For chub: 1st, Mr. Cave. For bream: 1st, Mr. G. Broadhead. For whitling: 1st, Mr. D. Sheriff; 2nd, Mr. Jas. Cave; 3rd, Mr. A. T. Chamberlain. For pike: 1st, Mr. Neal; 2nd, Mr. G. Chamberlain, senior. Mr. H. Starkey proposed "Success to the Jolly Anglers," and songs were given by Messrs. Marshall and Pole, and the evening was very enjoyably spent.

LITTLE INDEPENDENT ANGLING SOCIETY.

Some of the members of the above were out last Sunday and weighed in fish as follows:—Mr. Wightman, some nice jack; Messrs. Petrie and Scott, nice show of roach; Mr. Keene, nice show of jack.—W. H. Evans, sec.

ORIGINAL ALEXANDRA ANGLERS.

The following members weighed fish last night. Messrs Dymond, senr., Tiffin and Newton, some good jack; Messrs. Blackledge and Lowndrow, roach. Mr. Dymond, junr., had a brace of fine jack, and Mr. High had some roach and jack. We fish a match on Sunday next for several valuable prizes—go-where-you-please.—E. Dymond, sec.

ROYAL GEORGE ANGLING SOCIETY.

Considering the unsettled state of the weather (if such consistently bad weather can be so described), the members of the above society evinced a decided objection to seeking their Sunday's sport very far afield. Several who tried Richmond and the locality were moderately successful among the dace. The society boasts of one member, Mr. C. Chart, an ardent and indefatigable sportsman, who proved a brilliant exception to the general rule. Nothing can deter this gentleman from endeavouring to charm the finny denizen of the deep—or shallow—he is not particular. On this occasion he has upset the familiar proverb anent going farther and faring *wusser*, as he succeeded in taking at Pangbourne 12 lb. of roach, two of them together going over 2 lb. This, considering that the muddy state of the water would have suggested a spade as being a more fitting means of procuring fish than a rod and line, must be considered exceedingly good fishing. Charmed with his success, Mr. Chart once more set forth to try his luck at the same place on Tuesday. Defying alike the wind, the rain, and flood, he launched his frail craft on the heaving bosom of our old Father Thames, a short distance above the weir, and casting anchor, commenced operations, but found all his endeavours to make his line assume any position, other than one parallel with the surface of the stream, were futile. Pausing to consider what was best to be done under the circumstances, he hoisted his umbrella as some protection from the constant fusillade of hailstones, but speedily regretted the rash act, for that sometimes useful article was caught by a sudden squall and torn to pieces, the boat was broken from its moorings, and was rapidly carried towards the roaring waters of the weir. The utmost exertions with the sculls was insufficient to retard the rapid backward progress of the boat, and at that supreme moment with a watery grave literally staring him in the face, with the falling torrent roaring, hissing, and boiling within a few feet of him, with the spray tossed upwards on the howling wind like the arms of water phantoms eager to clutch their prey, it is stated by reliable eye-witnesses that Mr. C. Chart's countenance assumed an ashy greyness. Those who have the honour of that gentleman's acquaintance will fully appreciate the awful state of mind requisite to cause such a phenomenon. Had it not been for a friendly eddy which fortunately carried him within reach of an equally friendly bough, by means of which he hauled himself ashore, it would in all probability have been my painful duty to chronicle a far different termination to what was really a most dangerous mishap. N.B—There is a moral to this, although, unlike the writings of the knowledge-crammed Æsop, it is no fable.—C. W. W. Bernhardt, hon sec.

Oct. 25.

THE GRESHAM ANGLING SOCIETY.

At the meeting of this society at Masons' Hall Tavern on Tuesday last, D. A. Darling, Esq., presided. The river reports all represented the water out of order, and fishing prospects poor for the next week or ten days. Among the members who have taken fish since last report are Messrs. Edward Bennett, A. Jardine, and W. T. White. Mr. Bennett took five pike at Ormesby Broad, largest $5\frac{1}{2}$ lb., weighed by the Great Yarmouth Piscatorial Society. Mr. Jardine, who arrived after the meeting had closed, weighed in four pike, from private water, the largest $9\frac{1}{4}$ lb., the smallest 5 lb. 12 oz., and a perch 1 lb. 15 oz. Mr. White had a barbel from the Thames; Mr. Behrend and other members have also taken fish. Messrs. E. Wheatley and Henry Temple were ballotted for, and unanimously elected. Mr. Crumplen reminded members that all applications for space in the Great International Fisheries Exhibition, 1883, must be made not later than Wednesday next, and trusted that private individuals, as well as societies, would send some of their choicest specimens. Several members expressed their satisfaction that the society met at Masons' Hall Tavern, and members will doubtless now attend frequently in large numbers. Mr. A. W. Parker's paper on "An Anglers' Parliament" will be read on Tuesday, November 7, when a good discussion may be anticipated, and in which secretaries of other societies or gentlemen interested in the subject are welcome to take part. Microscopical and musical reunions will also be shortly held, thus adding to the interest always attending this society's meetings.

THE LARKHALL ANGLERS.

The first of the winter series of smoking concerts originally established by this society took place in the club-room, the Larkhall Hotel, Larkhall Lane, Clapham, on Wednesday evening, October 18. The room was well filled with seventy members and friends, when a varied and attractive programme was creditably carried out. Mr. G. F. Spencer, the popular president of the club, occupied the chair, and was supported amongst others by the following gentlemen, well known in the piscatorial world:—Messrs. B. Boyce, E. Mallett, C. Davison, C. J. Morris, H. Kite, W. Creak, F. Boyce, J. English, F. Keny, F. Crontel, and J. Green. A general regret was expressed at the absence of Mr. W. H. Brougham, who was unavoidably prevented from being present. The musical proceedings opened with a selection from "Il Puritani," given by Mr. Hallé, late of the Royal Aquarium, Westminster, after which Mr. Mallett sang with very good taste "Ah che la Morte" from "Trovatore." Mr. Marshall followed in a very telling manner with "If Doughty Deeds. Mr. Lovatt received some genuine applause in his rendering of "Phillis is my only Joy." The stirring ballad of "The Brave Old Temeraire" was most effectively given by Mr. Lockwood, who later on sang "The Skipper's Bride." Mr. Moore was well received in "Never More." Mr. Gordon Laurie, who is a special favourite on these occasions, caused roars of laughter in his singing of "That Awful Little Scrub" and "Father Molloy." Mr. Vagolini received flattering recognition of the way in which he sang "Flippity Flap," which was quite "too utterly utter." Mr. Boddy's recitation of "The Stroller's Story" was a great treat, and Mr. Broadlake throughout the evening was a tower of strength. Other gentlemen rendered good service, prominent amongst them being Messrs. Claud Hamilton, Davis, Hallé, &c. The Larkhall Anglers are in a state of high prosperity, and the success is mainly due to the indomitable perseverance of Mr. G. F. Spencer, and the energetic efforts of Mr. E. M. Mallett as honorary secretary.—B.

TRAFALGAR ANGLING SOCIETY.

The members of this society who were out on Sunday last were not successful in getting many fish, only three weighing in: Mr. Wilson, 2 lb. 8 oz. roach from New River; J. Gaze, 2 lb. 9 oz. roach; R. Gaze, 1 lb. 8 oz. roach from the Thames.—J. Gaze, sec.

Oct. 23.

WALWORTH WALTONIANS.

The October competition, up to date, is as follows:—1st. Mr. Bansback; 2nd. Mr. H. Dale; 3rd. Mr. R Cain. The last Sunday in November is appointed for the Sawbridgeworth competition with the South London. Members wishing to take part in it must communicate with Boalch not later than Thursday next. A smoking concert will take place at the St. Paul's Tavern, Westmoreland Road, Walworth, on November 8, for the benefit of Mr. W. Brown. Chairman Mr. W. Taylor; to commence at 8 p m.—Pixie.

WELLINGTON ANGLING ASSOCIATION.

Last evening the annual dinner of this, the most flourishing association in Nottingham, was held at Mr. S. F. Bestow's, the Wellington Hotel, Station Street. Mr. F. Warsop presided, and was supported by a large and influential company, including Mr. C. K. Eddowes, of Derby, clerk to the Trent Fishery Board.—The usual toasts having been given, Mr. S. Sills proposed "The Health of Sir Henry Bromley," the President of the Wellington Association. Mr. Sills alluded to Sir Henry's great generosity in the matter of fishing, and said he only regretted that of late he had suffered so much from gout. He was a true type of an English nobleman, and he could only have wished that he had been amongst them that night. (Applause.)—The Chairman proposed "The Health of the Trent Conservancy Board" and enlarged on the benefits which it conferred upon anglers as a body. He was pleased at that meeting to see Mr. Eddowes present. Mr. Eddowes had done a good deal for fishermen, and doubtless in the future he would continue to render his valuable assistance.—Mr. Eddowes, who was cordially received, stated, in response, that the Board did not interfere with the powers of riparian owners. They possessed jurisdiction from the Humber to Trentham, and desired in every possible way to preserve and protect fish. In fact, their sole object was preservation and protection. As to salmon the Acts now were different to what they were sixty or seventy years ago. But even now they were, to some extent, contradictory and difficult to understand or comprehend. Then, with regard to the question of the pollution of streams, he was looking forward to better things as regarded Burton-on-Trent, Leicester, Tamworth, Birmingham, and Buxton. Official inquiries have been held at Tamworth and Buxton, and the right as to the Wye had been successfully fought out. He trusted soon to see the Trent free from pollution, especially in the matter of the upper waters. In trout fishing he wished to mention, as showing the success of the cheap licences, that between 3,000 and 4,000 had been issued, that nearly 70 net licences had also been issued, and that 20 salmon licences had been taken out.—Mr. H. Coxon (*Nottingham Express*) was asked to propose "Success to the Wellington Association"—Mr. Coxon replied to the call, and the other toasts were: "The Donors of Special Prizes"; "The President, Vice-President, Hon. Secretary, and Committee"; "The Host and Hostess"; and "The Visitors."—The proceedings throughout were highly enjoyed.

P.S.—We have had a splendid season, more fish being weighed in than we have had for several seasons previous. I send you the weights of the first and second in each class:—Barbel, 1st, 8 lb. 2 oz., 2nd, 6 lb. $1\frac{1}{4}$ oz; roach, 1st, 1 lb. $11\frac{3}{4}$ oz., 2nd, 1 lb. $6\frac{3}{4}$ oz; dace, 1st, $10\frac{1}{2}$ oz., 2nd, 10 oz.; bream, 1st, 4 lb. $7\frac{1}{4}$ oz., 2nd, 4 lb. $7\frac{1}{4}$ oz.; perch, 1st, $14\frac{3}{4}$ oz., 2nd, 14 oz.; chub, 1st, 4 lb. 2 oz., 2nd, 3 lb. 4 oz. I have sent Mr. Morgan some information about anglers at Nottingham. Don't know whether it is for your paper?—S. S.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The morning of the 22nd inst. was but a continuation of all night's wind and rain, and many a one, who sleeps half Sunday away, would wonder how anyone could turn out before daylight with pleasure, and hope depicted in his countenance, and walk a mile or so against wind and rain, and defying the weather, sit him down in a field on the bank of the Thames with the determination of sport or no sport to remain thereabout till the shades of evening compels him to depart. Yet such an one may know about twenty of our members did so, inspired by a love of the sport and a friendly competition, and to show the vagaries of fishing are like those of fortune. The winner of the 1st prize may as well left off at breakfast time, having by 8 o'clock landed 7 barbel weighing

15 lb., the largest 4 lb. 5½ oz., the largest of the season, and though he tried on for nine mortal hours not another touch could he get. The following was the result of match: 1st prize, 50s., Mr. G. Hulbert, 7 barbel, 15 lb.; 2nd prize, 30s, Mr. S. Oatley, 3 barbel, 7 lb., 5 oz.; 3rd prize, 21s., Mr. Perkins, 3 chub, 4 lb. 5½ oz., also 1 eel, 2 lb. 9¼ oz.; 4th, 18s. 6d., Mr. Pink, 1 barbel and gudgeon, 3 lb. 14 oz.; 5th, 15s., Mr. Adeane, roach, perch, and chub, 3 lb. 7½ oz.; 6th, 10s., Mr. H. Hulbert, 1 barbel, 2 lb. 15 oz. The above were taken between Bray and Cookham, in the tidal waters. The heaviest take was Mr. Yarham with 1 lb. 14 oz. of dace.—**Geo. Evans**, chairman.

ANSWERS TO CORRESPONDENTS.

J. B. R., Leeds.—We have only seen the ordinary Acme line with the interwoven wire, and cannot speak from experience of the "new centre wire" Acme line; but it is not correct to call the latter "new," as lines of all kinds with centre wire (like a core) have been made for years past by the Manchester Cotton Spinning Company. The novelty in the Acme line consisted in plaiting the very fine wire in with the silk.—Ed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

PEGGING v. CORKING.—MALE AND FEMALE PIKE.

Sir,—Allow me to tender "The Trent Otter" my most sincere thanks for his very able explanation in your last issue.

The only query with which I feel I can scarcely agree with him is No. 4, when he says, "Do not operate on a swift stream if you can help it when trying this pegging business."

Since your last issue, a Trent fisherman has informed me that fast swims (in fact, the faster the better) are the very best places on which to perform, and more especially for barbel, in July and August.

But may not this Trent fisherman be wrong, and mean corking for barbel? If so, will "The Trent Otter" kindly explain the difference between the two styles? In corking for barbel, is not a rather heavy weight used, with a float to match, called a corking weight and shot almost entirely dispensed with?

Also, will "The Trent Otter" kindly inform me by what distinguishing mark you can tell a female from a male pike? I have had a most terrific argument with a man "who knows," and I am not at all satisfied with the result of the contest.

How many times and oft have I heard anglers say what a fine female fish, or what a splendid male fish, who have known no more about it than you know of a person you have never seen.—I am, &c., Mark Antony.

[In order to answer Mark Antony's query we consulted many standard English, French, and German works including Yarrell and Couch, and in none of them could we find any description of the difference in external appearance between male and female pike. Some writers say the male pike is much smaller than the female, and does not grow so fast, but this is not much help. Then we wrote to Mr. Jardine, and are much obliged to him for the following reply, with which we entirely agree, and may say that we distinguish the fish in the same way.—Ed.]

HOW TO DISTINGUISH MALE AND FEMALE PIKE.

Sir,—In reply to yours of this date. I distinguish the females from male pike by their being much more elegant in contour, bodies rounder and deeper, heads shorter and therefore prettier, eyes not so hungry and savage in expression as the males, who always have longer heads and lanky bodies, with, as a rule, hollow bellies, as if a good dinner would do them good. I can invariably distinguish their sex by general appearances, and the experience gained by a long career of angling. After January it is comparatively easy to tell a "spawner" from a "milter," by squeezing the belly down to the vent, when either ova or milt will exude. Females invariably are much the larger fish, one of 15 lb. frequently "pairing" with a 9 lb. male. A similar sort of thing as to relative sizes now and then occurs in the human family. As to the weights and dimensions of notable female pike, I contributed, a few months since, a short article in reply to some queries which appeared in the Fishing Gazette on the above-mentioned subject.—I am, &c.,

A. G. Jardine.

HERR A. JARDINE UND DIE HECHTE.

Sir.—Two friends accompanied me last Saturday to a fishery which shall be nameless. There was plenty of wind—the water in perfect condition—and it proved, as I thought it would, a likely day. We caught 23 pike weighing 115 lbs., the six largest from 6¾ lb. to 10 lb. each. In addition, I got a perch of 2 lb. and 1¼ lb, and part of the above catch were weighed at "The Gresham," last night, *i.e.*, Tuesday.—I am, &c. A. G. Jardine.

THAT BIG PIKE.

Sir,—In your issue of October 7, I noticed the heading of "A Big Pike," an account of the capture of a fish measuring 3 feet 8 inches in a private pond in Kent.

I was passing through Brenchley in Kent the day after a fish had been taken out of a pond close by, which measured this exact length; but I was horrified to hear that some gentlemen had been down three or four weeks previously and laid trimmers in the pond, with the result that this fish had hooked himself and broken away with the gorged hook in his maw, and was ultimately taken by the keeper with a "boat hook" as he was labouring through the water almost dead.

I cannot, of course, say this was the same fish, but as there are very few private ponds in Kent, and this fish happens to be the exact size, I imagine it to be the one—more especially so as no answer was given to your query as to its weight, for through being half starved it only scaled just over 22 lb., whereas it should at least have been 30 lb. I was also informed the fish had been sent to the gentleman who "took it" (?) in London to be stuffed.

I am trespassing on your space this much because I think it is high time (even in private waters) that sportsmen (?) should discontinue the use of poaching implements such as trimmers, &c.—I am, &c.,

A Lover of Fair Sport.

GUT v. HAIR.—IN FAVOUR OF HAIR.

Sir,—"Come to my arms, my beamish boy," I mean "H. S. H."—for I could embrace him for the delightful style in which he withdraws from the controversy—without advancing a single argument against what I have said in support of hair. There are many reasons why his false analogy No. 2 cannot be correct. We advocates of hair would never think of using it in the Hampshire streams, where "three and four pound trout" are of everyday occurrence. And if hair will not do there, there is no reason why it will not do in other streams. I never heard such logic as this. Really one must be excused if a little sarcasm does ooze out now and then. I might with as much truth denounce gut, because some of it is thicker than hair, quite as reasonably as a writer condemned all hair because some he had curled. Would you put all dogs down because some went mad, or hang all human beings because some of them are murderers? Such, Mr. Editor, are the species of argument we hair supporters have had hurled against us. I hope we in the North of England have a better opinion of "H. S. H." and similar correspondents than he appears to have of us. He must not come here to find people acting in a certain way because "it is the thing" or the fashion so to do. This is just where he is peculiarly unhappy. We follow our own tastes and inclinations, using that tackle which proved to be best, which we, as a rule, make ourselves. We know what is required and stick to it. The fashion for certain rods or certain hooks or certain flies, which there are people would have us change, as we change the cut of our garments—not that we are any better for the latter, but because it stirs up trade a bit—does not influence us a bit. We fish, and are successful, and can always catch trout when anyone can. But I must stop else I shall be overrunning my reel, and perhaps get my line entangled. Sprint.

[P.S.—I was glad to find you, Mr. Editor, having such excellent sport amongst the grayling. Nothing would have delighted me more than to have been present at the capture of the 2½ lb. trout. I fancy about that time I was engaged with a salmon, probably an eighteen pounder. He made a terrific rush to the far side of the river, showed under the rocks, darted up stream a bit, and though I lowered my rod into the water, fouled my main line on a tree-bough hanging over, and being some six inches in the water. The line stuck, the fish turned, going like an express train, though more rapidly, right down stream. Still the line held, and fast the fish went. The eventful moment came. I looked at my reel, only a few more feet of line, fish still going. That ominous click, all the line out, a gigantic roll on the top of the water, about eighty yards away, and all was over. I slowly wound up the line which, being minus the fly, slipped quietly and easily through the boughs. The strong salmon gut had parted about a foot above the fly.]

THE GRESHAM AND GROSS WEIGHTS.

Sir,—My reply to "Roacher" is a very plain one. I am not responsible for "Ye Cripplegate." No such quantity of roach was shown, or weighed-in by, the Gresham Angling Society, on or near the 7th inst.

"Roacher's" error may have arisen from my giving the society some particulars of an exceptional take of roach which Mr. Wheeldon very kindly supplied me with, and of which that gentleman afterwards gave an account himself. These fish came from private water, and twenty of them weighed-in all 30 lb.; surely these were specimen fish, although not weighed in with us.

The views of the society have in no way changed in the direction indicated by your correspondent; on the contrary. our weights have been in most cases raised, and when our prize list appears (if any are given) this will be very apparent.—I am, &c., T. Crumplen

THE GRESHAM SOCIETY AND GROSS WEIGHTS.

Sir,—I notice in your last issue a communication from a correspondent signing himself a "Roacher," but who ought more properly to call himself a "Carper." The report in question (and to which reference is made in your own paper under the Gresham Society report last week) was in "Ye Cripplegate" as follows, under the head of Gresham Angling Society:—"Amongst other takes reported were the following:—Mr. J. P. Wheeldon, 80 lb of roach, taken on Saturday, October 7, 20 of them weighing over 30 lb., &c., &c." For this information I may say that these fish were not weighed in or even shown at the Gresham, but Mr. Wheeldon, being one of the honorary members, had a perfect right to inform the secretary, if he so chose, that he had caught certain fish; and if he was sufficiently skilful to do so, I cannot see any valid objection to his taking any number of large roach, even if, as your correspondent says, "the take is as much as the best Lea cracks weigh in at their clubs in the nine open months." I fancy the grapes are rather sour, for I was not aware that the Lea roach fishermen had fallen off so much in their well-known skill.

With regard to his polite term "puff" applied to the paragraph, does he mean of the Gresham or of Mr. Wheeldon? The notice was precisely the same as all other club notices in your own paper, as in others devoted to kindred topics, and I fancy you would be one of the first to disclaim any such term if used to such notices.

If, however, a "Roacher" or any of his friends can at any time secure a good take, I can safely promise him the same sort of "puff" if he will forward particulars to yours truly. Alpha.

Angling Editor, "Ye Cripplegate."

[We understand that Mr. Wheeldon did not take 80 lb. himself; he took 60 lb., and another rod 20 lb. For our own part we should very much like to be credited with such a splendid take of fish.—Ed.]

THE GRAINING.

Sir,—"L. B." in last week's "Club and Other Jottings" says he should like to have a specimen of the graining. These fish are found in the river Alt, near here, and last Saturday I went there for the express purpose of fishing for them. I succeeded in taking one only, which I should have sent to "L. B." had I known his address. I shall be having another try in a short time, and if I take any one shall be sent "L. B." if he will say where to. The one I got last week weighed 6 oz., and was a beautiful specimen and in first-class condition. These fish are delicately shaped, with a small head, and have a brilliant silvery appearance, and are altogether a handsome branch of the family of fishes.—I am, &c., R. Woolfall, hon. sec.

Strawberry Hotel, West Derby Road, Liverpool.
October 25th.

THE SIZE OF EXE FISH.

Sir,—I am perfectly satisfied respecting the dish of fish in question, as no one appears to have seen any such fish but Mr. Witney, not even the man who Mr. Austin quoted as having landed the largest, and am sure Mr. Austin must be indebted to young Mr. Witney for coming forward to substantiate his statement. Mr. Austin has rewarded him by calling him "second to none" on the Exe, which is decidedly open to question, in spite of Mr. Austin's diploma. Mr. Paine's, jun., letter is quite outside the mark. Mr. Austin's discovery of drawn gut and small flies, as well as dry fly fishing in fine still water, seems to have been made somewhat late in life: the art was well known and practised in the Exe for years past. I myself prefer wandering along the river, varying the scenery, and fishing the stickles or wherever I can get in, to standing on a rock doing the to and fro dry fly business, which I consider most monotonous, and certainly I get more fish. I will promise you, Mr. Editor, not to trouble you any more, and will leave every fisherman to follow his own taste, the practical worth of each style being known to me.—I am, &c.,

Brobdignagian.

TENCH IN THE THAMES.

Sir,—About five years ago Mr. Francis Francis originated an idea of increasing the stock of both carp and tench in the lower Thames, and in this movement he had my co-operation, and the result was that out of one pond alone in the Home Park there were, as far as my recollection serves me, nearly 200 tench removed into the Thames, besides some from the other ponds.

In June, 1879, Mr. Thomas Spreckley sent from Hampshire, out of the Avon, by the kind permission given to him by the Rev. F. Fane, 42 remarkably fine tench, which were placed in the Thames between Shepperton and Staines; and if the angling clubs will defray the expense I am quite sure Mr. Spreckley would only be too pleased to get even a larger quantity.

Amongst the large stock of fish that were brought from the ponds of Earl Amherst, at Sevenoaks, in November, 1879, there were a considerable number of tench.

In some of the nettings after a flood tench have been found, but not in great numbers.

I remember some years ago netting a back water at Laleham, to remove some stray jack and perch in the main stream; we found in the net a very fine specimen tench, the weight of which we estimated at 6 lb. It was remarkably clean and a handsome fish, worthy of preservation, but I gave instructions for its return to the river.

It not infrequently occurs in the weekly angling reports of tench being taken at Walton by the bank Anglers—I have known as many as three in a week. Last season some were caught at Hampton Court.

There are tench in the "City waters," and in no inconsiderable numbers. No one fishes for them, and those that have been taken are undoubtedly accidental captures.

W. H. Brougham.

October 24, 1882.

NETTING THE ASSOCIATION'S WATERS.

Sir,—I understand through the club to which I belong that the W. L. A. A. F. S. have lately rented a piece of water known as Springwell Lock, at Rickmansworth, a portion of which, I believe, is the river Colne, and the other portion, the canal, through which monkey boats navigate; and, wishing to know more about the water before paying it a visit, I made enquiries in town, and, as luck would have it, met a native of Rickmansworth, who is a fisherman, and, in answer to my enquiries, he told me that it is a very good piece of water, about one and a half miles in extent, and contains some very fine roach; but, said he, the boats are continually passing, and they net it to such an extent that it is scarcely worth fishing. I asked if there was not a keeper there to prevent the netting? and his answer was a smile—and it was a smile—just such a smile as you might expect to see in answer to an absurd question; but certainly I did not think I was asking an absurd question, but I could read in that same smile that there is no one there to prevent netting, and if there was, he could not stop it. I consider it my duty, as a member of the society, to make this report known to Mr. T. Hoole, but I prefer to do so through the medium of the Fishing Gazette, with your kind permission, so that all my brother anglers may see it; and if any of them can deny the truth of the report (which is entirely hearsay), I should be very pleased to know it, but I am sorry to say I can find no reason to doubt it, judging from where I obtained my information, and I have heard subsequently that these monkey boat inhabitants systematically net the water by dragging nets behind the boats. Surely, this wholesale netting of such a good piece of water can be prevented, if not, what use is it to the angler? Perhaps Mr. T. Hoole will kindly answer this letter.—I am, &c.,

The Red Fisherman.

[We sent this letter to Mr. Hoole, and append his reply.—Ed.]

"12—10—82.

"Sir,—This is the first I have heard of the water in question being netted.

"Mr. Neave, the late renter of the water, informed me that there was no possibility of its being netted without detection. He lives on the spot himself, and the keepers are always up and down the banks.

"We are just going to post the whole of the Colne and Canal rented by the society with our bills, offering rewards for the capture of poachers and all persons using illegal means to capture the fish.

"It is a good water, and we mean to protect it.

"You will always find some one who will state rivers are netted, but who can never prove it in one instance.—I am, &c.,

"T. Hoole,
"Hon. sec. W. L. A. A. F. S."

[Having fished the water referred to several times, we can fully endorse the statement that it is a good piece of water and holds good fish, and—wants carefully watching!—Ed.]

GREAT YARMOUTH PISCATORIAL SOCIETY.

Sir,—I have the pleasure of informing you that we shall hold our first dinner of the above society on Thursday, November 2, at the Victoria Hotel. We shall always consider that it was mainly due to your kindness in noticing our efforts in your columns that has brought the society before the public in the manner it is, and which, from all appearances, will eventually become one of note.—I am, &c.,

James Lark, sec.

[The above, which is accompanied by a very kind invitation to the dinner, is a pleasing letter to receive. We have helped to establish a great many clubs both in London and the provinces, and *some* of them have acknowledged our assistance in the matter. Every town in England should have its angling club and then the fish would get better protection.—Ed.]

HOW TO MAKE FLIES.

Sir,—Will you or some of your readers, through the pages of the Fishin Gazette, kindly put me into the way of learning to make my own flies? This i my first year at fishing, and of course I have nearly everything to learn; but I am very anxious to be able to make my own flies. Is there any book on the subject to be had? Or how do people set about learning to make them?

I take the Fishing Gazette, and will gladly accept any information which you or any other gentleman will be kind enough to give me.—I am, &c.,

Matlock Bridge. A Greenhorn.

[We should advise "A Greenhorn" to take lessons from some flymaker, as being by far the best and quickest way to learn how to make flies. There are dozens of books on angling which profess to teach the art. The best book on the subject is "Blacker's Art of Fly-making," with coloured plates, price 10s. 6d. Mr. Ogden Smith, of Winchcomb Street, Cheltenham, publishes a little work which gives very clear directions in fly-making.—Ed.]

WHAT IS A "ONE-ROD COMPETITION?"

Sir,—Can you or any of your numerous readers inform me what constitutes a one-rod fishing competition?

Is it fishing with one rod, and another on the bank ready put together for fishing, with line and hook attached? Or the first rod be taken to pieces before another rod is unpacked?—I am, &c.,

A Club Member.

[This depends, as in shooting, on the rules of the match, we should think; but doubtless "Pixie" can tell us the club etiquette on this matter.—Ed.]

THE MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION,

Dear Sir—In your issue of October 7th, there appears a letter signed "Trout," which alleges that the Salford Anglers' Club, by its rules, allows the members to weigh in trout during close season.

I beg to inform the readers generally of your paper, and "Trout" in particular, that this statement is not true, as a resolution was put to the members at a meeting held early in the present year and carried unanimously, "that no member of the Salford Anglers' Society should in the future weigh in for prizes any trout, char, or grayling during fence months."

Whilst admitting that the District Association is perfectly justified in upholding the law, and using every means which its rules allow, to put down the practice of angling for or exposing for sale any kind of fish during its own particular close season, our members are decidedly of opinion that they would be doing better service in putting some life into the matter of getting an extension of time for anglers' travelling cards, &c., than that its members should go to such trouble in writing to you such a misleading letter respecting our club.

If "Trout" would have taken the trouble to send a copy of his letter to our secretary before sending it to you, the matter would have been fully explained to him.

In conclusion, our members are decidedly of opinion that each society has a perfect right to frame it own rules and bye-laws to suit its own position, so long as they conform to the laws of this country respecting angling for salmon, trout, char, and grayling, and to the laws of the Board of Conservators of any particular river, brook, or canal they are entitled to weigh-in rough fish from, even if such time be during a close season.

I may mention that the trout referred to by your correspondent was caught in strictly private water.—I am, &c.,

Walter Ashworth, President.

Salford Friendly Anglers' Society, October 26.

GROUNDBAITS, OLD AND NEW.—DECREASE OF FISH IN THE THAMES.

The "Trent Otter" is quite right in his advocacy of a simple ground bait for roach. "It is all moonshine," saith this Trent sage, "to say that ground bait is no good," and I endorse this dictum most heartily. More especially is ground bait necessary in the still water of lakes or the comparatively stagnant water of canals. If possible, however, in the case of these kinds of happy fishing-grounds, the enticing preparation should be thrown in over night, so that in the "silent watches" the ever hungry roach may find the baited spot. I had a plan when I used to fish the canal at Boxmoor which answered splendidly. Hemel Hempstead, which is close by, has one public-house to every three private ones, or thereabouts, and consequently brewers exist in plenty. Of course, there was no difficulty in getting fresh "grains," and I used to procure and throw in a couple of gallons overnight, fishing with creed malt or wheat in the morning. It was necessary, of course, to spread them somewhat, so as to mark the course of a swim. The result has often been a 20 lb. bag of roach, which I am certain would be unattainable without previous ground baiting. By the bye, would "Trent Otter" mind putting me in the way of obtaining one of the Witham bleak? A "willow blade," whitling, bley or bleak—as the fish is variously termed—of 3¼ ounces would indeed be a specimen fish.

* * * * *

I incidentally remarked in the above note that I agreed with "Trent Otter's" simple ground bait. Antithesis suggests antithesis, and I am reminded of the fearful and wonderful ground baits and lures recommended by the anglers of yore. Here are a few:—Assafœtida, oil of polypody of the oak, oil of ivy, oil of peter (query, What, oh what is oil of peter?) and gum ivy—mixed into a paste. This, I presume, is for roach. For gudgeon in a clear stream and trout in a muddy, "John Richardson Gent," writing in 1740, recommends assafœtida, 3 drachms, camphire 1 drachm, and Venice turpentine 1 drachm, these to be heated together with a few drops of oil of lavender and oil of camomile. These are of course ridiculous, but then the authors existed in the "dark ages," so to say, of bottom fishing. The late Mr. Mechi, of Tiptree (who was a splendid fisherman, if not an entirely successful farmer), told me he never employed other ground bait than bran and bread thrown in of the size of a large marble, fishing with bread paste, and I know his takes were sometimes very great.

By the side of that simple ground bait fancy Blakey (author of the "Angling Literature of all Nations," &c.), recommending the following unspeakable mess :—Take a quantity of well-cooked veal, a handful of oatmeal, and a little honey; bruise them in a mortar, mix into a batter or thin paste with new milk and a few grains of assafœtida. Crush down in a mortar a quantity of worms, slugs, gentles, and some lumps of the most tallowy cheese you can find, thicken the veal batter with this compound and then roll it up into little balls. These balls must be thrown into a compost of tallow-greaves and grains steeped in bullock's blood, and the entire composition sunk in the selected spot some hours before fishing. What think you of that, "Trent Otter?" It reminds one of the famous specific for all internal diseases, of which some of the early English physicians thought so much, Venice treacle. This was compounded of some thirty-five drugs, some of them absolutely antagonistic to each other in their operation.

* * * * *

Was it not Charles, the Merry Monarch, who asked the Royal Society (or is the story entirely apocryphal?) why a globe of water weighed no more after the introduction of a fish than before? After much ponderous consideration, the same learned pundits found they couldn't tell. The answer should have been, "Is it so?" I am reminded of this by the title of Mr. Crumplen's paper before the august Balloon Society in council assembled, "The Causes of the Decrease of Fish in the River Thames." "Is it so?" I ask, to an extent demanding complaint against the magnificent industries of the lower Thames. And is it a fact that the non-tidal waters are being so seriously decimated by extraneous agencies, in view of the 8000 members of angling clubs, not to mention unattached anglers? Is it, I ask, finally, so necessary for every club to follow the example of the Gresham (of which Mr. C. is secretary) in the rejection of all but specimen fish, as Mr. C.'s weighty remarks would seem to imply. For my individual part, I think a great deal of exaggeration is often indulged in in respect of the decline of the Thames, and hence little practical outcome is the result. Why is it that the excellent project of Mr. Marston anent a "Coarse Fish Cultural Association" was not referred to as decidedly the concentration of all Thames preservation? This note is nothing but interrogatories, and I don't expect complete answers; and beyond all, Mr. Crumplen must not suppose I refer to him in any tone other than that of deference and respect.

* * * * *

Of course, Thames fish become less as they are caught, but they breed enormously, and I am not sure that the thinning out process is not to the benefit of the river. There are less jack than formerly—good! and all the better for roach and dace and the rest of the non-preying fishes; but don't hear that barbel are less numerous, or perch or chub. If they are, breed more in suitable places and stock your beloved stream, but don't limit the growth of commerce or the pleasure of others, unless you are quite certain by doing so you are conferring the "greatest good on the greatest number." Even then let it not be forgotten that minorities should be considered by the gentle craftsman.—Chub Chavender.

[Oil of peter must be petroleum or stone oil we should think. If we are not mistaken Mr. Crumplen did refer to coarse fish preservation.—Ed.]

HOW A LOBSTER SHEDS ITS SHELL ENTIRE.

Your able correspondent, "Chub Chavender," in the last issue of the Fishing Gazette, kindly asks me the above question, which I will now endeavour to throw some light upon, if I do not exactly fully explain the same to C. C's wishes. During the past forty years I have had some thousands of lobsters through my hands, from Norway and Scotland, also English, the latter of which are the lightest in colour, and for size the lightest in weight when boiled, taking the size into consideration as compared with the Norway and Scotch. Of these two latter countries I have never seen a lobster's left off suit of armour, but of the former, I have seen many. In fact, upon several occasions, when taking them from the furnace after being boiled, the old shells have parted freely from the head and tail, under which the new soft shell had formed, but the legs still retained their old original gaiters. But I am digressing, and cannot do better than quote my dear old tutor, Frank Buckland, whose pupil I was for sixteen years, they run thus: As a watch case contains much delicate and complicated machinery, so does the back shell or carapace of crabs and lobsters contain many highly complicated and wondrous structures. The lobster is somewhat similar in its anatomy to the crab. In the crab and lobster the skeleton is external, in fact they may be said to live inside their skeletons, or, if you please, natural armour, the joints in their harness being beautifully adapted for offence and defence. The covering is composed of a skin more or less hardened. The "dermo skeleton," when once completed, undergoes little or no further change. It is adapted to the increasing size of the body by being periodically cast, and entirely renewed at such periods as the body grows too large for its case, in fact they grow by moulting their shells. The shell of a crab when about to be cast off, is split along the underside of the body, from the mouth to the tail, and the line of division is plainly marked in the shell of a full-grown crab. The crab is enabled to draw his claws through the narrow opening of the point where the claws join the body by the curious fact that the shells split just at this point. The shell of the lobster also cracks at this point, and the length of a seven inch lobster immediately after leaving its shell would be eight inches, and after it has shed its shell once, it grows half an inch in the barrel each time. In Mr. Buckland's museum is the shell of a lobster, which could not have been more than an hour in being cast, as the attendant when going to dinner left one lobster, and when he returned there were apparently two.

Professor Bell, in his "Stalk-eyed Crustacæ," states that when the animal, by gradual internal increase, has become too large for its existing covering, it ceases for a time to feed, and retires to a secret and undisturbed spot, where it may undergo the process in security. If examined at this time an evident loosening of the crust may be perceived, upon pressing it gently in different parts. Shortly it appears restless and uneasy, rubbing its limbs against each other, and moving the segments of the body in various directions. It throws itself upon its back and swelling out its body, ruptures the membrane which connects the carapace with the abdominal, and raises the former so as to loosen its attachments. Resting from time to time, after its laborious efforts, it finally detached the whole thoraco abdominal portion, from which it withdraws itself, having disengaged the legs and the antennæ, the eyes and other appendages.

It is impossible to imagine that the crust of the legs, and especially the large claws, could be cast off, unless it were susceptible of being longitudinally split, and Réaumur states that such is actually the case. Each of the segments being composed of two longitudinal pieces, which, after separating to allow of the passage of the soft limb, close again so accurately that it is very difficult in the cast crust to discover the line of division

Mr. C. Spence Bate, in his "British Sessile-eyed Crustacæ," states: The process appears to be the result of an internal growth of the animal, which, becoming too large, the skin splits at the margin of the dorsal and sternal arches of the three anterior segments of the pereion, the inferior arch carrying the legs, inclusive of the coxæ.

The anterior segment of the pereion extends over the posterior margin of the cephalon; at this point the attachment is broken anteriorly, and the lateral disunion of the three segments allows the upper surface to be raised as a movable lid, through the opening of which the animal escapes from the old integuments. With some exertion, the posterior portion of the body together with the limbs are withdrawn, after which the head and anterior members are removed, and the entire animal is free from its old exuviæ, which resembles a dead individual, left in its old position.

Mr. W. B. Lord, in his "Crab and Lobster Lore," also tells us that when these crustacean corselets are getting too tight for them, they manage by some extraordinary means to extricate themselves from them, but it is a work of time and trouble, the body appearing to dilate within its prison walls, until the coffer-like cover formed by the shell slowly and by degrees gives way; the membranes one by one are torn asunder, the muscular tissue filling up; the large claws and pincers undergo a softening process which admits of their being drawn through the constrictions, between the joints, and the crustacean and his old garments part company at last, and like Professor Owen, their longings are for a new skeleton, and like that gifted anatomist, rest not until one is obtained. Unlike the page, who, in complete suit of armour accompanied his noble master to the Holy Wars, and, as the legend goes, returned after years of absence a dwarf, from having nothing else to wear, our crustacean friends are more prolific in expedient, as will be seen by those who investigate.

Frank Gosden.

DO EELS TAKE FLIES?

Some summers ago I was staying at Ringwood with the late Mr. H. L. Rolfe, the artist. We were beside the Avon in the meadows below the bridge, the day was broiling hot, and we were lying resting after some hours' spinning, enjoying a pipe and some whiskey well watered from the stream, when my companion called my attention to a constant snapping noise which evidently proceeded from a bed of floating weeds, which had caught the branch of a partly submerged tree. "Do you see," said Rolfe, "that cloud of gnats which are hovering and dancing in the air above that mass? The gnats are laying their eggs, which are fructified in the water." "But," I remarked, "surely the gnats do not make the noise we hear." "No," rejoined the scaly painter, not a little to my surprise; "that noise proceeds from eels, who are, with their heads just above the surface, feeding on the insects whenever they come within reach of their jaws." Expressing my incredulity, like many another who hears of a thing for the first time, Rolfe took the salmon landing net, and wriggling, *a la* Chippway Indian, snake-like on his stomach, approached within reach of the spot, when, rapidly thrusting the net a little below the floating mass, he brought ashore three fine eels, at least 1½ lb. each. He told me he learned this dodge from a keeper of Lord Malmesbury's, of Heron Court; that it was only to be practised in very hot weather, when these insects were dropping their eggs, and that, although he had often taken one or two eels in that manner, this was the first occasion he had got three, which he attributed to the extra size of the landing net and the greater length of its handle.

Creel.

Worms in Dogs.—"Wokingham, July 5, 1866.—I have used 'Naldire's Powders' for ten years, and have never known them fail in a single instance.—C. J. Bastin." "Naldire's Powders" are also a splendid alterative, keeping dogs in excellent condition. Price 1s., 2s., 3s. 6d., and 5s., of all Chemists, and of Barclay and Sons, 95, Farringdon Street, London.

FACEACHE, TOOTHACHE, PAINS IN THE GUMS, NEURALGIA. —Adam Smith's Neuralgine is a Certain Cure. Bottles, 1s. 1½d., 2s. 9d. Post free from Proprietor, Chemist, Wednesbury. London Agent, W. Edwards, 157, Queen Victoria Street.

THAMES ANGLING PRESERVATION SOCIETY.

Arrangements were made by the committee of this society to make a practical inspection of the portion of the Thames between Staines and Richmond on Friday in last week and a few friends of members of that body are permitted to accompany them. The "Duchess of Connaught" steam-launch, provided by Mr. T. G. Tagg, of East Moulsey, was to be ready at the Pack Horse landing stage at Staines at eleven o'clock, to convey the party quietly down the river, but just below Penton Hook Lock some weeds got into one of the valves in the machinery, and it was found necessary to put the fire out to remove the obstruction, and after that the steam had to be got up afresh before the launch could proceed to Staines. Mr. Alfred Nuthall, who was on board the steam launch, had to walk a distance of two miles to inform the committee of the cause of the delay, and instead of starting at eleven o'clock, as arranged, it was exactly one o'clock before a start could be effected. During the interval, however, the party sat down to a bread-and-cheese luncheon at the Pack Horse Hotel; and the worthy proprietor, Mr. John Bright, jun., was not only very attentive to his guests, but volunteered to get the steam up of his own launch, and run the committee down to Penton Hook. There was, however, plenty of time to do the distance comfortably to Richmond, and it was apparent from the condition of the water and the heavy stream that was running rapidly down, the practical part of the journey would be completely defeated, as neither anglers or fishermen would be out. The first call was made at Chertsey Bridge, to look over the fish farm belonging to Mr. James Forbes, and to see his fine stock of fish. Unfortunately, Mr. Forbes was confined to his room with his old complaint, and could not give the visitors the kind attention he always does, but he sent them out some lubrication, and all drank heartily to his better health. The next call of a few minutes was at the Ship Hotel, Halliford, which is a favourite resort for piscators. As there would be a delay at Sunbury in getting the launch through the lock, the interval was filled up with a look at the rearing ponds now kept up by Mr. Spreckley for the benefit of the Thames, but the water was so much coloured that it was impossible to see the youngsters that now remain in it. The only other call that was made was at the Island Hotel, the proprietor being the owner of the steam launch; but this did not occupy more than ten minutes, and then the vessel steamed comfortably down to Richmond, where it was timed to arrive at half-past five o'clock. Exactly at that time the party landed a little above Richmond Bridge, and they then proceeded to the Station Hotel, where arrangements were made to dine at six o'clock, and with the well-known punctuality of the hostelry, all was ready at that hour. Mr. Thomas Spreckley occupied the chair, and Mr. R. B. Marston the vice-chair. There were also present Messrs. F. H. Lemann, A. J. Little, Hickson Briggs, A. Nuthall, C. P. Wheatstone, H. B. Eyre, T. R. Sachs, F. C. Hatfield, and W. H. Brougham as representing the committee. The visitors were Messrs. B. Perelli-Rocco, T. Nash, John Wotton, N. Wotton, T. Norman, Harrison, and Main. Letters of regret at their absence were received from Messrs. P. Geen, W. A. Crump, F. C. Clench, W. G. Barnes, J. R. Berry, Alfred Jardine, John Knechtli, J. Pattison, and Joseph Andrews. The dinner, which was placed on the table by Mr. John Munro, gave the greatest satisfaction, and was thoroughly enjoyed by all present. It was served up under the personal superintendence of Mr. Munro, and he was highly complimented on his catering. Several toasts were given, and the speeches were of a thoroughly practical character. After the loyal toast, Mr. Hickson Briggs proposed "Success to the Thames Angling Preservation Society," to which Mr. Spreckley replied. Mr. A. J. Little gave "The Vice-Chairman," and it was acknowledged by Mr. R. B. Marston. Mr. Alfred Nuthall proposed "The Secretary," and Mr. W. H. Brougham responded. The Chairman gave "The Visitors," coupling the name of Mr. Thomas Nash, who replied; and Mr. T. R. Sachs proposed "The better health of Mr. and Mrs. Forbes." Some capital songs were given by Messrs. T. Spreckley, T. Norman Harrison, Main, B. Perelli-Rocco, and others. The party did not break up until the closing hour of eleven o'clock. The entire expenses of the day were defrayed by the committee and visitors.

Containing TALES, ARTICLES and ENGRAVINGS by the best Authors and Artistes of the day.

A COLOURED PLATE EVERY MONTH

Can be had through any Newsagent, or direct from the Publishers,

SAMPSON LOW AND CO.,
188, FLEET STREET, LONDON.

ROYAL AQUARIUM.—The JAVANESE GAMELAN.—Selections from the Repertoire of 44 pieces. An exemplification of art, 3000 years old. DAILY, at 2.30, 5.30, 7.30, and 9.30.—Admission ONE SHILLING.

ROYAL AQUARIUM.—MISS and WILLIE BECKWITH, appear in their marvellous natatorial entertainment in the large Swimming Tank in the Annexe, at 5.30 and 9 30 DAILY.—Admission ONE SHILLING, children under 10 free.

ROYAL AQUARIUM.—Open 12 0 noon, Close 11.0 p.m.—PROGRAMME for THIS DAY:

Afternoon.		Evening.
2.30 5.30	The Javanese Gamelan (special performances)	7.30 9.30
3.0	The Three Almontes	10.45
3.15	The Troubadours	10.30
3.45	Victorelli Brothers—Musical Clowns	9.15
4. 0	The Elegant Tilly Family	8.30
4.15	Napier and Alexandra—Double Bars	10.15
4.30	Astarte	8.45
4.45	The Lenton Brothers—Acrobatic Act	9.0
5.0	Maud and Charley Ross—Speciality Singers	8.15
5.15	Transfield Troupe—Acrobatic Act	8.0
5.30	The Beckwiths in the Annexe	9.30
6.0	Organ Recital by Mr. Albert Lowe...	—
—	Francois—Globe Act	10.0

Admission ONE SHILLING.

BALLOON SOCIETY of GREAT BRITAIN.—ROYAL AQUARIUM FRIDAY LECTURES.—Subject, this Evening (Friday), Oct. 27, "Harbours of Refuge," by F. Johnson (the Fisherman's Friend). This lecture will be held in the annexe to the Aquarium; entrance opposite the Abbey. Members of the National Lifeboat and the Shipwrecked Fisherman's Societies are requested to attend and take part in the discussion. The chair will be taken by Sir Harry Verney, Bart., M.P., at eight o'clock.

ROYAL AQUARIUM.—REFRESHMENT DEPARTMENT.—The newly-appointed ANNEXE GALLERY is NOW OPEN. Table d'hote daily from six to nine, 5s. per head, including admission to Aquarium. Entrance in Broad Sanctuary.—BERTRAM and ROBERTS, Contractors.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces:—

Messrs. Alfred and Son, Moorgate-street.
Messrs Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-street, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 1, Sabina-street, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks. Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford.
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-street, Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons. Midland Tent Works, Loughborough,
Miss G. Wells, 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 35, Cannon Street, Birmingham.

Newsvendors can obtain the journal through their London Agents

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, NOVEMBER 4, 1882.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, LONDON, 1883.

IMPORTANT NOTICE.

THE date for closing the list of applications for space has been extended to the 25th of November.

The Executive Committee of the Great International Fisheries Exhibition, London, 1883, have received from many quarters intimation that the Regulations 16, 17, and 29*, are productive of inconvenience to the Exhibitors of Small Collections, or Single Objects. They therefore desire to announce that, in case any Exhibitor may be unable by himself or his Agent to provide for the care of his Exhibit on its arrival, the Committee will, if they think fit, undertake the care of such Exhibit, subject, however, to the proviso in Regulation 40.†

N.B.—Any Exhibitor desiring to avail himself of this privilege, should apply not later than the 25th of November, 1882, by letter, addressed to

THE SECRETARY,
Great International Fisheries Exhibition,
24, Haymarket, London.

In order that a Special Label may be sent to him to be attached to the Exhibit.

By Order of the Executive Committee,
J. W. MOLLETT,
Secretary.

---

* *Exhibitors or Agents to receive Own Goods, &c.*

(16) Each exhibitor must provide, either personally or through an agent, for the dispatch, transmission, reception, unpacking, and arrangement of his goods, and for the verification of their contents when unpacked. If neither the exhibitor nor his agent be present to receive the packages on arrival at the exhibition, the carrier will be directed to take them away; but should any goods be deposited in the exhibition premises during the absence of the exhibitor or his agent, the committee will not be responsible for any loss or damage from whatsoever cause arising.

Foreign Packages.

(17) Packages from foreign countries must likewise have painted on them in distinctive marks the letters I. F. E. in red paint. They must be addressed to the exhibitor himself or his agent. They must all be marked in such a way as to show distinctly from whence they come, the name of the country and the number of the exhibitor being painted legibly thereon.

Exhibitors to Keep Stands Clean.

(29) Exhibitors will be required to provide all necessary attendance, and to keep their stands and exhibits properly cleaned and in good order during the whole period of the exhibition.

† *Non-liability for Loss or Damage.*

(40) The committee will not hold itself responsible for any loss or damage occurring to any exhibit from any cause whatsoever, but while declining any responsibility it is the intention of the committee to take such precautions as they deem necessary.

A large and influential meeting of the Manchester Anglers' Association was held on Friday last, at the Albion Hotel in that city.

The meeting was addressed by Mr. Oldham Chambers, of Lowestoft, on behalf of the Great International Fisheries Exhibition, who explained the objects of the movement and the sympathy that is being felt in it throughout our Colonies and Foreign States generally.

The speaker stated that it was by important associations like the Manchester Anglers and influential gatherings like the present, the executive hoped to awaken public interest in the exhibition in the country.

A meeting of the Council will be held in a few days, when it is anticipated active measures will be taken to promulgate the general interest of the exhibition in the city.

FISHING ROUND BIRMINGHAM.

BIRMINGHAM is not a fishy place, that is to say, there is no really good angling in the immediate neighbourhood free to the ordinary fisherman who cannot or does not belong to one of the few exclusive societies which rent and preserve various parts of rivers and pools.

Why should there not be an association here, similar to the one in London, to rent, stock, and preserve waters, obtain railway privileges for its members, devote part of its funds to the culture of so-called coarse fish, and further angling interests generally? An association to which rich and poor alike might belong.

There are several good rivers within easy distance of this town, which, with the assistance of two or three intelligent keepers and the expenditure of a comparatively small sum of money, could be converted into anglers' Paradises. As it is, they are fished, wired, poisoned, netted, and sometimes dynamited, to a fearful extent. The Avon, to wit, miles of which could be rented for a ridiculously small sum.

If any other Birmingham angler should read this and be of the same opinion, let him communicate with me through the editor, and perhaps something may be done for next year.

Now to attempt to give a short account of one or two places which are available to an angler, not a member of any club. There are the Corporation Waterworks Reservoirs, the fishing in which is reserved for members of the Town Council and by their kindness, respectable inhabitants may obtain an occasional permit. The *modus operandi* being for the applicant to obtain from a Councillor a recommendation to the very worthy chairman of the Water Committee, who will, most probably, give him a permit for self and one friend. The fishing in these reservoirs is, on the whole, good; but by some strange oversight of the powers that be, there are no rules as to the size of fish takeable. Much to my disgust, I have seen large baskets of fish, perch and roach, from three to four inches in length taken. Given a strict rule as to the size of fish to be retained, and the fishing would soon become very good. Ground baiting is prohibited.

There are several pools in Sutton Park, a few miles from town, in which fishing may be obtained on payment of a fixed sum per day, but the fish are wily and difficult to catch, though occasionally an angler is fortunate and succeeds in doing, as a friend of mine did last autumn, taking 60 lbs. of tench, single handed, in one day. In at least two of these pools, I am sorry to notice, that abomination of all sportsmen, the trimmer, is in use frequently.

Besides these, there are many ponds and pools in the vicinity, which are well known; but, unfortunately, all to which the public have access, suffer from a distressing scarcity of fish, attributable to a variety of causes, chiefly retaining very small fish and never restocking.

After all, pool fishing is a slow affair and not to be thought of where a river is accessible.

As regards rivers, we have the Severn, Avon, Trent, Cole, Tame, and many others within thirty miles.

To commence with the Severn. The fishing in many places is free and in some very good, especially for chub and occasionally trout, for which a licence is required. Two free places I will mention where, I may remark, Sunday fishing is allowed; the first Holt Fleet, five miles above Worcester, and seven miles by road from Droitwich Station. Here I have taken and seen taken many splendid chub, and the proprietor of the hotel on the river bank is very clever at capturing fine trout below the weir. This hotel I can recommend to anyone visiting this spot, as being comfortable in every way, beautifully situated, and most reasonable in charges. The proprietor is most obliging, and will give anyone information respecting the fishing.

The other place on the Severn which occurs to me is Arley, near Bewdley, a station on the London and North Western Railway; here the Valencia Arms Hotel is situated on the river bank, and is a most desirable resort for the angler. The river here abounds with dace and chub, the latter of which gives a most excellent winter sport. At Arley still remains one of the few ferry boats of olden times. The scenery between here and Bewdley is almost unsurpassable for rural beauty, wooded banks rising to a great height on either side of the river.

There are many other fishing stations on the Severn, of course. I have contented myself with mentioning two, which are sure to please anyone visiting them.

The Avon, alas! thou beautiful but ill-used river, since the immortal bard dwelt upon thy leafy banks and perhaps dipped his line into thy crystal bosom, sad changes have come over thee. Not but what thou art still beautiful, but the finny treasures have departed, prey to the depredations of sewage and the poacher, and want of proper protection.

There are fortunately still some places in the upper parts of the river where good sport may be obtained; one only I will mention, Ryton-on-Dunsmore, five miles from Brandon, the next station to Coventry on the London and North Western line; here fishing may be obtained in the waters belonging to Ryton Flour Mill, Mr. James Price, the proprietor of which will, I feel sure, give anyone particulars who will write him, enclosing a stamped envelope. I have on several occasions had capital sport here, taking on one day thirteen pike.

The other rivers and fishing stations near Birmingham I must leave for the present.

If I have given any information which may lead anyone to spend a day or a few days at either of the places I have mentioned on the Severn or Avon, I only hope that he may leave them with as pleasant memories as I have, and feel as thankful as I do that there are places within easy reach of a large town where a man may go and forget his business or professional cares for a few hours or days, as the case may be, and at the same time indulge in the most harmless and enjoyable sport imaginable.

AVON.

A FIRST EXPERIENCE WITH BLACK BASS.

OUR love for angling dates back to a boyhood spent in the lovely valleys of Hertfordshire, where we often took jack and large perch in the streams running into the Grand Junction Canal, at a time when this canal was famous for its fine fishing. Our vaulting ambition craved the largest jack, the finest roach or dace; often lucky enough to get some good fish, oftener laughed at by friends for coming home empty-handed! We remember taking a 3 lb. pike at the confluence of two streams close to Frogmore Mills, and lived on the glory for months, until the younger brother of the young lady I was courting, eclipsed me one evening by landing a big fellow weighing nearly 7 lbs.; but he broke his rod and line above the float, and only by jumping into the stream waist deep did he manage to catch his line, seize the fish, and somehow throw it ashore.

A few years residence in the States, an extended acquaintance with fishing and sporting journals, a warm friendship with genial American fishermen, and we again "went a-fishing," but this time for black bass; we put him at the head of the list because to indulge in salmon fishing we must journey nearly 1000 miles ere we can wet our flies in a salmon stream, and to find a good stream with trout in it, we must travel from 300 to 400 miles; but in all our live streams, in all large lakes fed by bottom springs, or that have small creeks running into them, there both species of the bass will thrive, and if given a fair chance will increase and multiply.

We intended spending our summer holidays up near a chain of lakes that connected with one another by a winding and tortuous river, the whole chain being 65 miles long. Friends had written us: "Bring some fishing tackle along, for Torch and Elk Lakes have some fine black bass in them, and you can get some good fishing." Behold us then a few days after in a leaky, loggy punt, tossing up and down on the waves on Torch Lake, as we near the mouth of Torch River, and get into the stream the lumpy water calms, and we catch sight of numbers of bass, lying close to the edge of the channel bank, watching for any unfortunate minnow that may drift into the current. They are a bold, predacious fish, but they do not stay for you to look at them. We cannot stay to fish here, for we have some miles to go up to another lake; so landing on the peninsula, and leaving our boat, we push along up the wood-road into the clearings, to our destination. We stay for the night at our friends of the Clan Campbell. Though many years from auld Scotia, they are true Scots, and gave us a royal welcome.

The son, Alec, is one of nature's gentlemen—a braw lad, leal in his friendships, and never tiring of his task to entertain the guests of the family. He procured boats for us, and was our guide and willingly took the oars, piloting us to the best fishing grounds; we rigged up our tackle and fished with a revolving spoon, making the casts from the bows of the boat, sometimes laying out 30 yards of line in Thames style. We found our spoon did not sink deep enough, so putting on an ounce sinker we could cast out all the line we wanted. We fished some time without a sign of a strike, and began to think all the bass had vamoosed from Elk Lake. Alec said, "Cast on both sides, alternating them." We did so, when all at once up came a big fellow clear out of the water, and gave a double spring back; we saw the gleam of the plated spoon, but did not dream we had hooked him, in fact, he had hooked himself. Down he went into the water; our line had one turn around the forefinger—we soon knew this, for in his mad rush he came near taking forefinger along too—down he went taking yard after yard of line. Suddenly he changed his tactics, and came straight for the boat. Alec shouted, "Look out, now, lead him around the bow of the boat, or he'll smash your rod for you; he's a whopper."

We lead him around, steering clear of the boat and oars, and he tries another mad rush, shorter this time. As we tighten the line on him he sulks; we pull, giving him all our rod will bear, this starts him, Fortunately for us, our trace is fine gimp; had we a gut trace on he would have flouted his tail at us; while our line is taut he suddenly springs into the air and comes down across the trace with all his weight, but it holds, and as we pull in he weakens and turns on his side, played out; the landing net is slipped under him, and we gather him into the boat. Phew! but are not the spines in his dorsal fin sharp? We had taken him up to get the hook out of his mouth, somewhat clumsily, perhaps, he elevated those spines and our hand at the same time, drawing blood from each hole the spines went into. My friend held him up and dropped him as quickly as a hot cake, then cracking his head with a heavy cane and killed him. Taking the hook from its mouth we change the the bait, putting on a helgramite (vulgaris, hellbender), locally named Dobson, a very taking bait, though a species of water-bug, and dropping over the rear of the boat while we scaled and measured our bass. He was over 18 inches long and about $4\frac{3}{4}$ lb. weight; pretty good for the first bass.

But what's the matter with my line and bait, something is going off with it like fury, the moment a dead strain comes on the line, up the gentleman comes, shaking and wriggling as tho' fighting mad; into the air he jumps—the same trick—it must be something peculiar to bass. I am getting nervous with this style of fighting fish, but due care and watchfulness brings him to the boat, another four pounder. An hour's fishing and no bass, so putting on a trolling spoon we row down the lake, about a mile, to a spot called the Narrows, always a noted bass fishing ground. Here we strike another one, small to be sure, but still a good one. I begin casting again and we can almost reach the channel banks on either side. The bottom of the lake is covered with sunken logs and limbs of trees, the bass know it, I fought one here for about ten minutes; he was determined to make for his hiding place. We wanted him, and objected to any such proceedings, and strained rod and line to the utmost, and finally brought it in; we have eight bass that weigh 30 lbs., this is enough; the sun is getting hot and bass won't bite under a garish sky, so we pull for the Campbell's and get dinner, then spend the afternoon in the fruit garden and orchard.

Since that time we have spent many days fishing for these gamey fellows; they will take almost anything that will swim—minnows, helgramite, smail green frogs, artificial flies (if made in pronounced colours) field mice when crossing a river, and even a small water snake; but a choice tit-bit is the small cray-fish, that can be found in fresh water. Stick one of these on your hook, and if any bass are in sight of your bait when it goes down wriggling you can just expect some fun.

Perhaps some one may say, "How large have you seen them caught?" An Indian friend caught one in a stream he leased and stocked with spawners that measured 26¼ inches from the snout to the forks of the tail, and 18½ inches around the body in front of the dorsal fin. We cut a paper profile from a piece of Manilla board, and filled in the fins and markings, sent it to a friend on the Board of Trade. It was pinned to the desk of a prominent member, and marked thus "Holabird's Whale, a St. Joe River black bass," weighing 6¼ lbs.

In conclusion, would say, if some fishing club would put into Tring reservoirs 25 adult bass, and protect them for three years, after that you could not fish them out. I am certain all the streams from Berkhampstead, around Boxmoor, the Little Bourne and the Gade, would in time be benefited by this one planting. They know how to take care of themselves, and no fish swimming protect their spawn and young fry as the black bass does.

I must confess that I fear the Roach and Dace would suffer, and your interesting correspondent "the Thames Fisherman," would be inclined to grumble about them; for they are as pugnacious as an Englishman, as cheeky as a Yankee, and will whip any fish of their weight that swims, but in losing the roach you would gain a gamier fish, far preferable both for the rod and the table.

W. D. TOMLIN.

Chicago.

NOTICES OF BOOKS &c.

NEW PUBLICATIONS FROM MESSRS. CASSELL & CO, LUDGATE HILL, LONDON.

"Greater London," by Edward Walford. Illustrated. Part I. Price 7d. with map.

This promises to be an extremely interesting publication, consisting as it will of profusely illustrated descriptions of the country, towns, and villages, within a radius of about 20 miles of Westminster—from Cheshunt in the north to Leatherhead in the south, from Erith in the east to Staines in the west. With Part I. is given a coloured map, over 600 square inches in size, which alone is well worth the money; indeed, we can strongly advise every London angler to get this map, and we notice that the publishers reserve the right to discontinue to supply it after the expiration of six months. Part I. is so interesting that everyone who purchases it will desire to have the whole work. Mr. Walford's name is a guarantee of its accuracy and picturesque style.

"The World of Wonders," a record of things wonderful in nature, science, and art. Illustrated. Part I. Price 6d.

The contents of this part will give our readers a clear idea of the nature of the work. 1. The Rotation of the Earth. 2. Remarkable Dreams. 3. Giant Cuttle Fishes, 4. Extraordinary Fingernails 5. The Bird Hermit—Life Saved by a Hen. 6. At Sea in a Coffin. 7. Ice and Water. 8. The Suez Canal. 9. Electric Machines. 10. A Monster Water-lily. 11. The Wonders of the Heart. 12. Bird and Insect Warfare. 13. Adam's Peak and its Shadows. All these articles are finely illustrated and the type, printing and paper leave nothing to be desired.

"Our Happy Family." Being the Little Folks' Annual for 1883. Price 6d.

Anyone who desires to please the little folks,—and who does not?—can most surely do so by presenting them with this charmingly illustrated interesting children's annual.

"Cassell's Almanac for 1883." Price 6d.

This year's issue of this old favourite fully sustains its reputation as the best sixpenny almanac published. It is profusely and well illustrated.

Part II. of Cassell's "Familiar Wild Birds." Price 6d.

This second instalment is in every way equal to the first, of which we spoke very highly some time ago. In this part we have most beautiful coloured representations of the bullfinch and starling. By the way, makers of flies, both amateur and professional, would find this work an invaluable aid in the selection of feathers of various colours.

NOTICES OF RODS, &c.

From Mr. J. W. Martin (the "Trent Otter"), 4, Northern Buildings, Lover's Lane, Newark.

The "Trent Otter" is an old, well-known and valued contributor to this paper; his writings have proved that he is thoroughly well acquainted with all the various branches of the art of bottom fishing and spinning. Messrs. Sampson, Low, Marston, and Co. are about to publish a work on the Nottingham style of fishing by him, which we can confidently say is an extremely useful one. Mr. Martin has recently started in business as a fishing rod and tackle maker. He sends us one of his new "Working-man's Rods" for full particulars of which we refer our readers to his advertisement in our columns. Considering its very moderate price we do not think that there is a better bottom fishing and spinning rod than this in the market, and are quite certain it will give full satisfaction to every purchaser, whether rich or poor

From Mr. David Slater, fishing-tackle maker, 9 and 10 Portland Street, Newark-on-Trent.

Mr. Slater, of Newark, received a medal and diploma at Norwich, "for cheap and good tackle and rods," and also won the special prize of £10, given for exhibit of collection of inland fishing tackle. He has sent us a Nottingham rod, reel, and line of his make for notice, being, he says, "Exactly the rod, reel, and line, as advertised in the Gazette, for 11s.; though the purchaser can have the rod stronger or lighter as may be required, also any length between 10 feet and 12 feet." The rod is a really capital one, well suited to the requirements of the bottom fisher. It is in three long joints, with winch fittings and a new kind of upright ring, which has wire guides on both sides to prevent the line catching; this is the best ring of the kind we have seen, and will prove most valuable to all who spin for pike, perch, trout, &c. Mr. Slater ought to advertise this ring at so much per dozen. The reel is a polished hard wood "Nottingham," 3½ inch diameter, with brass cross-piece to strengthen the back and prevent warping. By-the-way, Mr. Garle Browne gave a very useful recipe for preventing this warping in wooden reels a week or two back in this paper. The line is a fine and strong "Nottingham" silk twist, sixty or seventy yards in length, we should guess. We can recommend rod, reel, and line as being genuine articles and wonderfully cheap.

FLOOD.—FISH AND FISHING.

I remember some twenty years or more ago, when Mr. S. Carter Hall presided at the annual dinner of the Thames Angling Preservation Society at the Star and Garter Hotel, Richmond Hill, in speaking about our Metropolitan river he described it as "the beautiful Thames." It might have been so at that particular time, but it is anything but beautiful now, unless there may be those who look upon a flood as beautiful, and see grandeur in the deluge of water that covers the meadows for a great distance all around. The river as I saw it on Saturday last was greatly out of bounds, and the water in the most wretched condition. The estimate of the fishermen was there would be no angling for at least a week or ten days; but they consoled themselves with the idea, and a right one too, that there would be some good fishing afterwards. The perch would collect themselves together and resort to the deeps, and the jack would get out of the weeds and roam about in the stream and open channels. But the great question at the present time is one on which depends the safety of the fish; their abode just now has no limit, and they are roving about in places where it is not altogether safe for them to run. The anxiety of the river keeper will be apparent, as it is as much his duty to look after the safety of the fish as it is in ordinary times to preserve and protect them from the hands of the well known poachers. I was asked the other day by the proprietor of some land that was then under water whether he did not possess a common right to net it. My reply was simple, "Do not attempt it, or you will find yourself in the wrong box." The fish are the property of the Thames, and wherever the Thames flows, the scaly family that are in it belong to the river. It is very probable this winter will find the officials of the T.A.P.S. more to do than they had last winter, as there appears every probability of greater floods, and the work of dragging ditches and other places will become desirable and necessary. The fish will work up into these places, and in previous seasons they have been rescued by thousands out of them. We cannot afford to lose the fish that have this year been put into the lower Thames by tons, and they will not be lost for want of looking after. Just as the previous flood was subsiding the keepers were alive and active in the discharge of their duty. They commenced searching the ditches and taking those steps that were essential in getting back the stray fish. It has been remarkable the number of trout that have been found in the Thames below Kew Bridge by the netsmen, and it may not be out of place to refer to it when speaking of the safety of the coarser fish. These men when they get trout take them up as quickly as possible to Mr. Alfred Nuthall, of Kingston, who is a member of the Committee of the T.A.P.S., and they are at once consigned to the river above locks. I have just received a letter from that gentleman, who says: "One of the netsmen, named Pearse, has just brought over two nice trout, one is a beauty about six pounds." A reward agreed upon by the Committee is paid, and the men are always anxious to bring them. The general idea is that the Thames trout in high water work upwards, but in this case it has been the reverse, and without giving an opinion now upon that point, I will leave the question for others to determine. I shall prefer going back now to the other fish and the flood; and if we only get a few days like the one which followed that of Saturday last, the river will soon get into its proper condition. First of all, the anglers in the eddies will begin to find the roach; and I never think of this without remembering a magnificent show of roach that was made at the Richmond Piscatorial Society, under similar circumstances, by Mr. H. Dickinson, of Kingston, from that portion of the Thames. There the jack and perch anglers, when the water has got the right turn, will be afloat, and I cannot help thinking they will find plenty of fish; but I shall regret to hear of any being taken in the unsportsmanlike practice of trailing. The eyes of all true anglers will be upon those who continue to do so, as there is nothing more strongly deprecated in the clubs, both by punt and bank anglers, than the system of trailing. At the important gathering of anglers at the conference at Cannon Street Hotel, in August last, if the meeting could have determined upon making a bye-law to put a stop to trailing by making it an illegal act, it would have been carried with great enthusiasm, and not a single dissentient would have been found in the room. My advice now is to anglers to avail themselves of each chance of fishing after a flood; and support all that is true and honest in the sport. B.

THAMES SIDE RECOLLECTIONS.

By CHUB-CHAVENDER.

(*Continued from page* 317)

FIFTEEN years ago the water at the Middlesex side of Chertsey Bridge contained some splendid old barbel, which occasionally were taken, but more often got away. I daresay there are many still remaining, for the traffic, though it interferes with the biting, seldom entirely drives away the pier-loving elder members of the wattled community. Several of these fish have fallen to my rod, one going as high as 8 lb. in weight. In early morning these fish could be easily seen if the weather were bright, with their brown backs and broad expanded fins showing plainly in the clear water, as they hovered round the huge stone buttresses. A snatching hook might have dealt death amongst them very extensively, but a baited hook they simply ignored, moving calmly away to let it pass. At that time, one of my frequent companions was a gentleman, brother to a well-known Chertsey angler, of exceedingly quiet and angler-like persuasion, whose patience was infinite and but scantily rewarded; for did he not, I remember me, even prefer a barbel hook bound on somewhat coarse brass wire to the fine gut, which alone would allow success? Well do I recall the horror of my soul when, on my presenting him with a gut hook from my tackle book, that he might exchange it for the uncivilised wire, he calmly took out his knife and severed the gut below the shank. "For gracious sake what *are* you doing?" I asked. "I always use wire," was the reply. "Thank you very much for the hook, I will whip it on presently." Poor gentleman! what he lacked in sport he certainly made up in a gentle undemonstrative patience, almost pathetic.

On the shallows of Dumsey Mead I took my first Thames trout. For some twenty yards out in summer time the stream cannot exceed a couple of feet in depth, and though there was a marvellous growth of the American weed, some pretty sport with roach, dace and a gudgeon could be had here and there from the clear spaces, and the fly was ever useful when wind and weather permitted. At the time of which I am speaking (twenty years ago), there dwelt an old gentleman just over the bridge whose sole means of recreation were his pipe and rod and garden. Many a time have I seen him resting to light the enormous meerschaum he always carried, and enjoy a quarter of an hour's contemplation; many a time have I watched the dace come, one after the other, to bag, as accompanied by the author of the immortal and inimitable "Box and Cox," (who then lived at Chertsey) he has plied the blow line, baited with the alder, bluebottle, or cow-dung flies. Hungrily have I, as a mite, longed to be able to fly-fish like this and catch such bouncing dace and roach, and at last my desire was gratified; this kindly old gentleman took me in hand, and by his side I learned the exquisite pleasure fly-fishing is capable of affording. Poor old gentleman, he has passed long since to that "undiscovered country, from whose bourne no traveller returns;" but I shall never forget his kind Waltonian face with its ready smile, and the lessons he taught will keep his memory ever of the greenest.

This gentleman was my mentor, my Gamaliel, guide, philosopher, and friend in the catching of the first trout I ever took, and about which, by-the-bye, I had almost forgotten to tell you. The day had been a sweltering one in midsummer, and the sun was just sinking in a glorious panoply of crimson, purple, and gold, when I joined my instructor on the meads, about three hundred yards below the bridge. The stone-flies were on the water, and I had come prepared with a goodly gentle-box full of them. My rod was a bamboo light roach rod, about 16 feet long, and a floss silk line of 20 yards, to which was attached a length of fine gut, and a No. 10 roach-hook comprised the tackle. Oh, how grateful was the soft and fragrant south-west breeze, blowing from behind us! Very soon the dowdy little old maid, as Kingsley calls the alder, was impaled and floating softly out, buoyed by the line like a gossamer spider, to eventually fall with ever so slight a fall upon the water rippling on its shallow way, "gentle yet not dull," as Denham hath it. Several dace had fallen to this sort of negociation when, as I neared an ancient willow which then stood by the water—I could point out the spot to a foot—a boil of the water, and I was fast into something rather more important than a two-ounce dace. The spike of my companion's rod was in the ground in a moment, and he himself by my side with words of reassurance and advice. Twenty minutes did I fight this my first trout, and at last I had the delirious joy of seeing my beautiful prize, with his eye like a rich round jewel, and his incarnodined sides and pearly underside, lying subdued and panting out his brave heart's life. Four pounds and a half he weighed, and that night, I doubt not, I felt an an intenser emotion of pleasure and jubilant happiness than ever has been or ever will be repeated this side the universe with me. As I write, I seem to recall it so vividly, that it sends one's blood again thrilling through the veins. I fancy my friend was even more proud than if he himself had taken it.

Passing down from the scene of this (to me) memorable capture, we arrive at the famous deeps, yclept Dumsey and Domesday. Here the stratum is gravelly, with mighty boulders and stones interspersed, though the bottom is by no means a bad one for the bottom fisher. And the fish! Barbel, bream, big roach, and dace, here and there a perch of colossal proportions, but chiefly the first two named, form the staple of what the deep contains. Here is the paradise of the Nottingham rodster, and I have known a hundredweight of barbel and bream as the result of a day's fishing. Persistent baiting, and baiting with judgment, are, however, necessary to sport in this part of the Thames.

Docket Point—so called after the man Docket who lived in the cottage here—equally possesses some grand barbel, and even jack are taken from the reeds on the right-hand side of the river. This part of the river, I need not tell my readers, was the site of the deplorable accident between Debignes steam-launch and a rowing-boat some time ago, and I myself have once or twice narrowly escaped a running down by either launch or rowing-boat. It would be tedious to recount the number of fish and the various catches which my diary indicates as having been my sport near here in those my early days; but hour on hour in winter and summer has this length of water been fished by me, until it seemed to speak voices of pleasaunce which even now I can hear. Increased traffic on the river, however, and the enlarging number of anglers are doing their work, and I greatly fear that unless our worthy editor's coarse fish scheme becomes a living reality, the days of old sport are gone never to return.

FISHING ON THE DEE.

NOW that the fishing season is coming to a close, and that there are only a few days more that we can fish, perhaps the following information may be of interest to some of your readers who are fond of the gentle art. If any of your readers would like to have the last three days in salmon fishing they cannot do better than go to Carrag-on-the-Dee, a small station 2 miles this side Corwen. They can leave by the eight boat—Prince's landing-stage—then by the train from Birkenhead, which leaves at 8.20 a.m., arriving at Carrag, 10.30 a.m. There is the Grouse Inn, within 300 yards of the station, kept by Mrs. Evans and her daughters, where you can be made very comfortable, and the terms are moderate. The charge for salmon fishing is 2s. 6d. per day, and the licences for the week 7s. 6d. The river is now in good order, and there are a great number of fish up. I went up on Thursday last, and returned on Saturday night. On Thursday I killed two salmon, on Friday two, and on Saturday one, from 10 lb. and upwards, besides others which I had good battles with, but had the misfortune to lose, and one or two after almost being ready for gaffing. This has been a good season for salmon fishing—in fact, it has been one of the best I have known for years. There are more salmon up the Dee at the present time than has been known for many years, and if the winter be a mild one we may expect a great crop from this spawning season. Out of the fish I killed (as four of them are females) I took at least 40,000 ova. It looks almost a pity to kill them in this state, and I fancy I can hear some of my friends say "I ought to know better." Well, I may just say to such friends that they only say this for want of thought. The fact is if you had killed them in June the loss to the river would have been quite as great; but as many fishers cannot get them in June, when in their best condition, we have to be content with them later on in the season. And we are the losers in so much as we don't get them for culinary purposes as we would wish them.—W. RAMSBOTTOM, in *Liverpool Courier*, October 29.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

SCALE FOR ASCERTAINING THE APPROXIMATE WEIGHT OF FISH.

A North Devon correspondent recently asked for the above, and Mr. J. A. Hutton, of Victoria Park, Manchester, very kindly sends it; he says it is from J. T. Burgess's book on Angling, page 176. Of course, such a table is only approximate; you may, in the same river on the same day, catch a trout of twenty inches weighing less than one of eighteen inches.

Length in inches.	DESCRIPTION OF FISH.																				Length in inches.
	Trout.		Salmon.		Pike.		Grayling.		Carp.		Chub.		Barbel.		Roach.		Perch.		Tench.

NOTE.—Mr. Burgess says, with reference to the above table:—"As it is inconvenient to carry a weighing machine about, and as anglers will persist in guessing at the weight of the fish I give here a scale which will enable them to ascertain with tolerable precision the weight of the fish when in good condition. It must be borne in mind, however, that the weights given are only approximate."

CLUB AND OTHER JOTTINGS

By L. B.

CLUB men and anglers generally will be sorry to hear that that indefatigable worker, Mr. Tom Hoole, is suffering from a severe attack of rheumatism which confines him to the house—and all alike will join in wishing him a speedy recovery.

Mr. John Knight has been elected secretary of the Marylebone Angling Society, in the place of Mr. W. Pearce, resigned.

The little book, "Where to Fish Round London," has been handed over to one of the oldest and ablest of our piscatorial writers for revision, and when the next edition is published it will not only be corrected, but considerably added to, and I feel confident will do much to supply the long felt want of a thoroughly reliable cheap book of reference.

A meeting of the working committee of the West Central Association of London and Provincial Angling Societies will take place at the Portman Arms, Great Quebec Street, on Friday evening, November 3rd. There are several new societies to be proposed for enrolment and other business of importance to be got through, so it is hoped committeemen will muster early.

The monthly meeting of the United London Anglers' Central Committee will take place at The Bald Faced Stag, Worship Square, Finsbury, on Monday evening, November 6th, Mr. Samuel Morgan will preside, and several matters of importance are down for discussion.

I thank Mr. R. Woolfall for his kind offer to send me a graining, I have forwarded him my private address and shall look out with pleasureable anticipation for the coming of the fish.

Re Tench in the Thames.—I have a distinct recollection of seeing a splendid take of these fish weighed into the North Western Angling Club by Mr. Wheeler; there were, if I recollect right, about 12 or 14 fish, averaging about 2½ lbs.; they were taken towards the close of the old Thames general angling season, in the neighbourhood of Shiplake. I am only speaking from memory, but should any of the readers of the FISHING GAZETTE feel curious about this take, I have no doubt Mr Fred Hill, the courteous secretary, could, upon reference to the weight book, tell us exact date of take and gross weight of same.

A capital article *re* "Anglers' Rights on the River Thames," appeared in last week's number of an excellent contemporary, "All the Year Round." It is well worth reading by all interested in the question.

A No. 1 District West Central Association visit will be paid the Phœnix Angling Society, Tavistock Arms, corner of Warrington Street and Stebbington Street, Oakley Square, on Tuesday evening, November 7th; the Phœnix Anglers have a bonny big room, and are prepared to give a hearty reception to any number of brother rodsters who can spare an hour to give them a look up on this occasion.

Re Netting the Associations water.—I cannot help thinking it is pitiful anglers should write such letters as the one signed "The Red Fisherman," which appeared in last week's GAZETTE. Does the letter contain a tittle of evidence to justify the above heading? Decidedly not. "The Red Fisherman" asks a question of a native and reads the answer in a smile; the said astute native further tells him that the bargemen do net the canal, &c. That this canal is netted, is a generally admitted fact—and pray can "The Red Fisherman"—or, for the matter of that, any other fisherman, tell us of any other water, particularly canals, whose waters are great highways, where there is not good reason to believe netting is carried on by bargemen. I am afraid it is very difficult and costly to put down netting entirely; all we can hope to do is to reduce it to a minimum by taking all precautionary measures in our power. To bring through the medium of a public paper, what is practically a serious charge against those who are striving to do their utmost for their brother anglers, is, I stoutly maintain, a pitiful thing—such a letter is, moreover, calculated to encourage poachers. If "Red Fisherman" will give my colleague, Mr. Hoole, now lying on a sick bed, reasonable time to carry out the measures he speaks of, and let those who are watching the water—whatever the natives may say to the contrary notwithstanding—continue their good and necessary work without discouragement, he will be doing us a real service. "Red Fisherman" and his friends need not, however, be positively idle, if they see anything wrong, they are part owners of the fishery, remember; they can take immediate steps to have it set right, or, if they do not care to do this, they can at least telegraph number of barge, date, &c., to Mr. Hoole, who will not lose an hour in having the matter seen into; and just one thing more, if "Red Fisherman" will keep his eye on some of those natives about Watford above, and Uxbridge below Rickmansworth, he may be doing us a real service. There are a number keep quite a collection of nets, for show, of course, they never use them, oh, no. If you doubt it, ask Mr. Vincent, secretary of the Watford Piscatorials; and as for the little bit of copper wire and the stout pole—when the jack by-and-bye are in trouble—well—I speak from an intimate knowledge of the water, remember, which "Red Fisherman" admits he has never even seen.

WORMS IN DOGS.—"Scalford, near Melton Mowbray, Jan, 7, 1871.—Keeping as I do so many valuable mastiffs, probably as many as any breeder in England, I have used 'Naldire's Powders' and consider them an effectual, speedy, and safe remedy for dogs.—M. B. Wynn." "Naldire's Powders" are also a splendid alterative, keeping dogs in excellent condition. Price 1s., 2s., 3s. 6d., and 5s., of all Chemists, and of Barclay and Sons, 95, Farringdon Street, London.

ARRIVAL OF MORE BLACK BASS IN ENGLAND.

We are glad to say that Mr. Silk has got safely back from America, with a lot of fine Black Bass. We hope to get him to give us a short account of his trip next week. These Black Bass are for Lord Exeter, Mr. W. Oldham Chambers, Mr. Carrington, and Mr. R. B. Marston.

RIVER REPORTS.

MID-THAMES.

I am pleased to report that the river has rapidly subsided, and although still high and travelling like a race horse, will be in fair angling trim by the time these lines are in print. Anglers, if they are bankers, will have to put up with some slush and mud, but success will assuredly attend their efforts, worm fishing especially, in the eddies and lay-byes. At Bray, on Sunday last, some excellent roach were had from the quiet corners; and in the cut to the lock at Cookham bags of 8 lb., 9½ lb., 10¾ lb. and 14 lb. have been reported to me; but I am sorry to say the fish all ran small, and pounds of them should have been returned. At Marlow, little has of course been done during this flooded water. Eels here, however, have been plentiful and hawked about the town at 9d. per lb., which is cheap in the face of 2s. per lb., which is willingly given in the summer time. At Hurley, on Sunday, Mr. Gerkey caught 5 lb. of roach a perch of 2 lb.; and on Tuesday Mr. Brooksbank got some 3 lb. of roach with and lobworms, and lost a perch estimated at 3½ lb. after a five minutes' fight.

Thursday Evening.—River rapidly sinking from flood, fining down from brown paper colour, and becoming first class for roach and jack.—Marlow Buzz.

Ancholme District.

In February last I turned out in one of the small rills hereabouts 2000 Fontinalis fry, and was agreeably surprised to find that these pretty fish have grown wonderfully well. Out of twenty caught for inspection on Saturday last, no less than sixteen were 6 inches in length, and it is a singular fact that most of them were males, from which the milt was exuding. As these were all caught in a small landing net, they were none the worse for the gentle handling, and darted off with considerable vigour when returned to their native element. Some one has given these fish the character of runaways, but, so far as my experience goes, I find them to stop in my water better than trout. It may be that my water suits them. It literally abounds with shrimps, and is unsurpassable for purity. These little fish were the prettiest sample I ever saw, and will, I have no doubt, be ready to catch next season. Despite the very heavy rains of the past week, and the consequent discoloured state of the water, some good catches of both roach and bream have been made here and there in the stillest places.—Thomas Ford, Caistor.

Chichester.

The water has now nearly reached its normal height, and with but a little fine weather would be at once fishable. No matter how great the flush, this water is always in trim. The Chichester Angling Society were most fortunate in their excursion to Selham on the 28th as far as weather was concerned, but the swollen state of the Rother rendered angling a piscatory pursuit under difficulties. However, Mr. Hammond managed to take first prize with a pike of 1 lb. 15 oz. Mr. Rogers second, with a roach; and Mr. Stokes, third prize. A most enjoyable day was spent. Mr. Willison, of the "Three Moles," catering in his usual obliging and reasonable manner. (We anglers are not often "over blessed wi' siller.") Home was reached at an early hour, all being delighted with their outing.—George F. Salter.

Derwent (Chatsworth).

Since my last communication there has been no favourable change in the weather, it being the reverse of bright, and river still continues thick and rather high, which causes fly fishing to be at a complete standstill, and prospects of it at present not too bright; but if weather should be favourable water will be again in fishable order in a week, when good fly fishing may be expected. Bottom fishers in the beginning of the week did very fair amongst grayling with maggots and cockspur worms.—Wheatsheaf Hotel.

Dove.

Weather and water rather muddy, though highly favourable for piscatorial pursuits. There have not been many rods out since the late flood, but the few that have frequented the river have met with gratifying encouragement, notably at Hartington and lower down stream near Okeover. Bottom fishers, too, have had fairly good sport, below Uttoxeter, amongst the bream. Pike have hardly commenced to run as yet. A few sharp frosts and a little dry weather will have a beneficial effect upon them. To-day (Thursday) there has been a fair rise of grayling on the river, and the elements have a decidedly improving appearance.

Eden (Armathwaite).

The weather has been very unsettled, with heavy rains. The waters have been so heavy that only poor fishing has been had. On Friday last Mr. R. Routledge and Mr. Brooks got six salmon in the Warwick Hall water, which weighed in all 126 lb. The same day the Rev. Canon Whitmore got one in the Armathwaite Club water. On Monday George Ferguson got one weighing 20 lb , and Wednesday Mr. Hannah one weighing 18 lb., also in the Armathwaite water. The season closed on Wednesday.—Skiddaw.

Eden (Carlisle).

Yesterday closed one of the worst autumns for salmon-fishing that I remember for many years, or, to use the expression of the local anglers, "it has been a terrible back-end." As I wrote you some time ago during September there was a great scarcity of fish. Towards the end of the month there was a fair run, and anglers' hopes were in proportion; but, what with deluges of leaves in the water and the unsettled weather, the river has hardly ever been in good order for more than a day at a time, and constant disappointment has been the general result. Some anglers, who have had little or nothing else to do, have killed a fair number of fish, in one or two cases two or three being gaffed in a day; but the general result has been bad—so bad that I hear keen old hands saying they are glad it is over, and rods are being put away with a feeling of relief as angling and disappointment cease together for the next three months. For many reasons I anticipate a poor spring-fishing season. Let us hope I may turn out a false prophet.—Silver Grey.

Ilfracombe.

Sea fishing Friday and Saturday; very few herrings caught, the wind blowing strong from N.N.W. with heavy sea. Sunday evening several boats out, fishing very slack; Monday the average of herrings caught was 150 in a boat. A lad fishing from the flat rock off the Capstone Parade, caught a ling 24 lb., and a cod 20 lb. was caught from the jetty. Tuesday the boats had some good fishing with ground lines, over 300 cwt. of conger, three ling 60 lb., and five cod weighing from 15 to 20 lb. each were brought in; one ling and one cod was caught with hand lines from the jetty. Wednesday blowing a gale, the harbour full of small mullet; a herring net was set across, but they failed to secure any. A man threw a stone and cut the head of one off. Thursday morning wind moderating a little; the boats had a short drift, one boat hauled 300 herrings, the other only 20 or 30. The harbour is again full of mullet, two conger just caught from the jetty weighing about 12 lb. each. Wind still blowing strong with a heavy sea.—E. Comer.

Lea (Ware).

No fishing of importance has been had hereabouts since my last report, the continuous downpour of rain having caused the river to rise to such an extent that floods have been the order of things; still I am pleased to say the water is gradually subsiding, and its colour toning down. If we get no more rain this week I should fancy anglers should be fairly "in it" amongst the roach by Sunday. Fishing in the "Manifold Ditch" adjacent to the river, on Tuesday afternoon, I caught some fine roach—ten drawing the scale at 4½. Mr. Hall, also fishing in the same water, had a splendid lot on several occasions during the week. These fish, as well as my own, were taken with the ordinary red worm. But I would remind anglers visiting this place that the "Manifold Ditch" is private water, and fishing in it can only be obtained by permission.—Lion and Wheatsheaf.

P.S.—Thursday evening: Rain again falling steadily.

Leicester.

The heavy rains we have lately experienced have not tended to improve fishing matters in this district, as it has rained without exception every day during the past fortnight. Consequently the river Soar and most of the brooks have been unusually high and discoloured. Still the more ardent anglers would not be denied, and several have been rewarded by a few good roach and perch, taken in the quiet spots. Mr. Bird took several roach at the early part of this week weighing close upon a pound each, and a number have been trying for pike, but have met with very indifferent success, as only an odd brace or two have been had. At Aylestone matters are quiet, and but little angling has been done lately, the rain having been the greatest drawback to these waters, which are usually a good resort for winter fishing, as there are some of the finest chub fishing in this county. Reports from Barrow-on-Soar are very quiet, whilst but few anglers have patronised the Wreake. The weather on Thursday was fine, with cold winds. Waters fairly high, and too much colour in them.

Medway (Tonbridge).

The locks have been kept open, and the water is now getting in capital condition. If we are only favoured by fine weather, anglers will be busy by the commencement of the week.—Ye Medway Water Rat.

Nene (Northampton).

The water is in this district now becoming fishable. The sport for the last fortnight has been a complete blank. But I think, with reasonable weather, we shall be rewarded in the coming time, and I hope to be able to send you some favourable reports.—T. F.

Taw (N. Devon).

Water still high, only just a half-day now and then fishable. River over banks and full of leaves, one day red, another black, next day muddy. Last Saturday, one salmon and six peel. On Monday, Captain Croxen took two peel. A gentleman staying at Southmolton Road took a salmon; another gentleman held one for twenty minutes, and then it broke away. Yesterday Captain Palisson took a peel and others, I hear, got some fish further up the Mole. This is the best season for salmon I ever remember, and only thirteen days left. It is to be hoped some fine weather will be had and many salmon hooked. Most salmon fishermen are pleased with their sport, and I have not heard of any, as in years gone by, complain of having bad luck. The only fault experienced is that there are not enough farmhouses to put up at on the rivers; but Barnstaple, being the capital of North Devon, is large enough, and good train accommodation for many more fishermen. A few fish only are taken with the fly, the Devon (real) minnow is the attractive bait.—Rusty Game.

Thames (Goring).

Water now going down fast, and getting clear. Sunday, if it keeps fine, will do well for all sorts of fishing.—John Rush.

Thames (Oxford).

During the past week there has been a slight diminution in the volume of the flood water. This morning the gauge at the Botanical Gardens registered a fall of 6 inches since the previous day. The Thames is settled and clear, and it will be good business for any angler who can spare a quiet hour over the flood water and still corners and bays of the river. Three days more of fine weather will bring the Cherwell to its usual condition, as far as the colour of the water is concerned, but it will be at least a week or ten days, under the most favourable circumstances, before it is possible to wet a line from the banks of either stream. The meadows having absorbed every drop of moisture they are capable of receiving, the water with which they are covered must await the lowering of the river before it can get away by its natural channels the ditches. The fish which at this time have taken refuge in the floods to escape the force of the stream will, as a natural consequence, be left in great numbers in the ditches, and as they always work to where the supply emanates, either on account of the increased aëration of the water or greater facilities for obtaining food, making gigantic efforts to surmount the obstacles in their way, are, especially the jack, at the mercy of any poacher who chooses to go around armed with a brass charley (Anglicè wire snare) or gun, and it is greatly to be deplored that our splendid district is not in the hands of a society similar to the Maidenhead, who would take the protection of the dykes into their charge, and so put a stop to the indiscriminate slaughter of the imprisoned fish. Many anglers indulge in very pointed and curious remarks when they are pulled up by a large ditch, which prevents their trying that likely reach in the next field. I own it very disagreeable to have to walk over a hurdle, or, worse still, to stand the chance of a sudden immersion, by falling off a plank or tree trunk, slippery with frost or slimy confervæ. "But why not stop and try the place." An unlooked-for contretemps of this sort seldom upsets my equanimity—in fact, I rather like to have the good luck to come across one, especially if there is any stream running through it. I survey my ground, or I should say, water, carefully noting the likely swims and especially the sheltered places formed by the debris collected by the branches of a partly submerged bush, rush beds, etc., and, if possible, I endeavour to gain some idea of their approximate length and depth. This very satisfactorily accomplished, I retrace my steps, and starting at the head of the ditch with the tail of a nicely scoured lob-worm, I try each in succession, after I have given the whole length of water a fair trial, and if I have time, I again return to the point at which I began fishing, and try the effects of a live bait, and invariably succeed in capturing one or more good fish which have taken up their quarters at its mouth. In the ditch belonging to the Great Western Railway, a portion of which bounds Port Meadow, I once, after a summer flood, succeeded in capturing two roach which turned the scale, respectively, at 1 lb. 6 oz., and ¾ lb., a jack, and several good perch. I took a stroll on Tuesday last along the banks of the old river, at the present time almost the only fishable spot of any length between Oxford and Iffley. There were a few anglers at work. One named Carter, had just lost a jack of about 3½ lb., which had succeeded in breaking his tackle. Another informed me that he had been engaged in a life and death struggle with a monster of quite ½ lb., who had also gone off to join his relations, let us hope a wiser fish for his pains; and a fortunate piscator had succeeded in grassing one off the L. N. W. pumping station, which might have weighed 1 lb. I also saw a two and a half-pounder landed off the G. W. R. Allotment Gardens, opposite to Louse Lock. I hear that a large jack, estimated at 14 lb., more or less, was seen in the floods at Shipton-on-Cherwell on Sunday afternoon, by a labouring man, who, luckily for Master John, had his best clothes on, and also that a short time ago one of 11¾ lb. was picked up dead in the Red House Lake, above Wolvercote, having in his struggles pulled the peg of the night line on which he was caught out of the bank. It would have been a great blessing if a lively young bull had appeared on the scene and assisted the brute who set that line, whilst engaged in his nefarious work, to a short aërial flight and a cheap bath for his trouble. Don't forget that the supply of worms for the winter may be picked up now with very little trouble, but that very soon a change in the weather may render them practically unattainable. You are not always obliged to follow the advice of ancient books on angling as to the best means of keeping and scouring them. A friend of mine, a rather green hand, was met one evening at his usual pub. by a bright spirit, who informed him that he had read in an old fishing book, published goodness knows how many years ago, that it was a good thing to put camphor with them. Filled with the idea, he purchased 2d. worth, and on reaching home placed the whole lot in the bag in which he kept his worms. I went out with him a few days after, and in the hurry of starting he omitted to ascertain their condition; when he did examine them at the water side they came out looking as if something they had eaten had given them the stomach-ache. I never heard a man utter such a stream of varied and long-continued profanity—the air was thick with brimstone, and as for the author of that lying old book, no punishment he could think of, even dissecting and hanging him, was good enough, and if the misguided man who had given him the advice had come along just then he would have been treated to a free meal of camphorated worms by my irate companion.—CHERWELL OTTER.

Thames (Twickenham).

Wind south-west, with light showers. I am pleased to say the water is running off well, and is getting a good colour. I hope, if the weather keeps fine, to be at work again by the time this is in print. My customers will have some idea of the amount of water we have had here when I tell them I started last Sunday in a punt from our door and landed in the bar of the Island Hotel. I am sorry to say the grounds and premises attached to the hotel have suffered greatly from the floods, and the banks which cost Mr. Anderson, the proprietor, over £1000 last summer to keep the island "high and dry," have blown in in several places, which at low water mark has the appearance of large reservoirs; but it is a pleasure to hear "Andy" remark, when he is being consoled with his loss, "Well, it might be worse."—ALFRED PERRIN.

Trent (Alrewas).

Gales and floods continue to be the order, or rather the disorder, of the day, while the meadows adjacent to the rivers are reported in lamentable condition from the flood water. As far as the rivers are concerned, news piscatorial, I have none, and very little from other localities. A few jack ranging from 3 lb. to 6 lb. have been taken spinning, and a number of perch, about ten to the lb., have been taken from one of our waterworks reservoirs. The fishing by the way, is monopolised by the members of our town council and their friends. If these waters were thrown into the market and let to respectable anglers or angling societies at anything like a reasonable rate, a goodly sum might be raised towards reducing our heavy expenditure. The river to-day (Thursday) is reported over the banks, and the water thick and unfishable.—JAMES GREGORY.

Trent (Newark).

It is not worth while wasting paper and ink over the river report this week, for the water is out of condition and no chance of angling for a week at least, if the weather should be favourable. Miles of meadow land in the valley of the Trent have been submerged, but on Sunday the water was going down rapidly. Since then heavy rain has again caused a rise, and so to-night (Thursday) water is high and thick, and prospects very bad.—THE TRENT OTTER.

Tweed and Teviot.

Since my last notes of a fortnight ago, rare sport has been got by anglers on this queen of salmon rivers. During the past ten days Major-General Henry, on his water, the Pavilion, Melrose, has killed upwards of 30 fish—one very large beautiful one of 38 lb. On the Hon. H. Brougham's waters, Maxton and Rutherford, he has had as many, and all large fish, ranging from 16 lb. to 28 lb. and 31 lb. On the Floors Castle waters, both the Duke of Roxburghe and his Duchess have had capital sport, and one day on the upper water there Mr. Dalton had a take of nine salmon, the weights being 27, 25, 21, 21, 19, 23, 18, 14, and 16 lb. On the Hendersyde water, on Tuesday week, Colonel Biden had one of 20 lb., and on the following day his Grace the Duke of Roxburghe killed seven salmon on the lower Floors waters, ranging from 15 lb. to 24 lb., and on the same day the Hon. H. Brougham, on Maxton, had half-a-dozen, largest, 26 lb. Mr. Denison, on Birgham Dub, had three, 28, 22, and 18 lb., and on Sprouston water Mr. Kermack, Edinburgh, one of 9 lb., while Colonel Biden had one of 17 lb. On the Ednam House water (Junction), Major-General Hood, of Staining, killed one of 15 lb. On Thursday the sport got was again very good, as on the Birgham waters Mr. Denison had a brace—22 lb. and 15 lb. respectively. On the Sprouston water Mr. Bayliss, C.E., London, had one of 14 lb. Colonel Biden, on the Hendersyde water, had one of 24, one 18, and one 17 lb. On the Edenmouth water Mr. Jas. Kerss one of 22 lb., and the Duke of Roxburghe, the upper water at Floors a couple—7 and 19 lb. On the Junction water Mr. P. Elliot one of 20 lb., and Mr. J. Drummond, Ednam House water a brace—19 lb. and 14 lb. On the Floors water the Hon. C. Barrington four—ranging from 16 to 22 lb. On the Shott on Floors water Mr. Dalton had five—one 28 lb. On Birgham Dub the same day (Friday), Mr. Denison two—18 and 20 lb. On the Husel water (Lord Howe's) Lord Romney, two—one 32 and one 18 lb.; while on the same water the Earl Clanwilliam had one of 20 lbs. Mr. James Moffat, Edenhall, on the Husel water, the same day, killed one of nearly 20 lb., and on the same day Mr. Drummond, on the Ednam House water, killed a brace, one of which scaled 16 lb. and the other 20 lb. On the Hon. H. Brougham's water, that gentleman had over a dozen fish, one of which turned the beam at 34 lb., a few of the others scaling 26, 20, 20, 18, and 16 lb., while on Saturday he had one of 16 lb., and two of about 20 lb. each. On Saturday excellent sport was got on all the casts in this neighbourhood. On the Ednam House water, Mr. Pringle Elliot had one fish, and lost several. On the Hendersyde upper water, same day, Colonel Biden had one fish of 18 lb., and on the Birgham Dub water Mr. Dawson killed half a dozen salmon, weighing 2[illegible], 20, 20, 17, 13, and 9½ lb., and lost one of about 7 lb. On the Sprouston water, Mr. James Brunlees, C.E., London, had good sport, killing five fish one of which scaled 31 lb., the others being 20, 15, 13, and 9 lb. each. On Hendersyde Dub, the same day, Mr. Dalton killed three salmon, and on the lower water Sir George Waldie Griffith killed one. On one of the middle waters on Friday half a dozen salmon were got, and on the following day nine fish were taken from the same water. On Monday all the casts were occupied, and again anglers were awarded with good sport. On the upper Hendersyde water, Sir G. W. Griffith had a couple of about 18 lb., and on the lower Sprouston Mr. Kermack had one of about 16 lb., while on the upper Sprouston Mr. Brunlees killed a grilse. On Birgham water Mr. Denison had one of 13 lb., while on the same water, the same day, her Grace the Duchess of Roxburghe killed a brace, one being 30 lb. On the Maxton water, the Hon. H. Broughan had three. The fishing on Tuesday, however, was not nearly so good, a slight rise in the rivers having caused the fish to be rather unsettled. On Hendersyde Dub, Captain Griffith killed four salmon; and Mr. Brunlees, on Sprouston, had one of 27 lb. Mr James Moffat, on the Ednam House (Junction) water, got one of 15 lb.; and on the same water, Sir W. Scott, Ancrum, killed one also of 16 lb.; and on the Sprouston water, Mr. Bidder, Q C, London, killed a brace of nice salmon, 21 lb. and 24 lb. In the Coldstream district, the takes are better than they have been for some time. On the Lees water, Mr. Farrand, London, has killed a brace; and on the Combill water, Christie has had good sport, getting five fish—heaviest 24 lb. On the Learmouth water, Mr. Bushfield has killed three—from 14 lb. to 27 lb. On the Birgham water, Mr. G. H. Thompson, on one day, killed six fish—weight, 120 lb.; and on the same water, on another day, he had one kipper—a regular beauty—of 30 lb., and a grilse of 10 lb. Excellent sport has also been got in the Galashiels district, the water being full of fish. On Wednesday, on Sprouston Dub, Mr. Brunlees, C.E., London, killed six salmon, weights 25, 18, 19, 20, 17 and 16 lb.; the same day on same water, Mr. J. Bayliss, Kingston-on-Thames, killed one of 30 lb., but the take of the week was that got by Mr. Denison (who is as yet the lion of the season), who on Bingham Dub, had nine salmon to his own rod, the weights of which were 25, 25, 19, 23, 16½, 16, 16, 14, 15, gross 170 lb. weight. On the Hendersyde water Captain Griffith killed one, and Sir G. W. Griffith a brace of 18 lb. each. On the Junction water, Mr. Drummond had a brace of fish, one 13 lb. and one 14 lb. and on the lower water at Ednam House, Mr. P. Elliot had a couple, one of 16 lb. and one of 18 lb.—MAXWHEEL, Kelso, Nov. 2.

P.S.—Weather dull and threatening, with the wind in the South.

Witham (Boston).

The river and great drains in this district are still unfishable. Large bodies of water continue to come down them, and all idea of angling must be given up for ever, again came, and things are as bad as ever. The scouring out which the another few days longer. On Monday prospects had much improved, the water was running down nicely, and some chance of a resumption existed. Rain, how-drains are getting will be of advantage to anglers, and when they can be utilised the pleasures of pike fishing will be much enhanced. Vegetable matter has all but disappeared now, and the waters are clearing. The net men are still reaping a great harvest among the eels, which are running in immense quantities. There have been very high tides at Boston, and some of them have found strange abiding places by their aid.—YELLOW BELLY.

Wye and Derwent.

We have had a very great quantity of rain fall since my last report, which has caused the rivers to be in one continual boil the whole of the past week; in fact, to-day (Thursday) the Derwent is bank full from the heavy rain which fell in the night, and is not even fit for bottom-fishing. The bottom fishers on the Derwent during the past week have killed some handsome dishes of both grayling, roach, and dace, with both maggots and brandling worms. Last Friday one angler got on the Darley Dale Club water 11 brace of large grayling with worm, three of the largest grayling turning the scale of 3 lb. 2 oz., the lob in feed below Cromford.. There have been baskets made from 6 to 13 lb. per angler. We have had no fly-fishing lately. There will be none worth coming down for, for another week or ten days. Weather very unsettled.—Geo. Jas. Eaton.

Yare (Norwich).

The floods have put a stop to all angling on this stream for the chief part of the past week. I hear reports of some good takes of bream at Brundall, but they have not been confirmed. Should the weather improve, I look forward to good sport amongst the bream and jack during the next few days. Many fish will be killed by being left high and dry on the marshes. The storms and floods in this district have quite put us out of our reckoning, but, from appearances, things are settling down to their normal condition, and I hope for a better report next week. Am going to Horning Ferry, and trust to send you an account of our doings.—Robert Moll.

Yore (Hawes).

Several decent takes were made last week, notably one by Mr. James Hesseltine. This gentleman killed four brace of splendid grayling in less than one hour with the bait I mentioned in my last, viz., a well-scoured roadside worm. The river was very fresh on Monday, and is now in splendid fly trim, although in all probability we shall have a flood by to-morrow.—Joseph Corry.

CLUB REPORTS.

ALEXANDRA SOCIETY OF ANGLERS.

The members intend fishing a peg-down match on Sunday, November 5, from Waltham Bridge to Cheshunt Lock, for several valuable prizes. Messrs. Collins, Hunter, Witts, and Wisker weighed in roach and dace, from Ware, on Sunday last.—F. Wagner, sec.

Nov. 3.

AMICABLE BROTHERS' ANGLING SOCIETY.

Mr. F. Arnold, perch, 3 lb. 13 oz. The members will fish the river Colne next Sunday for nine prizes.—J. Worledge.

October 29.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 5s., annual subscription from W. H. Rodell, 2s. 6d. donation from J. Jennings (Bostonian Angling Society), and 2s. 6d. from J. Cherry (Silver Trout Angling Society), omitted last week. As the half-yearly audit will shortly take place, I shall feel obliged by secretaries sending in their lists for members' tickets and settlement of outstanding accounts.—R. Ghurney, sec.

Nov. 1, 1882.

CAVENDISH ANGLING SOCIETY.

A good muster attended the society on Sunday last, but, I regret to report, in nearly every case with empty baskets; but buoyed up with the hopes of good catches with the subsiding of the floods. Mr. Granfield showed roach, and much excitement is evinced at the close quarters of several of the foremost gross-weight competitors. Members attention is called to the annual meeting night, Thursday next, when business of the greatest importance will be discussed. Their attendance is earnestly requested.—E. Chambers.

Nov. 1.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 15th: Mr. Castell, roach and chub from the Roding, 3 lb., and Mr. Nitz, roach from the Rye House. On the 22nd, Messrs. Pratt and Chambers, roach and gudgeon from Ponder's End, and Mr. Castell, perch from Watford. On the 29th, Mr. Castell a few fish from Boxmoor, saving the club from a blank.—Cas.

DUKE OF NORFOLK ANGLING SOCIETY.

The members of the above society remove to their new quarters, the Ledbury Arms, Ledbury Road, Bayswater, on Wednesday next, Nov. 8, when they will be pleased to see as many of their brothers of the rod as can make it convenient to attend. Harmony to commence at 8 o'clock.—James Avon, sec.

Nov. 1.

GREAT NORTHERN BROTHERS.

We had a poor show of fish on Sunday, owing to the floods. The following members weighed in roach: Messrs. Theobald, J. K. Fitch, Hutchings, and Baker. Our Central Association return visit was well attended, thirteen clubs responding. The next visit will be paid to the Odds and Evens. The next Eastern District visit will be paid to this society on Tuesday, November 14.—J. A. Fitch, sec.

Nov. 1.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Tuesday last was well attended, numerous visitors being present. The chair was taken by Mr. Jardine, Mr. R. Bryant, librarian, undertaking the duties of secretary *pro tem.*, consequent on Mr. Crumplen's absence. The resignation of Mr. Thompson, the society's late treasurer, was accepted, and a resolution passed tendering the thanks of the members to him, and expressing their appreciation of his past services. Mr. Charles Bates, at the request of the committee, has now kindly undertaken the office of treasurer, an appointment that is sure to give general satisfaction. The takes of fish during the week have been very poor, consequent on the state of the rivers. Mr. Edward Bennett, of Great Yarmouth, fishing with "genial Sam Richmond," in public water at Ormesby Broad, has however, been fortunate again with the pike, landing one good fish weighing over 9 lb. Mr. Graham Bennett, Mr. Crumplen, Mr. S. C. Harding, and other members have also tried their skill, Mr. Harding having a few nice chub from private water. The treasurer and secretary of the society accepted invitations to the inaugural dinner of the Great Yarmouth Piscatorial Society, and joined the members of that vigorous and promising institution, at the Victoria Hotel, Yarmouth, on Thursday evening, where they were very warmly received. Mr. A. W. Parker reads an important paper before "The Gresham," at their club room, Masons' Hall Tavern, Basinghall Street, E.C., on Tuesday next, at 7 p.m.—Subject: "An Anglers' Parliament." The paper will be followed by a discussion, in which members and visitors may take part. Members of other societies and gentlemen interested are invited to attend.

HIGHBURY ANGLING SOCIETY.

During the last month the Highbury anglers have met with exceptional success among the finny tribe. Mr. Alfred Wells produced several capital jack, two of the best scaling over 20 lb. Mr. Higley also weighed some fine jack, perch, and roach, the gross amount being nearly 40 lb. At the same time Mr. Anthony has been equally persevering, and been rewarded with a splendid take of roach and dace. Several other members have brought up some good shows.—James Edward Wheatley, secretary.

KINGFISHER ANGLING SOCIETY.

On Sunday, whilst roach fishing in Godfrey's Water at West Drayton, Mr. T. Stevens landed a trout which weighed 5 lb.; with the assistance of Mr. W. Hawkins the beauty was weighed and returned uninjured. Mr. S. D. Browning weighed three roach from the same water, each being over 1 lb.—G. Archer, hon. sec.

LEICESTER ANGLING ASSOCIATION.

The half-yearly dinner in connection with the above association was held at the Bull's Head Inn, Harcourt Street, on Thursday evening, when an excellent spread was provided. After the removal of the cloth, the prizes were awarded to the successful anglers, and votes of thanks given to the officers and committee. Several toasts were drank and responded to, and the remainder of the evening was spent in conviviality.

ORIGINAL ALEXANDRA ANGLERS.

The members of this club fished a match yesterday. Mr. W. High secured first prize with a very fine show of roach, some of the fish scaling $1\frac{1}{4}$ lb. Mr. Blackledge was second with a good show of roach. Most of our members were unfortunate, owing to the bad state of the waters. Some of Mr. High's fish have been sent to be preserved.—E. Dymond, sec.

PECKHAM BROTHERS' ANGLING SOCIETY.

The match for the president's cup on Sunday last was won by Mr. H. Williams; the next match takes place on the 12th at St. Margaret's. The dinner to celebrate the opening of the club will take place on Tuesday next We shall be pleased to welcome any angling friends who choose to pay us a visit. The chair will be taken at 7.30 p.m. by A. Brodie, Esq.; at nine all are welcome.—W. H. Page, hon. sec.

PHŒNIX ANGLING SOCIETY.

The next return visit of East End angling societies will take place at the above house on Tuesday evening, November 7, when we shall be pleased to see any of our brother anglers.—W. Elbourn, sec.

RICHMOND PISCATORIAL SOCIETY.

Owing to the unsettled state of the weather, the competition for Messrs. Little and Co.'s prize, &c., has unavoidably been postponed until the 15th inst. The meetings, however, have been of an highly interesting character, discussions upon "Supposed Decrease of Fish in the Thames," "Do Fish Feed on the Flood Tide," &c., &c., opened up some very important, and, to all intents, useful facts on these points. Mr. Wm Abbott read a paper entitled "A few Incidents in the Life of an Angler," which was of a very amusing character. Two other gentlemen have promised papers at future dates. A smoking concert is also in preparation. The vice-chairman announced that he had assisted Mr. Nuthall, of Kingston (honorary river-keeper and a member of this society), in putting two nice trout in the river at Kingston, taken in flounder nets at Wandsworth. Mr. N., with his usual liberality and love of angling, having given his set fee for these as for all trout brought him out of season, viz., 10s. 6d. each, thus encouraging to the letter every possible means of providing sport for his brother anglers. There were present at the meeting Mr. F. C. Clench (chairman), Mr. Dickinson (vice chairman), Mr. Gaynor (curator), Messrs. Taman, H. Davis, Neville, Lucas, Turner, R. B. Matthews, Griffiths, Hayward, Hester, Scantlebury, Field, R. Bingley, Wilson, Powell, A. J. Little, W. Abbott, J. J. Wood, Munro, &c.—J. H. Gaunt, secretary.

RODNEY PISCATORIALS.

In consequence of the prevailing flood, the competition that was to have taken place on the 29th October, at Walton, is postponed until the 12th of November.

P.S.—A competition was to have taken place among the members of the Rodney Piscatorials for five prizes at Walton-on-Thames on the 29th, and in spite of the immense amount of rain that fell during the past week, and the information given by all the papers as to the flooded state of the river, several of the members visited that place. We left Waterloo Station at 8.45 a.m., and in about an hour we reached Walton. Here we were informed that the river was up to the steps of The Anglers, and that we might stand a chance in the Barge Cut. We made for the Weir Hotel, and after hopping and jumping from mound to mound across a big field we reach a meadow of wallflowers at the back of the Weir Hotel. Wading through these (the water gradually increasing each step we took), we managed to get within ten yards of the fence that surrounds the hotel garden. Here we had to halt, as one of us complained of the water getting too deep, and running into the tops of his boots. Retreating from this point we tried another way between the bushes, and in spite of the briers and brambles we managed to get opposite that board in the Barge Cut marked danger, and a few yards we should have been landed. But alas! beyond this point the water was deeper, the current stronger, and to make things worse, at the bottom were some short bushes, consisting of brambles and briers. Reaching this point it was proposed to take off boots and stockings and roll up trousers and wade through it. Now, as I already bore proofs that briers and brambles with my face and hands did not agree, I was positively certain that my bare feet would continue the quarrel. I therefore declined that mode of travelling, and returned to visit another place, quickly followed by the others. Below the haystacks, going towards Walton, between the bushes, we saw a gentleman catch a bleak. Here we unpacked, and for over an hour the only things we caught were briers and brambles, old boots, and other things too numerous to mention, in fact, anything but fish. I must say that when a pair of old boots turn up, one gentleman thought that it was time to retire, "as he had quite enough of boots during the week in town, without having them following him about on Sunday." Following in the tracks of the above gentleman, we soon discovered that Father Thames had increased his dominions, and we had to make a wide détour before we could reach the Swan. Here we gladly partook of refreshments: and a member presented to the landlord a card of "The Rodney Piscatorials," viz, an enamelled card, printed in gold, as follows:—"Ye Rodney Piscatorials are at Home at ye Albion, Rodney Road, Walworth, on Wednesday and Sunday evenings.—J. HOTHAM, secretary. Friends and 'brother bobs' welcomed." I must say that the worthy host offered to us the privilege of going through his grounds, ; and also a gentleman likewise offered to take us in a boat to Hampton, but, having had enough of Father Thames's levée to his aqueous neighbours, we declined. Passing from the Swan, we strolled to Walton Bridge ; here a sight met our gaze, and Messrs. Miles and Howell stood, looking with amazement at the sight of the water (these gentlemen are, unfortunately, mutes), and their fingers and hands went to work much faster than the tongues of a ccuple of excited Frenchmen. After pointing out to them where the towing path ran along by the "Sale" and the rails of the Iron Bridge that goes over the back water, we bent our way towards Walton, and called in at the Crown Inn, kept by a friend of The Showman of "The Mud Town Plots." Here the contest that is well known among the older inhabitants of Walton was fought over again, till the time drew near for us to catch our train.—PIXIE.

ROYAL GEORGE ANGLING SOCIETY.

Most of the members have been out on the warpath—perhaps towpath would be a better term—notwithstanding the severe weather ; but, as might have been expected, very little was done. At the meeting on Tuesday evening, stern determination to do or die during the ensuing week was depicted on every countenance, and if we have two or three moderately fine days the fish up the river will have a lively time of it next Sunday. To encourage angling in the rough weather a subscription was set on foot to provide a series of prizes for gross weight during the remainder of the season. This is in addition to usual season's gross weight prizes. The rules are :—Go where you please, go when you please, go how you please, and enlist the services of a professional puntsman if you please. Several gentlemen put down half a guinea, and the fund reached a sum rather over £6 in a few minutes. Apropos of Mr. Chart's escapade at Pangbourne last week, a noted maker of tackle, &c., not many thousand miles from Great Andrew Street, tells me in confidence that had the umbrella used with such disastrous effect on that occasion been one of his make the boat and its occupant would have soared gracefully on the wings of the wind over the dangerous waters, and have been deposited gently in a place of safety unharmed. Chart says he won't try it.—C. W. W. BERNHARDT, hon. sec.

THE LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out last Sunday, but owing to the late rain, not much sport was to be had, but the following members weighed in : Mr. Scott, jack and roach ; Mr. Petrie, dace and perch ; Mr. Graham, roach. The above society's half-yearly supper will take place on Wednesday, the 29th November. W. H. EVANS, sec.

Nov. 2, 1882.

THE STOKE NEWINGTON.

We had a fair show of fish on the 29th inst., Mr. T. Gretton weighing in 4 lb. 7 oz. roach ; Mr. E. Machin, 2 lb. 9 oz. roach ; and Mr. W. Whitmore, 1 lb. 1¼ oz. roach, Mr. T. Gretton winning Mr. C. F. Robinson's prize for the heaviest gross weight of fish taken during the month.—T. GRETTON.

Oct. 30, 1882.

TRAFALGAR ANGLING SOCIETY.

The members of this society fished a pegged-down match on Sunday last at Cowley Broad. Only six members put in an appearance, Mr. Dewen winning first prize with a 3¼ oz. perch, Mr. Goldstine second with a 2 oz. roach ; J. Gaze, H. Lord, W. Morriss, and H. Wilson getting old tin pots and weeds. The other prizes not won will be fished for as soon as the weather changes.—J. GAZE, sec.

UNITED LONDON ANGLERS.

The usual monthly meeting will take place on Monday next, November 6th, at 9 p.m. The new club lists and instruction cards, revised and corrected to November 1st, 1882, will be ready, and may be had on application. Several important questions will be brought forward.—R. GHURNEY, sec.

A HERMIT OF THE BROADS.

FLOATING listlessly along the surface of one of the wildest and most secluded of the large lagoons constituting the Norfolk Broads, may occasionally be seen a capacious house boat of the Noah's Ark pattern. It is occupied, says local gossip, by a retired non-commissioned officer of the Indian service, an elderly man who in an evil moment for himself yielded to the blandishments of a comparatively youthful syren and made her his wife. "Incompatibility of temper" soon led to a separation. The lady was, however, but ill content to yield up conjugal rights over at all events the domestic purse. Wherever the retired and retiring officer went, madame was sure to follow. Wearied at length by ceaseless persecution, the old gentleman hit upon the expedient of a life on the Broads, far away from the haunts of women and secure from pursuit. Even now, whenever in any of the few boats that find their way on that particular lake, female habiliments are perceptible, a long telescope is brought to bear from Noah's Ark, and there can be little doubt that should the enemy be seen approaching, even with the lure of the olive branch, the ancient *militaire* would immediately batten down and immure himself in his floating stronghold. His necessities are few and easily supplied, and this "Hermit of the Broads" is by no means averse to conversation with strangers, provided that no woman is of the party. —*Norwich Argus*.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE "FISHERMAN'S CURSE."

SIR,—Referring to one or two articles that have recently appeared in the FISHING GAZETTE regarding that nuisance, the black gnat, perhaps you may find space for a few lines from me on the subject. I know little of the difficulties that anglers labour under from the presence of this insect in autumn, as my own fly fishing has seldom extended past August, but in the latter end of spring, when he has come to the front in enormous numbers, I have felt that his cognomen is well deserved.

Some two or three years ago I saw in a contemporary directions for dressing an imitation of this fly. It was:—Body, slenderly made, black floss silk ; legs, one or two turns of plover's topping ; wings, small and spare, of young starling quill feather ; hook, 00. This is an extremely good fly, and kills well in low water almost all through the summer months when the weather is bright. It must of course be dressed on the finest possible gut. But when the "cuss" is on in myriads, and at every puff of wind forms something like a black cloud, a few feet above the surface of the water, with the trout leaping and splashing after the flies in all directions, I have seldom found any imitation of the black gnat kill well.

Whether the chances of the artificial gnat being taken among the innumerable natural ones that are careering over the water are extremely small, or whether it be impossible to imitate precisely so minute a fly, I cannot say. I always find that it then pays better to put up a cast of totally different flies—small duns with an orange bumble as one of the droppers.

When the "cuss" first appears, the black gnat I have described will kill its share of fish. A better fly, however, is the black midge, which sometimes kills extremely well. I always use three on the cast, which should be made up so that the droppers stand well out at right angles from the line, and the best way that I know of doing this is to make the flies themselves up into a cast in the manner recommended in Stewart's "Practical Angler."

These midges are useless as "dry" flies, and can only be used satisfactorily in fishing up stream, the extreme softness of the tackle causing the fly to collapse at once if it is cast down stream. I enclose a specimen of the black midge. It is an old-established fly in the North, and probably you know it well. On the Exe it is, when dressed a size larger, a deadly fly in early spring on occasional days, but it cannot, like the blue upright and its kindred flies, be depended upon as a regular provider. The most favourable time for using it is when there appears to be no usual rise of fly on.

Almost as great a nuisance as the "Fisherman's Curse" is a tiny yellow midge that must be first cousin to the black one, and makes his appearance on the water at odd times throughout the summer. This insect is apparently neither so strong on the wing nor in such force as the other, for he dances about in small detachments, and recklessly chooses for the scene of his gyrations a spot somewhat similar to that selected by M. Blondin when he crossed the water near the Falls of Niagara, namely, the "glide" just at the top of a stickle ; but without the luck of that celebrated aerial pedestrian, he as often falls into the water as not, is carried down stream, and, if not absorbed *en route* by an expectant fish, finally brings up in the quiet eddy at the side of the deeper pools, where he floats about among the foam and débris collected there ; and an angler looking for a rising fish will observe a series of slight disturbances of the water, much resembling the fall of occasional drops of rain. These are caused by the trout taking down the yellow midge. They cannot be dignified by the name of "rises," as the fish moving under the foam only an inch or two below the surface make scarcely any commotion when they suck down a midge, and very close observation is necessary to ascertain what they are taking, a midge being so small a speck on the surface.

When trout leave the stickles to feed in this way, they are very difficult to raise to ordinary flies, and I noticed during the past summer that these movements almost invariably indicated rain at hand. To imitate this yellow "cuss" is nearly as difficult as it is with his dusky relative, the black midge, and the nearest approach I could ever get to it is dressed as follows :—Body yellow silk, wings and legs a small barred greenish-yellow hackle from the back of a love bird. I have found this fly kill when nothing else would, and I owe my knowledge of it to a book on flies and fishing published some years ago ; and, although I am not now quite certain about the author, I think it was written by Sir Randall F. Roberts. As in black midge fishing, I use three flies on the cast ; and as the casting is chiefly in water quieter than the stickles are, I get them to float if possible. This is difficult to do, and necessitates withdrawing the flies from the water almost the moment after they have been cast, and a good deal of "drying," but it answers better to do this than let the flies sink, probably under the fish, and remain unnoticed.

I send you also one of these imitations of the yellow midge dressed as described.—I am, &c., R. A.

Tiverton, Oct. 26.

[The samples sent are very good. We have similar black ones, but the yellow exactly this pattern is new to us.—ED.]

PEGGING *v.* CORKING.—MALE AND FEMALE PIKE.—GROUND BAITS OLD AND NEW, &c.

SIR,—"Mark Antony" takes exception to one of my statements which appeared in a recent number of the FISHING GAZETTE, viz., "Do not operate on a swift stream if you can help it, when trying this pegging business." But, Mr. "Mark Antony," will you kindly remember that when I used that phrase, I was alluding solely to roach, and roach fishing alone. Roach fishing, as every good angler is aware, is principally practised in places where there is only a moderate stream, although I am aware that roach are sometimes caught in very rapid waters

I somehow fancy that "The Trent Fisherman" was poking fun at "Mark Antony." I wonder how many roach "The Trent Fisherman" would catch if he were pegging for roach with a light quill float, and half a dozen small split shots on his tackle ; in, say, the Corporation fishery at Winthorp ; where there is fourteen feet of water, and a rattling stream. "Mark Antony" is quite right in his supposition that "The Trent Fisherman" meant "corking" for barbel, and not "pegging" for roach; there is such a wide difference in the tackle employed for these two methods, that I can only think that "The Trent Fisherman" must be woefully ignorant of the subject he pretends to teach.

As I explained last week "pegging" for roach is practised successfully in a slow stream, and not above a yard or so from the bank, with a small quill float and a light tackle, weighted with some half a dozen small split shots. In "corking" for barbel (or as it is variously termed "long corking" and "tight corking") the tackle employed is a cork float of middling size, a fairish stout gut bottom of about a yard in length; this tackle has on it some half a dozen large split shots (about as big as swan shot) and on the line close to the loop of the tackle there is one of those long, pear-shaped leads, known as "corking weights." Now this sort of tackle is used in any sort of a stream that you know contains barbel, but of course, the faster the stream runs the heavier must the weights be; for successfully trying this plan, in a rather swift water, that is, say, eight feet deep, your bait should be about eleven feet from your float, to allow for the action of the water on the line and bait, so that your bait is always on the bottom of the river If the stream only runs slowly, your float and weights need not be so heavy, nor need there be so much extra line between float and bait. I try this plan when the barbel swim is not very far from the bank, and I feel inclined for a little bit of lazy fishing. I might just say that in trying this plan the float is held stationary, when the stream has carried it as far below as you require. This corking business is occasionally tried for chub and bream fishing, according to the stream. I hope I have made my meaning clear to "Mark Antony," and just tell him that if he purchases my new book on angling (when ready) he will find there all these kinds of fishing treated most fully.

With regard to the distinguishing marks of male and female pike. I can only say that I entirely agree with Mr. Jardine on the subject. It is only by a lengthened experience that anglers can tell at a glance the difference between the two. I have found that the male fish is longer and thinner than the female, supposing the two fish to weigh alike; the head of the male is longer than the head of the female, and the observant angler will find that there is a difference in the vents of the two fish, the vent of the female being more distended than that of the male, while the belly of the female in the region of the ventrals is slightly different from the male; but as I remarked just now, it is only by long and careful obeservation that the difference can be easily detected.

"Chub Chavender" asks me what I think of a ground bait he quotes from some ancient author. All that I can say is, that it is a bit of a "caution"; I can safely say that I shall not try it. "Chub Chavender" has the advantage of me, he seems to be possessed of a library of reference with regard to piscatorial matters. I have the misfortune to be poor, and cannot afford these rare old books on the subject, but should not I like to be poring over some of these musty old tomes that have a very ancient and fish like smell about them, and read of the queer baits, &c., recommended for fishing by the authors that existed in the dark ages. But, never mind, they tell me that a pound of experience is worth a ton of theory, and what knowledge I may possess is gained by experience. During next summer I shall be happy to try and get "Chub Chavender" a specimen bleak from the Witham. I have seen several from there weighing from $2\frac{1}{4}$ to $2\frac{3}{4}$ oz., but only that one specimen have I heard about that exceeded 3 oz., but "there is always as good fish in the sea as ever came out of it," so if I knew where to send one to when caught, I could be on the look out for a big one.—I am, &c.,

THE TRENT OTTER.

[Send it to our care.—Ed.]

PEGGING FOR ROACH.

Sir,—I think, from what I can make of it, "Trent Otter's" description of "pegging" is simply ordinary "ledgering" only followed with less advantage than accrues from using the ordinary small roach ledger.

"Mark Antony" is quite right in stating that fast swims are much the best for this kind of fishing; I have proved it over and over again, and it stands to reason that if the current is strong the bait will be kept working better, which is far more likely to tempt the shy and cautious roach than where it remains quite stationary. I always split the ledger open with my knife before putting it on the line, by this means it can be removed at pleasure at any moment, and the gut or hair is saved the twisting.

I see along controversy has been carried on relative to the distinctive value of gut and hair. I think convincing proof would be given to the supporter of gut if he were to go up the Thames or the Ouse, or any other river, and sit side by side with a fisherman using hair; he would then find the hair took three fish to his one. I have frequently doubted this myself, but have proved it by putting on a very fine drawn gut hook, with the result "few or no bites"; change it to hair and the fish bite again. This seems to me conclusive.

I succeeded, last year, in landing a chub weighing 3 lb. with a hair hook and line, so I cannot see why hair should lose its reputation.—I am., &c.,

E. W. A.

TENCH IN THE THAMES.

SIR,—From Mr. Knight's question it would seem that even club secretaries are not aware of the resources of our charming pet river. I can tell him there are a few tench taken every year at Shiplake, a place known by acquaintance or repute to every angler; there are not many taken, perhaps ten or a dozen, but they are nearly all taken by three men—note, three men. Now their catching is about the neatest thing in angling, or rather in fish getting, ever encountered. About a mile from the railway station is the mill, about half-a-mile above the mill is Shiplake hole, half-way between the mill and the hole is another deep hole in mid-stream, and those two holes are the scene of exploit which is as follows: When the water is about right, after weeds are gone, down comes a punt from, say, Reading, with one—sometimes two—professional fishermen. Say on the Monday they bait the two holes well and leave the punt in the neighbourhood, go home by train, and on Tuesday return to Shiplake by train, fish most of the day, catching something which goes into the well; go home by train, return on Wednesday, fish again some hours, put result in the well, and home again by train, baiting well each day, of course. Thursday, Friday and Saturday repeat as before; by this time there is something in the well, which generally consists of roach, a few good chub, and several of the much desired tench, which are usually very handsome specimens. Now for the *coup d'etat*: Sunday morning down comes the patron from London, meets puntsmen, goes to one of the swims, perhaps both in the day, fishes his best, and perhaps catches something, perhaps nothing. But, however, at evening the well is cleared into a bag and a grand show of tench and chub is placed on a club-room table in London. This sport has gone on for some years, generally in November. So as soon as the water gets bright, look out for a great take of tench at Shiplake. Sometimes it does not come off until February. The late lock-keeper told me he thought the fish worth 5s. a brace, and looking at the prize they win, I think so too; and don't you, sir, think that the mind (as we say in the city) that could engineer and finance such a neat and perfect scheme deserves a really good prize?—I am, &c.,

THAMES TRAVELLER.

MALE AND FEMALE FISH AND COLOURS OF THE CARP.

SIR,—After the description given by A. G. Jardine, Esq., I think you will agree with me when I say there can be no longer the slightest difficulty in distinguishing the male from the female pike. After reading his elaborate and artistic description every angler will at once recognise the truth of his remarks.

I tender both yourself, Mr. Editor, and A. G. Jardine, Esq., many thanks for the trouble you have taken in the matter.

His remarks have certainly upset the opinions of many anglers tremendously wise in their generation, yet fearful fools on this subject.

Still you must confess, Mr. Editor, it is strange that the male of almost every species of animal (and more especially of birds) should be so much handsomer, larger, finer, and altogether grander, and yet the pike should be an exception to this rule. Does this principle apply to all the finny tribe?

I now wish to call your attention to the colours of the golden carp.

Can you inform me at what period and under what circumstances the golden carp assumes its splendid hue? Has it been caused by in-breeding in a colder climate than China, its native place? It is certain that they are not so beautifully coloured when hatched.

I have, however, seen them in warm, protected ponds possessing infinity of colours—everyone must have seen this—and at other times black and spotted. Does this singularity arise from cross-breeding, or is it the result of an unhealthy condition?

Again, is the colour in the scales or in the skin? If in either—scales or skin—what causes the transformation of colour? Has it ever occurred to you that the carp may have some power of evolving a "pigment" from its surroundings capable of imparting this colour. I should like to know.

Supposing that they were taken from the warm and protected state, and placed in water of a lower temperature, not too cold for them to exist, how would this condition affect the colour of the fish? It is to me an interesting subject, and I shall be glad to obtain information.—I am, &c.,

MARK ANTONY.

DOUBLE AND SINGLE-HANDED FLY RODS.

SIR,—In reading over the interesting account you gave two or three weeks ago of your day's grayling fishing in Hampshire, you incidentally inform us that Mr. Francis used a double-handed rod for grayling fishing.

I have been wondering whether Mr. Francis in doing so followed the custom on those southern streams. It appears to me that you in your ten foot rod used a far more likely weapon for effective work, in grayling fishing, at any rate. The flies by means of a double-handed rod may be put on lightly, as in this case they were, but I cannot conceive of a "two hander" being sufficiently smart and tender in striking grayling. I wish some of your readers would let us know what advantages for this kind of fishing these two-handed rods possess. I presume that more line is "got out," but I am doubtful whether it is "managed." Then, does the angler sling his landing net—an indispensable in grayling fishing—behind him, or does such a rod require an attendant to carry the net and net the fish? I have seen double-handed rods used on some of the streams in Scotland for trout fishing, but I thought them very ungainly and awkward, but nevertheless well suited to the tackle I saw attached to them. I was under the impression that only salmon fishers and pike fishers, and such like larger game, required the use of both hands to the rod.—I am, &c.,

YORKS.

October 30.

[We believe that a double handed rod is more often used than a single-handed one on the Hampshire waters. The fact that Mr. Francis got in one day six brace of grayling from 12 inches up to $1\frac{3}{4}$ lb. is proof positive that he, at any rate, can use a double-handed rod delicately; he always takes a man with him to carry his fish and land them. A big rod commands much more water than a smaller one, and in a big open water it has its advantages. But for our part we very much prefer a single handed rod from 9 to 12 feet in length, according to the nature of the water. A 10-foot 10 oz. rod can be used from morning to night without causing much fatigue. The small rod has the speed, lightness, and deadliness of the rapier, the big rod has more of the qualities of the broadsword—weight and force. But, after all, the question as to what rod is best depends on the angler and the style of fishing he finds most comfortable and killing. The rod is made for the angler and not the angler for the rod. One man's drink is the next man's poison.—ED.]

LIGHT MINNOWS FOR ICELAND.

SIR,—I have lately returned from Iceland, where I enjoyed nine weeks' fishing. When, as sometimes happened, the fish would not rise to the fly, I was obliged to try the minnow. The rivers in which I angled where much infested by green slime, and it is quite impossible, owing to the weight, to fish them with the ordinary phantom minnow, the hooks of which claw up the slime at every cast. An artificial minnow for Iceland should be made as though it were intended to float. I killed many salmon with the smallest and lightest phantoms I happened to have with me. They were about an inch long and silvered all over. They very soon lost the silver.

Can any of your readers tell me how these minnows are silvered, as I should like to take some of the preparation with me next year?

I have spoken to one or two tackle sellers on the subject of getting some specially light phantoms made, but they tell me that the makers of such things are not likely to put themselves about to make what I want, as they get the heads and propellers of the phantoms cast in grosses. Now, it is these heavy heads which make the phantom useless in such rivers as I fished this summer, all of which, when not extremely sluggish and infested with slime, ran over lava-beds on which one loses even the lightest of trout flies. I have been trying to make some minnows from cork, and I think they will do if you can tell me how to silver them.—I am, &c.,

WANDERER.

London.

[The lightest minnow we know is the Garnett quill minnow, made first by Atkinson, of Kendal, and now to be had everywhere, though not always well made. It consists merely of a bit of quill, and thin metal fins to impart the spin. "Wanderer" should get some of Judson's silver and gold powder (sold with varnish, for mixing, by most oilmen and grocers), it answers admirably. A little hard drying varnish should be put on over the coat of silver or gold.—ED.]

A FIVE-POUND PERCH.

SIR,—We have been setting up for a customer of ours a perch weighing 5 lb., length $21\frac{1}{2}$ inches, girth $17\frac{1}{2}$, thickness $3\frac{1}{2}$ inches. If you think any of the readers of the FISHING GAZETTE would like to see it they can do so by giving us a look in between this and the next two weeks.—I am, &c.,

40, Fetter Lane. J. GILLETT.

[Being of Professor Huxley's opinion, that true knowledge consists in seeing the thing itself, we called on Messrs. Gillett and saw the fish. It is the largest perch we have ever seen; it was caught near Daventry, and it weighed full 5 lb. two days after it was caught.—ED.]

WALL-EYED PIKE AND PIKE-PERCH.

SIR,—In reading the FISHING GAZETTE, I have noticed several times the words pike-perch and wall-eyed pike mentioned. Could you kindly inform me what these species are, and if we have any in our British waters?—I am, &c.,

GROACH.

[The American "wall-eyed pike" was described in our impression of January 24, 1879, by Mr. T. R. Sachs, and this gentleman has also frequently described the pike perch of the Continent. Both these fish are very similar in appearance, and our correspondent will get a very good idea of what they look like when we say the fish presents the appearance of a cross between a pike and a perch. Take the head of a perch give it the pike's formidable mouth, add the large prickly perch back fin, and behind that the big dorsal, caudal, and anal fins of the pike, and you have the pike-perch. It is a terribly voracious fish, and attains a great weight.—ED.]

THE MANCHESTER AND DISTRICTS AMALGAMATED ANGLERS' ASSOCIATION.

SIR,—Kindly allow me a few words in reply to Mr. Ashworth's letter in your issue of Saturday last, in which he charges me with making an untruthful statement.

In reply to this, I enclose a copy of the Salford Friendly Anglers' rules, which, as you will perceive, allow its members to weigh in any kind of fish all the year round; and the rule that he now refers to was only passed after the universal condemnation his society received from the Manchester Anglers. In further proof of this, I may say that the subject of this trout being weighed in was first introduced at the delegate meeting in January (shortly after the trout had been taken); was renewed in April when Mr. Ridgway's notice of motion was given, when no rule up to that time had been passed

The resolution was passed in July, as the correspondence will have shown; and, as the Salford Friendly Anglers were waiting the decision of the association it is only fair to assume the rule was passed after Midsummer.

For the information of your readers, I would like to ask Mr. Ashworth what he calls "early in the present year," when the rule he refers to was passed. I must leave Mr. Ashworth to reconcile his confusing statement, that the association is justified in putting down "angling" for or exposing for sale any kind of fish during its own particular season, when his own members claim the right to make their own bye-laws for rough fish at any part of the year, even if such time be close season.

From the concluding paragraph, am I to understand it is meant as a justification for taking the trout out of season? If so, would he like the proprietor of the "strictly private water" to see the correspondence on the subject? I shall be sorry to forward it to this gentleman, well knowing that it would stop all orders to fish going to the same quarter again.

In conclusion, allow me to inform Mr. Ashworth that I am in no way connected with the association, otherwise than as an ordinary paying club member, so that I have nothing to do with the extension of time for anglers' travelling cards, but would, like himself, be very glad to see the members of the association working more earnestly for the extension of time, which, to my mind, has not received the attention it deserves.—I am, &c.,

TROUT.

October 30, 1882.

LARGE PERCH FROM DAGENHAM.

SIR,—Seeing in your paper that a large perch was taken at Dagenham, I thought it would interest you to know that I have got one taken at the same place by Mr. Geddes, on September 17, 1882, and what seems rather strange is that the weight should be the same and the size 14½ in. in girth 18 in. in length.—I am, &c., THOMAS POPE.

Hanbury Arms, Felton Street, Hoxton.

FISHING IN PRIVATE WATERS.

SIR,—I heartily echo the protest of "A Lover of Fair Sport" against poaching in private waters. A short time ago I was fishing at a gentleman's country place, and heard the following:—

An angler having leave for a day, brings a friend, five rods, with live baits and floats, the fishermen smoking under the trees till there was a run at one of the rods.

Another angler and friend caught a number of pike. The keeper asked for one of the little ones and was refused. "Can't spare one; going to weigh in at our club," was the answer, and the whole catch, babies and all, were carried off.

No wonder when asking leave for a day's fishing we often meet with a curt refusal.—I am, &c.,

FISH FAIR.

October 28.

CHUB AND BARBEL WANTED.

SIR,—Can you put me in the way of getting some chub and barbel to stock a river with?—I am, &c.,

KEPPEL H. GIFFORD

[We regret to say we do not know where coarse fish of any kind can be bought for stocking purposes.—ED.]

CHEAP TICKETS FROM RICHMOND.

SIR,—Possibly it may be satisfactory for anglers to know that these tickets were granted in the first instance as a special concession to the Richmond Piscatorial Society, but upon a suggestion made by us to the South Western Railway Company, that all anglers holding privilege tickets of the association should be entitled to the same, they were pleased to sanction this, instructing me to supply the booking-office with a pattern card, so that no fear may be now entertained of a railway ticket at reduced rate being refused upon production of the Privilege Card.—I am, &c., J. H. GAUNT, sec.

Richmond Piscatorial Society.

SOME FLY DRESSING QUERIES, &c.

SIR,—Will you allow me, through your columns, to ask a few questions on subjects on which I require some information?

Are the hackles of blue Andalusian fowls of the orthodox tint for fly-dressings?

Where can I obtain lengths of rod wood, hickory, greenheart, &c., to work up into rods myself?

Can anyone tell me where I can obtain some bittern feathers?

Will some dresser on the eyed hooks kindly explain the *modus operandi*, and in what it differs from ordinary dressing?—I am, &c., BITTERN.

Cardiff.

DO EELS TAKE FLIES?

SIR,—I can authenticate Creel's letter on the above subject, having on two or three occasions, when fishing in the Avon, seen eels feeding on flies that settle on the weeds floating on the surface.—I am, &c.,

October 31. K. H. G.

A WATERPROOFING WANTED.

SIR,—Can you or some of your readers inform me what proportions of alum and sugar of lead to mix in five gallons of water for the purpose of rendering cloth coats waterproof? I found it answer well, but have lost the recipe.—I am, &c., WATCHET.

WATER FLEAS.—Common as water fleas are, it may safely be affirmed that there is no more beautiful or surprising sight than that which they reveal to the astonished vision of those who see them for the first time under the microscope, nor will the interest thus excited be found to flag under a more extended acquaintance. The exceeding fineness and delicacy of their limbs are specially remarkable, but perhaps the most pleasing and instructive feature they present is the transparency of their tissues, which allows all the functions of life to be carried on under the eye. The whole of the digestive process, from the first inception of the food into the mouth, its trituration by the mandibles, its passage through the gullet into the stomach, its subjection to the vermicular action of the intestine, its digestion, and final expulsion from the body, are all visible; the beating of the heart, the course of the circulation, the movement of the respiratory organs, the contractions of the muscles, the formation of the eggs in the ovary, and their subsequent development are all clearly presented for our instruction and wondering admiration."—From *Science for All* for November.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invite Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sen or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

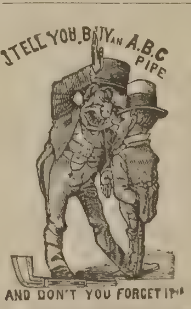
IMPORTER OF FOREIGN AND FANCY BIRDS,
166, Great Portland Street, London.
THIS WEEK'S ARRIVAL OF FOREIGN BIRDS.

1,000 pairs of beautiful Avadavats in full colour, at 3s. 6d. per pair. 500 pairs of African Finches. African Waxbills, Zebra Waxbills, Fire Finches, Singing Finches, all at 3s. per pair. German Goldfinches, 3s. per pair, or 2s. Cock Bird. Norwich Canaries, 7s. 6d. per pair, or 5s. 6d. Cock Bird.

NO MORE WET FEET.—If you once use MILLEN'S SNOW and WET REPELLER and SOLE PROTECTOR, for Winter and Summer, you will not regret it. 5s. to 7s. saved for Sixpence. Although it is a speciality for the bottoms of the soles, it is equally beneficial to leather and kid uppers, not only rendering them quite waterproof, but more durable; also the original shape of the boot is kept until quite worn out, which gives a corresponding benefit to shape and ease of the foot. For Children's and Ladies' Shoes, also the heavier made boots, it is invaluable. Only one application, as directions, will last until the soles and uppers are worn out. Shoes can be blacked in the usual way. Sent free for 7d. or 1s.—Postal Orders or stamps, from HUMPHREY MILLEN, Fern Factory, Little Marlow, Bucks.



I TELL YOU, BUY AN A.B.C PIPE
AND DON'T YOU FORGET IT!

EVERY MAN WHO SMOKES

should send 24 stamps for Sample Pipe.

No wet Tobacco to smoke through. No filthy oil to enter the mouth. Smoke always sweet and free, and can be instantly cleaned. The most perfect pipes invented since smoking began. 10,000 Testimonials. Illustrated prospectus free. With amber and case, 5s.

The Fishing Gazette.

SATURDAY, NOVEMBER 11, 1882.

SOME NOTES ON THE FIRST "FOREST AND STREAM" ANGLERS' TOURNAMENT.

OUR readers will peruse with much interest the account of the recent anglers' tournament at New York, which we print in another column. *Forest and Stream*, and especially its fishing editor, Mr. Fred Mather, are to be heartily congratulated on the thorough success of the affair. As in the case of our FISHING GAZETTE Tournaments, the weather was very bad—wet, cold, and windy—"the attendance at no time exceeded more than two hundred and fifty; this was owing, doubtless, to the unfavourable weather, which during the first day was abominably nasty." The affair was fully reported by the leading American paper

It will be acknowledged by all who know anything about fly-casting that some of the casts at this tournament were simply marvellous. In the "light rod" contest, for instance, Mr. H. W. Hawes made, in beautiful style, the extraordinary cast of *twenty-seven yards, one foot,* with a ten-foot split-bamboo rod weighing only *four and-a-half ounces.* For our part we should have said that such a cast with such a rod was simply an impossibility, but the strict conditions under which the casting took place, the elaborate arrangements for accurate measurement, and the jealous scrutiny of the casting by the rival contestants make it impossible that any error was made. Indeed the examination of the distances cast by other anglers in this contest gives the last man of the seven credit for over twenty yards, and that with a rod of only four-and-a-quarter ounces! Mr. Silk, who was present at the tournament, tells us that the measurements were made from the spot on which the competitor stood to the spot where his end fly fell on the water and there can be no question whatever about the strict accuracy of the measurements given; this independent testimony from an unprejudiced Englishman ought to silence all challenge of the measurements. To our mind this wondrous casting with such feather weights as four-and-a-half ounce rods, is by far the most interesting feature in the tournament. Mr. Silk says the casting lines used were of braided silk, waterproofed, and this confirms our impression that lines of this description are, on the whole, by far the best that can be used by the fly-fisher.

Until recently we have always looked with disfavour on the glued-up split cane rods, although we must say our experience of them had been confined to English made rods of this description.

But in the face of such extraordinary results obtained by their means as we have referred to above, we confess that our views respecting them are totally changed, and we feel certain this will be the case with most English fly-fishers; making full allowance for the fact that the casts were made from a platform three feet above the water, and undoubtedly this was an immense advantage as compared with casting done on a level with the water, still the fact that such rods will send a line out to such a distance, places their casting merits beyond cavil. We may mention that we have recently received from Messrs. William Mills and Son, fishing-tackle makers, of 7, Warren Street, New York, a superb hexagonal Leonard rod, made to our requirements, as regards weight and length. It is a stiff three joint, ten-foot rod, weighing ten ounces. As a piece of workmanship, it is simply perfection, every joint is made of six strips of cane so beautifully put together that even with a magnifying glass it is impossible to see where the edges are joined together. In a few days we hope to try it with a line and feel certain from its "feel" without a line, that it will answer our expectations, and they are great. Messrs. Mills and Co., are sole agents for Mr. Leonard, whose rods won every first prize at the recent tournament. They intend to have an extensive exhibit at our International Fisheries Exhibition next year, and our English anglers will then have a chance of seeing and handling these celebrated rods for themselves. It is to be hoped the executive of the exhibition will arrange to have a piece of water set apart for fly-casting and testing fly-rods; the jurors will find this an immense advantage in deciding the merits of the various makes submitted to them.

The cast made with a single-handed fly-rod by Mr. R. C. Leonard, covered twenty-eight yards, one foot, with an eleven and half-foot rod, weighing ten ounces. This cast, considering that it was from an elevation of a yard above the water, both in front and behind, is not, we think, much in advance of the twenty-three yard cast, made on the ground (and not over water) with a ten-foot rod at our first FISHING GAZETTE Tournament.

The bait casting with one oz. and two and a-half oz. weights was not extraordinary, and will not compare with the casts made in this style at Hendon.

An Englishman, Mr. H. Prichard, is credited with the longest cast made with a single-handed rod at the tournament. With a ten-foot four and a quarter inch rod of eight oz., he sent his fly out thirty yards from the platform. His style of delivery is peculiar, as will be seen from the *Forest and Stream* description of it; but peculiar or not, it must be wonderfully effective.

Mr. Harris in his "American Angler," thus describes the casting of Mr. Hawes and Mr. Prichard :—

> "In the first contest was developed the surprising skill of Mr. H.W. Hawes, of Central Valley, N.Y., as a 'distance' fly-caster. His method was a new one at angling tournaments, but may be seen almost daily, in season, upon the broad steams of Pennsylvania, notably on the Delaware River near Tumble Falls, where the knowing ones reap a fruitful harvest of black bass during the early and late

days of the open season. On this wide stream, with banks hundreds of feet apart, and not a bush that will range within gunshot, the lover and advocate of long casting, as he wades down mid-stream, can reap the fruition of his most immoderate aspirations. Our old Mentor, Jonathan Gillingham, of Philadelphia, better known as 'Scul's' taught us 'the how,' and the recent casting of Mr. Hawes practically brought those teachings in all their detail before our mind's eye. It is known among Pennsylvania bass anglers as the 'overhead cast,' elsewhere as the 'overhand,' and is certainly the most effective long distance action that is known and practised by the craft. We will try to describe it, although fly-casting phraseology is yet in its infancy:

"When the line is laid out, say twelve yards or more in the forward cast, lift it quickly at the moment the flies touch the water, throwing, by a spring of the rod, the line backward and upward, giving the rod, when perpendicular, a second but slight wrist-turn, so as to add an additional impetus to the backward and upward flight of the line in the rear cast. Don't allow your rod to go back more than thirty degrees (Practice only will give you the exact angle.) In the recovery for the forward cast, pause until you fell the pull of the line on the tip of your rod. You now have the full weight of the whole line bearing upon it. At that instant make your forward cast with force and skill, and the result will surprise you in the additional reach over the ordinary method of casting. Pages could be penned covered with the pros and cons connected with this style of casting, its value, delicacy, availability on ordinary streams, &c. We have never found it indispensable, even on the broad waters of the river named above. A twelve or fourteen yard cast, when deftly done, seems to shut up the eye of our favourite fish, the black bass of running waters.

"We do not wish to be understood as disparaging the casting of Mr. Hawes; he is certainly one of the most gifted 'distance' casters of the age, and the evenness and military exactness of his action were certainly as pleasant to look upon as the results were wonderful to note. His casting was all done with the Leonard rods, and his longest distance of eighty-two feet was made with a four and a half ounce of that make. Mr. Hawes, in the salmon contest, used the "overhand" cast, reaching a distance of 116 feet, the longest distance on record in salmon casting.

"Mr. Harry Prichard has proved himself to be the champion 'distance' fly caster of the world, having made a cast of thirty yards one foot with a Leonard rod ten and a half feet long, and weighing eight and a quarter ounces. Mr. Prichard is about fifty years of age, well preserved, a jovial companion, slightly nervous, and a most excellent rodmaker. He is a member of the Washington Rod and Gun Club of Brooklyn. We heard dissenting opinions as to the style of his casting. It certainly is not graceful, nor does it seem to be an effective method for the stream; yet we are assured by such sterling anglers as Dr. Ferber, and others qualified to speak, that Prichard generally scores above his angling companions when on an outing; and an old gentleman, evidently one of the craft, asserted broadly at the tournament, that the roll of the line on the water, with its swashy splashing, attracted the fish. There is evidently merit in this underhand or 'rolling' cast when used at short distances; at long ones we fear that it is 'off colour' and 'off scoring.'"

Some anglers in criticising these interesting fly and bait casting tournaments pretend to decry the merits of long casts. They say that a man may by practice be able to make a longcast and yet be a very poor angler. In our opinion, this is a wrong view to take of the matter: they are not angling matches at all, and no sensible man would claim that a long cast is the *best* cast, or proves the angler who makes it to be a clever angler. At the same time we repeat that a man who can manage a long line delicately and well, will generally be able to use a shorter one effectively; on small streams, a long cast is rarely necessary, on broad streams it is often of immense value. Then, again, as tests of the relative value of different styles of casting and different makes of rods, these tournaments are unquestionably useful.

THE RECENT AMERICAN ANGLERS' TOURNAMENT.

(From *Forest and Stream*, Oct. 26, 1882.)

THE first annual *Forest and Stream* Anglers' Tournament opened at Harlem Mere, Central Park, New York city, on Thursday, the 19th, at 11 a.m. The place selected was on the eastern side of the Mere, on Fifth Avenue, near One Hundred and Tenth Street. Here there was a large open space, with gravelled walk, next the water, and a substantial platform had been built thirty feet out into the water, giving an opportunity to cast in three directions, according to the wind. This platform was originally intended to be two feet above the water, but by request of the bass casters, some of whom cast with the point of the rod below the feet, or "underhanded," it was placed at an elevation of three feet. The day opened in a lowery, clouded manner, but there were many persons present, and a few ladies graced the scene. Mr. Jones, Superintendent of the Park, had kindly provided seats for 200 persons, who could have a fine view of the casting. From the south to the north side of the lake, close to the east shore, a line was stretched, to which buoys were attached five feet apart, each alternate one in order from the stand being marked with the number of feet distant from the platform. In a boat outside the line the judges and referee were paddled about when the contests were going on, enabling them to keep abreast of each cast and thus correctly estimate its length. When the turn came for casting for accuracy and delicacy, which followed the casting for distance, a single buoy of 6 inches diameter, anchored 40 feet to the south of the stand, was made the object of aim.

This buoy was nicely made and presented by Mr. B. F. Nichols, and it was so evenly balanced that only a ring showed above the surface. The first thing on the programme was the light rod contest, which had been proposed by makers of light rods to show what they could do. The result was a surprise, as no one thought that over 65 feet would be cast with them. Mr. Hawes, a workman in Mr. Leonard's rod factory, cast 82 feet with a 4½ oz. rod. He is a pupil of Mr. H. L. Leonard, who did not cast at all in the tournament, on account of illness. The latter is probably the handsomest fly caster in America with either single-handed or salmon rod. The retrieving of Mr. Hawes elicited warm commendation. On his back cast the flies were up in the air at an angle of 30 degrees. The following are the scores:—

LIGHT ROD CONTESTS.

Judges: James Benkard, Prof. A. M. Mayer; G. W. Van Siclen, referee.

Class A.—Open to all. To be cast for with rods of 5¼ oz. in weight or less, made with ferrules and reel bands, and of two or more pieces; rods to be not longer than 10 nor shorter than 9 feet; 6 to 9 feet leaders with two flies.

Scale of points—Distance, actual cast; accuracy and delicacy, twenty-five each.

Winners to have choice of prizes in the order of their awards.

1. A split bamboo "Catskill" rod, reel, and line, given by Wm. Mills and Son, 7, Warren Street, New York ..	£10	0	0
2. Members South Side Sportsman's Club, cash	5	0	0
3. One year's subscription to *Forest and Stream*	0	16	0

	Length of Rod. Ft.	In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes ..	10	0	4½	82	12	20	114
R. C. Leonard ..	9	11¾	5¼	73	20	20	113
Reuben Wood ..	9	6	5¼	70	17	15	102
George S. Hier ..	10	4½	4½	67	15	15	97
H. Prichard	9	7½	5¼	67	9	20	96
E. S. Osgood	9	6	5¼	58	10	18	86
James Annin, jun. ..	10	4¼	4¼	64	9	10	83

Class B.—To be cast with full mounted rods of two or more pieces, with metal reel bands, weighing not more than 4½ oz.; leaders to be 6 to 9 feet, with two flies.

Judges and scale of points as above.

1. Members South Side Sportsman's Club, cash	£5	0	0
2. William Mitchell, rod maker, 26, Vandam Street, New York, offers a three-piece fly rod, duplicate joint, and three tips, 4¼ oz. weight, or similar rod with metal reel plate 1 oz. heavier, if winner prefers, value	6	0	0
3. One year's subscription to *Forest and Stream*	0	16	0

	Length of Rod. Ft.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes	10	4½	78	10	24	112
G. S. Hier	10	4½	66	20	18	104
James Annin, junior	10	4¼	60	14	20	94
T. B. Mills	10	4½	60	8	16	84

Mr. Annin cast very prettily, but failed in distance.

THE B. F. NICHOLS' CONTEST.

(Single-Handed Fly Rods.

Judges: James Geddes, Dr. A. Ferber. Francis Endicot, referee.

Scale of Points.—Distance, delicacy, and accuracy, thirty-three each. Open to all. Each contestant to use the same rod, reel, and line, which will be furnished. (Rod 10 feet long, and weighing 6½ oz.) Each competitor will be allowed three minutes' practice with the rod before casting. The scale of points in this class will be distance, accuracy, and delicacy, thirty-three each. The line must be retrieved after each cast. Two flies to be used on leader. The casts for accuracy shall be at a distance of 40 feet. Accuracy and delicacy shall be judged perfect when the stretcher-fly strikes in the float at every cast (after reaching it) without splashing and before the body of the line strikes the water. All the prizes are donated by B. F. Nichols, manufacturer, 153, Milk Street, Boston, and all in grooved wood cases.

1. Split bamboo salmon rod 16½ feet, 27½ oz., with two tips, German silver mountings (12 00 dols.). Also one split bamboo trout rod, 10 feet, 7¼ oz., German silver mountings, value 20·00 dols. Total	£12	10	0
2. Split bamboo trout rod, 11 feet, 8¼ oz., German silver mountings, two tips, 20·00 dols. Also one similar rod 10 feet, 7¼ oz., 20·00 dols.	8	0	0
3. Split bamboo fly rod, 11 feet, 8½ oz., two tips, German silver mountings	4	0	0

	Distance cast.	Allowance for cast.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes	71	32	30	28	90
Reuben Wood	67	28	30	30	88
Ira Wood	64	23	30	30	83
James Aunin, jun... ..	62	22	30	30	82
R. C. Leonard	74	33	28	20	81
Geo. S. Hier	60	22	25	33	80
W. Holberton	56	20	33	25	78
Dr. M. E. Elmendorf ..	55	19	25	28	72

Here again Mr. Hawes was a winner with a cast of only 71 feet against the 67 by the veteran champion, Reuben Wood. Both these gentlemen, it will be seen by the terms of the contest, were using a rod they had never seen before. Ira Wood followed with 64 feet, and James Annin led such casters as W. Holberton, Geo. S. Hier, and Dr. Elmendorf. Mr. R. C. Leonard made the longest cast, 74 feet, but failed in delicacy and accuracy. By the time this contest was called the rain began to fall heavily, and rubber coats and umbrellas were out in great numbers. Still many not provided with these articles stayed, and even some ladies remained on the seats until the the close of this contest, which ended the sport for the day.

FRIDAY, OCTOBER 20.

This day opened fair, with the wind from the north-east, and the buoy lines were shifted to the south. Baffling winds were in order all day. Still, good casting was done, and previous records beaten. The committee were asked to bar out the winners of yesterday from the amateur contest, but did not see their way to do it under the rules. This kept out many gentlemen who felt that they could not compete with professional rod-makers like Hawes, R. C. Leonard, and Culhane. The error was in the rules, which were strictly adhered to, and as the men named had never cast before in public the result was unforeseen. The first contest to-day was :—

SINGLE-HANDED FLY-CASTING.—CLASS A.

Judges, James Benkard, Barnet Phillips. W. Holberton, referee. Scale of points as in light-rod contests. Open to those who have never cast in any tournament or who have no public record of casting sixty feet, with rods of seven ounces or over. The winner to have choice of the following prizes, and the other contestants to choose from the remainder in their respective orders of merit:

1. *Forest and Stream* offers a solid hammered coin silver gold-lined flower, fruit or punch bowl, value	£25	0	0
2. Members of the South Side Sportsman's Club offer cash	10	0	0
3. James Ramsbottom, Baldwin's, L. I., a split-bamboo fly rod with reel, reel case, and waterproof silk line ..	7	0	0
4. Wakeman Holberton, 65, Fulton-street, card of copy of Standard Trout Flies, coloured by hand, in frame ..	2	0	0
5. One year's subscription to *Forest and Stream*	0	16	0

	Length of Rod. Ft.	In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Total Points
W. H. Hawes	11	6	9¾	81	25	25	131
M. Culhane	11	6	10½	74	24	20	118
R. C. Leonard ..	11	6	10	85	12	20	117
J. Ramsbottom ..	11	0	8	63	23	23	109
M. E. Elmendorf ..	11	6	7½	56	22	22	100
Ed. Eggart	10	4	8	60	20	18	98
H. P. Wells	10	2	8	50	15	18	83

STRIPED BASS CASTING.

(New York Bay Style.)

Judges: Charles H. Murray, Francis Endicott. Barnet Phillips, referee.

Casts to be made with one-ounce sinkers, in a lane twenty feet wide, and each contestant to have five casts. His casts within the lane only to count The distances to be added together and divided by five; the result to constitute his score.

1. "Remington" sewing-machine, with four drawers, hemmer, &c., complete, presented by Martin B. Brown, New York	£11	0	0
2. One year's subscription to *Forest and Stream*	0	16	0
3. "Paddle and Portage," by Thomas Sedgwick Steele, Hartford, Conn., from the author	0	6	0

	1st cast.	2nd cast.	3rd cast.	4th cast.	5th cast.	Average.
John E. Williamson ..	—	80	—	—	88	33 3-5
Edward vom Hofe	45	35	—	—	—	16

The casting here was poor. Mr. Williamson has a record at the Coney Island tournament of 168 feet 6 inches.

STRIPED BASS CASTING.

(Sea-Coast Style.)

Judges: William A. Woodhull, S. M. Blatchford. James L. Vallotton, referee.

Open to all. To be cast with 2½ ounce sinkers. Winners to have choice of prizes, in the order of their awards. Lane and score as in light bass casting.

1. Split bamboo "Newport" bass rod with agate tip and rubber handle, donated by Fred Malleson, 136, First Street, Brooklyn	£8	0	0
2. "The Ameriean Anglers' Book," by Thad Norris, presented by Porter and Coates, Philadelphia	1	2	0
3. One year's subscription to *Forest and Stream*	0	16	0
4. "Canoe and Camera," by Thomas Sedgwick Steele, Hartford, Conn., from the author		6	0
5. Meerschaum and amber cigar holder (carved brook trout), in case, donated by F. J. Kaldenberg, 125, Fulton Street, New York	3	0	0

	Length of Rod. Ft.	In.	Score of Casts, Feet. 1st.	2nd.	3rd.	4th.	5th.	Total.	Average.
J. A. Roosevelt ..	7	5	135	163	—	180	158	636	127 1-5
J. E. Williamson ..	7	6	—	—	169	165	161	495	99
W. Murray	8	6	103	—	—	—	132	235	47
G. Landman ..	7	6	59	—	75	—	55	189	37 4-5
J. McGuirk	7	6	—	83	—	55	—	138	27 3-5
C. H. Murray ..	8	6	—	135	—	—	—	135	27
M. Culhane	7	6	—	40	—	—	—	40	8

Many good casts outside the lines were made, but the rule of casting in a lane, to secure accuracy, was new and bothered the contestants. Mr. Roosevelt's casting was much admired for his coolness, as well as his record.

SINGLE-HANDED FLY-CASTING.—CLASS B.

Judges: Francis Endicott, Henry F. Crosby; Jas. Geddes, referee. Scale of points:—Distance, actual cast; accuracy and delicacy ten each.

Open to all who have never won a first prize at this or any other similar contest. The winners to have choice of the following prizes in the order of their awards:—

1. "Game Fishes of the United States," plates by S. A. Kilbourn, and text by G. Brown Goode, presented by Charles Scribner's Sons, New York	£10	0	0
2. Split bamboo fly rod, presented by Mr. Fred. Malleson, 136, First Street, Brooklyn, N. Y.	5	0	0
3. One portable "Stranahan" canvas boat, seat and oars complete, presented by Frank Holmes, Chagrin Falls, Ohio	4	0	0
4. Copy of "Fysshe and Fishing," by Dame Juliana Berners (American edition)	0	6	0
5. One year's subscription to *Forest and Stream*	0	16	0

	Length of Rod Ft.	In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
R. C. Leonard	11	6	10	85	9	8	102
T. B. Mills	11	6	10	77	9	7	93
M. Culhane	11	6	10	70	9	8	87
W. Holberton	11	0	9	60	10	8	78
Ed. Eggert	10	4¼	8	57	8	7	72
C. A. Bryan	10	4	8	55	8	7	70

SALMON CASTING.

Judges: C. F. Fearing, James Benkard; L. W. Winchester, referee.

Scale of Points.—As in single-handed fly-casting, Class B. Open to all. Winners may choose prizes.

1. A finely-finished, German silver mounted, hexagonal split bamboo salmon rod, presented by Conroy and Bissett, 65, Fulton Street, New York	£10	0	0
2. One dozen patent fluted spoon baits (assorted sizes), with large photo. of 40 lb. muskallonge, presented by G. M. Skinner, Clayton, N.Y.	2	0	0
3. One year's subscription to *Forest and Stream*	0	16	0

	Length of Rod Ft.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes ..	20	116	7	9	132
Reuben Wood ..	18	105	10	9	124
H. Prichard ..	17	107	7	9	123
J. Ramsbottom ..	18	91	8	6	105

In this class the casting did not at all come up to the standard in either of the points of distance, delicacy or accuracy.

SATURDAY, OCTOBER 21.

The day was fine with varying winds from off shore to behind the casters, who faced the south. The only remaining contest was the

SINGLE-HANDED FLY-CASTING—CLASS C. (CHAMPION CLASS.)

Judges: Francis Endicott, W. C. Harris. Fred. Mather, referee. Scale of Points—Distance alone to count. Open to all. Winners to have choice of prizes.

1. E. G. Blakford, Fulton Market, New York, cash ..	£5	0	0
2. A Bethabara fly-rod, presented by Fred. D. Divine, 76, State Street, Utica, N.Y.	2	0	0
3. Revolver, 32 calibre, presented by Messrs. J. P. Lovell and Sons, Boston, Mass.	2	0	0
4. One year's subscription to *Forest and Stream*	0	16	0
5. "Book of the Black Bass," by Dr. J. A. Henshall, presented by Robert Clarke and Co., publishers, Cincinnati, Ohio.	0	12	0

	Length of Rod. Ft.	In.	Weight of Rod. Oz.	Longest Cast in Feet.
H. Prichard	10	4½	8	91
R. C. Leonard	11	6	8¾	90
H. W. Hawes	11	6	8½	85
T. B. Mills	11	6	8¾	79
M. Culhane	11	6	10½	76

Mr. Prichard, of the Washington Gun Club of Brooklyn, here made his remarkable cast of 91 feet in his peculiar rolling throw. This has been variously called a "water cast," an "underhanded cast," and a "hoop-snake cast." The line lies on the water at perhaps 60 feet, and by reeling off more line it is sent out with a rolling motion until the flies leap out beyond. There are various opinions on the merits of this mode, which is new here, but is said to be used in England. Some contend that it is impossible to take a fish in this manner on account of the commotion in the water near the caster. The other contestants retrieved their lines, and cast in the usual manner, and made many good casts. Only once did Mr. Prichard go beyond 85 feet, but as this contest was for distance alone he was awarded the first prize.

[We have made a few notes on this most interesting tournament elsewhere in this number.—ED.]
